compensation being the cost of maintaining and operating the railway plus a fair return for the capital actually employed, the people are unquestionably entitled to a voice in determining what such compensation shall be and how it shall be arrived at, and their representatives will find the railways have cost not to exceed an average of \$30,000 per mile, and could be duplicated for enough less to more than offset the enhancement in the value of right of way, depot grounds and terminals.

Railways well located and mortgaged for 80 per cent. or less of actual cost can dispose of $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent. bonds at par; but badly located or poorly managed roads, often failing to pay interest, we may call 5 per cent. a fair rate, and on this basis the annual net revenue of roads existing at the close of 1888, from traffic, rents, interest, dividends, and all other sources, should not exceed \$234,123,000, being \$67,408,000 less than the net traffic earnings reported by Poor, and taking the net earnings (\$406,220,000) as shown by the Inter-state Commission, the excess is \$171,097,000 wrongfully extorted from the agricultural and other industries in one year.

This difference in the amount of net earnings arises from the fact that, in Poor's Manual, only traffic earnings are tabulated,* no account being taken of the immense sums railway companies derive from rents of lands, buildings, track, and terminals, as well as in the form of dividends on stocks and bonds owned, and the profits from the sale of such securities, all amounting to vast sums and yearly increasing as the railways become consolidated and absorb more and more of existing property; hence Mr. Poor's figures are incomplete and misleading, inasmuch as they fail to convey a correct idea of the total of railway earnings or the amount annually extorted from the user.

Of the \$234,123,000 resulting from a 5 per cent. revenue on \$30,000 per mile, a very large part, as will hereafter be shown, belongs to the user rather than the investor, while many parallel roads, built for construction profits, are needless; and others so badly located that the traffic will be wholly insufficient to provide revenue, and the owners must, like the owners of badly located buildings, suffer the loss entailed by lack of business sagacity. Favorably located roads can collect more than 5 per cent.; should they be permitted to do so? Each railway company is a distinct organization, each road a separate instrument and specially conditioned, and it is questionable if the compensation for the capital employed should, in any case, be permitted to exceed the rates fixed upon, from time to time, as a just return. As interest rates fall, so should returns from railway investments.

Justice and reason appear to have little part in determining railway rates, the environment being all potent, as in the states where efficient granger laws have been reinforced by a strong and active commission, rates are much the lowest, and highest where either the laws or the commission are inefficient; yet enough has been accomplished to show the be-

neficent possibilities of governmental control in suppressing some of the multifarious evil practices of railway companies; and while these practices continue, they are much less common and not so flagrant as in the past, when the manager of an inter-state railway, in order to destroy the value of the property of a coal company having no other outlet for its product, could, without a minute's notice, advance the rates on coal shipped by such company 133 per cent. above the rates charged another coal company in which such railway company and its officers were stockholders; nor with the inter-state law in force are railway officials likely to repeat the indiscretion of such manager in writing the president of a coal company (of whose property he desired to force a sale) the subjoined letter.

ST. LOUIS & SAN FRANCISCO RAILWAY CO.,

OFFICE OF THE
SECOND VICE-PRESIDENT AND GEN'L MANAGER,
ST. LOUIS, MO., February 9th, 1882.

President Pittsburg Coal Company, Pittsburg Kansas.

Dear Sir:—I will pass through Pittsburg about 12 o'clock on Monday next, and would be glad to have you join me at Pittsburg, and go to Girard, and back to Pittsburg.

If we can buy your coal at a low price, I think we can possibly make a deal on that basis.

As long as you continue shipping coal, it has a demoralizing effect on the trade, and renders the coal business unprofitable, to a certain extent, to the "ROGERS COAL COMPANY."

Respectfully,

C. W. ROGERS,

Second Vice-President and Gen'l Manager.

Discriminations and other fraudulent practices, whereby the few are enriched at the expense of the public, doubtless continue, and will until railway managers, thus betraying their trusts, are sent to keep company with the men who plundered the Ocean, Fidelity, and Sixth Avenue banks; but there is, as compared with the time preceding the enactment of inter-state and state laws, but little of the work of discrimination in progress; and great as is this evil, it is trivial as compared with those growing out of a capitalization excessive by more than one half, and which is the warrant for annually levying an immense sum in unjust tolls, by which producer and consumer are alike despoiled of a large part of their earnings.

If the courts are right in holding that the carrier is entitled to but a reasonable compensation, and that the reasonableness of the charge rests upon the cost of maintenance, operation, and the amount actually invested in the plant, then the exaction of existing rates of toll is wholly indefensible. As a bar to the rendering of justice to the user, the plea is made that should rates be reduced to what would afford but a fair return for the actual cost of the plant, it would work great hardship to the present holders of railway securities, who are assumed to have bought them in good faith, and many of whom are widows, orphans, trustees, and institutions in which the poor have deposited their scanty savings. Has this plea against justice any basis except one of sentiment? If sentiment and a charitable regard for the poor and helpless shall govern, are there not twelve times as many widows, orphans, and poor among the 60,000,000 of railway users?

From the fact that there are 10,000 holders of New York Central stock, Mr. Poor estimates that there are

* Page 4 of the Introduction of Manual of 1889.

+ "Granger laws" are the laws enacted in the agricultural states of the Mississippi Valley for the control of railway rates and methods.

1,000,000 investors in railway securities, who, with their dependents, constitute a body of 5,000,000, and it is proposed that rather than this one thirtieth shall surrender, once for all, so much of their power to tax others as is the direct product of fraud, that they shall continue such unjust taxation.

This is not simply a proposition that one thirtieth of the population shall unjustly tax all others this year, next year, or even the third or fourth year, but that such burden, yearly increasing by the addition of more water, shall be carried by the twelve-thirtieths to their graves, that when death relieves them, their children and children's children, for countless generations, shall each in its turn take up the grievous burden and carry it until they also drop into the grave, and so long as these railways exist, this one-thirtieth shall possess the power to thus levy an iniquitous impost upon the entire industry of the country. Could anything be more unjust?

Shall 60,000,000 people and their descendants suffer a great and growing wrong rather than that 5,000,000 shall surrender a power to which they have no right?

The railway is public rather than private property, and while the stockholder is entitled to the usufruct and its limited control, yet such control is a trust for a specific purpose, such purpose being the service of the public for which the compensation shall be just and reasonable, but the law never contemplated that one party in interest should alone be in possession of the knowledge necessary to a determination of the amount of capital employed, and the reasonableness of the charges made, and so long as such knowledge is withheld, shareholders must expect discontent on the part of the public, and efforts to secure such control as will ensure justice: and it is this discontent which has been one of the most potent factors in bringing into existence the "Farmers' Alliance" and kindred organizations, in which millions of farmers—for the first time in history—are united for a common object.

The endowment of the railway company with the exceptional power to enter upon and take private property, and the equally exceptional limitation of the stockholders' liability to the cost of the shares held, implies special duties and obligations to the public; and the people, whose lands have been taken, who furnish the traffic, and provide the revenue, have a right to a voice in determining the justness of the rates charged.

Another plea is that the cost of transportation is less in the United States than elsewhere, hence there can be no cause of complaint. If rates are higher in Republican France or Imperial Germany, where railways exist, primarily, for military purposes, it is neither our duty to emulate them in such matters, nor to copy their costly modes of railway administration; yet we may well profit by their example in providing for stringent control of railways and the rates for carriage.

The farmer, understanding that rates are unjust by reason of an enormous fictitious capitalization, and that such rates reduce the value of his land and its products, appeals to legislation for relief, which states have sought to furnish by laws regulating rates and methods of administration, which are denounced as acts of robbery by the men who have

perpetrated the frauds of which such laws are the resultant.

The men loudest in denunciation of every attempt at control by law are those most active in the manufacture of securities, in operating the construction company, in paying unearned dividends, in selling or capitalizing cheap lines at many times their cost. These are the special champions of the widow, the orphan, and the savings bank, whom they have despoiled by the most unblushing frauds. These are the innocent, chivalrous men, high in the esteem of the street and the exchange, who wish the way left open for more nickelplating, more Wabashing, more Credit Mobiliers, and more stock and bond watering.

There is abundant evidence that where the laws have been such as to secure the greatest control.—Illinois and Iowa,—well located and judiciously managed railways are exceedingly prosperous. Many great lines derive the major part of their traffic from the granger states, yet the laws, which railway managers and investors denounce as acts of confiscation, have not prevented the payment of good dividends. Mr. Poor shows that, for twenty five years the Chicago & Alton dividends have averaged 8.7 per cent., that the Chicago, Burlington & Quincy has paid regular cash dividends ranging from 8 to 10 per cent. per annum, and stock dividends aggregating \$6,701,990. The Chicago, Rock Island & Pacific has done about as well in the way of dividends, although its traffic has been so largely drawn from Illinois and Iowa. Until certain bond and stock operations, the Chicago, Milwaukee & St. Paul paid 7 per cent. dividends, and the Chicago & Northwestern has swelled its capital account by the payment of stock dividends, while paying regular cash dividends of 6 to 8 per cent., and the Illinois Central has, for twenty-six years, paid dividends ranging from 4 to 10 per cent. per annum, and aggregating \$56,989,817.

Notwithstanding these laws and that nearly or quite all these roads carry an undue amount of water, that crops have failed, and panics have prostrated the industries of the country, they have prospered, new lines been added from the tolls collected on the old, the investor received ample returns, and some of the managers enabled, by some occult process, to amass enormous fortunes, all going to show that the granger laws have not been oppressive, and that when railways fail to make fair returns it is due to faulty location, unreasonable rate wars, speculative or incompetent management, or an extraordinary excess of water in capitalization.

Possibly a flood of light may be thrown on this subject by the experience of the writer when general freight and passenger agent of a new railway. Imbued with the idea that the prosperity of the road would be subserved by encouraging immigration and fostering business, the writer formulated tariffs calculated to further such ends. Imagine his astonishment when told by the general manager they would not answer, and to be informed that the road was not being built to make money out of its operation but out of its construction, and what was required of the traffic department was the greatest

present revenue possible and to make the passenger rates just low enough to take the traffic from the stages and the freight rates no lower than necessary to drive the ox teams out of the freight business.

The policy then outlined was pursued until the railway passed through the reorganization thereby made inevitable, and this cheaply-built prairie line, with free right of way and land grant and subsidy equal to its entire cost, is now capitalized for \$105,000 per mile.

On most railways the basic principle underlying tariff and schedule is "All the traffic will bear," and it is to hold in check these "Chevalliers of the road" that granger laws are formulated.

It may be safely assumed that \$30,000 per mile is the outside cost of existing railways, and that the aggregate, at the close of 1888, on which tolls should be based, was \$1,682,216,000; but here the question arises: How much of this sum has the railway builder furnished, and what part has been extorted from the railway user in the form of excessive tolls?

Available data does not admit of going back of 1874 when 69,273 miles were in operation, the cost of which, at \$30,000 per mile, being credited to the

builders; and adopting the net (traffic) earnings as shown by Poor we find that, in 1874, crediting each \$30,000 with its proportion of such earnings, *pro rata*,—and adopting the capitalists' theory that the water in the capital is entitled to the same revenue as the money part thereof—the earnings of the water in the capitalization of that year amounted to \$91,957,829, being equal to the cost of 3,065 miles of railway. Continuing such computations for fourteen years and crediting the railway users with the income of so much of the railway mileage as was, from year to year, built from the tolls collected on the capitalization in excess of \$30,000 per mile, it appears that the users have, within fifteen years, been mulcted, in the shape of tolls based wholly on water, in the sum of \$2,422,588,455, from which those in possession have constructed 80,752 miles of new railway, leaving but 2,901 miles, costing \$7,039,000,* to have been built, in the same period, from funds supplied by those claiming to own all the railways. For details of these computations, see Table I.

*This is from traffic earnings alone, to which should be added a vast sum from miscellaneous sources.

TABLE I.

Year.	Miles of railway in operation.	Capitalization per mile	Net traffic earnings, <i>Per Poor</i> .	Net traffic earnings per mile.	Mileage on which investors are entitled to revenue.	Proportion of earnings per mile on road to be fit by investors at cost of \$30,000 per mile.	Proportion of earnings per mile on fictitious capital.	Earnings of fictitious capital and miles of road built therefrom.			
								Earnings each year on fictitious capital.	Earnings of road built subsequent to 1874 from revenue on fictitious capital.	Total earnings from fictitious capital and from capital furnished by railway users and road built therefrom.	Miles of railway built in each year from tolls of fictitious capital and from tolls or mileage built in preceding years from excessive tolls.
1874	69,273	\$58,256	\$189,570,938	\$2,736 57	69,273	\$1,409 10	\$1,327 47	\$91,957,829		\$91,957,829	3,065
1875	71,759	61,652	185,506,438	2,585 13	68,694	1,258 00	1,327 13	91,165,867	\$7,923,423	99,089,290	3,303

1878	78,960	59,163	187,575,167	2,375 57	66,068	1,204 41	1,171 16	77,344,577	30,689,989	108,034,566	3,601
1879	79,009	57,730	216,544,999	2,740 76	62,516	1,424 10	1,316 66	82,276,766	45,277,355	127,554,121	4,251
1880	82,146	58,624	255,557,555	3,111 01	61,402	1,591 91	1,519 10	93,234,752	64,617,581	157,852,333	5,262
1881	92,971	60,445	272,406,787	2,930 02	66,965	1,455 02	1,475 00	98,733,556	76,277,210	175,010,766	5,834
1882	104,971	61,303	280,316,696	2,670 42	73,131	1,306 90	1,363 52	99,678,766	85,098,274	184,777,040	6,159
1883	110,414	62,030	298,367,285	2,656 07	72,415	1,285 54	1,370 53	99,209,926	100,999,717	200,209,643	6,674
1884	115,672	61,366	268,064,496	2,318 32	70,999	1,133 66	1,184 66	84,077,689	103,628,904	187,706,593	6,257
1885	123,320	61,398	269,493,931	2,185 32	72,390	1,067 75	1,117 57	80,870,718	111,357,351	192,228,069	6,408
1886	125,185	61,098	300,603,564	2,401 27	67,847	1,179 02	1,222 25	82,903,995	137,748,854	220,652,849	7,355
1887	137,028	58,603	334,989,119	2,444 67	72,335	1,251 67	1,193 00	86,263,444	158,219,042	244,482,486	8,149
1888	145,387	60,731	301,631,051	2,074 61	72,545	1,024 86	1,049 75	86,125,770	151,174,756	237,300,526	7,910
								\$1,311,114,877	\$1,111,473,578	\$2,422,588,455	80,752

The above computations are based on a cost of \$30,000 per mile, and the unwarranted assumption that investors furnished the money to build all the roads existing in 1874.

Should it be claimed that instead of dividing the earnings *pro rata* between the real and fictitious capital, that the real is entitled to full compensation before anything is assigned to the fictitious, we will, without admitting that the preceding computations are not correctly based, proceed to first give compensation, at the rate of six per cent. per annum, for all

the capital actually employed (except that furnished by the users in the form of tolls in excess of such six per cent.) and again assuming that the capital to build all the roads existing in 1874 had been furnished by the putative owners, and we find the results as set forth in Table II.

Table II. shows that from traffic earnings alone,

the holders of shares and bonds have received six per cent. per annum for every dollar invested and have, within fifteen years, been enabled, by the watery fiction, to extort from railway users the enormous sum of \$1,592,280,471 (to which should be

added about half as much more from miscellaneous earnings), with which has been built 53,076 miles of railway, for the use of which it is proposed to forever tax those who have furnished all the money employed in its construction.

TABLE II.

Showing revenue of investors at six per cent. on cost of \$30,000 per mile and mileage built from earnings in excess of six per cent.

Years.	Miles of Railway in operation.	Mileage on which investor's revenue is computed.	Capital furnished by investors on the basis of cost being \$30,000 per mile.	Revenue of investors on basis of six per cent. on cost of \$30,000 per mile.	Revenue of Railways from traffic earnings. Per Foot.	Earnings in excess of six per cent. on \$30,000 per mile, hence belonging to the railway user, but employed in building new roads.	Miles of railway built from tolls in excess of six per cent. on \$30,000 per mile, and to the revenue from which investor has no right.
1874	69,273	69,273	\$2,078,190,000	\$124,961,400	\$189,570,958	\$64,879,558	2,163
1875	71,759	69,596	2,087,880,000	125,272,800	185,506,438	60,233,638	2,008
1876	73,508	69,337	2,080,110,000	124,806,600	186,452,752	62,646,152	2,082
1877	74,112	67,853	2,035,590,000	122,135,400	170,976,697	48,841,297	1,638
1878	78,960	71,073	2,132,190,000	127,931,400	187,575,167	59,643,767	1,988
1879	79,009	69,134	2,074,020,000	124,441,200	216,544,999	92,103,779	3,070
1880	82,146	69,201	2,076,030,000	124,561,800	255,557,555	130,996,755	4,366
1881	92,971	75,660	2,269,800,000	136,188,000	272,406,787	136,218,787	4,541
1882	104,971	83,119	2,493,570,000	149,614,200	280,316,696	130,702,496	4,357
1883	110,414	84,205	2,526,150,000	151,569,000	293,367,285	141,798,285	4,726
1884	115,672	84,737	2,542,110,000	152,526,600	268,064,496	115,537,896	3,851
1885	123,320	88,524	2,655,720,000	159,343,200	269,493,931	110,150,731	3,672
1886	125,185	86,727	2,601,810,000	156,108,600	300,603,564	144,494,960	4,816
1887	137,028	93,754	2,812,620,000	168,757,200	334,989,119	166,231,919	5,542
1888	145,387	96,572	2,897,160,000	173,829,600	301,631,051	127,801,451	4,260
						\$1,592,280,471	53,076

Is it possible that no remedy can be found for such evils? In the National Bank the law has created another form of public trust, but one whose relations to the people are infinitely less intimate and with the services of which the public could dispense without serious results.

The railway and the bank each perform functions that the state might: yet the bank alone is held to the most rigid discharge of its duties, a maximum fixed for its rates of toll, the amount it shall loan any one party, and the kind of security determined as well as the amount of its reserve fund, its books and assets at all times subject to inspection without notice, no share issued until paid for in full, the payment of unearned dividends made a penal offence, and breaches of trust punished in an exemplary manner.

Can there be any sufficient reason why the railway corporations, with infinitely greater power and privileges, performing functions a thousand times more important, and directly affecting a hundred persons for one affected by bank administration, should not be subjected to control quite as stringent and quite as far reaching?

Shares and bonds being the basis of tolls, should a railway company be permitted to issue share or bond until its par value in actual money has been covered into the corporate treasury?

Should the basis of tolls be laid until it has been shown that a proposed line is necessary to public convenience and will make fair returns on its cost?

Should a railway company be permitted to collect tolls until it has shown the exact cost of the instrument of transportation?

Should it not be a penal offence for a railway official to pay an unearned dividend?

Should not railway accounts, stock and bond ledgers, and assets be subjected to like inspection as those of national banks?

Would not rate wars cease, were railways once having reduced rates, debarred from ever again advancing them without governmental permission?

Should not railway companies be taxed on their capitalization as shown in issues of bonds and shares?

Should not railways be appraised at present cash value, and earnings, from all sources, be limited to what would afford a given or maximum return on such appraisal?

Or should the nation assume the ownership and operate the railways through a non-partisan commission, as the Province of Victoria, Australia, has shown to be both practical and economical?

There is no longer any question as to the power of the nation to control these great arteries of trade, nor is there outside a limited circle, any question as to the necessity of such control, and it but remains for the lawgivers to formulate such statutes as will protect user and investor, both of whom are at the mercy of a small body of men who can and do make and mar the fortunes of individuals, cities, and states, without let or hindrance.

A SHIBBOLETH.

A writer, W. S. Lilly, in the *March Forum*, has an article entitled "The Shibboleth of the People"—or stated differently, "The People,—the Shibboleth."

In the United States "the people" is the national cry, the national watchword—and it is against this national exclamation that Mr. Lilly writes. Mr. Lilly uses expressions which lead to the conclusion that he is a foreigner, as for instance: "The American vote, it is explained to me," etc., and we assume that Mr. Lilly is an Englishman, and antagonizes the shibboleth, "The People" that he may *whack* Gladstone and other distinguished Englishmen who are trying to solve the Irish problem.

The opening sentences of Mr. Lilly's article are as follows:

I met, the other day, a young gentleman from the University of Oxford, distinguished, I was told, as orator at the Union there, who, after a few minutes conversation, was so good as to inform me that he believed in "the people's" gospel—every man to count for one, no man for more than one, whereupon, in my haste, perhaps, I privately wrote him down an ass."

In this the reader has Mr. Lilly's political, moral and religious creed. He writes a man down "an ass" who believes every man should "count for one," and that no man should count "for more than one"—and Mr. Lilly seeks the pages of widely circulated publications in the United States to air his aristocratic and monarchical opinions. It is needless to say that in the United States,—however strange the assertion may appear—Mr. Lilly will have thousands of admiring and approving readers. There are thousands of Americans who despise the shibboleth, "The People." There is not a Carnegie, a Vanderbilt, an Astor, a trust baron, syndicate, shark, a stock waterer, or a food cornerer in the land, who is not entirely in sympathy with Mr. Lilly and who, when they hear a man assert, that "every man should count for one, and no man for more than one," writes him down "as an ass"—and fortunate is the man who holds to such opinions, if he escapes with no severer penalty than being called "an ass;" fortunate if he is not proclaimed "an anarchist," "a dynamiter," "a socialist," or something, if possible, still more odious.

Mr. Lilly wants his readers to understand

what the shibboleth, "The People" means, and says: "It may mean a nation, as it does when we speak of the English, the French or the American people. It may mean a particular section of a nation, the most numerous, the least wealthy, and the least cultivated. When used in this latter sense it very commonly becomes a shibboleth, and an extremely effective one too."

Having defined what "the people" means, or may mean, Mr. Lilly proceeds to note the difference between the "*populace* and the *people*." He quotes Grattan as saying that "the populace differs much, and should be clearly distinguished from the people," and says "the tendency of political progress from his (Grattan's) time to ours, has been to ignore the difference (between people and populace) and rub out the distinction. Throughout the civilized world the populace is now, to a very great extent, identified with the people. And no wonder, for political power has everywhere gravitated to the populace."

The lexicographers make a distinction, as vicious as it is arbitrary between "the people" and "the populace." Webster says:

PEOPLE, the body of persons who compose a community, tribe, nation or race; an aggregate of individuals forming a whole—a community, a nation.

With this definition, what becomes of the "populace?" It is the people, the people are the populace, because the people constitute the whole. Still Webster says:

POPULACE, the common people; the vulgar, the multitude.

And then as if to everlastingly obliterate such a definition, we have in the same paragraph: "Populace—Comprehending all persons not distinguished by rank, office, education, or profession."

Here we have an attempt at distinction, without a difference, and finally the square admission that people and populace are absolutely one, and that distinctions when discussing the shibboleth, "The People," are arbitrary, and in a sense atrocious, as the purpose is to centralize power in the hands of the few and reduce the many to serfdom.

It is not questioned—the fact is too glaring to be denied, or extenuated, that there are those who are ceaselessly at work to degrade the so-called "common people"—to

refer to them as the "mob"—the vulgar horde, and this is accounted for by the fact which the writer asserts, that "throughout the civilized world the populace is now to a very great extent identified with the people"—and that "political power has everywhere gravitated to the populace"—and hence, legitimately, and naturally, "the people's gospel, every man to count for one, no man for more than one," and hence, also, the shibboleth, "The People."

Mr. Lilly does not hesitate to admit that the people for a long period were "nothing," that they wanted to be "something," and that now they are everything, and that "what is called democracy, or government of numbers, is an accomplished fact, and universal suffrage is an accepted form." Here is an admission that the people's gospel—the glad tidings of emancipation, has been heard, and has brought forth an abundant harvest.

It is the purpose of Mr. Lilly to satisfy his readers that the "people's gospel" is a popular sham, a miserable vagary and he proceeds to state his views as follows:

Let us consider a little. Two things are required to enable a man to exercise rightly the political power represented by a vote. In the first place, his will should be determined by the public good rather than by his private ends; and, secondly, he should possess a knowledge of that wherein the public good consists. Is it possible to predicate such a will, or such knowledge, of the average voter? Can any candid person aver that Mr. Mill is wrong when, in the preface to the third edition of his "Principles of Political Economy," he dwells upon "the extreme unfitness at present—of mankind in general and of the laboring classes in particular—for any order of things which would make any considerable demand upon either their intellect or their virtue?" As a matter of fact, the considerations which appeal most strongly to the average voter have nothing whatever to do with intellect or with virtue. The masses are led, not by principles, but by passions; not by reason, but by rhetoric. They are the natural prey of demagogues, who know best how to appeal to passions; who, "uttering great swelling words of vanity, while they promise them liberty, are themselves the subjects of corruption." The idols of the multitude have ever been those who have known best how to play upon it by arts to which magnanimous or high-souled men will not stoop. Universal and ungraduated suffrage issues, at its best, in government by mediocrities; but, more commonly, in government by scoundrels. It ostracizes culture, leisure, independence, and all the qualities which specially fit men to legislate for their country. It produces that political indifference among the men of

light and leading, which is the worst curse that can fall upon a nation.

The foregoing is a fearful arraignment of the people. Mr. Lilly ought to have been honest enough to have cited an instance in history where the nation was wrecked because of the people's gospel, where "every man counted for one, no man for more than one." He ought to have referred to the nation where the people count for little, or for nothing; where the people's gospel is never preached; where the rich ride and rule and the poor bow and obey; where by virtue of such rule the people are happier, more progressive, more intelligent than in the United States, where for two centuries and a half the people's gospel has been preached, and under whose sway the mightiest empire of the earth is established and which can perish only when the gospel of plutocrats is substituted for the people's gospel.

Here, in a government by the people, it is not held, even by the majority, that a majority is always right, and hence constitutional limitations of the prerogatives of majorities in numerous cases. If Mr. Lilly were not himself an arrant demagogue, he would point to Russia, Turkey, Italy, Germany and Spain, where the people's gospel is not preached; not even in England in all its matchless power, and have instituted comparisons.

No, he comes to the United States, where the people's gospel proclaims "every man to count one, no man more than one"; where under the people's rule, including the "populace," there is a free press, a free Bible, a free church, free schools, and, thank God, free men; in view of which, what becomes of Mr. Mill's slander upon the "laboring classes" and the intelligence of their votes? "Scoundrels" there are; scoundrels there have been in all ages and in all nations. The United States has had its share, has it now, but so far they have played no more conspicuous part in governmental affairs than in England. The gospel of the people does not "ostracize culture, leisure and independence;" it ostracizes no good quality in men; it does not ostracize the "laboring class;" nor is it true—on the contrary, it is as malicious a libel as

was ever written—that “the considerations which appeal most strongly to the average voter have nothing whatever to do with intellect or with virtue.”

If Mr. Lilly or any other person finds any satisfaction in designating the masses as the “common people” we have no objection. The common people in politics are like common sense in law and logic. Banish the “common people,” and you have Russia; banish common sense, and you have pandemonium.

It is a fact, which Mr. Lilly and his admirers might study with profit that in the days of Christ He mingled exclusively with the “common people,” and on one occasion, when He was preaching the people's gospel, that “every man counted for one, and no man for more than one,” the “common people heard Him gladly.” On that occasion the Master pointed to the *uncommon* people, and said: “Beware of the Scribes which love to go in long clothing, and low salutations in the market places, and the chief seats in the synagogues, and the uppermost rooms at feasts; which devour widows' houses, and for pretence make long prayers; these shall receive greater damnation.”

The foregoing is about the first mention we have of the “common people” the “populace”—the laboring classes as distinguished from the “scoundrels” who “devoured widows' houses,” and of all miscreants, were selected to receive the “greater damnation.”

It is well enough, occasionally, to put upon record the declarations of the Master relating to the people—the populace, particularly when some snob—some Scribe or Pharisee seeks to degrade the “laboring masses” and elevate the “scoundrels” who “devour widows' houses,” and rob labor of its just reward.

That there is a growing purpose on the part of the millionaires in the United States to hush the gospel of the people—to change the shibboleth of the nation, we do not doubt, and that the ambition of Mr. Lilly is to foster the growth of such upas ideas is manifest. It may be that success will be achieved. It may be that the Sampson—the people, will be de-

cayed, debauched, cajoled, until they find themselves shorn of their strength, and handed over to the Philistines to be mocked and ridiculed and have their eyes put out. If the day should ever come, then look out for the blind athlete, then watch the pillars of the temple of Liberty, for as certain as that

“Truth crushed to earth shall rise again,”

the temple, people and treasures will be buried in ruins.

FOREIGN PAUPER IMMIGRATION.

There is a ceaseless clamor against “foreign pauper immigration” to the United States. Every poor person is *not* a pauper, though every pauper is a poor person. A pauper is so poor that he or she must be supported by charity or starve. A pauper, as a general proposition, is unable to work. (Old, infirm or feeble minded, the law exempts them from labor—the state cares for them. There are no able bodied, sound minded paupers. If such persons refuse to work the law compels them to work. They are vagrants, vagabonds, tramps, idlers by choice, and generally criminals by profession. They are not paupers, and have no just claim upon charity.

That such characters are all too often found among immigrants from foreign countries is not denied. The point we make is that the clamor of the times includes the great mass of immigrants who seek our shores for the purpose of bettering their condition.

Associated with this outcry against “foreign pauper immigration” is the noise made about the “pauper labor” of Europe. Do those who create the hub bub desire to be understood as denouncing poor men who work in European countries? and because they are poor, class them with paupers? If so, do they not see if poverty and work in Europe degrades workingmen to paupers, it does the same thing in America?

It should be understood that paupers do not work, and that workingmen are not paupers in any land. In this matter let us be distinctly understood. We write to correct errors of expression. Words are signs of ideas, and often of exceedingly vicious

ideas. As for instance, when a member of congress calls labor "a commodity, as much so as any *raw material*, worked up," and the talk about "pauper labor" and "pauper laborers," is equally ridiculous.

Let us take for illustration two extremes of conditions. Jay Gould, with an income of \$10,000,000 a year, and a trackman on one of his railroads whose income is 90 cents a day—or \$270 a year—a difference in incomes of \$9,999,730. Both of these *gentlemen* live within their incomes, neither of them are objects of charity. The trackman is no more a pauper than Mr. Gould. He wears coarse clothes, he eats coarse fare, he lives in a humbler house—but he works, he supports himself and his family. He is independent. Let him be still further oppressed and robbed, and he will wear still coarser clothes and eat still coarser food and find a still humbler dwelling. But he is not a pauper laborer. Europe is full of men who for centuries have been oppressed, robbed and degraded, who have struggled against conditions which agonize the brain to contemplate and yet, have saved enough to get out of their bondage—to find some other land, where, under God's blessings, conditions are more favorable for the poor.

At an early day, we are to have a celebration of the anniversary of the discovery of America by Christopher Columbus. Why celebrate the anniversary? What good came of the discovery, if it did not afford an asylum to men who would escape from tyranny, and especially, those who were workers? But it is held that those who came first secured a preëmption right to the land, not only where they "squatted" but to acres without limit, and now, while making no objection to the immigration of the rich, lift their hands in "holy horror" because the poor manage to land on American shores.

The time has arrived to stop the chatter about "pauper labor" and "pauper laborers." Trust barons and great corporations may be pleased with such terms, because they have the significance of slaves, or serfs, and do not suggest citizenship. If it can be once established that the term, workingman, is synonymous with "pauper laborer," the work of degradation speeds on

more rapidly, and the Corbins of the period will be able to accomplish their purpose more perfectly.

The laws as they now stand, exclude criminals and paupers from our shores, as also, "contract laborers." That is enough. We have room for 400,000,000 population. There are yet empires of waste places. Cities are in a congested condition, but it is not the fault of workingmen. Men at the head of industrial enterprises seek the towns and the cities, and workingmen follow. There are ten thousand industries in the United States that would succeed quite as well in the country as in the city, if located on any of our railroads,—the railroad, the telegraph and the telephone have completely upset the old theory that the city was best suited for industrial enterprises—and that it still holds sway, is due to the vicious ambition of cities to show the largest population, regardless of the vice and poverty which are entailed upon those who must work or starve.

When the Columbus Exposition, in 1893, is thrown open to the world, what will be seen? Not a thing that does not glorify labor—labor, from the humblest toiler to the most skilled artisan, and it is hoped that Europe will contribute, as well as all the civilized nations of the earth; and who, we ask, will write of these exhibits as the product of "pauper labor?" or who will voice the sentiment that the men whose skill challenges the admiration of all beholders, are forbidden the privilege of coming to America? Let us be done with such gabble. When from the mast-head of one of the little vessels in the squadron of Columbus the cry was heard, "Land! Land!" it meant land for the world; not for those who first robbed the Indians, but for men through all time who might seek homes in the New World. At any rate, whatever else may be said in regard to a Chinese wall policy of exclusiveness, let us be done with the "pauper labor" folly—something that never existed since Jehovah finished the world and "rested from all the work which he had made."

COLUMBIA COLLEGE owns property valued at \$8,000,000, yielding a yearly income of more than \$300,000.

SHALL WE GO A-MAYING?

Yes, let us go a-Maying. The trees and the fields are arrayed in emerald beauty; the wild flowers are blooming, the brooks are laughing and the birds are singing. Let us go a-Maying. The Ice King has retreated to his arctic domains. The south winds are blowing. The skies, in cerulean beauty, are bending above us; the fleecy clouds are sailing like swans in azure seas; hill and vale, field and forest, all invite us to go a-Maying.

For a day we will bask in the sunshine and leave all carking care behind us. The morning is blooming, the air is laden with delicious odors and the dew is bespangling herb and flower and tree.

"Come! let us go while we are in our prime,
And take the harmless folly of the time:

We shall grow old apace, and die
Before we know our liberty.
Our life is short, and our days run
As fast away as does the sun.

And as a vapor, or a drop of rain,
Once lost can ne'er be found again.

So when or you or I are made
A fable, song or fleeting shade,
All love, all liking all delight
Lies drowned with us in endless night.

Then when time serves and we are but decaying,
Come, my Corinna, come! let's go a-Maying."

During many weary weeks we have sighed for the coming of the vernal season—for the violets in the vale, for the song of the thrush.

"Ah! our hearts were weary waiting—

Waiting for the May—

Waiting for the pleasant rambles,

Where the fragrant hawthorn brambles,

With the woodbine alternating,

Scent the dewy way.

Ah! our hearts were weary waiting—

Waiting for the May."

Well, May has come with all its wealth of beauty and fragrance. May is the queen of flowers, and all the songsters of the grove sing the glories of May. The bee comes forth from its honey home, its sweet retirement, to replenish its wasted store and sing its song of gratitude for the "coming of May." With deft and fairy fingers May decorates all the landscapes, nor does she forget the wayside nooks nor secluded dells and the babbling brooks, as they dance their way to the sea, are ceaseless in their praise of the beauty of their bossy banks.

Yes, let us go a-Maying. Let us gather the wild flowers and weave them into wreaths and chaplets to deck the brow of beauty. Let us go a-gypseying as we did "a long time ago," when

"Our eyes were bright, and our hearts were light.

And Nature's face was gay.

The trees their leafy branches spread.

And perfumes filled sweet May.

We danced and sang the jocund song

'Upon the village green,

And naught but mirth and jollity

Around us could be seen.

And thus we passed the pleasant time, nor thought
Of care or woe:

In the days when we went a-Maying, a long time ago."

Yes, let us go a-Maying and take the children—the youth, the maiden, the little toddlers. Let us climb the verdant hills and view the landscape o'er. And

"Then we'll go to yonder glade

Bonnie Lassie O,

Where so oft beneath its shade.

Bonnie Lassie O,

We have told our tale of love,

And have sportive garland wove.

Bonnie Lassie, O."

Yes, let us go a-Maying. No time is to be lost. We must be joyous and happy while we may. The old, with their wrinkles and gray hairs, will renew their youth as they see the children weave their chaplets of flowers and in the wealth of their youth, strength and beauty, dance the bright hours away.

It is no task to go a-Maying. To most of us the fields and the woods are near. Just "over there" the wild flowers are blooming, the bees are humming, the herds are feeding, the lambs are gamboling, the squirrel is barking, the birds are singing. Let us go out into God's country, away, away from the city, its dust and din, and commune with nature.

Alas! too true, thousands of our fellow workers will not go a-Maying in 1891. They will not gather wild flowers nor hear one note of all the ravishing melodies of nature. The flowers bloom for them and the birds sing for them and all of the varied and wonderful beauties and blessings the good God has bestowed with lavish prodigality, but thousands will not enjoy them, because poverty hedges them in and their task masters

hold them by their cruel greed, fast in their bondage. Between the shop and the tenement house is a ceaseless funeral march and the hearts of the victims of wrong beat like muffled drums. They will not go a-Maying.

But others can, and thousands will, as opportunities offer, renounce work, forego wages, put on their holiday attire, and go a-Maying—go to the fields and to the forests, to Nature's concert of harmonies, to Nature's picture galleries, to Nature's flower gardens, and while communing with the flowers, exclaim:

"Your voiceless lips, O Flower, are living preachers,
Each cup a pulpit, every leaf a book,
Supplying to my fancy numerous teachers
From loneliest nooks."

* * * * *

"Were I in churchless solitudes remaining,
Far from all voice of teachers and divines,
My soul would find in flowers of God's ordaining.
Priests, sermons, shrines."

THE NEW REPUBLIC.

Bellamy's *New Nation*, we have from time to time contemplated with sensations of special pleasure. It is to come as day emerges from the night. First the arrows of light, pencilled drawings betokening the coming of the god of day, steadily growing and glowing in effulgence, shadows flee away and finally the source of life and light and heat coming into full view and rising grandly to meridian glory. Then the winter of man's discontent, made glorious summer by the sun nationalism, comes no more upon the earth. Poverty takes everlasting flight and the millennium, so long prayed for, appears and comes to stay. We have long ago fallen in love with Bellamy's picture. As a work of art, it is divine, it is to the last degree creditable to Bellamy's imagination, and weighs for its realization.

"Go wing your flight from star to star—
From world, to luminous world, as far
As the universe spreads its faming walls."

And you will find hung upon those "walls" nothing more beautiful than Bellamy's *New Nation*. It is to come without war. No bugle blast is to call to arms. It is to come as does the garniture of fields and forests, at the bidding of the sun and rain, the emerald grass, the wild flowers, and all the varied beauties which nature spreads

out with lavish hand to adorn the world. Who so cold, so stolid, so deaf and blind as not to wish for the coming of the *New Nation*? who so inert and passionless as not to listen for the sounding symphonies of the merry stars and the shouts of the sons of God at the birth of the *New Nation*?

But there is another scheme on foot. It is to have a "New Republic." The scheme owes its origin to Mr. Thomas Lake Harris, of Santa Rosa, California. Bellamy's *New Nation* devotes considerable space to Mr. Harris' scheme and we are indebted to the *New Nation* for what we know of the matter. The "New Republic" is to come as comes the earthquake, the thunderbolt, the tornado; it is to be preceded by calamities, and all the portents are now in the air. Hear Mr. Harris—He says:

The war of strikes and boycotts threatens always to become a war of public insurrection. Pinkerton's police, state militia, the sheriff's posse are powerful; but so are the massed toilers; their roused and maddened wifehood and motherhood; so is dynamite. A mortgaged agricultural state, ruined by failing crops, 10 per cent. interest, onerous rates of railway transportation, tariff taxes, prices of farm products reduced below the cost of production by the system of cornerage,—what is it but a state on the edge of revolution or secession? It is easy to conceive of a possible situation, in which the farming states, as independent sovereignties in the union, may array their governing authorities, legislature, courts, citizen soldiery, against the federal powers. It is easy to look on to the birth of a new confederacy; our Union is not a band of invulnerable steel, it is a glass globe; we feel already the jar of the concussions; its atoms may fly apart. It may shiver into fragments.

Paradise is in the air; the atmosphere of our social hope is impregnated by diffused elysium. This utterance proceeds in that promise; but there is also an air of terror. The toiling masses of the people can be led through miseries, disappointments, ruinous calamities; on to a certain point they may be driven by their task-masters like cattle toward the shambles. Starvation of the body, starvation of mind, heart and hope, starvation that with spectral shadowing extinguishes the fire of the hearth and slays the comfort of the bed, that smites the babe upon its mother's bosom, and shrouds at last that mother for the grave,—this in its long approaches is endured, but in the last extreme it loosens the passion of revenge, the desperation of ruin that is latent in the natality of man; it leads forth a storm of mania that is the opposite of the evolutionary whirl.

When the cry is heard, "Bread or blood!" the plutocratic rulers may well tremble. This is not so far off, by the law of the alternative, but that quickening senses may now feel it tingling toward them. If all the promise of the past is latent in our nation for

the evolution of its social humanhood, the savagisms, the barbarisms of all that past lie latent in its animalized cupidities. Coiled like gigantic serpents they wait, if roused and unfettered, to whirl forth upon the land in all the power and deadliness of wrath that is implied in such enormous heredities. Then reason is nowhere, the instinct of self-preservation is lost, is swallowed up in the final instinct of destruction. The wise of old have written: "It is dangerous to trifle with the avenging fates."

Now there is here a body of toilers, men and women, numbered by millions, to whom every outrage offered to the fellow is felt as a personal indignity, a dart that quivers and rankles in their own flesh. In this common multitude, made one by the sympathy and sensitiveness of the common outrage, this latent mania exists in full force, but is held hitherto in the consensus of repression. It struggles and is forced down: it heaves again and again, made by each new indignity less patient, more determined, more terrible,—loosening by little and little the accustomed restraints that held it in subjection.

"Bread or blood!"—at any hour when the cry lifts wide and persistent the mania may emerge. There is not here to meet it, as in Europe, the obedient force of millions of soldiery. Our government does not rest on force, it is based on popular consent. These thousands of millions of dollars of the people's earned wealth, these hundreds of thousands of square miles of the people's heritage are appropriated by the capitalistic few, whose title holds only by pen and ink that has no binding force, excepting for so far and so long as the people is acquiescent.

Let a whirl of mania forestall the final outlet of the whirl of evolution, and the insurrectionary explosion may flash across the continent, from seaboard to seaboard, between the rise and set of sun. Then the rule of the prudent wise of the multitude is lost in the reign of the terror. Mania, the infernal goddess whose hand brandishes the torch, may show by it the road to the guillotine. For the last quarter of a century we have filled up the land with the discontented myriads of the Old World: they came expecting freedom, but have found new servitudes; they came led on by hope, they sit down brooding and sullen with despair. The skies do not brighten to them, they darken and darken on.

Social nationalism and the kindred preparatory movements, by instilling hope and patience into the oppressed masses, hold in suppression the explosive forces. But these forces are approaching terribly near the surface, the limits of the safety-line are very nearly overpassed.

Men have a curious habit of shutting the mental eyes to what they dislike or are afraid to see. Another habit, when successful, is that of thinking in their phrase, that "old Mr. Luck will always be good to them." This habit holds possession of the average American mind. No nation was ever so successful as ours: therefore it must always be successful. They forget: this nation has been in rapid motion. A thousand years of result have been whirled into one century. Living so fast, it has lived almost to its end, its to-morrow is with death. It may rise again, a new and glorious republic, socialized humanity to the resurrection of the just: but, as to its

present form, movement, custom and environment, it must first die.

The *New Nation* says Mr. Harris is what is termed a "socialist nationalist," but without reference to what he calls himself, or is called, he sees frightful things, and he sees them, or thinks he sees them, with terrible distinctness. To him everything looks red or blue. He hears terrific sounds, the earth trembles beneath his feet and the atmosphere is charged with lightning, dynamite is lying around loose everywhere; the United States is one great powder magazine. Men are preparing to lay hold upon the pillars of the States and shake down the superstructure. The imagination of Mr. Harris is awfully lurid, and like the old German, who, in early times, camped near the Hot Springs in Arkansas, he thinks hell is not more than half a mile distant. Mr. Bellamy should labor to change the character of Mr. Harris' reflections. As matters stand, we feel like repeating the old darkey's inquiry:

What yo' gwine to do
When de world's on fire?

AN English editor, in suspending the publication of his paper, said that "The circulation of this paper, thanks to the extraordinary and unparalleled success which has attended it since the first number, has increased to so enormous a figure that we are quite unable to print it. We are, consequently, compelled to suspend publication." That editor's joke proclaims him a genius.

EVICIONS for the non-payment of rent are twice more numerous in the city of New York than in all of Ireland. All lands and climes are favorable for the growth and maturity of the landlord hog.

THERE are now two hundred women preachers in the United States. Why not turn over the industrial enterprise entirely to women? They could handle it satisfactorily.

DURING the past one hundred years, London has grown from a city of 900,000 population to more than 5,000,000.

IN London 1,000 houses are built every month.

Wages.

"Tell me, what shall thy wages be?"—Gen. xxix.

PRELIMINARY to what I shall have to say in this paper on the subject of wages I desire to introduce the following from the *Chicago Daily News Almanac* for 1891:

WAGES.

The following are given as reasons why by the day, wages in the textile industries are high in America and low in Europe.

Number of looms run by one weaver in cotton mills:

In America	6 to 8
In England	3 to 4
In Switzerland	2 to 3

Number of yards turned out by one weaver of same quality and width of cloth:

In America	1,350 yards
In England	857 yards
In Switzerland	460 yards

Number of spindles in throstle spinning by one spinner (girls):

In America	900
In England	576

Wages by the yard are lowest in America. Rate per 100 yards of print cloth:

In Fall River	40 cents
In Lancashire	51 cents
In Switzerland	60 cents

WOOLEN MILLS.

Number of looms run in dress goods mills by one weaver:

In America	2 looms
In England	1 loom

Number of yards turned out per week by one weaver:

In America	300 yards
In England	105 yards

Number of yards turned out by one weaver on one loom in cheviot cloth:

In America	120 yards
In England	80 yards
In Ireland	54 yards

INGRAIN CARPET.

Number of yards turned out by one weaver on power looms:

In America	180 to 240 yards
In England	72 to 120 yards

Rates paid per yard:

In America	4 to 5½ cents
In England (power loom)	4½ cents
In England (hand loom)	10 cents

Perhaps there is no problem of which the solution is so difficult as the one relating to the recompense of labor; no subject so irritating and vexatious as the question of wages. We see a perpetual conflict between employer and employé; the one striving to decrease wages, the other seeking an advance; resulting in a struggle as perplexing as it is never ending.

What is *labor*? There are numerous definitions given, but do they quite convey the idea that we intend? Are they not more copious than explicit? If this deficiency is as real as it is apparent, the cause will probably be found in the present conception of the word rather than in negligence on the part of lexicographers. As a substitute for something better, and at the same time to be brief, we could define *labor* as "the exertion of muscular strength in exchange for wages." But then the question arises, "what is wages?" To be again brief we could say

that wages "is the price paid for labor." That this will be accepted as the correct meaning of *labor* and *wages* matters not; it answers the purpose in the present instance. Of course there is mental as well as physical labor, but the latter is generally understood when we speak of *labor*. Some may claim that one can labor without expectation of recompense; but this is hardly a fact, unless it be an act of charity, and charity is never without recompense. A man may row a boat for pleasure and he may perform the same act for pay, the latter is *labor*, the former is *recreation*.

The causes assigned for "low" wages are nearly as numerous as the remedies prescribed. Some ascribe low wages to the selfish, grinding power of monopoly, the antagonizing acts of capital; others, that the statutes are defective in the degree of protection afforded. If wages is the *price* of labor, it must come under that never-varying rule, the rule that the price of all things is governed by *demand* and *supply*. To increase the demand for labor without adding to the supply exerts a powerful influence in the raising of wages, but to increase the supply without an extra demand has an effect directly the opposite. When employers are numerous and employés are few, the latter can dictate the terms, but when the situation is reversed low wages are accepted to avoid idleness.

If *demand* and *supply* are the controlling influences, the question can be asked with propriety, "Why not let us endeavor to so arrange these influences that labor will be benefited?" This would be the proper course to pursue, but then it is not improbable that in the future laboring men would meet with the same obstacle that has always been their "stumbling block" in the past. These "sons of toil" have never had the time nor inclination to think for themselves upon the subject; they prefer to allow some one else to do their thinking, and this professional "thinker" willingly accepts the task, but is usually under obligations to a class whose interests are not identical with the interests of labor. If past experiences should be our future guide we may be able by a little diligence, a small exertion of our mental powers, to avoid the reefs upon which many of our hope laden crafts have foundered. By glancing through the annals of the history of the great "Battle for Bread," we may realize where we have mistaken the strength of the enemy, and can see at a glance where defeats could have been victories.

We are aware that the supply of labor is largely in excess of the demand; we know that hundreds of thousands of idle men are vainly seeking employment, then let us discover the cause. Have we "multiplied and replenished" to an excessive degree? No,

for it is said that "among American men there are few husbands and in American families there are few children" when compared with other nationalities. What then is the cause of this enormous supply, this great surplus of labor?

By referring to statistics we find that from 1881 to 1890 there came to the United States 5,246,613 people seeking homes and employment. It is safe to say that they found that which they sought, even if it did become necessary for a few of the "boys" to leave the old home and go a little farther west, where there were "better openings" for young men. This process has now reached a period when an English speaking person feels the need of an interpreter in the mining region of the east. Without being accused of partiality to "English speaking" people we can deplore the fact that the men who "took our places" had just come over on the last ship. There can be but little doubt that immigration has been the cause of the great supply of labor, and this supply not being met with an equivalent demand has resulted disastrously to American labor. How can the demand for labor be increased, or rather how has it been done in the past? Without including our agricultural products we may say that the demand for labor is regulated by home consumption, inasmuch as there is no mutual commercial intercourse with other nations. As we have to depend almost entirely upon home consumption for demand it has been deemed necessary to encourage home production by aid from the government. Under a "protective tariff" an extra demand for labor is created by offering inducements to capital to invest in the protected industries. The tariff is the popular remedy for low wages, but its efficiency is not equal to its popularity. Like anodynes in medical practice, it affords temporary relief but effects no cure, and leaves the patient an abject slave to the "remedy." A protective tariff may increase wages or may decrease wages. When there is a great demand for labor created by the operation of the tariff our wage-earners are benefited, but if our protective tariff attracts from foreign nations a great supply of labor the gain is balanced by a loss. When the tariff creates a greater supply than demand the effect produced upon wages is the opposite of what was intended. The protective tariff does not protect American labor from foreign labor because labor is not on the list of articles protected. A home demand for labor can never compete with a foreign supply. It is claimed that American labor is a direct beneficiary of the protective tariff, but we have failed to hear of a single instance where wages have been increased on account of increased protection. The manufacturer, quite naturally, endeavors to increase his profits by clamoring for more protection, and at the

same time procures his raw material and labor where he can obtain it cheapest, be that America or Hungary.

How can American labor be a direct beneficiary of the tariff as long as there are no restrictions placed upon immigration? The weavers, tailors and shoemakers of Europe cannot send their wares to this country without paying a duty, but they can come themselves and take our jobs at wages that we will not accept. No one receives them more cordially than the protected American manufacturer. Would it not be better for us, for these foreigners to send a few suits of clothes over here free of duty if they would only consent to remain at home? A tariff is either a *tax* or a *bounty*; a tax on the consumer and a bounty to the producer. Labor is not a producer in this instance; the producer is the owner of the plant who calculates labor with raw material as a part of the *expense of production*.

American workmen are content to pay \$150 for clothing and household goods that are not worth more than \$100, under the delusion that they will get a rebate of \$50 in wages. Probably within a week after their purchase they receive a notice of a reduction of wages, they refuse to accept the reduction and strike, then Castle Garden is called into requisition, and a few "little homes" are sold because the owner "went west" looking for a job.

The protectionists have many strong arguments that they produce in support of their policy, among which, the assertion "America pays much higher wages than free trade England," is very prominent. They claim that protection has brought about this state of affairs. They forget that free trade England pays more wages than is paid in Germany with all her protection. They have forgotten that there was a *greater difference* between English and American wages under a low tariff than there is at present. It is a fact that the percentage of increase in wages is greater in "free trade" England than in "protected" America. If protection increases wages, why is it that free trade England pays higher wages than protected Germany?

Density of population has far more to do with wages than the tariff. When the United States has as many laborers to the square mile as England, wages will have been reduced accordingly. Some may say this will not hold good because England is more densely populated than Germany, yet pays better wages. The reason for this is that the greater supply in England is more than equaled by a greater demand. There are no commercial barriers around England, she trades with the world. She refuses to buy from none and sells to all. Under the present conditions America cannot compete with England in manufactures, because the

American capitalist wants and *must have* from three to four times the profit on the same goods. An Englishman is pleased to make four or five per cent. profit on a *million dollar* sale, an American prefers to receive a twenty per cent. profit on a *thousand dollar* "home market" sale.

If we wish wages to improve we must devise some means of creating a greater demand for labor or decrease the supply. Our home market has already been stimulated with "protection" until the farmers are up in arms against the tariff, so we can not expect to increase the demand to any great extent. The only recourse is to regulate the supply by placing a restriction upon immigration.

W. S. Carter.

Federation.

THIS is an age of progress, an age of wisdom and an age of combinations and trusts. The facilities for creating wealth are increasing day by day. In the workshops and factories will be found men manipulating machines which do the work it required a dozen men to perform a quarter of a century ago, which proves the assertion that this is an age of progress and wisdom to be unquestionably true. The millions invested in the transportation of merchandise, in the mining and manufacturing enterprises throughout the land shows conclusively that this is also an age of trusts and monopolies. The most ignorant and casual observer recognizes the fact that the federation of capitalists has strengthened and benefited them and given them power to defeat unfederated labor in any contest. If federation has proven a success to capitalists, it will prove a success to labor. They have given us an example of its power for good which should be the means of suggesting a moral replete with wisdom to Mr. P. M. Arthur and cause him to recognize the selfish, unwise and unphilanthropic spirit which prompted him to say to his craft: "Mind your own business." There will be a day when such men will be regarded as enemies to reform. They will not be regarded as the Colossus "who doth stride the narrow world and we petty men walk under his huge legs and peep about to find ourselves dishonorable graves." For men are sometimes masters of their fates. The fault, dear brothers, is not in our stars, but in ourselves that we are underlings. Now, "in the name of all the gods at once, upon what meat doth this our Caesar feed that he is grown so great?" Shall we say it is the meat of self-interest? We shall think so until the distinguished chief can produce a better argument than he has ever offered upon this subject. While he has been successful in duping

some of his craft, there are thousands whom he cannot convert and who will not follow the injunction, "Mind your own business," "We can take care of ourselves," "We can fight our own battles," etc. It is very profitable to "mind your own business" if it is done with a discretion that will warrant success. It is a duty to take care of yourself (if you can), but what profit is it "to fight your own battles" if your fighting only brings defeat? Then it becomes a blessed thing to have some one to help you fight your battles. If the fighting of your own battles has in any instance achieved success or victory, then we profess to be ignorant of the history of the past, and we will hush and listen to the oracle and grow wise with listening; but we need no oracle, we need only look to the history of the recent past, which teaches us to read, remember and be wise.

Let us soberly inquire into the cause of these defeats. It is a fundamental principle of philosophy that there is no effect without a cause; so we cannot expect to prevent an effect without first removing its cause. Then what was the cause which effected these defeats? It finds its answer in another principle of philosophy that the weak must yield to the strength of the strong.

When two contending forces are unequal, victory is for the strong and defeat, disaster and ruin comes to the weak. Does not history, philosophy, as well as common sense, teach us the truth of this assertion? In a struggle between capital and labor it can not be said that the battle is not to the strong. The material or pecuniary advancement of each separate organization has been effected how? Why solely by union, which is strength. Would any of our organizations be as strong with half of its membership as with its whole? No. If not, why not? And why does each strive to enlist all who are worthy and eligible? Is it not for the purpose of giving it strength? Is this not federation in a limited sense? Then if federation has been beneficial in such a limited degree, I ask what would it be in a general sense? If federation is not a multiplicity of power and strength for our good, then we have no power, and federation must become a dead letter.

Federation is a practical question, it requires no economist to digest it or to understand its application. It will cause no "entangling alliance" except to those who would rather "fight their own battles" than to have others assist them.

Federation has few opponents, who as we believe, have thoroughly considered the question and compared its good with its evil—but where is its evil? Will some one who has the power of penetrating into all

the contingencies that could possibly arise instruct us? We have no prejudices and no opinions that are not open for correction. It is sympathy and love for the toiler that actuates us. It is no dream of ambition that inspires our action. We are soldiers of a heavy and galling cross who seek by honest means an amelioration of our condition. We would not persuade anyone to make a compromise of his judgment, but let us all debate upon this reform. It is one of the needful things in a controversy to have all the points at issue laid bare so all mistakes may be prevented. We may have been blessed with victories in the past, but is this any reason why we should not accept the strength offered through federation? Does federation render us less able to fight our battles? It gives us increase of numbers. Is this objectionable? It gives us increase of wisdom. Is this detrimental? It will unite as brothers those who have been unable to assist because they were not obligated to do so, therefore indirectly assisting our enemy to defeat us. Federation will sing the death dirge to scabism. Federation will become labor's fortress. Federation will unbind labor from its wheel of Ixion and from its Caucasian fetters, and the vultures of monopoly will seek their prey from other fields.

"Oh! happy torments when our torturers doth teach us answers for deliverance."

J. G. Cary.

The Single Tax.

TO THE editor of the *Locomotive Firemen's Magazine* my thanks are due for publishing my somewhat crude reflections on the "Single Tax" question, as also for advance sheets of the April issue of the *Magazine* containing the reply of Mr. W. P. Borland.

I have read Mr. Borland's article with special interest, because he says, "I have given the economics of the single tax a great deal of study," and further, "and although I do not wish to be considered an authority on the subject, I think I can clear up a great many points on which Mr. Marshall seems befogged."

Most assuredly I appreciate the kindness of Mr. Borland, but he must have observed that in what I had to say I was replying to remarks made by Mr. S. D. Guion, who assumes to be "an authority" on single tax matters, and because Mr. Guion's views were fully indorsed by Mr. Henry George's paper, the *Standard*. This being the case, it may possibly occur to Mr. Borland that Mr. Guion is the party "befogged," and the one who specially requires assistance in navigating his single tax pilot boat. Indeed, Mr. Borland says, "It seems to me that Mr. Guion has made an unfortunate

use of the term 'profits,' in that he has used the term in an ambiguous sense." That was my view of the matter, and still Mr. Guion had the unequivocal indorsement of the *Standard*. Here, then, we have an old time disagreement of doctors, the learned professors, men with diplomas and authority to speak to the unlearned, the rank and file.

But we are particularly struck with Mr. Borland's elucidation of Mr. Guion's ambiguous use of the term "profits." He says: "Strictly speaking, it is not the profit which arises from the use of land, but the profit which is expected to arise that determines its value." I certainly have no disposition to play upon words to increase the mystery in which Mr. Borland's language involves the discussion, still it occurs to my mind that Mr. Borland is himself badly "befogged." If proof is required, the following supplies it: "A person may be deriving an immense profit from the use of a certain tract of land, yet, if there is no competition for the use of that land, it has no value." Here all theories are ruthlessly overthrown. The value of land is determined by "competition," by rivalry—not by "profit," by "use"—simply by a contest to get possession of the land. Mr. Guion says: "It (the single tax) is not a tax on land, but on the value of land, on the value of bare land without improvements, as a vacant lot in a city." Mr. Borland says, "strictly speaking, it is not the profit which arises from the use of land, but the profit which is expected to arise that determines its value."

Persons who are giving the single tax question any serious consideration, should demand of writers who have "given the economics of the single tax a great deal of study," that they cease quibbling and state boldly and concisely what plan they have adopted to raise all the revenues, national, state and municipal, by the single tax on land—and to keep remarkably quiet until they have formulated a plan satisfactory to themselves, one upon which they can all agree, and then stick to it.

The single tax on land is an exceedingly simple proposition. The "wayfarer, though a fool," gets the hang of it at once. But the instant specifications are required, the land tax economists are at sea. One says "use," another "profits," another "competition," another "expected profits," another "rent," and so on to the end of the chapter—and of them all, Mr. Borland, notwithstanding he has given the "single tax a great deal of study," is not ready, we conclude, to propose a single tax bill to go before Congress, and which, if passed, would make the collection of revenue one of the easiest tasks known to the nation.

The writer hereof does not pretend that

he has been a close student of the single tax on land; he has been far more interested in the spectacular theory that the single tax would indefinitely increase the revenues of government, national, state and municipal, and taking writers at their word, I have stated the axiom, that all revenues are derived from labor—and hence, if under a single tax there are to be larger revenues, labor must bear heavier burdens. But, assuming that present revenues are maintained under the single tax régime, I fail to see how labor is to be benefited. What I have to say is within this circle.

If Mr. Borland can demonstrate, as he proposes to do, that labor will be benefited by the single tax—if his arguments shall be conclusive, and they must have the force of mathematical proof—no one will applaud more enthusiastically than myself.

The improvement of the laboring masses is the supreme problem of the times in which we live—and he who labors for its solution, however humbly, is a philanthropist—he loves his fellow-men—and he need not be solicitous about his future, for his name will be written in fadeless letters in the book of "God's Remembrance."

I brush aside what might be called *chests-nuts* (and I mean no disrespect to writers)—rent, use, profit, etc., and state a proposition—not far fetched—not ambiguous—a clean-cut statement.

Two men, A and B, own adjoining city lots. Put their value at say \$1,000 each. They have exactly the same "site value." A is a rich man, and as soon as he purchases his lot he improves it at an expense of \$5,000 and he derives an income from it of \$1,000 a year. B. is a poor man, and can save from his earnings only \$500 a year. He puts his money aside, saying, "when I have \$5,000, I will improve my lot"—necessarily, it will require ten years for B to obtain the \$5,000. During the period named, A has received \$10,000, all of his investment, with a surplus of \$4,000.

Now, it is held by single tax men, that B's lot should be taxed the same as A's—because it has the same "site value." In the one case, the land is in use. From it a profit is derived; in the other case, the land is *not* in use, and no profit is derived, but single tax economists would tax the two lots the same—absolutely. Is that the idea?

In the case of A, the terms use, profits, rent, one, or all, might be used in ascertaining the value of A's lot. Could they be justly used in determining the tax upon B's lot?

Here is, apparently at least, a dilemma. If B's lot is not taxed the same as A's, the "site value" theory is exploded. If it is taxed the same, use, rent, profits, etc. are practically meaningless.

In the case of A, whatever the tax might be, his revenues would be sufficient to meet the demand, while in B's case, the single tax would be likely to relieve him of his land. The Government under the beneficent sway of the single tax, would gobble it up.

True, the single tax advocates could say to B, "sell—pocket your cash and let the rich own your lot." We conclude B would sell out before the Government had taxed him out. But it is possible that Mr. Borland can put the matter in a more lovable light. It is to be hoped so, since taxing "site values" and *expected* profits, competition, etc., so complicates the subject that men doubt if the single tax is the panacea for our financial woes.

I have no desire to embarrass Mr. Borland, but I am persuaded, the reader, at the expense of reproduction, will be glad to see a few paragraphs of Mr. Borland's essay in this connection, since they come as emanations from a mind well versed in the subject under discussion. This for instance:

It seems to me that Mr. Guion has made an unfortunate use of the term "*profits*," in that he has used the term in an ambiguous sense. Strictly speaking, it is not "*the profit which arises from the use of land*," but *the profit which is expected to arise*, that determines its value.

If *expected profits* are to determine values and taxes—then, certainly, "no pent up Utica" need contract the boundless possibilities of the single tax. The "*profit which is expected to arise*" and be taxed, like faith, becomes "*the evidence of things not seen, the substance of things hoped for*."

Suppose one farm in Dakota produces fifty bushels of wheat to the acre. Why not *expect* the same from all the arable lands in the state and tax them accordingly?

But, says Mr. Borland, "a person may be deriving an immense profit from the use of a certain tract of land, yet, if there is no competition for the use of that land, it has *no value*." Hence, value arises from competition—not from use or profits, nor rent. Competition settles values according to Mr. Borland, Ricardo's theory of "*rent*" to the contrary notwithstanding.

Throughout New England, farms are being abandoned by thousands. Houses are going to decay, and the land has gone and is going back to a wilderness, as when the Algonquins ruled, and the Pilgrims made Plymouth Rock renowned in song and history. Notwithstanding these things, the states wherein these lands are situated, place a taxable value upon them. There is no "competition" for these lands, they are not used, their owners derive no profit from them. Still they are said to have a value and are taxed.

I shall, with the army of the *Magazine* readers, await with no little anxiety for Mr.

Borland's continuance of the discussion, and it may be, if I do not wear out my welcome, that I shall again ask for some of your valuable space, chiefly for the purpose of ascertaining if revenues, whatever may be the process of securing them, can be derived from any other source than labor.

Charles Marshall.

Socrates.

(Conclusion.)

SOCRATES, as we have stated, refused the elaborate discourse that his friend Lysias, the most able and powerful orator of his time, had prepared for him; because, as he stated, it did not fit him. He firmly refused to appear before his judges in the submissive posture of a suppliant, or make use of any voice but his own in his defence. His plea was a bold, manly and generous effort, strong in the greatness of his soul, and worthy the noble liberty of that great philosopher. Plato, who was present, transcribed it afterwards, and from it composed the work which he calls "The Apology of Socrates," one of the most consummate masterpieces of antiquity.

Melitus, who accused Socrates of unfaithfulness to the gods, and corrupting the youth of Athens, knew that he could not prove these charges, but by artful coloring had given them a likelihood that certainly must have impressed the judges with the belief that they were well founded, notwithstanding the fact that there was not a word of truth in all that the accusers had advanced.

"I am accused of corrupting the youth," replied Socrates, "and of instilling dangerous maxims into them. My whole employment is to persuade the young and old not to entertain too much love for the body, for riches and all other precarious things, of whatsoever nature they be; but to let their principal regard be for the soul, which ought to be the chief object of their affection; for I incessantly urge to you that virtue does not proceed from riches, but, on the contrary, riches from virtue; and that all the other goods of human life, as well public as private, have their source in the same principle." Continuing, he said: "I shall always exhort and reprove you: my good friends and citizens of the most famous city in the world for wisdom and valor, are you not ashamed of having no other thoughts than of amassing wealth, and of acquiring glory, credit and dignities, while you neglect the treasures of prudence, truth and wisdom, and take no pains in rendering your soul as good and perfect as it is capable of being?"

To the charge of abject fear and meanness of spirit, he replied with great force of logic.

It was powerful in the simplicity of its eloquence. When he had drawn attention to the services that he had given his country in the field and in the senate, he concluded: "Every man who would generously oppose a whole people, either among us or elsewhere, and who inflexibly applies himself to prevent the violation of the laws and the practice of iniquity in a city, will never do so long with impunity. It is absolutely necessary for him who would contend for justice, if he has the slightest wish to live, to remain in a private station and never to have any share in public affairs."

The courageous bearing and majestic deportment of Socrates while delivering this discourse, was not pleasing to his judges and they declared him guilty. However, he was informed that an abatement of the condemnation of death would be made by he himself imposing a penalty of banishment, imprisonment or fine; this he refused, because that would be to acknowledge himself guilty; an answer that so much offended the judges that they condemned him to drink hemlock, a common punishment of those times.

A friend and disciple of Socrates, named Apollodorus, advanced to him expressing his grief for his dying innocent. "What," replied Socrates, "would you have me die guilty?"

Plutarch, to show that part of us that is infinitely more noble than our body, that lies in man's power, cites that admirable sentence of the great philosopher after the trial: "Anytus and Melitus may kill me, but they can nothurt me."

Socrates went to prison, where he remained for thirty days, upon which Seneca, that deep thinker and wise writer, remarks that it lost that name when he entered it, and became the residence of virtue and probity.

The cause of Socrates' long imprisonment was that the Athenians sent every year a ship to the island of Delos, to offer certain sacrifices, and it was prohibited to put any person to death in the city from the time that the priest of Apollo had crowned the poop of this vessel, as a signal for its departure, till the same vessel should return. During this time Socrates was visited by his friends, to whom he discoursed with great tranquility of mind upon the wisdom of philosophy. Sentence had been passed upon him the day following the departure of the ship, a voyage that occupied thirty days.

The same day that the ship was to arrive from Delos, Crito, his intimate friend, came to him early in the morning to notify him of that fact, and at the same time informed him that an opportunity to escape was offered. The jailer, he said, was gained: he would find the doors open, and a safe retreat awaiting him in Thessaly. Socrates

laughed, and asked him "whether he knew of any place out of Attica where people did not die." Crito urged the matter very strongly, using every argument to move him,—his friends' grief, his country's disgrace at the shedding of innocent blood, and lastly a father's love for his children's welfare,—but to no purpose.

Socrates listened to him with attention and praised his zeal, while he expressed his gratitude. I shall make one quotation from his wonderful reply to Crito on that occasion. Let us be careful before we ridicule it, as the sordid education of to-day may inspire. "What are you going to do, Socrates? Is flying from justice in this manner aught else than ruining entirely the laws and the republic? Do you believe that a state can subsist after justice is not only no longer in force in it, but is even corrupted, subverted, and trod under foot by individuals? But it may be said the republic has done me injustice, and has sentenced me wrongfully. 'Have you forgot,' the laws would reply, 'that you are under an agreement with us to submit your private judgment to that of the republic? You were at liberty, if our government and regulations did not suit you, to retire and settle yourself elsewhere; but a residence of seventy years in our city sufficiently denotes that our regulations have not displeased you, and that you have complied with them from an entire knowledge and experience of them, and out of choice. In fact, you owe all you are, and all you possess, to them—birth, nurture, education and establishment, for all of these proceed from the tuition and protection of the republic. Do you believe yourself free to break through engagements with her which you have confirmed by more than one oath? Though she should intend to destroy you, can you render evil for evil, and injury for injury?'"

Socrates employed the last day of his life in entertaining his friends upon the great and important subject, the immortality of the soul. "If what I advance," said he, "upon the immortality of the soul proves true, it is good to believe it; and if after my death it proves false, I shall still have drawn from it in this life this advantage—of having been less sensible here of the evils which generally attend human life."

At last the fatal ship returned from Delos, whose arrival, in a manner, gave the signal for the execution of Socrates. Accepting the cup, with a calm and serene countenance he drank off the whole draught as though sipping at his table.

Some time had passed after the death of Socrates before the people of Athens had realized the enormity of the crime. Melitus was condemned to death and the rest banished. Plutarch observes that all those who had any share in this black calumny, were

in such abomination among the citizens that no one would give them fire, answer them any question, or go into the same bath with them, and had the place cleansed where they had bathed, as being polluted by their touching it, which drove them into such despair that many of them killed themselves.

To further display their veneration, the Athenians caused a statue of brass to be erected to him, of the workmanship of the celebrated Lysippus, and placed in one of the most conspicuous parts of the city. They also dedicated a chapel to the memory of this great teacher, which was called the "Chapel of Socrates."

Thus ended that magnificent figure of antiquity, so noble and elevated in his teaching, grand in his magnanimity, modest yet fearless in his convictions; that gave to his times a halo of glory and to humanity for succeeding generations that inspiring principle—that guilt is the only evil a wise man ought to fear.

Tim Fagan.

Labor and the Single Tax.

HERBERT SPENCER says, "given a race of human beings having like claims to pursue the objects of the desires; given a world adapted to the gratification of these desires,—a world into which such beings are similarly born—and it unavoidably follows that they have equal rights to the use of this world. For if each of them has freedom to do all that he wills, provided he infringes not the equal freedom of any other, then each of them is free to the use of the earth for the satisfaction of his wants, provided he allows all others the same liberty. And conversely, it is manifest that no one or part of them may use the earth in such a way as to prevent the rest from similarly using it; seeing that to do this is to assume greater freedom than the rest, and consequently to break the law."

The foregoing text is made to support a great many different lines of reasoning, but all of them ultimately arrive at the same end, viz: The emancipation of labor, and the social regeneration of mankind. Among the advocates of the different schemes proposed, can be found many who (more zealous than wise as I believe) claim absolute perfection for their particular reform. Thus, there are nationalists who tell us that labor will never obtain its just share of the wealth it produces, until their ideas are adopted; the same claims are made by state, and Christian socialists, anarchists, communists, Pentecostites, single taxers, and I have before me a pamphlet containing a very plausible argument, showing that the prohibition of the liquor traffic is all that is necessary to secure to labor its just rewards.

I am not one of those who believe the "single tax" to be the *ultima thule* of reform, but I do believe, that before any permanent benefit can accrue to the great mass of workers, the rights of all persons to share in the bounties of nature, on equal terms, must be secured to them. That the single tax will secure those rights easily, effectually and without interfering in the least with government as at present constituted, can be logically demonstrated. For that reason I am a "single taxer." It was long held that wages were drawn from capital and the law of wages used to be stated thus:

Wages depend upon the ratio between the number of laborers and the amount of capital devoted to their employment. It was taught that there was always a portion of capital (called the wages fund), set aside for the payment of wages, and it was easy to demonstrate from this standpoint, that any increase in the number of laborers must tend to reduce wages, thus excusing from a Malthusian standpoint existing mal-adjustments in our social system and inculcating in the minds of workingmen the belief that their only hope for maintaining the rate of wages lay in restricting the number of persons who could participate in the fund. From this idea have sprung the restrictions imposed by trade unions, the agitation for a shorter work day, many of the contemplated restrictions on emigration, etc. But the wages fund theory has been refuted so thoroughly as to make it ridiculous. It has been demonstrated that wages are not drawn from capital at all. Wages are drawn from the product of labor, and the true law of wages is this: "Wages depend upon the margin of cultivation, falling as it falls, and rising as it rises."

By the margin of cultivation is meant that point at which labor is free to engage in production for itself, and the truth of the law becomes apparent when we consider that no person will work for another for less than he can make by working for himself. Thus, call the product at the point of highest production 100, and at the margin of cultivation or point where labor is free to engage, 20, wages will be no more than 20, whether labor is applied at 100, 80, 60 or 40, simply because labor can earn no more than 20 by producing for itself. This is the reason why wages are higher in new countries than in old. Natural opportunities have not all been appropriated and the margin of cultivation or point at which labor is free to engage, is higher than in the old countries. Adam Smith states this clearly in chapter vii. book iv. "Wealth of Nations," he says: "Every colonist gets more land than he can possibly use. He has no rent, and scarce any taxes to pay."

He is eager therefore to collect laborers from every quarter and pay them the most liberal wages. But these liberal wages

joined to the plenty and cheapness of land, soon make these laborers leave him in order to become landlords themselves, and to reward with equal liberality other laborers who soon leave them for the same reason they left their first masters."

In countries where natural opportunities are all appropriated, and labor is not free to engage at any point, wages will of course be fixed arbitrarily, and always at the lowest point at which laborers will consent to live and reproduce their kind. Remember, I am speaking always of the great mass of workers; I am not considering the effect of trade laws upon the wages of certain classes of workers, as such laws are arbitrary, and become operative only on the class which they are intended to affect. Trade unions are but the natural outgrowth of a rotten social system; and although it must be admitted that they have done and are still doing work of incalculable benefit to labor, and work that could be done in no other way (existing social conditions considered), it must also be admitted that, under conditions of freedom, they would become entirely unnecessary.

From the foregoing law of wages must be inferred—

1. That as wages are drawn from the product of labor, and not from capital, increase in the number of laborers can only mean increase in the product from which they are paid; therefore, increase in the number of laborers is not the cause of decrease in wages.

2. That if the margin of cultivation can be raised, wages must raise.

The "single tax" will raise wages, because it will totally annihilate speculative rent, and thus raise the margin of cultivation. Let us see how this will be done.

To begin, let us consider what are the true relations of labor and capital. Three factors enter into the production of wealth—land, labor, capital. Two of these factors, land and labor, are essential. The other factor is not essential; it is but auxiliary to labor, and might, in fact, be considered as one form of labor, as its only function is to increase the product of labor when applied to land. Thus labor applied to land produces wealth; capital and land alone can produce nothing, but labor and capital applied to land will produce more than labor working alone. The term land, economically considered, includes all natural materials, forces, and opportunities; in short, everything freely supplied by nature, from which wealth is or may be produced, is included in the term land.

Capital is wealth used to produce more wealth, or wealth in the course of exchange. All wealth is not capital, but all capital is wealth. As there could be no wealth without labor, so there could be no capital without labor. How, then, can capital oppress

labor? It cannot. Those who speak of the "oppressions of capital," are really speaking of the oppressions of the capitalist; and even then they are scarcely correct, unless the capitalist is also a land owner, as the monopoly of natural opportunities is the only power on God's footstool that may be used to oppress labor.

W. P. Borland.

[To be continued.]

The Woman Question.

IT will not be considered out of place, I surmise, to offer some suggestions on the woman question, for publication in the *Firemen's Magazine*, in which is to be found a "Woman's Department" conducted by one of the most graceful and incisive writers of the period.

For many years the woman question has been up for debate. It has been presented and discussed from almost every conceivable point of view, woman's rights, woman's sphere, woman's employment, woman's education, etc. As a consequence the rights of women have been increased, the sphere of women has been broadened, the education of women has taken a wider range and women's employments have multiplied. Still it is asserted that woman's emancipation from the thraldoms of old-time ignorance, prejudice, superstitions and cruelties has not come, and is yet a long way in the distance, and, as a result, the battle for full equality rages. The women won't capitulate, they won't arbitrate, they won't compromise. Often defeated the women are never conquered, and they never retreat; failure emboldens them. They belong to the "Try, try again league," and strange to say, their worst enemies are found in their own ranks. My attention has been called to an article in *Kate Field's Washington*, which treats of "Women in the churches," more properly I think, "Women in the pulpit."

The Christian church has been from the first not a little chary in the matter of conferring ecclesiastical power upon women. Why so? Where rests the blame? Who is responsible? It appears that in the M. E. church a movement was set on foot to secure for women the right to be delegates to the conventions of the church. The M. E. church in the management of its spiritual and fiscal affairs has been essentially masculine—only men were "called" to do the brain work of the church. There were enough inferior places for women. But they were not satisfied, they wanted their sphere extended, they wanted to be delegates, have a voice in shaping the policy of the church in all matters. On the question of admitting women delegates, some ministers voted "aye," because, as they said, their wives told them to, others voted "nay," because they had

received instructions from their wives to oppose the proposition, and therefore *Kate Field's Washington* says: "If the wives and daughters of those representative Methodists had argued in behalf of women, their husbands would not have dared to refuse what is manifestly just. Women are to-day their own worst enemies, and until they believe in their sex it is asking too much to expect greater consideration from men." I do not agree with what Kate Field says. To oppose woman's participation in church government is not entirely owing to man's ignorance and prejudice—that is to say, the men of the present. The writings of Saint Paul are canonical and binding, inspired. They are,—"Thus saith the Lord,"—and this has been the great trouble from the first. Let us see how it reads. St. Paul addresses Timothy as follows:

"Whereunto I am ordained a preacher and an apostle, (I speak the truth in Christ and lie not), a teacher of the Gentiles in faith and verity, I will therefore that men pray everywhere, lifting up holy hands without wrath and doubting. In like manner also, that women adorn themselves in modest apparel, with *shamefacedness* and sobriety; not with braided hair, or gold, or pearls, or costly array. *Let women learn in silence with all subjection. But I suffer not a woman to teach, nor to usurp authority over the man but to be in silence.*"

I have italicised somewhat, that it may be seen that St. Paul, who said he spoke "the truth in Christ," is responsible for woman's secondary place in the church. St. Paul, "an apostle," did not permit women to "teach" and he commanded them to keep silent. To deny the inspiration of St. Paul in the M. E. church or in any other orthodox church is rank heresy, treason.

In such cases what do women say, who are "Bible Christians" and loyal to the church? Well, they just differ with St. Paul and fight the more resolutely for recognition. They won't remain silent. I admire their pertinacity, and they will finally win a victory. *Kate Field's Washington* greets women as follows:

"Without women the men wouldn't have church enough to be buried from." said Mrs. Lathrop at the Women's National Council. Granted. What of it in the face of sentimentality and unreasoning prejudice?

"Three fourths of the congregations are women," declared Mrs. Lathrop. Well, doesn't this prove that women could remove the barrier if they chose? "Women do nine tenths of the work, and raise seven-tenths of the money." Of course they do: they work and beg for men. There is the truth in a nutshell.

In all of this, the point I want to make is that women should fill all the pulpits in the country. Preaching is eminently woman's work. Preaching suits her "sphere." She has all the required ability. Preaching is not hard work. It requires neither mental nor physical strain. It is not as exhaust-

ing as school teaching, and more than one-half of the teachers in the country are women. As a profession "divinity" suits women better than law or medicine. The compensation is fair, sometimes large, as for piety the women have about all there is in the world, as has been said without women there would be no church, and since women are the life and soul of the church, why not let them have the pulpits? No rational objection can be presented.

As matters are now conducted, the church needs reforming, more equality and less quality, and I think the women could if given a fair show inaugurate the remedy.

Frank Forrester.

The Coming Contest.

IF I am correctly informed in the matter, one of our resolutions, one of our demands was destroyed at the late Ocala, Fla., convention, and how long will it take shrewd politicians to destroy the last one of them? Then after years of toil and struggle with old parties we will be left without a party, entirely helpless and powerless, at the mercy of both of the old parties which we know are both in favor of the national banking system, and we have every reason to believe are aiding the British in their schemes to rob the American people. "United we stand, divided we fall." Can we be united by trying to reform old parties, can we do so and unite with our brothers in the state of Kansas? Surely not—we know that the people of Kansas will never go back and try to reform old parties and we have no right to ask them to do it. We should forever respect the people of Kansas as the great leaders of all our reform parties; we should stand by them and support them because the road that leads to victory has been marked out and traveled by the people of Kansas. There is no need of any of our brothers going astray because the road is plain and wide enough for us all to walk in and it is the duty of every producer in these United States both north and south, from the Atlantic to the Pacific to unite with our brothers in the state of Kansas. Come let us rally and fall in line and march with them to victory. And above all things let us resolve to do all in our power to educate our weak brothers, because it is a duty we owe to ourselves, to our country, to our Creator, to our children and to all future generations.

In conclusion I feel it my duty to say to you all with the patriotism and fervor of Patrick Henry, George Washington, Thomas Jefferson, Andrew Jackson and all the great and good men that have gone before us, we must cleave to our resolutions because upon these resolutions depends the fate and destiny of our nation for ages and ages to come.

Nathan Hiatt.

A Roundhouse Sermon.

By Rev. Emory Polisher, Dec. Dec.

MY BRETHREN: I have been greatly troubled in view of this appointment to preach to you. My trouble has been to find a text that would suit my congregation—something that would wake up the boys, make them listen while I am talking and send them home thinking about something that sticks to the ribs of their consciences, that I could couple to the train of their reflections, grapple their memories, cling to them in their cabs and when at home—or away from home, and make wiser and better men of them.

I have been greatly worried. I spoke to Mrs. Polisher about the matter—and she, good woman that she is, told me that it was time enough to fire up after I got to my engine. She said go and sing a good song or two, talk with the brethren, find out what they need and then give it to them. I took her advice and here I am without a text—and I must trust to Providence. I've got to make the run—and though things look a little gloomy, I hope our singmill will help me out and that we may have a refreshing meeting. Please turn to page 275 of our hymn book, and find hymn 318 as follows:

Come, let us sing as best we can,
High praises of the workingman,
The workingman, who dares to stand,
And grasp a brother's good right hand
And loves his God, his wife and lodge,
And ne'er was known to kick or dodge.

Come, let us sing of brothers' boon,
Who spend no time in the saloon,
Who're out to day in their Sunday clothes
Without a whisky-painted nose,
Whose smiling children are nicely clad,
Because they have a sober dad.

Oh yes, it makes us glad to sing
And give a tuneful offering
In praise of men who have the sand
Right and justice to demand,
And but for whom this world would be
A wilderness, from sea to sea.

Brother R. H. Side will please pitch the tune, while each one of the audience, with throttle wide open, will make this old roundhouse ring with melody.

There, that song does me good—and I feel more like preaching than I did when I took this stand. I now have a number of texts in my mind. I see there are some seats vacant and the people are dropping in. I see by my watch that we have time for another song before regular services begin, and I ask you to turn to hymn 68 P. M. It is a favorite song of mine. It mellow the audience, gets the people in shape to listen to facts, and is really often better than a sermon. I see our choir is here in full force, but I don't want the choir to do all the singing. After I have read the hymn let the singing begin.

"Come on my comrades in distress—
The world's a howling wilderness

And we are short of manna.
But we are going
Where milk and honey's flowing.
Where the fig and banana
Is growing.

"Comrades ope your eyes in wonder,
The blessed land's just o'er yonder,
O, don't you see the Jordan foaming?
Still proceeding
In the goodly land we'll soon be feeding
Where there'll be no more roaming
Nor stampeding.

"Comrades don't you feel like shouting,
When you think of the glorious outing.
That's surely coming to the brave—
The men of sand—
Men who organize and stand—
However cowards may croak and rave—
Firmly stand.

"Comrades will you do and dare?
Will you pledge yourselves in prayer
At this sacred shrine to-day.
Altogether?
Pighting faith to one another
In storm and shine to stay—
A brother?

"We will, amen, so mote it be,
The battle cry from sea to sea.
Once more, 'tis let my people go"—
They shall be free.
Though deep the tide of the Red sea—
Free, in spite of hell and Pharaoh—
God's decree.

While you have been singing, my brethren, I have been thinking about my text. The song we have just sung, sort o' rouses up my imagination. In fancy I see a mighty host of workingmen. I see them along the line of a great railroad, with battering rams, and hooks and ladders, tearing down their lodge houses.

I see a man, with a crown on his head, and a scepter in his hand. He has a long, waving plume in his hat. He is mounted on a pale horse. His steed is royally caparisoned, and yet, he looks like the devil. He is surrounded by a retinue of snobs. Thousands of workingmen stand before him. Their heads are bowed. I hear the word of command, "Down!" and the hosts of workingmen fall on their faces in the dust. Some crawl to where their commander is mounted on his steed, and lick his boots. Others shout, "Long live the Czar." Some yell, "O King, live forever." In my bewilderment I exclaim, "Where am I?" and the answer comes, "In Pennsylvania—the land of Penn and of Franklin, the land of old Independence Hall—the land where the Declaration of Independence was first read." Then I ask, "Who is the Royal personage on the pale horse?" and the answer comes—"Corbin." I ask, "What is the matter with these thousands of workingmen?" and the answer is, "They have no sand." Then I cry out, "O Lord, give the workingmen of my country sand"—and I raise my voice, I imagine, to such a steam whistle note, that it wakes me up from my reverie, but it gives me a text.

SAND.—What workingmen stand in need of is sand—fighting sand—what is called,

sometimes, "spine," "staying qualities." What Sam Jones, the great evangelist, calls "stickability." It means something a little more than courage—physical courage. There is no brag, bluster, bravado about sand.

A poet—I guess he was a poet, said "there are sermons in stones," and there is religion in sand. Take the sand out of a man and he is of no more use in this world than a dog which has had his bark removed by a *nuir romica* button. The *scab* has no sand in his composition—no sand in his craw.

Is there a man in my audience, who has yet to learn that life is one long, ceaseless battle? Who has not read Longfellow's "Psalm of Life" in which he says:

"Life is real, life is earnest,"

and further, that

"In the world's broad field of battle,
In the bivouac of life,
Be not like dumb, driven cattle—
Be a hero in the strife."

That's my idea. The central proposition is sand.

Only recently a captain in the U. S. army was removed because he lacked sand. He was all that could be desired on dress parade, but he couldn't stand fire. In the presence of hostile Indians, in a fight, where bullets whizzed, his chicken heart went down into his boots and he disgraced the army. He was deficient in sand—and so is every man who abandons his convictions.

The man without sand is without a mission in this world. He is of less consequence in the world than a cock sparrow—which kills caterpillars. Of less use than a glow worm in the grass that trims its own headlight to guide it through the gloom; less ornamental than the fire fly with its dynamo in its tail; of less service than scavenger swine and buzzards. I declare to you, my brethren, I know of nothing in all animated nature that crawls, so useless as a man, or the thing we misname man, who, or which, or that, has no sand in his craw.

But why preach longer to-day? Some one says to "go on." Thank you, I don't want to make you tired. To hear my brother say "go on" cheers me. In an instant, my fancy is on the wing. The army of sandless men disappear. Another mighty host comes into view. They constitute the grand army of workingmen who have sand. They are giants. They stand erect. The line extends across the continent. Turn which way I will, I see their banners waving in every breeze. Their camps are in every valley, and on every mountain elevation their signal fires are burning. They are in battle array.

I am preaching to a detachment of this grand army to-day. Here are veterans. I

can see in the flash of your eyes that you mean business. I can almost hear the throbings of your hearts. They are beating no tattoo; no retirement from the field; the battle is on. In the near future there is to be a victory, an emancipating, disenthraling victory for labor—or a defeat so overwhelming and crushing, as to defy exaggeration. And here, on this rudely constructed pulpit, here where the aisles have no carpets—here where hard, uncushioned benches serve for pews—here with my 25-cent Bible and 10-cent hymn book, with my soul baptized with inspiration, I predict a victory for men of sand. Amen.

We will now sing our doxology and be dismissed.

Sometimes brethren our faith gets weak.

And we fear we cannot stand
In the fight when Greek meets Greek—
Let our prayer be "give us sand."

Sometimes brethren things look blue.

With foes on every hand—
Then there's just one thing to change the hue,
Pray mightily for sand.

By and by brethren, the way will be bright.

That leads to the promised land,
But never forget you've got to fight—
That victory depends on sand.

A large measure of sand is what we need.

It is the great command,
And every brother should take heed,
And fill his craw with sand.

Some Things We Would Willingly Lose.

HERE'S a very ancient saying which some people claim is true,
That Nature has a work for each created thing to do;
For man and beast, for shrub and plant, for weed and grass and tree,
For cockroaches, for snakes and fleas, insects of low degree—
Each one is for a purpose made, tho' oft it seems to us
We'd part with several different breeds and never feel the loss.
Go interview a "buggist" who does fervently admire
Those forms of bug and beetle life, which other people tire,
And he will say, of all the great created mass of things,
The most entrancing studies lie beneath the beetle's wings.
You may stop and chatter with the man who seems to take delight,
In stuffing skins of bird and beast from morning until night;
By him you'll straightway be assured in language strong, profuse,
That every beast and every bird has its especial use.
Well, that may be, we will admit there's much beyond our ken,
Yet to a few we'd say adieu among both brutes and men.
For instance the mosquito may have *his* particular use,
But we must say that he subjects his rights to rank abuse.
The house fly, too, may have his place on Mother Nature's map,
Yet when he comes cavorting round and spoils our morning nap,
We rise in wrath and swear, by all the deities deceased,
We would not be disconsolate if his existence ceased.
Akin to these the woman is who goes off in the spring
And stays till fall because, she says, she's sure her health 'twill bring;
E'en now she weighs more than her "man" and eats more than her horse.
How gladly would we "wipe her out" and never know remorse.
Then there's the paper's "funny man," he's really getting worse;
His jokes are stale, we think that his barouche should be a hearse.
Then there's the brakeman who all night upon my seat will sit,
And never thinks to shovel down some coal into the pit.
Then there's the noble engineer who quietly leans back
And goes to sleep and lets her throw the water out the stack.
Then there's the "railway hog," who always thinks he has a right
To take a snooze and, also, all the vacant space in sight.
The Chinaman, the Mafia, also the hostile Sioux,
Would not be missed were they to go and join the angel crew.
And there's the man who never seems the brilliant side to view
Of things, but sees the gloom and wants the rest to see it too.
And there's the man who smiles and says, "Old man lend me a case,"
But never brings that dollar back unto its proper place.
Then there's the opera crank who always *will* applaud and thus
Calls back some antique chestnut to spring ancient gags on us.
With these we have the actress whose divorces count a score,
She only needs the time and chance to have a dozen more.
Then there's the man who always comes and offers his advice
Which you don't want nor wouldn't have at any time or price.
These are but samples, readers dear, I'm sure you will admit
You all know *some* whose sudden deaths you'd not deplore a bit.

MINNEAPOLIS, MINN.

Spasmodic.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the *tenth day* of each month.

Eccentric's Problem vs. Vulcan.

MR. EDITOR:—Heretofore I have been in this Mechanical Department of the *Magazine* an inquirer after mechanical truths, not an asserter and contender for such truths from my own standpoint. My good friend "Vulcan" seems to differ with my conclusions in a mechanical way in January *Magazine*, 1891, page 28. In his article in February *Magazine*, 1891, page 123, only so far as he refers in this article to what seems to him as unsettled questions is this to be considered as in the nature of a reply. All unquestioned matter in my article herein referred to I understand its correctness is conceded. As Mr. Lockwood advanced these ideas originally in reply to my "A few Problems," January *Magazine*, 1886, page 36, I shall ask him to make reply to "Vulcan" as herein quoted. "Vulcan" has not in his article, where he refers to the "publication in a comic paper," for "lots of fun," treated the quotation correctly or in his usual fair manner. I referred him to Mr. Lockwood's corrected answer in *Magazine*, December, 1888, page 893, and to the following quotation therein: "The bottom of the wheel is at rest, that a point above this point of rest, which you can neither see, conceive or measure, has commenced a movement as compared with the top, the top is moving at four times the speed." The article above referred to treats, with illustrations, this subject at great length, and I, for one, would like to hear "Vulcan" reply with some reasons, and not by mere assertion. Before we apply power to a locomotive driver, we certainly ought to know how that wheel moves and works.

In the *Locomotive Engineers' Journal* for March, 1891, page 251, the same question is made a matter of inquiry by one "Cross-Head," and from which I quote:

"Messrs. Editors: Does any one part of a wheel move faster than another? One of our great dailies recently published the following in its columns of 'To Correspondents': Is this a correct answer, and is the same line of reasoning applicable to a locomotive's driver?" Signed, "Cross-Head."

"G. E. C. The motion of the entire wheel of a bicycle or road wagon is uniform. It would be impossible for one part of the wheel to travel faster than another." Signed, "Cross-Head."

Asking for this article "Vulcan's" and Mr. Lockwood's kindly consideration, I am as heretofore

Eccentric.

MR. EDITOR:—I am pleased to see "Eccentric Strap" once more among us. I had begun to fear we had lost him. It is a pleasure to know that "Eccentric Strap" is at last where he belongs, on the right-hand side. I congratulate him on his success. I also congratulate him on being clear-headed enough to understand my demonstration of the action of the injector. It seems "Eccentric Strap" has a great advantage over "Vulcan" in that respect. In regard to the question propounded by "E. S.," I should say, from a casual examination of the subject, that if an engine had a front cylinder-head blown out, and was working only one side, that if the front port on the disabled side was not properly covered by the valve, the engine would not have the same power to stop by reversing as if the port was fully covered, for this reason: When an engine is running reversed, air is sucked in through exhaust pipes, and is forced by the action of the piston into the steam and dry pipes; a pressure exceeding boiler pressure is thus created in the cylinders and steam pipes. This we know, as we can note the effects on the gauge and pop, by opening the throttle. Now, it would follow that in the case stated by "Eccentric Strap," as there is direct connection from one steam chest to the other through the steam pipes, if the front port was open there would be much of the pressure that could be applied to stopping the engine, escape to the atmosphere. At least that is the way it looks to me.

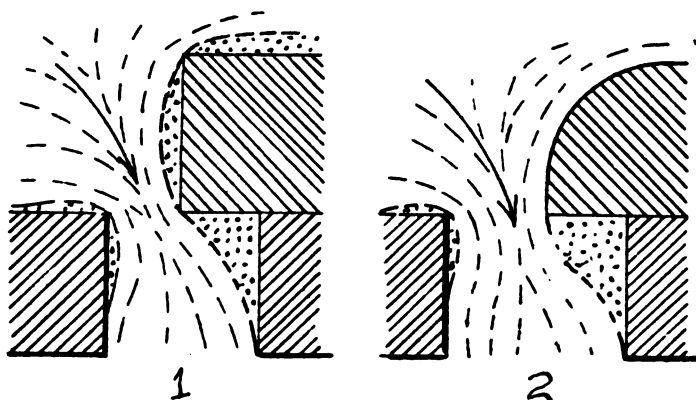

Vacuum.

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, Room 26, Atlantic Building, Washington, D. C., expired during the month of April, 1891, and are now free to be used by anyone, viz.:

Car axle, W. F. Brooks.
Car brake, W. C. Baker.
Sleeping car, R. P. Leary.
Carspring, P. G. Gardner.
Car coupling, Carlton & Killmer.
Car truck, C. A. Thompson.
Apparatus for avoiding collisions, Ryder & Biemond.
Rail joint, J. M. Clem.
Car brake, G. Westinghouse, Jr.
Carspring, J. C. Pickles.
Cinder fender for cars, D. E. Dutron.
Signal apparatus, T. S. Hall.
Switch, J. M. Clem.
Car ventilator or screen, I. A. Salmon.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents, by applying to Mr. Brock, whose address is as given above.

Slide Valve Details.

There has been too little attention paid in shops to the valve itself—particularly for stationary work. Any block with a cavity in it seems good enough in many cases; poor design and construction do not stick out so plainly as when the engine is on wheels and steam harder to get.

It is highly desirable that all edges past which the steam must flow, be rounded so as to permit the greatest freedom of motion. Figure 1 shows the course taken by steam in passing through an opening with straight sharp edges and angles. Figure 2 shows how they should be rounded. Care should be taken not to let the rounding extend clear to the working face of the valves, else when the latter is worn down the lap will be reduced. The dotted portions represent dead places, free from current. This desirable little detail is generally neglected.

ARCH.—As a general thing the arch is truly arch-shaped because rounded outlines best allow the steam to pass out with a minimum of friction. There are generally horns or lugs for the reception of the valve-stem; and these generally have, instead of holes in which the rod is screwed, slots in which it plays so that as the valve-rod and seat wear the valve can drop down without impairing the centrality of the rod in the stuffing-box.

The valve may be attached to the stem by means of a yoke surrounding it, which will permit its keeping to the seat without putting the stem out of center in the stuffing-box.

The passages should be as short as possible, and as to their cross-section, judgment must here be exercised in order, in fleeing from the evils of friction and wire-drawing, not to run into that of excessive clearance. But whatever is their cross-section they should be as smooth inside as they can be made; and should be free from angles or even sharp bends.

As to the material of which the valve is made—cast-iron is the most usual, although English locomotives have to a very great extent brass, gun-metal, bell-metal, and phosphor-bronze. In this country there are seldom to be seen any but cast-iron valves. As a general thing it is best to have the valves and the cylinder cast from the same ladle so that they will be practically of the same hardness. If there is any difference between them the valve should be the softer, as being the most easily replaced when it has worn.

Robert Grimshaw.

Question on Valve Motion.

Our old friend "Eccentric Strap" is still alive, and glad we are to hear from him again, and to hear that he has realized his anticipations, and has reached the right side, and is thus in a position to try some of his theories by proving them good practice. The question asked by "Eccentric Strap" amounts to this: What will be the effect of reversing if you can not have any compression by it? It is a generally well known fact that when an engine is reversed while running ahead, the cylinder becomes an air pump, in which the piston draws air from the smoke arch and forces it, into what? Well, as the action is just the opposite of using steam, it follows that the compressed air must go just the other way to the steam; it therefore goes into the steam pipe, and if the throttle be opened, and the compression is greater than the steam pressure (as it often is), the air will be forced into the boiler. But in the case as stated by "Eccentric Strap" the other end of the branch pipe was open, and afforded a ready means of escape for the air, and as there was thus no compression in the cylinder, the effect of reversing was lost, and it did not make any difference, or any appreciable difference, except the throttle be opened to get the help of steam.

Vulcan.

"Pulling her Fire."

J. M. Brayton asks about the cause of an engine "pulling her fire," which must be what the hard coal firemen of the Middle States call "hauling her fire," and consists of the exhaust taking a strong hold on the fire near the back end and drawing it up toward the flues. In most hard coal burners the fire is kept in a wedge shape; its apex or sharper point ahead and the heavy end near the fire door. When engines get to hauling their fire badly, they often change this order of things, and have the fire heaped up against the flues, and then it is all up with the steam, and a heavy job to get the bank of fire out, and get it thin enough to allow the exhaust to work it at the front end. An engine that hauls her fire is generally a good steamer as long as you can manage to keep the front end light enough, and the proper way to fire them is to have the back end very heavy, so as to force the air drawn in by the exhaust through the fire at the front, thus giving it no chance to draw the coals from the back end to the front. Changing the draft or petticoat pipe down lower will make the exhaust heavier on the front end, and easier on the back, thus often curing them of that bad habit. I must however say that I would rather fire one of this kind than one where the fire is handled so easy as to let it die out for want of work, for if once posted about the habit of "pulling" or "hauling" you can generally guard against it by loading her down at the other end, and trusting to her to feed it ahead. *Vulcan.*

Current Notes and Comments.

Theory. Theory is a word which has great terrors for some, but it should never have, for theory is only another name for speculation. The very men who abhor theory as a term often theorize the most. It is because the name is so frequently misapplied that men are afraid of it. Theory is supposed to be something which a practical man, so-called, detests; but the practical man, of all others, uses it the most in daily work. He cannot see the actual cause of the grunting in the cylinder, but he forms a theory as to what it is, and soon finds the remedy. Would that we could test all theories as promptly! Students and others theorize, or speculate in their researches upon the causes of cylinder condensation, but they cannot put them to conclusive tests. Such men are called theorists, in distinction to practical men. We are all theorists in daily work when we cannot obtain positive proof. Where we cannot see with our eyes and touch with our hands, we must speculate, conjecture; build on a slight foundation of fact a superstructure of possibilities which may stand or may tumble down. It seldom does this last if the speculator is well grounded in practical work.—*Engineer.*

As the above is so near in line with the thoughts expressed by "Eccentric Strap" in the April Magazine, I cannot resist the desire to reproduce it for his especial edification.

Flagging. General Manager H. S. Haines, of the Savannah, Florida & Western, has issued a circular to employees that concludes as follows:

TO FLAGMEN: Never forget that you are placed at the rear of the train to protect life and property, and that it is in the darkness of night, in fogs and storms, that your prompt attention to duty is most valuable.

It is better for your own peace of mind that you should get wet or be left on the road cold and hungry, than for you to see life lost, perhaps your own friends mangled and crippled, or engines and cars broken up in a collision, through your own carelessness or laziness, or because you did not go back when you knew that you ought to.

TO ENGINEERS AND CONDUCTORS: Your attention is called to this circular; see that your flagmen understand it and act upon it. Pay strict attention to giving whistle signals or verbal instructions to flagmen; also as to dropping fuses in ample time, when you know in advance that you intend to stop at an unusual place. You will thereby assist your officers in protecting your own lives, as well as the lives and property which it is your duty to protect. You will also add to the reputation of the railroad company which employs you, and in which, I believe, you take as much pride as I do.

Of the class of railroad accidents that can rightly be charged to negligence of employees, there is little doubt that fully ninety per cent. is due to insufficient flagging or to no flagging at all.—*Locomotive Engineer.*

All trainmen know that this is only too true, and many engineers have found it out to their sorrow when too late.

Golden Rule. When you think you are being unfairly treated by your officers or associates, before you kick very hard just think the matter over and see if you are entirely in the right yourself. Put yourself in the other fellow's place and take a fair, honest look at the case. Remember that this world would be pretty near free from wrong if each individual did right. Be fair. Sometimes justice cannot fly because she is weighed down by the leaden wing of selfishness.—*Locomotive Engineer.*

This putting the shoe on the other foot is what sometimes hurts, for if we have ever tried it we have found that as a general thing we expect more from the other fellow than we would like to do for him; and so say it, but such is human nature.

Strict Rules. The government officials who manage the railways in New South Wales appear to be a little exacting with the "servants" who are under their control. Our railroad men rather resent the claims that some managers make that they have a right to prohibit the employees of a railroad company from drinking when off duty, but the New South Wales "Commissioners" go a good deal further. They have recently issued an order prohibiting the employees from smoking even when off duty.—*National Car and Locomotive Builder.*

Rather strict orders; wonder whether the commissioners live up to their own rules, for if it is good for the men it ought to be for them.

Bad Examples. Not long ago there was an important meeting of railroad presidents in this city to fix up some of their broken agreements, and President Stickney, of the Chicago, St. Paul & Kansas City road, among other forcible remarks, said:

"I believe that all the presidents here are honorable gentlemen, and, as private individuals, I would trust them with any amount of money. But as heads of railroads they are a lot of scoundrels, and I wouldn't believe them under oath; neither would I trust them with a cent out of my sight."

Not one of the gentlemen present seems to have resented this charge, and therefore practically acknowledged its truth.

Very few who know anything about it deny that the management of a great railroad property on the modern lines laid down calls for the perpetration of almost, if not all the crimes in the calendar—robbery, corruption and bribery, to say the least—yet the worst of this is called "sharp financiering" or "good management." As the heads of our railroads are the virtual management, they are responsible for all questionable practices—and there are enough of them daily to send a banker or grocer to prison if he but slightly imitated them.

If an engineer or trainman is caught telling a lie about a little mishap on the road he is discharged. But the great big president will deliberately sign a cast iron contract just for the fun of breaking it to injure another line. President Stickney seems to have known who he was talking to.—*Locomotive Engineer.*

"Consistency, thou art a jewel" sings the poet, and considering its scarcity he might have said a rare jewel. Brother Hill is not at all backward in speaking his mind of men who will make bargains one day to break them the next, and thinks that after setting so poor an example they ought not to come down too heavy on their employes if they are caught telling them a lie about a mishap on the road when they were so ready to do the same thing for a little gain.

Angus Sinclair When Angus Sinclair was a boy in the telegraph office of the old home road in Scotland, he had the "engine fever," and used to spend his spare time around the engine sheds, where he soon struck up an acquaintance with the firemen, who used to swell him up with pride by allowing him to do sundry chores for them on the way to the trains. He learned rapidly, and one evening was elated more than usual when one of his stoker friends got down to oil and told him to "fill up the fire"—a common expression then. Angus had not written his pamphlet on combustion at that time, and translating the stoker's instructions literally, he "filled up the fire," and the fire-box as well, while his friend was busy elsewhere, and the engine started out with a mail train—losing two hours. The stoker has it in for Angus yet.—*Locomotive Engineer.*

The above story of the boyhood days of the now famous author of "Sinclair's Locomotive Running and Management" is nothing to his discredit, for it shows that even then he had a disposition to learn and that he was willing to work to pay for learning. It also shows that he did not shirk his work but obeyed orders, and these are valuable traits of character, and have no doubt, helped Mr. Sinclair in attaining his present position as an author, editor and secretary of the Master Mechanics' Association.

Federation. It is rather curious that almost to a man railroad managers or presidents are for a consolidation of interests, for rate agreements, and combinations of roads to better the conditions of the road they represent, suppress strife and maintain rates, and yet are so eloquent against a consolidation of the organized employes of the roads. They tell the engineers that to federate means the loss of prestige of their order and makes them no better than trainmen or firemen, and they tell the other boys that with federation the engineers would dominate and control them. What is sauce for the goose is sauce for the gander. Federation goes just as far toward insuring peace and prosperity

for men as for roads—in union there is strength.—*Locomotive Engineer.*

The brotherhoods know it and are very well pleased with its operation thus far, and feel assured that federation has come to stay, and that the only way to escape federation is by separation from the orders for they are all coming in just as soon as they can get rid of some of their old notions of caste.

Wm. Weiler.

Test of an Automatic Coupler.

In the *Creston (Iowa) Gazette* of March 18th, there was published an extended account of a successful test of an automatic car coupler, which we produce as follows:

Notwithstanding the inclemency of the weather, this morning at 9 a. m. quite a number of gentlemen assembled in the C. B. & Q. railroad company's yards just north of the machine shops in the eastern part of the city, for the purpose of witnessing a trial of an automatic car coupler, which is the invention of two Creston gentlemen, Mr. John Igoo, a former C. B. & Q. engineer, and Mr. E. D. Whipple, the undertaker in the Summit House. Among those present were the two inventors named above and Mayor Ed. Derr, J. B. Sullivan, P. C. Winters, W. M. Scott, Master Mechanic Evan Jones and a number of other gentlemen interested in the coupler; and representatives of the Creston papers.

The coupler was attached to the end of a box car and tests were made of its workings in every conceivable way and it proved entirely satisfactory. On the opposite end of the same car was a Boston automatic coupler, and on an adjoining car was a Janney coupler, and a splendid opportunity was offered for a comparison of the merits of the different couplers, and the unanimous verdict of those present was that the new coupler possessed features that made it superior in every particular.

The new coupler presents an appearance somewhat similar to the Janney coupler, but in place of the movable jaw being held in place by the dropping of a pin in place, that service is performed by an automatic lock of the simplest construction. When the two jaws on opposite cars come together, that action performs the locking of these jaws and they are firmly held in place, but can be released and the cars uncoupled by a bar which extends to either side of the car or from the top. An employe is not compelled to go between the cars for any purpose, as the jaws, when unlocked, are opened by a spring. The jaws of the Janney coupler, which is conceded the best coupler in use, have to be pulled open before making a coupling, but this is done away with on the new coupler. The coupler is also made of a sufficient depth that it will operate on almost any two cars no matter what discrepancy in height may exist, which is another advantage possessed by no other coupler.

In uncoupling cars all that is necessary is for the employe to raise a bar from either side or the top of the car and the lock inside the coupler is opened and the jaws are opened by the strain of the cars in separating.

The invention had a pretty thorough trial this morning and proved entirely satisfactory to the inventors and spectators, and it is hoped that it may prove profitable also.

Mr. John Igoo, who is mentioned as one of the inventors, is, and has been for a number of years, a member of our order, and at the present time is receiver of Advance Lodge, No. 101, Creston, Iowa. The invention is pronounced a success by all who witnessed the test and it is to be hoped that the inventors may be able to secure the prompt and satisfactory recognition of its merits.

"Newspaper Railroadin."

It is a good while sene I've dun eny ritin but I've sorter kep one I open and ben thinkin morerles, sum of the stuff that gits inter print is slitley amuzin ef it haint 'mazin;—I'm ole fashind an that makes all ther difrens but when it comes to shovin my old barker over the rode an keepin on the time table as well as one I on the iron ahed why if im a chicken it has took me a mity long time to "get thar" in the April L. F. M. the clippin from the Jernal of Appliunses cawt my I, an if you will have a littl pashuns with an ole man I'd like ter hav my say, most all engineers and firemen have some human nater in their make up, but I'm long ways from thinkin theyre all fools. The reasons the riter gives as why the "Jon Bull" had no frens is a slap at both classes of men in the kloeset relashun to the lokomotiv, and no man put in charge of any kind of a masheen whether bilt by some of the dude foremen or a man with a leenin to John Bull is goin to lay off and not git evry ounce out of her thats inside of her from the ash pan lip, kleeer to the spark kecher on the stack, if I'm enyways 'quainted with engineers they don't go round huntin trouble, and they git most all they can rase with and not do a grat amount of huntin, it may be the Pensilvany R. R. managers keep a lot of sich kattle round, but if I ain't off a good ways, a runner that hadn't eny better reesun than "its inglish"—"it rode bad"—or sich twaddle he would git out on the "carpit" and here a little lesson from one of the Div. Supts. threw the R. H. F. that would raise his hair so his old soft crown wouldn't fit him agin in 2 weeks at leest, and he would be a lucky rooster if he klim in on the foot bord on that div., agin at all. Men who run the machines now-days may and do have there likes and dislikes but unless I'm a bak number, and a good wase back thay aint fools by a long shot;—not much, the next pint that our kritik makes is a real old buster, 'Fifth, Many runners did not no what the parts were for and it was much easier for some to condemn a thing that they did not understand than it was to learn its use." aint I proud of my feller runners it makes me feel blew, only it is real funny after these runner men had done so "away ahead" of the regular standard machines of the Penn. R. R. with the old jonny Bully, that they didn't know enuf to understand her, I bleev I'm reedin it as it is but I aint so yung as I was 25 years ago but is out er my reech to understand sich lingo, hear's a man (or a boy) ritin in one line that a sett o'fools don't no enuf ter tell what the parts of a masheen is for and a few lines up he ses these same blokheds made old John Bull do bettrn our own make of "barkers" which is which or aint I ter hum, praps my hed is on the forward end an the waters up in the smok box

but it is kleeer as mud that these runners must be *very* kuris boys; how a man can understand a thing so's to make it hump and bust the regler rekord; and not know enuf to tell what the difrunt parts ar for is a mystery to an old sap-hed jest my size, an I'm resenubly sure thers more'n the same state of mind. It's ben generally sposed that the Amerikan runner could get at the inside or outside of any kind of a thingment to chew coal and stay on the iron, and I've been thinkin what a set of lunk-heds we all be to not no nuthin about what the parts of a masheen as we git it is for, and then to reed that we du no suthin and can make her spin nokin the record clean off the yankee good for nothin masheens is a stumper for my old noddle;—my idea has ben that my "valyerble services" wouldn't be very valyerble about an hour or next day at most after; I'd gin in eny reeson like these I've been reedin and kopyin hear to the R. H. F. and no man not an idyut would give any sech reeson even if he want man enuf to no any better;—if the men are to some degree prejudiced in certain matters it aint becos tha don't no better; it is in a grate meny kases for "wis dum born of sad expeeryuns" in trying to make a masheen got up by some fool, or the fresh gradewate of some institoot of book larnin, or a nuse paper offis, or some feller that can shute off his mowth orgin in figgers and roots and powers and tell what awt ter be dun, but let him make the trial of keepin my ole barker on time, an in a good deal less time than it took him to git his larnin he would be stalled, as ded as a smelt and the train dispatcher would be cussin for the omejit killin of "that are fool," but if any Div. Supt. on the ole Pennsilvany puts a nu lokomotiv on the iron and tells the "boys" to look her over and git out all theres in her, shes goin ter git fare play and the man who rites it down eny differunt is the man that aint willin or kapabl of takin the class of men that make up the "grate unwashed" body of over 30,000 lokomotiv runners and the 40,000 next best men that stan on the other side of the tale bord and "funk" the blak dimunds on these United States lokomotivs;—an as to not understandin the parts of old No. 1320, the Pennsilvany John Bull why any man is a natural born fool to make such an assershun;—no one man ran her for eny length of time and sum of the men that stood on her foot bord and "sent her flyin" are perfectly kapable of steerin any ole barker that runs on any two streaks of steel that is lade down on any continent that I've heered of yit.

My impreshun is that if a United States fireman or "runner" should have the kommon sens to say ther was enny better way to heet kars than bi puttin hot water bottles in in the kars as they do in Ingland now that the same nuse paper feller that rit the mess

of nonsens I'm takin of would sa that he was prejuidist, an thers as much reesin in the one as in tother; its kuris but it is tru, that the man who kum over with old No. 1320 was no fool an when his time was up, an he was goin back to Inglund, he was a good deal more onist than the ink slinger who puts his mouth round "us" for he told the men in the round house that she want adaptid to American work and trains, its kuris how much peole no that aint so; and Artimus Ward was right when he said it;—and its funny enuf to see what a dunky a man can make if he sets out, mi idee is and has ben for mor'n 25 years that the United States "runners and firemen" want eny pertickerler slowches as a class of men and sum how the idee had got under my skull that some rodes had some bizness abilty in the manigment, but if the men who pertend to manig the rodes will by an engin and put her in the round house becaus the "runners and firemen" can't find out what she is made of, or becos they have a "prejuidis" or a belly-ake; then I'm willing to say that I'm an old fool and nary a mistaik, thar ma be another way in lookin at it if American engineers don't no enuf to git all she had in her why didn't the Pennsilvany manigers git one of the big mouthed nusepaper dudes that no so much that aint so, if one man won't another kan, and in bizness there aint eny frendship; and it is real strange if one of the most onest rodes in this or enyother kuntry with its "Runner and Firemen" as well as them that pay it millyuns of \$ \$ \$ a year have been compelled by the reasons given to set one side such a splendid and valyerble masheen becos its men who run 1400 other masheens evry day and nite didn't no enuf to make her snort?—?—?—?—?—?—?

Thars a set of men travelin over the kuntry now "tha used to be locomotive runners" if yu bleeve thar mouth orgin, but if the fax are none tha never run morn one kind of an engin and that was made of wood, had wun wheel an a pare of handles an a wood hold about two bushel of sand or gravel, tha hev the gift of gab; and the check tha karry wood plait a nu gun bote, if it want a frawd; thes men are allus hanging round the R. H. tryng to pik up the slang we uze and then sell it to the men who run nusepapers on the same plan, I'd ruther sta on the rite hand side and make mi living onestly for a spell yet if I don't "run short" and get a la up, for if thars one thing a real United States "runner and fireman" hate on top of grownd its a mungrel that nose sich a lot that aint so; we have all the rakets and trubles we want and moar, but when we are accused of inkompetency and prejudis against another make of masheen than the ons we run by a swing jawed ink slinger, its time for me to kik; and hear you have it; I mite sa moar but

my spellin is so plagy bad that I'm afrade it will spile all the boys in makin out ther reports for a munth comin.

"Uncle Silas."

Automatic Couplers.

I notice in the April number of the *Magazine*, an article on the vertical plane coupler over the signature of "Vulcan." Now, Mr. Editor, after carefully reading his objections to both the Janney and Gould self-couplers, which I presume are the ones he refers to, I am perfectly satisfied that he has had no practical experience with either of these couplers. It is plain to be seen that the only knowledge he has, is what he has obtained from railroad officials who naturally object, and try to find flaws in a self-coupler, on account of its expense, and who make the safety of the trainmen a secondary consideration.

"Vulcan" says that in making up a mixed train the vertical plane coupler is a delusion and a snare; there is some trouble sometimes, I admit, but not any more trouble or danger than in making a pin and link coupling with a high and low drawbar; then why under these circumstances it should prove a delusion or a snare, is more than the writer can see. The objection that Mr. Adams, of the Boston & Albany, and Mr. Chamberlain, of the Boston & Maine, pretend to have is the liability of breakage to knuckles. These breakages do not occur from uneven distribution of strains, but from rough usage which can be avoided by every car being equipped with a self-coupler and a good strong deadwood, and as the brakeman would not have to go between the cars to couple or pull pins, he would be in no danger from these deadwoods, and the breakages would be reduced ninety-nine per cent. "Vulcan" claims that these couplers will not work satisfactorily with their own kind, as in the case of a high and low drawbar; he forgets that if every car was built according to the plans laid down by the master car builders (and who should know better how a car should be built than they?) every car would be a standard height, and the difference in height between a loaded and empty car would not amount to anything.

"Vulcan" and the New England Club would probably laugh at the idea of our roads adopting a standard car, but why should they not, as it would be as much to their interest to have properly equipped freight cars, as it is to have a standard gauge or a standard car wheel.

Many a wreck has ocured on our first-class roads, costing them thousands of dollars, through cars from New England roads, such as the Old Colony, etc., which are more fit for a museum than for active service on a railroad. The Janney coupler was

selected by a body of practical railroad men representing the principal roads in the United States, whose ideas are up to the times, not men with old foggy ideas such as the New England Railroad Club; and it would certainly do away with a terrible loss of life and limb to trainmen which results from the use of the old "man-killer" coupler.

Yours sincerely,
W. Hodgson.

MR. EDITOR:—I have read with much interest the article of H. W. Hall, on the "Wheel and Lever," in the February *Magazine*. If others would read as closely and experiment as honestly as Mr. Hall has done they could as easily satisfy themselves of the truth of the propositions I have demonstrated, and tried to illustrate.

I suppose some one will attack Mr. Hall's experiment on the ground that his lever, the eccentric rod, was attached to the axle, and that its power was applied differently from a rod and pin, but that is a fallacy. By bolting a bar to the outside of a wheel so as to extend below the rail, with holes in which the "pin" may be inserted, at different distances, his proof will be just as strong. The axle nor the centre have anything to do with the fulcrum or the leverage. We could not have a revolving lever without them, but they have no place in the real question of how the lever works, any more than the expansion of steam has.

In his experiment Mr. Hall pulled from the ground—that is he stood on the ground. The principle is the same, but the action will be varied, if you pull from the engine—that is if you stood on the foot-board—or if you pulled as steam pulls, with an equal push on the frame. In that case, when the pin is above centre your wheel rolls toward you because the pin is farther from the rail (or fulcrum) than the frame is. If the pin is below centre, the wheel rolls from you because from where you push is farther from the fulcrum than the pin where you pull. When your pin is placed below the rail and you pull on it, the wheel still rolls from you, because both your push on the frame and your pull below the fulcrum gives motion away from you.

Amboy Division.

A Perverse Woman.

Gillhooly—So Ferguson's wife is dead?
Gus De Smith—Yes; she died yesterday.
"She was an awful contrary woman."
"She was that, about everything, and she kept it up to the last. In fact, I don't believe she would have died at all if it hadn't been for her perverseness."
"Why, how was that?"
"She was very sick, and her husband, with tears in his eyes, said: 'Dear Jane, you must not die.' Then she looked at him and said: 'I'll show you whether I'll die or not,' and turning her face to the wall was dead in a minute."—*Texas Siftings*.

The Postal Service.

INTERESTING FACTS FROM THE POSTMASTER GENERAL'S LAST REPORT.

The sale of postage stamps of all kinds amounted to \$52,921,784.18.

The total number of pieces of matter sent to the Dead Letter Office was 6,479,293.

There are 8,257 letter carriers and they delivered last year 1,703,262,436 pieces of mail matter.

The greatest number of clerks on any railway postoffice line is 351—on the New York & Chicago.

The longest continuous run made by postal clerks is from Omaha to Ogden, a distance of 1,035.30 miles.

The number of clerks employed in post-offices was 7,809. They received for their services \$5,919,301, or an average of \$758 each.

The number of clerks in the railway mail service was 5,640, who were paid an aggregate sum of \$5,235,067, an average of \$928 each.

The weight of mails dispatched to foreign countries was 4,111,852 pounds. Of this amount, 3,351,565 pounds was sent to trans-Atlantic countries; Great Britain leading the list, receiving 1,549,680; Germany comes next, having received 644,673; while France is third, with 239,469 pounds to her credit.

At the close of the last fiscal year there were 59,838 postmasters in the United States, whose compensation was \$13,168,990, an average salary of \$220 each.

The total number of clerks in the railway mail service is 5,448. The number of casualties last year was 193. Ten clerks were killed and ninety-five seriously injured.

The total sum paid by the government for the transportation of mails, including railroads, steamboat and star route service, and also compensation for the use of postal cars, was \$25,732,545.59.

The heaviest mail carried over any mail route in the United States is between New York and Philadelphia. The average daily weight of mails carried over this route last year was 201,813 pounds.

For trains carrying mails the best time is made on the Lehigh Valley Railroad, between Easton, Pa., and Metuchen Station, N. J., distance 54.20 miles. The average time of all mail trains is forty miles an hour.

There were 13,324,240 pieces of matter sent in the registered mails; 3,998 complaints were made of delinquencies in the service; of this latter number 1,616 were reported as losses, but subsequently the letters or parcels were received by the persons addressed.

Saw Him and Called Him.—Mrs. Dogood—Did you see the Elephant while you were in New York?

Mrs. Tyker—I didn't; but my husband did. At least, when we got home he said one had stepped on his pocketbook.—*Puck*.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, INDIANA.

HINTS TO OUR CORRESPONDENTS.

At the risk of incurring the charge of repetition, we must offer a few more suggestions in regard to the preparation of letters for the *Magazine*, which we hope our writers will receive in the kindly spirit in which they are written. There are so many annoying mistakes made which are entirely unnecessary. We do not believe it is ever necessary for our correspondents to use torn scraps of paper or wrapping paper when a whole letter pad may be purchased for five cents. If one is totally ignorant of the proper method of commencing a letter, she has only to take any of those published in the *Magazine* and copy the heading.

INDIANAPOLIS, IND., March 24, 1891.

Editor Woman's Department:

Is not that simple and easy? Do not address "Dear Mr. Debs," or "Dear Mrs. Harper," or any other "dear." Put the date line at the beginning, not at the end of your letter, and write the name of the town and the name of the state. Sign your name to the letter. Make your sheets all of one size and write only upon one side, number each page, lay one sheet upon the other and fold all together. When you have finished a sentence, put a period at the end of it and commence the next one with a capital letter. Do not begin every line with a capital unless you are writing poetry. Always write "I," when speaking of yourself, with a capital letter. Do not commence father, mother, husband, wife, brother, sister or sweetheart with a capital. These are simple rules and easily remembered. Fully one-half of the mistakes the editor has to correct could be corrected by the writer herself if she would read over her letter carefully before sending it. These criticisms apply to the male persuasion also, as many of them make the same mistakes as the women do.

Out of thirty letters received this month, twenty of them closed with a thrilling reference to the waste basket, although we have been eight or ten years trying to impress

upon our writers that this is a superfluous remark. We would ask our readers if, out of hundreds of letters written for this department by women who insist upon telling us something about the lodge, one dozen of them ever contained any information upon that subject? We would rather you would tell us how you wash your dishes, or what success you have had with your onion bed this spring. Please remember that the object of this department is mutual improvement and benefit. Some of our correspondents persist in sending their letters to Mr. Debs, thereby compelling him to consume some of his precious time in forwarding them to Indianapolis. Now, dear friends, please give these suggestions your careful attention and your letters will be most welcome. Our correspondents have suggested a number of new and interesting topics of discussion. Let us have your opinions and comments upon those in which you are specially interested.

WITHOUT wishing at all to intrude upon the domain of the men's department of the *Magazine*, we cannot forbear a comment upon the poem of Shandy Maguire in the March number, entitled "Kitty O'Shea," and dedicated to Mr. Debs with "compliments," which are rather doubtful. We will not discuss the questionable taste of ridiculing and making light of a sin against morality, which has resulted in breaking up a family, disrupting a powerful political party and endangering the prospects of an oppressed nation. We will forbear any criticism upon the manliness (?) of the writer in placing all the blame upon the woman. But we wish especially to call attention to the last stanza, in which everlasting devotion is pledged to the Irish leader if he will "discard the woman" he has wronged. From our point of view there is but one honorable course left, but one way in which even a small reparation can be made for the sin committed, and that is by a respectable marriage as soon as it can be legally arranged. To "discard" the woman who has, for his sake, sacrificed family, friends, reputation and social position, would be a baser crime than even his worst enemies would believe Mr. Parnell capable of committing.

THE letter from East Cleveland is not quite up to the standard for publication in the Woman's Department. It contains some bright things, but its slangy and reckless tone bars it out. We trust that our correspondents of both sexes will assist us in preserving the dignity and respectability of our department. Every year shows an improvement in our class of correspondents and in the tone of the letters. We cannot afford to lower the character of our work.

SAY THAT YOU LOVE HER.

A most pathetic feature of many of the letters received for this department is the evident craving of the writers for love and affection. It is not possible for a man fully to appreciate a woman's intensity of feeling in this respect. Love is not so necessary a part of a man's as it is of a woman's existence. At some time in his life, usually in his early years, he becomes strongly attracted to some woman and considers that she is absolutely necessary to his happiness. A man's method of showing the highest admiration and esteem for a woman is to ask her to be his wife. There is a portion of that selfishness in it that is characteristic of most of men's actions. There is also a trace of the ancient and dominant idea that what he wants he must possess, and that nothing shall come between him and the object he covets. In the early history of the world he exercised his physical strength and carried the woman away. That species of courtship having become superseded by modern and milder customs, he is obliged to resort to other and pleasanter methods of securing what he wants. Hence the various phases of courtship, the drives, the places of amusement, the ices and confections, the moonlight walks, the long evenings by the cosy fire, the pledges of never-dying love, the promises of eternal devotion. All these are but the means to an end—the necessary preliminaries to obtaining possession. The woman thinks it is simply her own sweet self that inspires this devotion, and that if she can command it before marriage she can continue to do so after marriage.

And finally they are married and the man has secured what he started out to get—a wife. Usually he is satisfied and quite ready to settle down to the plain realities of life. It now becomes necessary to pay attention to the practical things of the world. He has founded a family, wherewith shall they be fed and clothed and sheltered? The coming of children makes the question still more serious. Even under the most favorable circumstances, existence is a perpetual struggle. The man who works faithfully day after day and applies his earnings conscientiously to the maintenance of his family, shows infinitely more devotion and constancy than are possible in the most ardent courtship. Engrossed in his work, annoyed by many cares, physically and mentally worn out by night, he is not inclined to effusive love-making. In fact he would consider it superfluous and unnecessary, if he thought about it at all, but it does not occur to him. He considers that he has shown his love for his wife by choosing her from all others and, if he provides for her and is kind and faithful, she never ought to have a doubt of his affection. We are talking only of those husbands who are simply

negligent about putting their love into words, not of those who are neglectful of the sacred duties and obligations of marriage.

But this practical view of the case does not satisfy the wife. It is doubtful if men are capable of understanding a woman's feelings in this matter; not because of any hardness of heart, but simply from a difference in nature. They are quite satisfied to take the wife's love for granted and they are conscious of no particular craving for a verbal expression of it. They utterly fail to comprehend her monotonous and isolated life, her longing for sympathy and tenderness, her grief and heartache at their apparent coldness and indifference. They do not mean to be unkind; they would not hesitate to lay down their life for her if it were necessary, and yet, through a big, blundering man's ignorance and obtuseness, they withhold what would cost them nothing and yet would be of untold value to the wife. Think of it! Just a kiss of good-by and of greeting, just a caress and a word of praise once in a while, trifles when you consider them in the abstract, and yet they would fill the days with sunshine and make the average married life a Paradise compared to what it usually is. Is there any remedy for these sins of omission? So much has been said and written upon the subject, and yet, no doubt, our grandmothers and great-grandmothers grieved and worried over this neglect, and it will break the hearts of our children and grandchildren. To the young husbands and wives this caution may be given: Do not let the first carelessness creep in; keep up, as far as is consistent with the trying demands of every day life, the affectionate habits of courtship, for it is very hard to resume them after they have been dropped awhile. The older married people need not be ashamed of loving demonstrations; they are even more beautiful in those who have been tried by the troubles and temptations of many years and remained faithful and devoted. But beyond and above all, hold fast to that mutual love and respect which is the essential basis of all permanent wedded happiness.

THE editor hopes the contributors will excuse her for omitting from their letters the complimentary allusions to herself. They are fully appreciated and enjoyed, but she feels sure they would not be of interest to the general reader.

WE will ask our good letter writers to please consider the discussion closed in regard to the management of husbands and wives. We cannot use any more matter upon this subject.

T. C. D., of Arkansas City, sends four closely written pages describing a B. of L. F. ball, given by the lodge. It is interesting and well written, but, as we have frequently stated, we cannot publish accounts of social events. We cannot spare the space and it is so long before they can be published they become "old news." For instance, this ball took place February 26th, an account was mailed to us March 8th, reaching here on the 10th. As we prepare the matter for the *Magazine* two months ahead, it would have to appear in the May *Magazine*. Would not an account of a February ball appear out of place in May? Will our correspondents exercise judgment in these matters?

"S. B.," of Springfield, Mo., writes very kindly of Lodge 51.

WASHINGTON, DAVISSON CO., IND., March 6th, 1891.

Editor Woman's Department:

In the March number, which has just come to hand, I notice where Mrs. J. W. Taylor, of Mattoon, wants to know what has become of Mother Jones? Can it be possible this is my much esteemed friend of long ago? Well, it is certainly some kind friend anyway, and now Mrs. Taylor, if you live at Mattoon, Ill., doubtless are this you know I am engaged on the *American Federationist*, published at that place. I am afraid our good editor, Mrs. Harper, gave me a kinder notice than I really deserved in the February number, but all the same I value her words very highly indeed. It was with a feeling of pride I read her kind words. I am very much interested in her editorial this month and with her usual good nature, I feel sure she will allow me to express my opinion on card playing, and my experience in such matters. As far as card playing as an amusement is concerned, there is no harm done if the card playing stopped there, and we could make our children feel that this was the only way in which such games were permissible, but alas, while under our home influence they may realize this, yet if infatuated with the game, they will forget this, just as sure as we wish them to remember it, and will not stop to think of the place or surroundings when chance gives them an opportunity to satisfy their pleasure. If we cannot prevent our boys from playing cards, if we do not practice the games at our home, we have at least the satisfaction of knowing that we did not encourage them by giving them an example. Our conscience will be clear at any rate. I knew a family who were looked upon as Christians, and no doubt but they were really good people. They loved to have friends surround them, and their favorite pastime of evenings was cards. The father of the family was a high church member, a man of wealth, one who employed numerous workmen, and always treated his employes generously; the mother was an excellent lady who did all the good she could find to do. The rich loved her, the poor blessed her; she loved music and singing; there were three fine boys in this family, and two handsome daughters. They took such interest in singing that they had a class of young men and women come to their magnificent home, and it was there church anthems and hymns were taught for the Sunday service. I was one of that happy class. Soon the boys grew to manhood, a credit (as to looks) to their loving parents. But the eldest boy, the pride of the family, infatuated by the game of cards, what became of him? First he only played for a little money with some of his friends; by degrees, step by step, this promising young man, letting infatuation get the better of him, played with every person and in every place he could get a chance. When his parents found out his degradation they obtained a

commission and sent him out to sea thinking to cure him. But alas, temptation was on board the vessel as well as on land and one day while engaged in the game a card was blown out of his hand; in attempting to catch it he lost his balance, fell overboard and was drowned. I happened to be at his home the day the fatal news was brought and the heartrending screams of that agonized mother ring in my ears yet. Oh, how she blamed herself, that his first lesson should have been learned at his own happy home. So earnestly after this did she impress upon my mind the evil of playing cards, that I came to look upon a card as something too terrible to take hold of. But this was not all. The second son had got into debt just at that time to the amount of several hundred pounds, lost by card playing. This trouble and the news of his brother's death was too much for him. He took morphine to end his troubles and in less than a month was buried in the graveyard of the little church, where but a few days before his voice had rung out in the Easter anthem. Thus was broken up one of the happiest families that ever existed, and the change in that one family was sufficient to prevent my ever allowing a game at my own home. There never was a card inside of my house and never will be while I have breath.

Some of my readers will say this is an isolated case. Well, the grief of that one home was sufficient to counter balance a dozen others that escape. I was surprised lately at reading an article in a journal where the writer, who seemed a lady of talent and education was relating something about card playing and wine suppers at 10 P. M. I should think young ladies ought to be in their beds at that hour, not card playing.

I am your sincere well wisher

Mrs. Henry B. Jones

[Mrs. Jones will pardon the editor for drawing a pen through her too complimentary allusions. The other matter looked too much like an advertisement. Where one regards card playing as our correspondent does, it certainly would be wrong to permit it.—Ed.]

HOME.

Home, how dear to our hearts is that one short word—when we speak of home how lovingly we speak of the place we cherish in our hearts. Home is indeed a haven of rest for the wearied soul and body.

Can we but wonder when we think of those who are leaving the place where they have spent so many happy days, some leaving it to make their fortunes in distant lands, others because of the spirit of discontent which has entered their hearts and made them slaves to its will.

When we hear the sad, sweet strains of that beautiful song can we imagine the writer, an exile in foreign lands, without money, without friends and without home; his heart breaking with sorrow, writing the words which ever float through our minds with a pathos that seems almost unreal—

"Be it ever so humble,

There's no place like home."

A child was once asked, "Where is your home?" Looking up into the face of its questioner with a glance of utmost love and confidence, it replied, "Where mother is." How many of us can say that our home is where mother is?

The "house mother," as the Germans so quaintly put it, is the ruler of the household. She it is who cares for the happy, laughing children, soothes their childish grievances, guides their tottering footsteps along the rough pathways, and lavishes on them a love that can never be replaced when she is gone.

Homes have been broken, ties of love severed by the loss of one person whom we love so well. Can we not then strive to do our duty in helping mother to make home bright and cheerful for the father and brother, and at last hear the praise of the loved parent when the hour of death is nigh, whisper in accents low and sweet, "Well done, daughter." Would not our happiness be complete?

Edyth.

PERU, INDIANA, March 5, 1891.

TRENTON, N. J., March 16, 1891.

Editor Woman's Department:

"I am only a fireman's wife," as some would remark, but there is many a gentleman beneath a greasy pair of overalls, and many a lady beneath a calico dress. I consider my husband as noble a man as ever walked this grand, old earth. He knows how to say "no," and mean it, and he considers me as much of a lady as anybody. We have found out that the way to live a happy married life is to put into practice the old maxim, "Do unto others as you would have them do unto you;" perfect confidence in each other; faith in God's promises; neither one the "boss" of the other; no "boss" is needed. We would carry out no plan without confiding in each other. I would not wish my husband to have to ask me for money, as though he did not help earn it; nor would I like to feel dependent by asking him for money. We both know what bills are to be met and pay them, and what remains we are at liberty to use if we so desire. We dress to suit each other and not to suit other people. To the wives I have written this letter, and if accepted, I will write to the Brotherhood of Locomotive Firemen, to their daughters and sons.

Wives: Before marriage many of you took pains to make yourselves look attractive to your lovers. Now, do not fail to try and make yourselves look attractive to your husbands. Dress according to your means, and for your husbands alone. You may say, "I have not the time I then had." Perhaps not, but you can at least look neat, for it is just as easy to be neat as it is to be slovenly after the habit is once acquired. Teach your daughters this fact as they grow up in life. For does not the good book say: "Cleanliness is next to Godliness." Also teach them to do all kinds of work: to cook and keep house. There is an old saying "That a man's heart is to be reached through his stomach." I think it is won before marriage without the use of cooking, but it is in a great measure held after marriage by good food. Teach them also to sew, for these are the accomplishments that a poor man's wife needs above all others. After these then I approve of all that one has opportunity to acquire. Magazines are of great benefit; the *Firemen's Magazine* has certainly been very instructive to me. But I have left my subject.

Mothers, if you have not time to train your daughters to sew, send them to a dressmaker to learn. Send them in a kitchen to work before you send them in a mill. It will be of greater benefit to them both physically and mentally. Teach them that there is no work that will disgrace them unless they disgrace the work. A lady friend of mine was raised with her every want supplied; she was sent to school until she was married. To-day she has three little children and she does not know how to sew. Her husband draws but very small wages. Do you not think her mother is to blame for not teaching this girl to sew, at least in vacation? Is it not discouraging for this husband? Although you may expect your daughter to marry rich, remember she cannot superintend a house full of servants unless she understands how to work. I was taught to work and sew; to-day I can take a trifle and beautify my home and make it comfortable and homelike. I can make a wrapper of five cent goods and feel as happy in such a wrapper as beneath a satin or velvet gown. Teach your daughters to marry for love and love alone. For what is spoken of more highly in the Bible than "Love." Without this "marriage is a failure." Right here I would say that all women have not the time that I have to make their own dresses. Wives, you can govern your husbands best by kind words. Remember, a soft answer turneth away wrath; it may seem hard always to do, but in the end it will soften the hardest heart. For "there never was a heart so hard but it had one tender spot." Do not say, "There is no use in my trying to be good when my husband will not try also." Try; for have you not your own soul to save and he has his. Cast your burden on the Lord and He will strengthen you and you will surely conquer in the end. Last, but not the least, I would say: Wives of railroaders, you whose husbands start out on what seems to me like going to war and facing the cannon's mouth, never let them start on a trip without first kissing them

good bye, no matter how angry you may be. Some will say it is soft to kiss. Would you think it soft to kiss his lips were he brought to you cold in death? Ah! no. Over his coffin lid you might say, "He was a good husband," while in life you were never heard to praise him. If he begood, tell him so while he is yet in life. If he is wicked, so long as you remain beneath the roof with him, do not speak of his wickedness. If you are at fault do not be too haughty to acknowledge your faults and ask to be forgiven. For if you do not do this, and harm should come to him, great would be the fall of your haughtiness, and your repenting would be at leisure. This poetry I love to think of and try to remember:

"We have careful thoughts for the stranger,
And smiles for the sometimes guest,
But oft for our own the bitter tone,
Tho' we love our own the best.

"How many go forth in the morning,
That never return at night,
And hearts are broken by harsh words spoken
That sorrow can ne'er set right.

"Ah! lip with that curve impatient,
Ah! brow with that look of scorn,
'Twere a sorry fate, were the night too late,
To undo the work of morn.

The boys of Excelsior Lodge, No. 11, are in a flourishing condition, and they are a noble set of boys and know how to be good and kind to their wives. Now let us hear from some of our sisters out here in the East. Do not let the Western women get all the credit for having the brains, for I know we are possessed of some too.

God bless the locomotive firemen and their families is the wish of a fireman's wife. Signed with pride,
The Jersey Writer.

[A very good letter. Come again.—Ed.]

LOUISVILLE, KY., March 6th, 1891.

Editor Woman's Department:

Having seen many interesting articles in your valuable *Magazine* in reference to different lodges, I thought perhaps a word from Mayflower Lodge, No. 415, of which my brother is a member, would be of some interest to its many readers. It is a thriving lodge, the members are all honest, noble, upright young men and are sure to come to the front, Brothers Mart McKenna and Bart Blue being the leading spirits. The fireman's life is a very trying one and they deserve the sympathy of all. They look danger in the face on every side. They are truly a noble set of men. I heard that several of the members had decided to lay aside the bachelor garments and don those of benedict. If they do others will be sure to follow. As this is my first attempt at writing, if accepted I will come again if I may. With best wishes for the success of B. of L. F., especially Lodge No. 415. I remain

Uncle John's Daughter.
L. B. E.

SAN FRANCISCO, March 12th, 1891.

Editor Woman's Department:

As I am at leisure and have long been thinking to put a good word in for the firemen of Golden Gate Lodge, No. 91, I am going to do so now. They are a dandy set of young fellows, kind, free-hearted and generous wherever they are known.

This lodge has set up an auxiliary for ladies, but alas! only the mothers, wives and sisters are allowed to join. As I am only the "sweetheart" of a fireman I cannot get in, but perhaps I may soon.

Thos. D. Manhire is Master and makes a very brave one. The fire boys made no mistake in choosing him. W. S. Runyon, our Receiver, has the same brave heart.

I see a good deal about "Managing a Husband." I have none yet but as "the happy time is drawing near" I will have one soon, but I'll let him manage himself and I think that is the best way.

A Fireman's Sweetheart.

GOODLAND, KAN., March 4th, 1891.

Editor Woman's Department:

How I do enjoy the *Magazine*, and anxiously look for its coming every month. My mother has often said she would like to see something I could not make use of. "Poverty is the mother of invention," and therein lies the secret. Now I hope all of you who have torn books, will try my way—as I never saw any one else mend them the same, I call it my way. Get the yellow oiled paper your hubby's tobacco comes wrapped in, and cut strips and paste on each side the leaf. I think it a shame so many nice books are let go. If you can't afford a bookbinder to bind your little journals or even the *Magazine*, get some good heavy pasteboard, and cut as long as the book and just wide, bind one edge of each leaf these pieces with some good stout cloth, say dress drillings leaving one-half inch at the back that has no pasteboard in, to sew on by, place all your papers in position and take an awl and stout twine and sew through all firmly. Then you can ornament the covers to suit your fancy. I have made several for my children out of S. S. papers and little books that had paper covers. There are such a multitude of ways to use old sock and stocking legs. When you have to "re-seat" knit drawers, take a sock leg and cut it open, take it onto the machine and in five minutes you can have a patch "as good as new." They make nice sleeves in children's under waists after the "original" ones are worn out, and I have made very nice-looking mittens from them; and after you have cut and made everything you can from them, take the pieces and roll them up tight and tie with cord, to scour knives with, or tie on the end of a stick, to black the stove with.

And while you are looking at your neighbor's embroidered pillow shams with such longing eyes, let me whisper in your ear how you can get time to make yours. Get a pattern that you can "start in at one end and go till you get done," or "one that has a series of lines;" all your bobbin with floss, and coarse looks better than fine; put fine thread on top, with a loose tension—you can tell how loose by trying on a small piece of cloth; sew your sham on what is to be the wrong side. I am sure you will be pleased, as a little way off you can not tell it from Kensington stitch, and it is so quickly done. I've embroidered "a pillow case across the end with a pattern intended for a mantel lambrequin, with tinsel; also an apron, and hemmed the children's school handkerchiefs the same way.

If you have to tie comforts, don't keep those horrid old quilting-frames around all summer, but after you have the comfort all tacked in, baste it across both ways where you would want the knots to be, and then take it out of the frames (lay it aside if you haven't the time that day to finish it); then get comfortably seated in your rocker, with the comfort on a chair and your lap, and clip and tie at your leisure. Maybe "John" will help you, but I have my doubts about it, as they are not, as a rule, over-fond of feminine work.

I hope some one will give us a few "hints" on housework, where hired help is not to be got and we must depend on the children. The best way I have found to get along with small help is to play "Mrs." Such fine times as we do have some days! I hardly ever have to make them work. Each one takes a room to clean up, and if any one else wants an article from another's room, they knock, and borrow it from "Mrs. Brown," or "Mrs. Green," as the case may be. Sometimes one is the mother, and I am made to "walk chalk." Then the little three-year-old must "play I am your pa," so he gets all the chairs in a row, and the funnel for a whistle, and then he will tell me what to tell the rest. Toot-toot! "Now say, 'Hark, chilblins, I hear your pa, maybe.' Toot-toot!" "Say, 'Yes, that is them.'" Then the train arrives, and the little fireman washes, and leaves everything "shipshape" in his imaginary engine. Then is the home-coming. He comes in and gives me a regular "bear's hug," and a kiss, and says, just like his pa, of course: "Well, old woman, I've had a pretty rocky trip, and I'm hungry—gee whizz! got anything cooked?" And if one forgets and calls him Johnny, he is sure to look cross and say, "I'm pa."

One of the "hints" I want is how to manage to not offend your neighbors, when their children come in at a very muddy time, with their feet perfectly loaded with mud, and track all over your house; and I have seen grown people as bad. Of all things, it is to me the most discouraging.

To the man in the February number who said he would tell how he managed his wife, only he did not like to give his scheme away—Don't. The rest have "schemes" and "methods" enough, without your adding anything to the list of "ways and means." But if any sister has a way to get her husband to take up the ashes when he builds the fire, I pray her let it be known. Don't forget to praise your wives when they do anything nice for you; and remember a "Thanks" for the patch she put on your overalls, and you happened to see before you wore, and the buttons she sewed on your jacket, are as sweet as praise could be. *Phillips*

[Such letters as the above are very acceptable.—Ed.]

SANDUSKY, OHIO, March 6, 1891.

Editor Woman's Department:

I have been a reader of the *Firemen's Magazine* some time and have not noticed anything concerning Safety Lodge, No. 142, in which I am interested, having two brothers as members. It is, I understand, in a very prosperous condition. Now let me say that I agree with a "Fireman's Mother" and say the pie and cakes she speaks of are very necessary in every family. I am a little partial to railroad men. They are a class as a rule that provide plentifully for the family. We rarely see pie and cake wanting in any of their families.

The first letter I read in the March number was Jim Dooly's, and I must ask a little space to express my sympathy for him.

Jim, surely in all Texas, you could find some one that would put up that "dainty lunch" you long for, and save the man with you from your envious glances. But if you cannot why come right up to Ohio. I know when you become possessor of that precious article you will call "wife," you will be very considerate and I sincerely hope you will find a good cook. My experience with railroad men has led me to believe that they are all blessed with good appetites, and will not tolerate poor cooks. Just one word more about the card subject. I say boys will play and they may just as well learn at home as in some saloon, for we all know "forbidden fruit" is sweet and play they will. Wishing success to the B. of L. F., I am yours, *Cedar Point.*

LEADVILLE, COLO., March 15th, 1890.

Editor Woman's Department:

May I be one of the applicants to write just a few words of encouragement for the Cloud City Lodge, No. 196? It is a prosperous lodge and increasing very rapidly and is composed of young and noble boys. We may not for the time being realize what good these noble boys are doing, but when sickness or death comes we can't fail to see and receive the willing hand they extend toward us; therefore I deem it every fireman's duty to belong to the brotherhood, for it not only benefits himself but his family also. So may we live to see the day when the firemen can demand their rights in triumph over the railroad monopolies.

I take great interest in reading the arguments of how to manage a husband, and I think it a rather complicated question, but can not say anything for myself as I am inexperienced in that line, but I hope if I ever do marry, he won't need any managing. Sisters, speak kindly of them, for they are here to day and away to-morrow, maybe never to come home again alive; a harsh word is never forgotten, while kind ones would lighten and make their work more pleasant. I appreciate the thoughtfulness of the sisters in sending receipts, for they are always acceptable, when you have to put up lunches. With success and best wishes for the brotherhood I will close by signing myself
A Fireman's Sister,

C. M.

THE WITHERED ROSE.

It is only a rose, now faded and dead,
Its beauty departed its fragrance now fled;
It is only a rose, with petals once bright,
That bloomed for a day—a blossom of white;
A memento of past friendship I cherish it yet—
Tho' simple the gift I cannot forget.

It is only a rose yet to me it brings pain,
For I think of the one who will ne'er come again,
While my heart grieves with sorrow for him, far
away,
Whose love, like the rose, lived only a day,
Then died ere it reached the zenith of bliss,
Alas! If our hearts such love could resist.

Tho' faded the rose, I cherish it still—
Tho' scentless its leaves, it has power to thrill
The heart with emotion so blissfully sweet,
Where love is enshrined so faithful and deep,
For the dear friend who gave it, who is now far
away,
While I treasure the rose so faded and gray.

Mrs. Nellie Bloom.

WEST OAKLAND, CAL., March 16, 1891.

MONTPELIER, March 15th, 1891.

Editor Woman's Department:

I have seen nothing in the *Magazine* from a fireman's mother, sister, wife or sweetheart of Montpelier, neither from the boys of Re-Echo Lodge, No. 195. Perhaps the women of Montpelier do not know how to manage a husband is why they have nothing to say, but cannot say the boys of No. 195 do not know how to manage their lodge, for I am sure they do. There are as good and true hearted boys in No. 195 as ever belonged to an order, and I am sure they are doing all in their power for the interest of the B. of L. F.

I cannot help noticing Mr. Dooly's letter in the March number. First, he says he would eat anything, no difference how it tasted, if it did not have a long hair in it. That does not sound altogether right, for it is not natural for any one to eat anything that does not suit his taste.

Again he says to excuse the mistakes of the inexperienced girl you have taken from her mother's care. Now has she not been an apprentice under her mother for from fifteen to fifty years or more and if she does not understand her business I say send her back to her mother until she learns her trade, just as a foreman of the shops would do with a machinist or a master mechanic with an engineer or fireman. If they are no good they must go; (why not the same with the wife?) How many wives are there to-day that keep their homes looking as they should or as they could if they would try? Not one-third of them, and what is the reason? Because as soon as hubby leaves town they are out gadding around, gossiping about their neighbors and never think of home until they hear the sound of the old man's whistle, then they have such a sick headache, or baby has been so cross they could not do a thing. Therefore hubby must get his own dinner, go to a hotel or do without. And how often do men come in and find their wives out riding, walking or even to balls with some other man, and when they ask her to go anywhere with them, "Oh I am so tired I do not feel like going." This will do for a time but it will not last. Soon there rises a jealous feeling in the man's heart, and he begins to spend his evenings around saloons and gambling houses and soon gets to drinking to drown trouble, as he says. Next he loses his job, and becomes a regular sot and bum, all through woman and whisky (but of course whisky gets the credit for all). How often do we hear the expression, "What would this world be without women?" It would be a paradise, a heaven on earth. How often does a man get into trouble but that there is a woman mixed up in it? Not once out of ten times. What is nicer and purer than a boy just emerging forth from youth into manhood! But lo, soon he is caught by the bewitching smiles and evil snares of vile women and dragged down into the fires of hades.

Girls, look out for such fellows as Jim. He is liv-

ing you soft soap and taffy. Do not believe a word he says. I think he would like to get married.

I agree with "Engineer's Wife," I think they have been managing their husbands long enough. It is time for a change in family government. Family government, like political, too long under the same administration, becomes monotonous. So let us have a change, once and forever.

Every woman should be glad to give up all pleasures to please her husband. Think of the grief and danger he must undergo to make you comfortable. From the time he gets aboard his engine until he is to the end of his run, his life is in constant danger, while you are at home by a comfortable fire or out walking, riding, and perhaps to a ball having a good time with your old lovers.

There has been so much said about managing wives and husbands I think some one of experience ought to tell us unfortunate fellows the way to manage to get a wife.

As this is my first letter to the *Magazine* and not expecting to be admitted, with best wishes for the Woman's Department and success to the B. of L. F., I will close.

Respectfully,

W. B. Richmond.

[The writer of this letter evidently needs a liver pad or some soothing syrup or anything but a wife.—Ed.]

FORSYTH, MONT., March 12th, 1891.

Editor Woman's Department:

In looking through the March number of the *Magazine* it occurred to my mind that I should knock for admission into the sunny circle of the Woman's Department. Both my husband and myself take great pleasure in reading it. There is a great difference of opinion expressed in it and I am sure we can all profit by it. Card playing at home seems to be the general subject at present. The editor's article in the March number is (in my opinion) a very sensible one, for nine out of every ten of the boys will learn sooner or later. How much better then that they should learn at home in an innocent social way than to go into a saloon to learn later on and perhaps bet on their second game.

I must say a few words of praise for "F. M. S." in the March number. The fireman that will win her for his bride, will indeed be fortunate, for no doubt she will make a model wife. I think she and "Jim Dooly" would complete a very happy household for they both have very noble ideas of married life.

I am so fortunate as to have a husband that fills the bill exactly of her ideal, his first thought is always of me, and dinner comes afterward.

With kindest wishes for the Woman's Department and success to the brotherhood, I remain

Yours truly,

An Engineer's Wife.

HAMILTON, ONT., March 7, 1891.

Editor Woman's Department:

I have often heard mother say that she has never yet seen a letter from any of the Hamilton ladies, but I am only a little girl of 10 years. But I will try and tell a little about our beautiful city. There have been some lovely buildings built here lately. The City Hall, the Young Men's Association Rooms, and the Public Library have been the latest. A walk or a drive to the top of the mountain is delightful, you can see all over the city and across the bay, which is at the present time covered with ice, and the ice boats and the merry skaters go skipping along. The ice men have had a grand harvest this winter. I heard father tell mother there has been the best ice cut this winter there has been for years, and there has been a great quantity shipped to other places. Father is a member of No. 151 and he always attends lodge meetings when he is home, and I always hear mother say, "Don't be late coming home."

A fireman's daughter,

Bessie E.

[Bessie has set the ladies a very good example.—Ed.]

BAY VIEW, MD., March 17th, 1891.

Editor Woman's Department:

I always read every letter in "the Woman's Department" before reading anything else in the *Magazine*. I would like to shake hands with "K. L. W." The very idea of having to smile when you feel like crying! I hope she will write often. I must have my say on this voting question. I feel sometimes as if I would like to break some of the laws made by men elected by foreigners and ignorant negroes. I don't believe any woman would really not vote if she had the opportunity to do so. It may sound conceited but I think I am more capable of understanding the Mills and McKinley bills than a good many of our smart (?) politicians. Because a man can't go to an election and return in a reasonable time, is no reason why a woman should not do so. If I had a husband (which fortunately for him I have not), I should just expect him to vote as he saw fit, and I should do the same. There is one fact I am sure of. If ever the happy day dawns when women can vote, they will have the prohibition question settled at once and in the only way—that is the manufacture of whisky stopped in the United States.

I imagine I hear our charming editress say "strong minded," and cast her eyes towards the waste basket. But if she will remember, this is my first letter and I had to say my say. I can't help saying I agree with "Jim Dooley," but wonder what is the reason he don't take that advice to boys, himself. Or, Jim, is it possible you can't find any one to take you? I cannot resist the temptation to tell the sisters that I love to play all kinds of games, including euchre, seven-up, dominoes, checkers, etc. Now I'm sure some of you are shocked and I'll not add another word except success to the Woman's Department.

Fireman's Schoolmarm.

P. S. I wish the sisters would use some other *nom de plume* beside initials, as it is difficult to remember them.

[Why not set the example by signing your own name? "Strong-minded" articles do not go into the waste basket.—Ed.]

OTTAWA, March 9th, 1891.

Editor Woman's Department:

I am neither wife, mother nor sweetheart of any of the railroad boys but I may say that I am a friend and an interested reader of the *Magazine*, and I thought I would write and tell you a little about the boys of Ottawa. The boys of lodge 172 (F. G. Lawrence) are a fine lot of fellows and do credit both by their conduct and personal appearance to the B. of L. E., which I think is a grand order for keeping up a continual brotherly feeling, and I must say that "the boys" here are in no way behind in exerting themselves to render assistance to those in need of it. They are kind hearted, manly fellows who are always ready to lend a helping hand. Their life, too, when on the road, is rather a hard one, and they are always in continual danger. Let us try to always have a kind word for them, for kindness goes a long way to soften life's pathway. Wherever we meet them, whether they are dressed up in their Sunday best or not, never slight them or hurt their feelings by not recognizing them. Let us remember them in our prayers, that in starting out on the road they may always be prepared to meet their God. Life is so uncertain, accidents always happening.

As I am not married I can not give any personal experience of how to manage a husband, but for those who have husbands I will send a recipe for ginger bread, which I think is very nice.

One cup flour, one cup sugar, one tablespoon ginger, one teaspoon soda, mix dry first; one-half cup butter, melted; one cup buttermilk, two eggs; pour in milk, treacle, butter, eggs, stirring all the time.

I am of the opinion that it would make the management of man easier if everything was cooked nice and tasty, but I do not know. May I come again, this is my first venture?

A friend and well wisher of "all the boys."

Velvet Eyes.

[Yes, come again and tell us something about Ottawa and life in Canada.—Ed.]

MONETT, MO., March 6th, 1891.

Editor Woman's Department:

I am not a constant reader of the *Magazine*, but when at leisure I love to read the letters in the Woman's Department, and I find them so interesting. Have often thought I should write, but have never attempted it before.

Have been quite interested in the letters telling how to manage husbands. I do not think it is very easily told. I have not been married very long, scarcely a year yet, but I had never thought of managing my husband. We both love one another and help each other and there is no managing needed on either side.

Have never seen anything in the *Magazine* from either the members, or their wives, of the Monett Lodge, but probably it is because it is not a very old lodge. I know it is not from lack of writers. Our little city isn't very old, having been a division point only a little over five years, and it has grown wonder fully. It was only a little village then, and now I think the population is about 4,000 inhabitants. It is away down in the southwest corner of Missouri and is such a pretty place.

Was quite interested at the piece of poetry, "How to Manage a Wife," written by Shandy Maguire, and if what he states were the true facts of the case I think he (poor man) is to be pitied. But I cannot think he has had such a hard time as he would make us think, and as I feel he will be answered by a number more competent to answer him than I am, will not say anything about it.

Now this is my first attempt at writing for publication and if my letter is accepted I may come again.

With best wishes and earnest prayers for all the brave boys that shovel coal, as my dear boy does,

Sincerely yours,

Pearl H. Johnson.

JACKSONVILLE, ILL., March 8th, 1891.

Editor Woman's Department:

I have been an interested reader of the valuable *Magazine* for over four years. And I can say truly I think Mrs. Harper deserves great praise for the success of the Woman's Department.

I look forward with great pleasure for the *Magazine*, as the Woman's Department has many useful as well as interesting pages to be read.

I have read a great many sensible letters on how to manage a husband. I have nothing to say on the subject, as I have never had the least trouble. We always consult one another in everything; that is how we have always gotten along so nicely. Some of the young ladies say how lovingly they will meet their husband when he comes home. Girls wait until you get him, and when you do he won't expect you to meet him with a broad grin on your face and your arms out when you are sick at heart over some trouble you have had while he was out on the road. Don't think your married life will be all sunshine. Prepare yourself for dark days as well as bright ones. If you are fortunate enough to get a good fireman (which I hope you will), no doubt you will be as happy as it is possible for us to be on earth.

I would be very glad if some one of the correspondents would please give a good recipe for chocolate cake.

Well as this is rather lengthy for the first, I will close with success to the *Magazine*, happiness and good luck to the editor, my best wishes for the B. of L. E. Yours truly,

An Engineer's Wife.

SCHANTON, PA., March 9th, 1891.

Editor Woman's Department:

I have been an interested reader of the *Magazine* for some time, and it is always received with great pleasure. I seldom see anything in its columns from Acme Lodge, No. 238. I will say in favor of the members, they are a brotherly class of men, always ready to aid the needy brothers. My husband is a fireman on the D. L. & W. R. R., and I think there is no worthier or better class of men than the firemen (one especially). Will close with best wishes to the *Magazine*.

Yours truly,

M. A. T.

HINTON, W. VA., March 5th, 1891.

Editor Woman's Department:

I have been a reader of the *Firemen's Magazine* for some months and take great pleasure in perusing its pages, especially the *Woman's Department*. I find a great many letters written from different places of which I have been a great admirer. Although I do not agree with all of the correspondents I can heartily endorse some of them. There is a letter in the March number from "H. C. P." I can not endorse. I think she is vastly mistaken in the matter of card playing. I do not endorse card playing in any form nor at any place, it being the first step to a gambler's den. The man who never takes the first drink will never want the second, neither will he ever be a drunkard. The youth who never plays the first game of cards will never play a second, nor will he ever be a gambler. If the parents encourage card playing God knows where it will end. God forbid that if my child should ever be asked where he learned to play cards he should say, "My parents taught me when at home." Bring up your children the way they should go and when old they will not depart from it. Bring up your children playing cards and they will play when they are older. If it should be the *secret* or *mystery* of card playing that causes the youth to seek it when older, and that is the reason why "H. C. P." advises card playing in youth, with the same propriety could "H. C. P." advise the seduction of the fair young maid whose virtue soars upon eagle's wings, to prove or make her virtuous in after life. I think in dealing with children we should be very careful and *avoid the very appearance of evil*. For my part when I am moulding the character of my children, if it becomes necessary to the successful management of my husband for me to sit down in my house and play a game of cards before my children, my husband would forever go unmanaged.

Now in regard to managing a husband, a great big book might be written and yet the man would not be managed. Women can not manage men, neither can men manage women. As for my husband, I think him capable of managing himself. If I had a husband whom I could not trust to manage himself I should blush to own him, or if my husband thought me incapable of managing *myself* I would still blush. Very good suggestions have been made for those whose husbands are incapable of self-management, but I am glad my husband can manage himself. I think it an insult to the men for women to write such articles and cast such reflections on their husbands, proclaiming from hill top to valley that their husbands are so green as not to be capable of self-management.

I hope the sisters will adopt some other topic for discussion, say "home attractions" or "flower culture," or "preparing their children for some profession in after life."

I have already written my first letter too long and perhaps have intruded on your valuable space, and by promising a shorter one in future if this appears in print, I will subscribe myself a friend to the B. of L. F. and especially old 236, of which my husband is a member.

May Day.

BUTLER, DEKALB CO., Ind., March 28th, 1891.

Editor Woman's Department:

I have been a reader of the *Firemen's Magazine* for a few months and like it very much. Have not heard from Butler Lodge, 164, and thought I would write a few lines for the B. of L. F. from this place. Am not a fireman's wife; have been staying with my sister. She has a fireman for a husband and we read the *Magazine* when we get it. I am well pleased with the *Woman's Department*, think it is very interesting. I have read a great deal about managing a husband. My sister does not try to manage her husband; she lets him manage himself and she does everything to make it pleasant for him when home, and I think that is the right way. That is the way I would do if I had a fireman for a husband, which maybe I will have some day. I will close, wishing the *Magazine* a successful future and all the firemen good luck. God bless the B. of L. F. Yours truly,

A Fireman's Sister, M. C. M.

MATTOON, ILL., March 8, 1891.

Editor Woman's Department:

This gloomy Sunday afternoon while my husband is at the lodge I will employ my time writing to the *Woman's Department*, which improves more and more every month.

Jim Dooly's letter in the March number is splendid. I wonder if when he gets a wife his sentiments will be the same. They are always very precious before marriage, but they soon forget that they ever thought so. If he remains of the same opinion after he gets his wife I hope he may never be tempted to sell his overalls for a breakfast; that the porter-house and coffee will always be ready on his arrival.

"A Fireman's Wife, Anna," says her advice to all girls that can marry is to marry a railroad man, that they will never regret the step they have taken. She must remember they are not all alike. I say Girls, marry to suit yourselves, for that was the way I did.

There has been so much said by the ladies about meeting your husband with a kiss. Let me ask some of the writers what they would do if their husband wouldn't let them meet him with that kiss but tell them that they had better be thinking about something there is more profit in. I am like K. L. W., I believe in looking just like I feel, for your husband would as soon see you look as you feel as to know you felt one way and looked another. But it is woman's nature to look for a little praise from her husband. As the wife of a year said to her husband when he asked her what she was crying about: She sobbed out, "Do you love me?" "Why, you foolish woman," he replied, "What did I marry you for if I didn't love you?" "Oh, then, tell me so sometimes," she said.

This echo of the heart explains the feelings of multitudes of women to whom words of affection would make the heart throb and pulses bound as they have not for many years. The husband should bring her daily the flowers of affection and hold above her the shield of his love when clouds lower and life's storms beat. It isn't money, or houses, or fine dresses which make happy homes, it is love and appreciation expressed not only in deeds but in words of tenderness, endearment and sympathy.

I have said more than I intended to and so I will close for the present, but some day when I have time I will call again. Good luck to all and a brilliant future to Mr. Debs.

Mrs. J. W. Taylor.

[Your letters are welcome.—Ed.]

BROWNWOOD, TEXAS, March 8, 1891.

Editor Woman's Department:

I have been reading the *Firemen's Magazine* only a short time and I am well pleased with it. It was sent me by some kind friend and I appreciate it more than any book except the Bible, and this is why: I have one and an only brother that is a B. of L. F. man, and I think it is one of the best of societies. I have just read Jim Dooly's letter in the March number and I think he is correct. I haven't a word to say about wife and husband management, as I think every true wife or husband needs no managing. I think they should consult each other but not manage. I think that word should be applied to an unruly mule or horse, not to man or wife. This is my first and if it is worth using I will do better in the future.

I will give you a description of our country and beautiful city, tell you of its fine buildings and of the oil well (its depth is now thirteen hundred feet, water and oil running out at the top), and of the R. R. and the pretty mountains. Our cemetery is just one mile from here and it lies just at the foot of Round mountain. At sundown it is the prettiest spot I ever saw and it is very dear, as I have just laid a loved brother there to rest until the great trumpet is heard. He was a K. of L. and now he is with the Sun of Righteousness. I hope every reader of the *Magazine* is trusting to God to take care of her loved ones, and especially firemen and engineers. My brother, H. A. Jernigan, is a fireman whom wife and mother and sisters are trusting.

C. J. Bell.

March 4th, 1891.

Editor Woman's Department:

I am the mother of two railroad boys, both firemen. You will probably find as good but I think not better boys on any road. It is only quite lately that I have taken much interest in the *Firemen's Magazine*, but one day the name "Nora Bull" signed to an article attracted my attention, and I wondered if it could be the "Nora" I had known since she was a baby, and knew her mother years before. From seeing one familiar name I became interested in the *Magazine*, and again I noticed "W. L. W." and he, too, is an old acquaintance. But I can't tell you how it amuses me to see so much discussion about "How to Manage a Husband." Why, bless you, I have lived with one of those necessary household appendages for nearly 25 years, and I tell you it is not necessary to spend a very great amount of time trying to manage them. They are all right (at least mine is), and I sometimes wonder if it wouldn't be a good thing for some wives to *manage themselves* a little differently. Maybe it would make some difference with the husbands.

"Phillips." I like your letter in the March number, and I would like to shake hands with an "Engineer's Wife" in the same number. I am going to preserve her letter in a scrap-book, or at least a part of it.

Let me assure "Olga Lane" that "married life is not so bad a life as some would like to make it, but whether good or whether bad, depends on *how* you take it."

"F. M. S." had no need to tell us she was not married. One reading of her letter would have convinced a married woman that such was the case. I say, by all means, have a good warm meal ready, if it is meal time—it pays!

The only apology I have to offer for writing is that both my boys are B. of L. F. men, and I am interested in the "boys." Minnesota.

CARROLLTON, MO., March 22, 1891.

Editor Woman's Department:

Once more I will apply for admission in the charming circle of Woman's Department. I have read every letter in that department, and find them all more interesting than ever before.

I will admit that to girls and women too, the subject of "managing husbands" is quite interesting; but as variety is the spice of life, and it is best always to drop a topic of conversation before it is worn threadbare, I move you, good friends, that we fall in with the suggestion of our Pocahontas sister, and discuss something that, although it may not be so important or so fascinating as the "loris of creation," yet may give us broader views and newer ideas.

I will take up books first. How thankful we should be that we are living in an age, and in a country where good reading matter can be procured for a mere trifle. Those who live in cities and large towns have access to free libraries and reading rooms. There is no country on the face of the globe, where there is more free, pure literature distributed than in our own beloved land. Yes, fill the home with the higher class of books, magazines and newspapers. Talk about what you have read and thus interest the family in that which pleases you. Spread out your books temptingly on the table where they will invite your brothers and your fathers to peruse them instead of spending their evenings down town.

But literature alone is not sufficient to make a pleasant home. If I were a wife, my first care would be to dress neatly and becomingly. In other words I would endeavor to please my husband by my personal appearance as much as ever I tried to gratify the eyes of my lover. Home will soon lose its charms if the mistress neglects her dress and makes no effort to beautify herself. Then again, I would not begrudge my time or money used in adorning my rooms, with fancy work. What hides the unsightly, straight lines of an old chair, better than a home made tidy, or what brightens up the dingy couch more than a gay slumber robe, or what rests the eye more than a pretty picture framed in an

artistic frame by your own hands? Again I would consider it my duty to see that my table was perfect in all its appointments. That the food was substantial and dainty, well cooked and well served. All this by proper management, I would do, and live within my income—and be able to lay by a sum each month, for a rainy day. Briefly summing up the matter of creating a pleasant home, it is necessary to be a neat, sensible wife, provide instructive literature, decorate the rooms with pretty home-made fancy work, and last, but not least, be competent to furnish the table with properly cooked food. As my letter is now rather long I will close with a host of good wishes for the brotherhood and its interests.

I am yours truly,

Grace Cutler.

[Your theories are all right and we hope it may be your good fortune to secure a kind, appreciative husband.—Ed.]

KEOKUK, IA., March 7, 1891.

Editor Woman's Department:

The March number of the *Magazine* came this afternoon and while reading the very interesting letters in the Woman's Department, I concluded to try my ability at writing one.

Do not be surprised if it is a failure, as it is my first attempt. I have a dear brother "fire boy;" he is away from home at present, has been for three weeks; I do not like that part of it, in fact do not like having him on the road at all, as it is so dangerous. But I have this consolation, he is a good Christian. Oh, that all railroad men were Christians, how much better it would be. An engineer on the Rock Island, Mr. Jesse Damp, who was scalded to death in the wreck at Eddyville, Ia., not long ago, was one of Keokuk's noble citizens.

I wish the ladies who write for this department would let the poor husbands manage themselves a while, and talk about something that will interest the sisters and daughters of firemen more. My opinion on that question is, that if husband and wife love one another neither the one nor the other will need any managing. The card question is being discussed to some extent at present. How any person can say, "Let the young men play cards at home and they will not care to go any place else to play," is more than I can comprehend. It seems to me, home can be made attractive without the aid of cards. My mother has never allowed a deck of cards to come into the house, and to-day she has three as noble boys as ever lived. If I may I will come again.

Minnie H.

[Yes, come again.—Ed.]

LOS ANGELES, CAL., March 18, 1891.

Editor Woman's Department:

Having had the pleasure of reading the *Magazine* for quite a while and never seeing anything about San Diego Lodge, No. 90, located at San Bernardino, I will just say a few words for the noble and worthy members of that lodge, so they will not be forgotten. They gave a grand ball, March the 17th, which was a perfect success, largely attended and enjoyed by all. The invitations were rather novel as they were written in the form of a train order.

I am so glad an "Engineer's Wife" in the March number proposed something so instructive to talk about. As for me, "managing a husband" is a topic that amuses me, but that is all. I am sure there are a large number that read the *Magazine* in the same boat as I, that is, young and inexperienced; and books, spending money wisely and decorating the home, is just the talk we will benefit from. We take the *Engineer's Journal* also, but I hardly ever read it as there is not one single thing in it that will interest a woman. Being a lover of elocution I never tire of the lovely selections that are found in the instructive pages of the *Firemen's Magazine*. Wishing the *Magazine* unlimited prosperity and success through life, and joy and success to the brotherhood in all they undertake to do, especially No. 90, at San Bernardino, I remain,

A Fireman's Wife,

Jennie.

TO "SHANDY MAGUIRE."

Dear Sir: I've been waiting and waiting,
In hopes I might hear from you soon;
I really believe you have forgotten
Your far-off friend, Mrs. Bloom:
No more you send kind words of greeting,
Nor write in that ecstatic strain,
As oft in the past you have written,
That so heavily over-taxed your poor brain.

I have wept till my eyelids are smarting,
And I assure you I am growing quite thin,
While pains through my heart are now darting,
As I think of Mrs. Maguire and the twins;
Of the "dimpled-child" boy that you longed for—
Of your marital troubles through life,
Which you so artfully portray, to gain sympathy,
In your ode "How to Manage a Wife."

You may try every means and method—
Resort to every device that you can;
Tho' tractable in many ways, Shandy,
The ladies will never be managed by man;
For when we wed the lords of creation,
And the days of our courtship are o'er,
We expect to manage the husband
As the lover was managed before.

Kind words are more persuasive than "ducats,"
In the daily management of a wife;
Tho' you bedeck her with jewels so priceless,
Yet no pleasure may enter her life:
But loving words of praise and true devotion,
Each womanly heart craves far more
Than gold, silks or satins or jewels,
From the one her heart may adore.

You have sung so oft of "orange groves"—
Of "love so fond and tender,"
That I expected you to greet
At the B. of L. F. convention last September;
Friends Sargent, Debs and Hannahan
Were here, whom the ladies did admire,
While you remained at home to care for the twins,
And be managed by Mrs. Maguire.

Friend Shandy, do not feel offended,
For poets are licensed, you know,
And the pleasure of writing these stanzas,
My muse would not allow me to forego;
And now I will say in conclusion,
When matrimonial troubles are rife,
That kind words will make the best "check-rein"
To use when managing a wife.

Mrs. Nellie Bloom.

WEST OAKLAND, CAL.

PANA, ILL., March 8th, 1891.

Editor Woman's Department:

It makes me tired to hear the ladies always say the same thing. I think they must like the men pretty well as that is all the most of them can find to talk about. I think the woman that says to always "meet your husband with a smile and a kiss" don't meet her husband with a smile and a kiss every time he comes in. I don't believe in anybody telling someone else to do what they wouldn't do themselves. I would like to see the house of the one that says "Always keep your house neat and have the meals ready to sit down to the minute your husband comes in, and yourself as neat as before you were married." Suppose you are washing, how can you look as nice as on Sunday evening when your intended came to spend the evening with you? I believe in using a little common sense as we go along.

I think the letter signed "Fireman's Mother" in January number is just splendid. Through the kindness of a friend I receive the *Magazine* and think it is just grand, especially the "Woman's Department." I will close with best wishes to all firemen, (especially one). I remain,

A fireman's friend,
Addie.

MISSOULA, MONT.

Editor Woman's Department:

I have read every letter in the Woman's Department of the February number. Some I like very much, two especially: "Engineer's Wife," of Abbot's ford, Wis., and Mrs. J. W. Taylor.

I wish some of you would tell me what you would do if you had a husband who was not affectionate and did not show his love for you, never caresses you unless you go to him and say, oh, do put your arms around me and kiss me, and then sometimes he thoughtlessly does not? And does not take any interest in things that you are interested in; when you talk to him, pays no attention to you, half the time don't know what you say? Don't care for reading, won't listen to you read; don't want you to buy books, and, though you are not a strong woman, in fact very delicate, he does not seem to care how much hard work you do; does not offer to help you and sometimes will not when you ask him? And neglects you in a dozen little ways that no one can see but yourself? Although he is otherwise a good man, does not drink, has no bad habits to speak of, saves his money and stays at home all he can. Pray tell me what you would do.

I for one do not believe in card playing in the home, nor any place else; neither does my husband. I could give several reasons why, but space forbids it here.

Minnie Steele says, "I am a church member." So am I; a member of the M. E. Church. Neither do I believe in kissing parties, nor gatherings where scandal is rehearsed and impolite stories told, nor card playing, nor dancing. Dancing is all right in itself, but at balls and dances we mingle with people we would hardly speak to on the street the next day.

Engineer's Wife, H. C. P., should remember that the Christians of the present day take the gospel of *Jesus Christ* for guide, and that, if I am not mistaken, teaches love, kindness and charity. Respectfully yours,

Alzetta.

LA JUNTA, COLO., March 25, 1891.

Editor Woman's Department:

I anxiously wait each month for the *Magazine*. I enjoy reading it very much. I not only think it a very interesting book, but a very beneficial one. If one would study the receipts they find in them. I have looked for some news from Spanish Peaks Lodge, No. 228, of which my husband is a member, and I have never seen any. This is my first attempt to write, so will not tire you too much this time. I see so many remarks concerning "managing a husband." I have nothing to say concerning that, as I think my husband capable of managing himself. My husband went out on the road last night on his regular run. It was snowing when he left and is still snowing. I hope there will be no blockade, so he can get in on time in the morning. I realize the danger he is in and I am always anxious to see him return home safe and well. I will close, wishing success to the *Magazine* and good luck to the firemen.

A fireman's wife.

May.

PADUCAH, KY., March 25, 1891.

Editor Woman's Department:

Please allow me space through your valuable columns to return thanks on behalf of the ladies to the boys of the Plain City Lodge, No. 238, for their most delightful ball of the 22d.

Surely they think "whatever is worth doing is worth doing well" for in every detail it was a perfect success and the only regret of the fair sex is that it is over, without prospect of an early repetition.

After months of constant reading I have never seen anything from Paducah, and it is a source of wonder to all, for a brighter, more intellectual set of boys never composed a lodge than those of the Plain City. And should they favor us with something from their pens, I feel assured it would be both instructive and entertaining. For fear of intruding on your time and attention, I will close for the present time, but should this be found worthy of publication in our highly appreciated *Magazine*, will come again to let our friends know we are still "up and doing."

Nellie.

NEW ALBANY, IND., March 29, 1891.

Editor Woman's Department:

I am begging for space enough to inform your readers that we have a Division 268, we call Clifton Heights, although never a word from any of its members has been seen in the *Magazine*. The lodge is in a flourishing condition, being one of the smallest divisions ever organized. It was organized April, 1890, with but five charter members, and now it has twenty four names enrolled. I don't see why some of its members have not written ere this. I am sure it is an order to be proud of and ranks among the best and grandest orders of the present day.

The February number of the *Magazine* has arrived. I see there is quite a debate on the subject, "How to manage a wife or a husband." My whole soul is in an argument when I have a good subject, but in this case I hardly know which side to take, for fear I shall get in trouble with some of those unruly creatures. I will first tell you how it is with me. In my younger days I was taught to look well before leaping, or see what matrimony is before you try it. Possibly that accounts for my not having a better-half; perhaps I have looked too long or seen too much of married life. Well, this has nothing to do with managing a wife or a husband, so I'll give you my ideas on this all-important subject. First I should endeavor to get a wife that knew enough to manage herself and try to make home happy and cheerful. I think if a man and wife are well matched they will neither of them need to be managed, but what is one's business will interest the other, and if the husband is a fireman, while he is out on the road toiling for the support of his loved ones, the darling little wife should be busy at home planning some way to save up his hard-earned dimes, so that he may have the promise of an easier life in the future, and also give him a square meal when he comes in. Always have clean overclothes and something good for his lunch, for the fire boys like something good to eat. Then make home pleasant and if your husband don't treat you kindly, he must be one of those unruly devils that don't know a paradise bird when he sees one.

Now, to give the poor men a show as to how to manage their female partners. When you marry be sure you love your wife and be most sure you can support her. Understand well before you marry the obligations of a married life, then if you think you can treat her kindly, love, respect, protect and support her, you are the man to get married. You should furnish a little home and always come and go in a pleasant manner. Make her think she is the idol of your heart; allow her to handle the money so far as she is able.

I am altogether "stuck" on Edward Ames' letter in the February *Magazine*. I am sure his wife ought to feel flattered that she has a model husband. I guess I had better drop the subject before I go too far.

Yours unmanageably,
Coladager Ed.

WELLINGTON, KANSAS, March 25, 1891.

Editor Woman's Department:

I am glad to see the men step in and relate some of their experiences in the wife managing "biz." Of course, the cleanliness and order around a home are due to the exertions of the wife, but if it is not appreciated by the husband she will not have the heart to keep it so, for "As the husband is, the wife is," and if he takes no pride in his home she has no incentive to work and keep it in order. For a woman to always be dressed up and smiling like a French doll, when her husband comes, is very good to write about, but when it comes to real everyday life "It's different, you know." If a man was not met with a frown or sober face once in a while he could not appreciate the smiles. And smiles; well, a forced one is little short of deception. I think "Shandy Maguire's" last effusion was just horrid. I think Mrs. Maguire must be a long suffering, patient woman, or she would step out and vindicate herself. Several of our boys are taking enforced rests on account of vaccination. My husband and I both pull our own share of the matrimonial car, and so need no managing.

Anel.

ATLANTA, GA., March 25, 1891.

Editor Woman's Department:

I have concluded to try my success at writing again. I think the *Magazine* is just splendid. I mean all of it, not just the Woman's Department, for I always read it from cover to cover. I am as much interested in the Mechanical Department every month as my husband is. But best of all I like the Woman's Department. I have not tried "Helle's" receipts yet, but I will. I think she is right about husbands. I know my husband does not always expect to find his meals ready, the house cleaned up, the baby as neat as a new pin and me smiling, because he knows it is not always possible. But I am like "Belle," my face is seldom straight, and when it is every one in the family wants to know if I am sick or mad. I think the letter from "A Fireman's Mother" is just splendid. I can safely say I get my share of "pie and cake." Please let me tell "Minnie" that I have been married three years and have never blacked my husband's boots yet (but if he was in a hurry to get to the lodge I suppose I would), but when he feels "badly and tired" and "lays off," I do not expect him to stay at home all the time. She wants to know "who takes your place when you sit up all night with a sick baby?" Now, don't you think if your baby is sick enough to sit up with, if your husband knew it he would stay and help you? I know mine does every time my baby gets sick; that is, sick enough to sit up with him. He is our only child and is just two years old. And if I do not feel able next day to do all my work myself, he helps me. I think most men would stay at home and help if they knew "baby" was sick. "Fannie" says she does not believe in card playing. I do, and often play with my husband. I do not think it is right to gamble, though. She says she thinks a woman is the cause of a man's ruin. Now, I do not think so. There are few women that have been raised to know that a man has to work for a living, that have little enough sense to expect "a plush coat, silk dress, and a new hat every three months," out of seventy-five dollars a month. If a working-man marries a girl who is well off and knows nothing about a workingman's life and wages, he need expect nothing else; but if he gets a girl whose father and brothers, and maybe herself, have had to work, he will have somebody who expects to help him along all she can. I was raised to work, therefore I must be one of those lucky ones who know how to take care of their husbands' "hard-earned money." Very often my husband goes to town with me and always insists on getting costlier things than I wish. I have seen nothing yet from any of the ladies about "managing wives." I think they need as much "managing" as husbands do. I know I do. That's saying a good deal, isn't it? But I am like a balky horse, sometimes I go and sometimes I don't, and you know balky horses need a deal of managing. Well, I could say much more but I do not wish to "wear my welcome out." Success to all is the wish of

Mrs. A. A. Maner.

[A very sensible letter. Call again.—Ed.]

MANZANO, NEW MEX., March 25th, 1891.

Editor Woman's Department:

I have received, through a fireman friend, a copy of the *Locomotive Firemen's Magazine*, the first I had ever seen, and think the Woman's Department is very nice. I live about forty miles from the railroad, on a ranch. The Manzano mountains are only three miles to the west, and just now are very beautiful, being covered with snow. On the east stretches a vast prairie, which is also white with snow. I think my home is most beautiful, though we are very isolated, our nearest neighbors being two miles away.

I am a Michigan girl, but New Mexico has been my home for three years, and I like it far the best. I think "Dad's Girl" wrote a very interesting letter. I have a correspondent in Texas, and Texas friends here.

As this is my first letter, perhaps I had better close. Wishing the *Magazine* the best of success, I am

Yours very truly,

Bertha.

A MEMORY.

Close to his heart he held me.
And the nodding roses heard
The passionate love he whispered.
And my heart to its depths was stirred.

We met, and all unbidden
My heart to his keeping went,
Nestling close to his bosom,
Like a bird from Paradise sent.

It seemed a dream of Eden.
That would vanish like glistening dew.
While my slumbering soul awoke,
And to passion thrilled anew.

His love was all I longed for,
And the joys of the world above
Looked shadowy and afar off
In the light of my maddening love.

His love is mine, but our paths far apart
As the shore to the depths of the sea:
The blessed dream is o'er—
A sad, sweet memory.

Oh pitying Heaven, the pain of parting!
Oh Fate, how cruelly relentless thy knell!
Tortured, rebellious heart be still!
Farewell, my heart's king, farewell!

Vita.

HORNELLVILLE, N. Y.

MILLVILLE, CAL., March 26, 1891.

Editor Woman's Department:

Well, this afternoon I'll visit with the editor. We are having a lovely winter compared with last winter, not any very cold weather and very little rain, scarcely enough to suit the farmers.

The Citrus fair at Marysville has just closed, the first for northern California, and the many thousand oranges and lemons that were on exhibition, were a sight to behold.

The cruiser Charleston, built at San Francisco, had the honor of bringing King Kalakaua on a pleasure trip to our state; but the king not being in good health, the journey and festivities were more than he was equal to, and he died at the Palace hotel in San Francisco, away from home, but not entirely among strangers, as he was acquainted to some extent here. The city paid due respect and honor to his mortal remains, which were conveyed to his island home by the Charleston.

Our state produces an endless variety of products; wheat is the principal grain and the quantity produced far exceeds home consumption. Lumber, fruit, gold, silver, are other resources, but, as I've always lived in Shasta county, I'll confine my description simply to that county. Our scenery is magnificent—lofty mountains, containing many snow-capped peaks, surround our valley, and in spring the earth is covered with a verdure of green, mingled with some of the loveliest wild flowers of every color and variety. I obtained ninety different varieties and pressed them, sending them to the county superintendent with school exhibits.

Quite a lot of grain and hay are raised every year and there are several grist mills in the county.

They depend entirely on irrigation to raise vegetables, for otherwise very little could be raised, as it is so very dry here in summer. Onions are the principal vegetable peddlers, although "boycott" has been resorted to, to drive them out, but as they can raise them cheaper than the whites they still come with "potatoes, cabbage," &c.

Several sawmills are here, of which the Shasta Lumber Company has the largest. They flume the lumber about thirty-five miles and wagons then haul it to the railroad, but they have commenced building a railroad from the dump to Anderson, a station on the C. & O. line, a distance of about fifteen miles, and they will probably extend the road on to their mills and do away with the flume.

A great deal of fruit is raised, there being many large orchards and vineyards here and the quality and quantity are excellent. There are two large sash and door factories.

Wages are \$2 per day during harvest and cheaper the rest of the year.

Many are engaged in mining, there being some large gold and silver mines. Stockraising is another feature for money making, as much of the land is adapted only to grazing and most of the stock winters on the commons.

Well, I believe I have spoken on all subjects except school teaching, and it would be heartless not to devote a few words to that interesting topic.

We have about one hundred district schools and about two-thirds of them are taught in the winter and the remaining are in the mountains and taught in the summer. Our county superintendent is a lady, having defeated her opponent, a gentleman, by four hundred and fifty majority last fall. The preceding lady superintendent was in office thirteen years. School teachers' wages are from \$60 to \$100 per month and the terms are from six to eight months. Young teachers were reducing the wages, but the older and more thoughtful ones were equal to the emergency, and at the Institute three years ago, they passed a resolution that it would be considered unprofessional conduct to teach for less than \$60 per month, calling those "scabs" who took less. I've given the favorable side of school teaching; but when the would-be teacher has to appear before that august Board of Education, often shaking and trembling, for a certificate—then the trouble of securing a situation—we find the pathway not strewn with heartease solely, and this county hasn't the name of giving easy examinations or being very lenient in marking.

My letter has already assumed too great extent, but in my next I will contribute some recipes and descriptions of useful articles.

Wishing success to the brotherhood and especially to the Woman's Department, I am, without any *nom de plume*,
Emma E. Smith.

[Do not fail to come again.—ED.]

FT. WORTH, TEX., April 1, 1891.

Editor Woman's Department:

Mr. Rob Hancock, who has recently been promoted to the right-hand side, is now on the night switch engine of the Ft. Worth & Denver. Rob has ever been on the right side of all workmen's rights, and is very popular with the boys of the B. of L. F. and all good people generally.

Mr. Harry Cunningham is now hostler on the same road at Ft. Worth. He has only recently returned home from the Panhandle counties and taken up his duties as Secretary of the lodge here. His mother, sister and friends all rejoice to have him home again.

I cannot forbear congratulating the *Magazine* on its new and beautiful appearance in this now rather old new year, and its anticipated removal to a larger field of usefulness.

The Woman's Department, too, seems to have taken a new impetus under its able management, and Mrs. Harper, who has ever been the champion and helper of womankind, is now in her new home, I hear, doing more and better work than ever before.

It seems to me, however, that it will be a great calamity for Mr. Debs to resign—that is, for the *Magazine*. His talents and general ability will command a far better position anywhere. Still we have grown so accustomed to associate his name with that of the *Magazine* that it will be like separating old friends. But we have no doubt that Eugene V. Debs' name will go on steadily climbing the ladder of fame. That wherever found it will be a synonym for honesty, integrity of purpose, and downright earnest helpfulness for the workmen of the world, be they found in what walks of life they may. Beginning when the cause of labor was poor and unhonored, he has stood bravely by his purpose and left nothing undone that would prove him heart and soul in the cause. But now the tide has changed; the workmen are fast gaining all they want; are taking the best places and placing those who have helped them to gain this victory where they will still be able to reach down and pull them higher. Excelsior is written on the banner of their party and the great thinkers, like Mr. Debs and others, will be rewarded for all past efforts.

This is for the *Magazine* and I cannot say all I

would like on this subject, for fear they will not "print" any of it.

Shandy Maguire's confession reminds me of an overgrown school boy rushing in hot, tired and impatient of his shoes, trying to undo an unruly knot. It is a little thing to untie a shoe, or manage a wife, but it takes patience sometimes when the knotty ones come up, and Shandy swears like he did not have much.

I am pleased to learn that "Kicker" is supposed to be a woman. We can all understand the letter now. Some of the boys enjoyed that immensely and were about writing a remonstrance in favor of "Kicker," to get the women started again. There is ever a fascination in eyes masculine to see women fight or disagree, provided it is some one else who is to be plucked. But taken all in all I believe one home is about as happy and well managed as another. There are some who have more means to enjoy themselves; others who have more capacity. There are times when life is bright and beautiful, when we are free from care and our homes are our greatest pride. Again we become weary of home and its surroundings and long to be away from it all, to lay our burdens down and never see them more. "Life is cold and dark and dreary." Long-fellow's "Rainy Day" is a greater consolation than all the bright promises in the Bible, at such times. However, I must close, for I have written more than I should already.

Irene.

[How do you know "Kicker" is a woman?—Ed.]

"THE BRIGHT SIDE."

Several weeks ago I was reading, in one of our local papers, an article called "The Bright Side," and quite often since, I have wondered how many of the readers of the Woman's Department ever look at the bright side. Now, in all our lives there is sure to come some darkness and trouble, yet I wonder how many of us ever try to find an opening, or ever think of some way in which we can see a light in our darkness. And very often little clouds arise in our sky, and instead of looking at "the bright side," and trying to make ourselves as content as we can under the circumstances, and also to make those around us feel happy, I am afraid we sit down and look gloomy and are cross and hateful, and cry at everything one says to us, and if anyone comes near us to try and comfort us by saying a few cheerful words, instead of being grateful, we break into a flood of tears and make ourselves miserable and everyone else. I am not very old in experience myself, yet I have often heard women say they did not believe any one could look at the bright side when their lives were full of bitterness and sorrow. Now I think that is a grave mistake, for have we not examples of noble and remarkable women, who had great troubles in their lives, yet they lived on and looked at "the bright side," and were comforted by its light. For instance, we have Mrs. A. H. Hage; her name is familiar to all women and girls of the modern day. When I think of her, I know there is a great deal in looking at the bright side, for did not she always look at the pleasant side of things? Some of the girls have said she had no really great grief in her life, but I am sure she did. Just think what it must have cost her when, one by one, her sons were called to fight for the service of their country, and when she told them farewell, only think how hard it was for her, yet no one knew what an aching heart hers was when she gave them up. And later on, when she left her home to care for the dying soldiers, how many messages of love and farewell she must have heard then from their dying lips. And do you not think her heart went out to them in tender sympathy, when she knew she could not deliver all their last messages to their wives and sweethearts? But I am sure in all her troubles she carried as one of her many mottoes, "Look on the bright side." Then again we have Elizabeth Prentiss—ah, her name is a household word. Who of the girls and mothers but that loves to hear her name and loves to sing her praises? But think of the burden of grief she carried, yet she carried it bravely and well. We all know she was a great authoress. I have read

many of her books and they have done me much good. One can always read between the lines and know her life was not all sunshine. Most of the girls in our wide land have read her beautiful story called "Stepping Heavenward." By only reading this book you will know she had griefs and trials in her own life, yet she made the best of it and carried as a standard, "Look on the bright side." When I think of those two women, it seems really easy to try and be content, yet I know it is quite hard to make the best of dark trials.

I will close, for I have already written too much, and if I am welcomed into the bright circle this time, I will come again. Wishing long years of success to the *Magazine*, and good luck to the brotherhood, I will say goodbye.

Rose Temple.

FL. PASO, TEXAS.

PRAIRIE DU CHIEN, WIS., March 26, 1891.

Editor Woman's Department:

Time's fleet wings have borne us onward "Gently as the pure snow flakes it moveth on," until another month, one more point in this great course, has been attained.

This morning Winter, with her frost, like the old man's hoary head, stands before us, a fitting emblem of purity. Every month brings us nearer to Spring, who paints with green and bids us hope, and each month brings the *Magazine* and its Woman's Department, a very interesting department, I must confess, and, as I scan the correspondence of the months since "Kicker" made her appearance, I can but liken them to soap bubbles from various pipes, each labeled and going its silent way.

One "Bright and airy," next "Give the devil his due," in bright and glorious colors; and "To the point," "Hit him again," "Well done," all come floating past. "The one that blows the biggest is the best fellow;" some stand almost still, as if in doubt, or sail slowly, lettered "Can he be a man?" "It must be so," and "Yet, not so. Ha! ha! I'm tired."

After an hour of energetic study I pick it up again. It affords rest and pastime, combined with pleasure, and I peruse it again. "How to manage a husband," "Poor fellow," "Up go the bubbles again, all labeled as usual," "Kiss him," "Smile at him," "Pat him on the back," "Drive him over," "He'll balk every time," "Black his boots," "Get him some grub," "Play cards with him," "Feed him well, his stomach lies next to his heart." Then Hope blows her bubbles and in her first tiny pencilings she daintily prints "Love him," "Lead him," "Wait for him," "Encourage him," "Guide him," "Love the twin soul that halves your own," and so on.

As they sailed in the glorious sun I watched the prismatic shadows and saw them blending with pleasure, and ening into patience, emerging through experience into hope. Carefully and tenderly they sailed to the heights and joined truth, love and joy. Now "Sweetheart" tries to catch her share of these gaudy bubbles, and as she nearly reaches one she ignores the label, "Catch me quickly," I am passing," "Passing rapidly away—people say," and turning her attention to the coloring of these crystal moons she whispers, "Everything has a meaning. Nothing has so much of love's silent language, unless it is the eyes, as color." The drops at the bottom of the bubble, they say, whisper faintly of tears. They imagine they read power, value and purity in its clearness. Its delicacy, its tiny, hair-like waves, each holds its value to their innocent, greedy eyes. Clear blue expresses Heaven, truth and constancy. Yellow or gold signifies richness, purity, endurance. At last, a dirty, muddy yellow implies jealousy and deceit, but they pass it by, looking forward to a golden tint, softening into red, which elevates their thoughts to a glorious strength, a higher thing of innocence. The sun has been shining on all of these bubbles for a long time and I have been watching the varying hues playing softly hither and thither until the shutting of the door and the well known step shattered my reverie.

Hoping I have not wearied you beyond endurance, I say, what next?

A Mutual Friend.

NOT TO-NIGHT.

To-night let me rest 'neath the old roof-tree,
Let me feel once again the old thrill
That came to my heart in the bygone time,
Ere I taught the heart-voice to be still.

The strife and the trials that come in the day
I'll put them aside for to-night,
And rest well content in the lamplight glow,
Tho' the turmoil return with the light.

Thoughts of the loved ones are fresh in my mind,
While I gaze on each vacant chair,
And remember that life has changed since then—
Much is dark that might have been fair.

Busily toiling from day to day,
The home friends sundered wide,
Cherishing a rose or tress of hair
More dear than all else beside.

In fancy again I clasp the hand
Of brothers and sisters dear;
They all are gone from the old roof-tree,
And I alone am here.

Could I see once again the smiling eyes,
The lips with laughter curl,
While the bleak north wind goes wailing by
And the feathery snowflakes whirl.

Let me see again my mother's face
Light up with a gleam of mirth,
As she sits in the group, with silvered hair,
'Mong all that she loves on earth.

They will never return to the old roof-tree,
The distance too great has grown;
Life holds for them newer seeds of love
Than those in their childhood sown.

The sister may sigh through the lonely eve
And long for their buried love,
But 'twill never be hers, as in other days,
Till she goes to the home above.

The lonely mother, with stooping form,
May weep and her eyes grow dim,
As she thinks so oft of her wandering boy
And murmurs a prayer for him.

And so not to-night will I vex with care
What only should come with the day,
But will think of the loved ones and offer a prayer
That they may be happy for aye.

Sibyl.

ROODHOUSE, ILL., March 28, 1891.

Editor Woman's Department:

I am a faithful reader of your most valuable *Magazine*, and as a wife and sister of members of that grand and noble organization, the B. of L. F., will write a few lines of encouragement to what I consider the best part of the *Magazine*, namely, the Woman's Department.

The letter from "Minnie Belle," in the January number, was only the second time I ever saw one from here. We have many noble members of dear old J. M. Dodge Lodge, No. 79, who are earnest workers for the brotherhood, and best of all, they believe in, and stand up for their motto of Protection, Charity, Sobriety and Industry. Now, I want to ask the ladies a question. Why cannot we ladies of the B. of L. F., organize an auxiliary much the same as the ladies of the B. of L. E., who will shortly have their lodge in working order? Our boys, Bros. Becraft, Truitt, Stone, and C. A. Timlin (who, by the way, was married to one of our leading society young ladies last November), and many others of the B. of L. F., would be greatly pleased to have us do so.

I think "Anna," from Fort Scott, Kansas, a very sensible woman. If only more women were like her there would be less trouble and tears in homes that should be happy. I have been married nearly five years and do not regret my choice. I have never tried to "boss," neither have I been "bossed." For my part, I think too much has been said about managing husbands, and wives also. A man that has to be managed is a disgrace to his sex, and a woman

the same. Any one, with common sense, won't have to be managed, and for my part, I could not love a man that had to be managed; it seems too childish for men and women. If man and wife would only work together, and for each other, there would be no managing needed, and many happier homes. Of course, there are many little things to be given up on both sides, but in the end all will be right.

I have heard firemen's wives say, when not invited out to a party composed solely of engineers and their families, "Oh, those high-toned engineers." Now, this is not a kindly feeling for the women to have toward one another, for at some future time their husbands may be "right-hand-side" men, and they would not like for the firemen's wives of that time to speak in such a way of them. Our men are brothers in their work, and more so when in time of danger, and we women should consider each other as sisters. All engineers were firemen at one time in their life, and no right-minded man will feel himself above another one, merely on account of the difference in their positions; and more, we are all born equal in the sight of our God.

Hoping this will be accepted, I may, in some future time, knock again for admittance into the charming sanctuary of the Woman's Department of the B. of L. F.

Wishing long life and success to our brotherhoods, and also to the Woman's Department, I remain yours truly.

An engineer's wife.

Marguerite.

[You will always be welcome.—Ed.]

CHARLESTON, ILL., April 2, 1891.

Editor Woman's Department:

If you will permit me to enter your charmed circle I will give you my idea of managing a husband. If he is a good one he won't need any managing, and if a bad one, I feel sorry for the wife who has him. I do not manage my husband, neither does he manage me. We both manage our home and little ones and each one tries to make the other happy. We have been married seven years, and have to have our first quarrel yet. I think if a husband and wife truly love each other, they cannot find anything to fume over. My husband gives me his money, and I never waste it. I think firemen and engineers work too hard for their money to have it spent foolishly.

He never comes home looking cross, but has a pleasant smile and a kind greeting for babies and me, and I surely smile, for I am always so glad to see him. I never get tired of his company. I think my home is the dearest place on earth. I have his meals ready when he gets in, if I know when he is coming, and if not ready he will sit and hold baby while I get it. He never gets mad over it, and if he did should certainly take my time then. When a man is at home it won't hurt him to help his wife a little. My husband can sweep, make the bed, wash dishes, and he is willing to do anything to lighten the work for me. If he wants to build a walk, or fence, I am glad to help him and I am not ashamed to hold the boards while he drives the nails. It takes two to make a bargain, you know, and unless both try to make home happy, there can be no happiness there. My husband does not drink, smoke or chew, so you see he is as near perfect as man can be. We keep no secrets from each other, and I think that is one key to our happiness. Now my advice to those who have trouble in managing their husbands and wives, is to try our plan and it won't be long until the question, "How to Manage a Husband or Wife," will find its place in the scrap basket, and lawyers will not get rich making money out of divorce cases. Well, my baby is crying and I will have to get my "paregoric bottle" ready and take her to bed. I guess I have taken too much of your valuable space now. Will have something of more interest next time, if I am permitted to come again. I think George Hall's poems are beautiful, also Nellie Bloom's, and poor Shandy Maguire does have an awful time trying to manage his wife. Try and be as good as my husband, Shandy, and she will soon lay the broom aside. With best wishes for yourself and the brotherhood.

Clover Leaf.

[Come again.—Ed.]

HARBOR, ASHTABULA CO., O., March 21, 1891.

Editor Woman's Department:

I have thought for some time I would like to enter the circle of your correspondents, but the dread of that "waste basket" has always interposed.

Although we do not take the *Firemen's Magazine*, I have the reading of it through the kindness of a friend, and I like the Woman's Department very much.

For the benefit of the brothers who read this part of their book, I will say, railroad business is very dull here. Some of the old firemen have been discharged and a great number of both engineers and firemen are idle.

For the ladies, I think if they would write more of their housework, and how they conduct it, the letters would contain more needed information. I believe it is by hearing more of other's ways that we can make our own nearer perfect. As I take it for granted every lady likes to make all things count as much as possible, and yet have her house look neat and inviting, I will tell them one little instance that may be new to some. To make a pretty and serviceable rug, take odd pieces of old woolen carpet, it will make no difference how worn out; cut it into strips about three inches wide, and ravel out about an inch on each side, and then double the strips, and by sewing these strips together, a very nice rug will be made with but little work, and it needs no lining. If the strips are cut crosswise of the carpeting they will look better. Then one can take the wool that is raveled out and sew it in tufts onto a piece of canvas and make another rug of it.

I have some good recipes which I will send some other time. One I will give now for cake: Two eggs, the white of one for frosting left out; one-half cup water or milk, one cup sugar, a piece of butter half as big as an egg; three big spoonfuls of baking powder, flavor to suit; enough flour to make a good batter, I have no specified amount. This will make eight good layers, or one good loaf, and by putting spices in part of it one can make a marble cake.

As to managing "husbands," I don't think they need it. For if they will not be kind and obliging of their own free will, they cannot be made to.

For fear my letter is too long now, I will close, wishing all firemen and those related to them long life and much happiness.

A Fireman's Wife.

MISSOULA, MONT., March 16, 1891.

Editor Woman's Department:

This delightful *Magazine* comes to us regularly every month. The February number is much larger than the last. I hope the ladies will continue. Let's talk about something besides men. Let us just set them aside for a time. Just look at Shandy Maguire. The ladies through the *Magazine* mentioned his name in their writings so often it has just completely turned his poor, foolish head. I agree with "Olive." I too think that the married people should have a rest. I think that a girl should enter some good school as soon as old enough, to study. Learn everything that is taught in a ladies' school—fancy work of all kinds, music, etc. Go in with a will that you are going to perfect yourself in something. It matters not whether your parents are wealthy or in common circumstances, you do not know at what time you will have to be thrown on the world to make your own living. Some young girls go to school, knowing when they go there that they are going to be married in vacation. "I don't care whether I learn anything or not, I will play lady when I marry." It is best to be prepared when you leave school to support yourself in case you should be left without any means. Even then you would have a better idea to make the best use of the money or property. Girls, before you are thinking of getting married you must learn to cook and do cooking that can be digested. You must bear in mind that no matter how much a man cares for you, if you cannot cook, he thinks more about his eating. All men are alike (that is, all my lady friends say so about their husbands). If you want to keep a man in good humor you have got to have your cupboard filled with lots of good eatables—cake, pies and fruits of all kinds I agree with the party writing from

Bloomington, December 23, let man and wife be equal partners. I do not think that too much bossing on either side will be just the thing. I will not say anything about Lodge 194. Let the boys tell what they and the lodge are doing. Hoping my letter has not been too lengthy, I remain,

Missoula.

SOLANO COUNTY, CAL., March 22, 1891.

Editor Woman's Department:

I have had the pleasure of reading a few copies of the *Firemen's Magazine*, and I think it is about the best I have ever read, "of its kind." It is very interesting. At a friend's request I will try and pen a few lines to the *Magazine*. And if I do not make a very good attempt the first time, please excuse me, and if it meets with any satisfaction whatever, and does not find its way into the waste basket I will try to do better the next time I write. The most important question seems to be about managing husbands. I think a man ought to be able to manage himself if there is any "manage" to him. If not, he isn't worth managing. I don't think any man could help loving a nice little wife, who can handle a broom to brush down the cobwebs and sweep up the room, and can make decent bread that a fellow can eat. Not the horrible compound you oft-times do meet. Who knows how to broil, to fry and to roast, make a cup of good tea and a platter of toast; a woman who washes, cooks, irons and stitches, and sews up the rips in a fellow's overalls, and makes her own garments—an item that grows quite highly expensive, as every one knows—a common sense creature, and still with a mind, to teach and to guide—exalted, refined; as sort of an angel and house-wife combined.

Well, as this is my first letter, I guess I will close. Wishing the *Magazine* success, and may God bless the brave boys of the B. of L. F., I remain respectfully,

A fireman's best girl,

May Aymes.

ARKANSAS CITY, KAN., March 30, 1891.

Editor Woman's Department:

I thought I would step in for a few moments, not having much time to stay, therefore will not detain you long.

I want to make a proposition to the ladies that have been giving their experience of "managing a husband." Now, I propose that each one tell how she manages her housework, and how she began housekeeping, and also give receipts for cooking—above all for making yeast bread. I know of several girls that do not know how to make good bread, and that in my opinion is the main thing in housekeeping.

I hope all will give us their receipts. Now I want this for my own benefit as well as lots of other girls. How nice it is to sit down and read the Woman's Department, and all the letters have some good, sound advice in them. It is a pleasure to me to read the letters from all parts of the United States.

I think after all we have read in the *Magazine* we will all know how to manage a husband, and now what we want to know is how to manage a house.

I think we ought to learn that first of all. I knew a city girl that married a farmer, and the first thing she did when she went to her new home was to sit down and take a good cry. She knew nothing about housework. Now, I think that is what every girl should learn. Housework is no disgrace to any lady.

I wish other of the Arkansas City ladies would let us hear from them. There are lots of firemen's wives and sisters in this city.

Business here is not quite so rushing as has been. There have been some engines rebuilt here in the shops, Nos. 192, 173 and 197. I like as well as the engineers or firemen to see a nice, new and bright engine come out of the shop. It is a great pleasure to me to watch the many freight and passenger trains coming in and going out on the A., T. & S. F., also the Missouri Pacific.

The B. of L. F. No. 255, are going to have their first annual ball at the Fifth Avenue Hotel, February 26th. Also the O. R. C. have one at Winfield to night. The B. of L. E. are to have one, but haven't set the exact time yet. Hoping my letter isn't too long, I will close with best wishes to the noble B. of L. F.

A fireman's sister,

T. E. D.

EAGLE BEND, MINN., March 13, 1891.

Editor Woman's Department:

How warm and bright the sun shone forth to-day. As I sat revelling in his beauty and receiving the full benefit of his rays, I thought, no wonder that the bright side of life is often compared to God's blessed sunshine. But while it is true that it is a free gift Heaven sent for all who wish to indulge in its invigorating power, yet it is not equally true that we often turn our back on his glory, stand in the shade and look away in the distance for a dark cloud, be it ever so small, which foretells that a storm is imminent, which may be but a false omen? Fostering the shadows and rejecting the sunlight, losing half the sweetness in life with forebodings of coming evil, is it not true? If we could enjoy the blessings that are bestowed upon us each day of our lives and leave the future to God, what happy mortals we would be, helping others by our cheerful, trusting spirit. It is not necessary to be highly educated or have a special talent in order to make ourselves useful and beloved. A word of encouragement to the crestfallen, a helping hand to the helpless, a word of warning, kindly spoken, to the reckless, and in a thousand different ways, we can distribute sunshine wherever our footsteps fall. Let us cast off the yoke of despondency and don the robe of abiding faith, hope ever bright, and charity to all. Shandy, I am afraid you are becoming indiscreet again; you are liable to incur some of the ladies' displeasure and set their pens in perpetual motion. I can see the signal ahead and it is that very conspicuous Irish cloud. With friendly greeting to all. Ever yours,

Mrs. C. E. Miller.

N. SPRINGFIELD, MO., March 25, 1891.

Editor Woman's Department:

May I knock for admittance to your much esteemed department to say a few words in reply to the letter written in the February number and signed "Ruby"? I was very forcibly struck with the account she gave of her husband.

It may be that I have not the proper regard for others' feelings that I should have, but nevertheless it seems rather out of the way for us sisters to expose our husbands' faults for public opinion. My good sister, how would it suit you for your husband to expose your faults in a like manner, for I am sure there is no one perfect.

No, there is not one man that would be willing to expose his wife's faults. They would strive to conceal them from public gaze. Now, why should we allow them to outstrip us? I think the wiser plan is to conceal each other's faults; but allow me to say I cannot see where any faults exist in my hubby.

As to managing either party, that is something I do not believe in. We can both manage ourselves.

My hubby is going presently on his engine. He is a member of 51, and I am very proud of him.

Wishing B. of L. F., No. 51, untold success, I will close. A fireman's wife.

P. S.—Why not exchange patterns in fancy work?

GLEICHEN, N. W. T., April 1, 1891.

Editor Woman's Department:

While reading the *Magazine* I thought I would write a few lines. I see a great deal said about managing wives and husbands, and how to keep the house nice and tidy and the children all neatly dressed, and everything in order. And it is all very nice and a woman deserves great credit who does it. But I was going to speak on a different subject. I think it would be a good idea if some of the young men thought more of trying to save some of their wages, for I have known young men to work for three or four years on the road, and getting good wages, and not save one dollar in that time, and if their month's pay ahead was drawn they would owe every cent, and a little in debt. This is the case with a great many young men that I have known. I have had them tell me so. Now, I do not see the use of a man getting good wages, if he works for ten years and has nothing to show for his hard work only a few shabby clothes. He may have had what he calls a good time. But I cannot see it in that light. I think, if he had made it a point to have

saved twenty-five dollars a month that he would be better satisfied and his friends would think more of him, and if he should live long he will need every dollar that he spends foolishly. This is to the unmarried firemen, and I hope that none of them will take offense.

As for the *Magazine* it is a very interesting book. I will close by wishing success to the B. of L. F. I remain

The firemen's friend,

Annie.

PHOENIX, ARIZONA, April 2, 1891.

Editor Woman's Department:

I am in receipt of the January and February numbers of the *Magazine*. To express my opinion I must reiterate the words of others: "It is excellent." But I did not ask admission to sing praises of the *Magazine*, nor to talk about those dear darling boys.

The October *Magazine* contains a letter from "M. C." of Marietta, Ohio. I found it especially interesting. I think it would be both interesting and instructive if the various contributors to the Woman's Department would describe their homes and the surrounding country as regards natural scenery. At least we Western folk would be glad to have a glimpse of Eastern villages, etc. Now I want to say just here that Arizona is more than a combination of Apaches, sand hills and rattlesnakes, although you may not think so. I would impress upon your mind one thing, that Arizona has the best sort of public schools. I have attended public schools in California, Arizona and Texas, and I find that Arizona schools are equal to those of the former State, and far superior to those of the latter. And tell me what it is that so fits children for the duties of life as a thorough school course?

Poco tempo, and you will see Arizona inhabited and governed by men of letters.

Will some kind sister tell me of a good method of cooking *frjolles*—not a *tu* Boston, of course. In return I will tell you how to make *tortillas*.

With much respect to the *Magazine* and to the brotherhood, I am,

Hanna Brown.

TO MR. MAGUIRE.

Well, Shandy, I will have a word to say. Since you've told us what you know About managing wives; so clear the way And see where my pen may go.

You've handled the subject in such a way It's hard to tell where to begin. But here I will say I know your wife Would much rather not have had twins.

I'll admit they are lovely, and any one well May feel proud their mother to be: But yet, when one has the care of those boys They must wear out her patience, you see.

Any man that finds so much pleasure abroad And can manage to enjoy himself there, Will not make just the kind of a husband at home To relieve his own wife of such care.

I know you are flattered, as many men are, And may think it is only your due But many a heartache you'll leave at home With one who cares only for you.

She may have grown nervous, toiling for you, Your twins, and perhaps many more. How long since you've told her, "I love you, my dear?"

Do you make love to her any more?

Ah, Shandy! look back to the days of your youth When she gave up to you her young life For weal or for woe, she trusted her all And was happy to be just your wife.

Now, Shandy, I always have thought well of you. Have admired your writing *galore*. I only have said what is true of most men Who think their own wife such a bore.

ELDORADO, KANSAS.

Katy.

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

THE O. R. C. AND THE B. OF R. C.

The Order of Railway Conductors as originally organized, was by its constitution non-protective, or in more common parlance, was a non striking order. But in the march of events, and under circumstances, which forced the thoughts of the membership into new channels, the order, in convention at Rochester, N. Y., May, 1890, eliminated the non-protective or anti-strike law from its constitution, which, without further action, left the order in a somewhat anomalous condition. There was no law opposed to strikes nor was there any law which under any conditions authorized strikes, and it is presumed, that at the annual convention of the order which meets in the city of St. Louis on the 12th of May, the subject will receive special consideration, and that a definite policy will be adopted.

Prior to the Rochester convention of the O. R. C., another order of railway conductors was organized known as the Brotherhood of Railway Conductors. This new order was brought into existence by virtue of the fact that the O. R. C. did not, and under its laws could not protect its members when they were the victims of flagrant injustice, and throughout the entire history of railroading, no one class of employes have been subjected to greater wrongs than have been inflicted upon railway conductors.

The B. of R. C. has sought during its brief career to remedy the wrongs complained of, and the victories it has won and the good it has accomplished bear eloquent testimony to the fact that there was a pressing demand for it.

The B. of R. C. has had a phenomenal growth, and is regarded as one of the most aggressive and progressive orders of railway employes.

But the action of the O. R. C., in convention at Rochester leads to the conclusion that at the St. Louis Convention the order will be made *protective*, in which case, the two orders of railway conductors would be in harmony in policy and purposes.

Should the action of the O. R. C., be such as we have intimated, the question arises, why have two orders? Why not consolidate? Why remain apart?

The *Magazine* is unable to suggest a reason why there should be two orders of railway conductors, having practically the same policy, any more than it could frame an argument in favor of two orders of locomotive firemen—and with the same policy and purposes guiding and animating them, we doubt if a rational objection to their consolidation could be formulated.

The O. R. C., in electing a Grand Chief in sympathy with protection, and whose administration of the affairs of the order evinces a clear comprehension of protection, leads naturally to the conclusion that the action of the order at St. Louis, will be such as to emphasize the wisdom of having but one order of railway conductors in the country.

The legislation required to bring about the unification of the two organizations is simple and if the spirit of compromise should prevail and be permitted to exert its power we shall look forward to the early consolidation of the two orders, a consummation which we do not doubt would be fruitful of lasting benefits.

GATEWAY CITY REVIEW.

We have received No. 1 of the *Gateway City Review*, published at LaCrosse, Wis., by C. H. Morrison, editor and proprietor. The *Review* will pay special attention to labor organizations, and says:

We present the public this morning with the first number of the *Gateway City Review*, a journal devoted to the interests of the many kindred organizations in this city, those of the North Side in particular, the local news and all matters of public interest. The mission of the *Review* is to give the several organizations a medium through which they may publish to the general public a weekly résumé of matter that will tend to aid their prosperity. The columns of this journal are open to contributors, and articles on questions pertaining to the "good of the order" are solicited. The *Review* will not consent to be a mere advertising publication, but will devote every effort to fill its columns with original and readable articles; a paper that will prove a welcome visitor in the home of every citizen. If the paper meets with your approval we should be pleased to receive your subscription, the price of which is one dollar a year.

The *Review* gives cheering evidence that its editor is very much at home, fully comprehending the task he has selected to perform for the delectation of the public; and we wish Brother Morrison may find the task both pleasant and profitable—a reward which all editors deserve.

Will you contribute to erect a monument to Wm. D. Robinson, the father of organizations of railway employes? Any amount from 10 cents upward will be received. See notice of monument fund elsewhere.

THE RAILROAD TELEGRAPHER.

In numerous instances, the railroad telegrapher or train dispatcher, is one—two in one—but the wages received by these double-worked men, is barely enough to keep a single man's soul in his body, and if a married man with children, he must of necessity be on the ragged edge of poverty and hunger all his life.

A writer in the *Railway Telegrapher*, of February 15th, himself a station agent and telegrapher, furnishes a graphic account of the duties of the station agent, of which the public knows little or nothing at all, notwithstanding the public is very much interested in the matter.

The station agent, also a telegrapher, is express agent, freight agent, telegraph operator, way-biller, freight-checker, etc. What he does must be done quickly, all must be done at the agent's risk, as any damage resulting from an error is charged up to him. Besides being all we have said, the agent must be something of a lawyer, a good judge of counterfeit money, and be a good judge of all kinds of goods presented for shipment, and know if they are perishable. In addition to such things the agent must be polite and answer all questions regardless of their importance. In addition to such duties he must study tariffs, instructions, etc., and sell tickets. Says the writer:

The first daily duty of the agent at a way station is to rise (if he has been allowed to lie down), repair to his office, dust off his desk and his chair; but he must not sit down till he has blown out his switch light, examined his switches and the whole yard, shoveled the snow off the platform in winter; then make his daily report, prepare his cash for remittance, receive and way-bill freight, and prepare to sell tickets, check baggage and way-bill express for the next train. While doing all this he must also give continued attention to his telegraph instrument occasionally transmitting a few messages, answer calls from a number of business men, answer a lot of nonsense to men who only talk to signify their presence or to show their importance, and he must answer or nod his head to "Good morning, fine day," from every one that comes in. When the express train and the way freight arrive at the same time the agent is supposed to attend to both. He does no such thing, but he must say he did whenever the question arises. The agent must break every seal and open all freight cars himself, note the seals on both sides of the car, check his freight, note all shortage and bad order. Why it is not sufficient for each agent to note the seal he breaks is a mystery, but in all investigations he must account for all the seals on the car when passing his station. No agents at way stations do it. They take the conductor's word for half of them and guess off the rest. If a freight train should wait for every agent to do all his duty that train would arrive home twenty four hours late every trip. When the trains are gone the agent must report by telegraph the exact time of arrival and departure, then pick up his express and book it, take in his freight, enter his bills in the delivery and abstract books, make out 50 or 100 advice notes and write out half as many postal cards. Then he can proceed to open the bundle of letters received by the last passenger train. Half of them are circulars, new tariffs and supplements which he must file in their proper place after writing a receipt for each one of them. The other half will consist of a lot of investigations, the answers to which must be taken

from old books and way bills. Involving more work than can be done now, so he throws them on the end of his desk where such correspondence is continually accumulating, but for the present the agent must turn his attention to the next trains which are now nearly due and will bring him another dose. When the last train of the day has passed is the agent done? Not by far. He has weekly reports to make amounting to one day's work every week, and monthly reports which are no less than six days' work, all of which must be done in proper time or his work will still be increased having to answer a number of letters and telegrams in regard to his delay. These letters and telegrams are considered a very small matter at the department offices where there are clerks to do the writing and operators to transmit the messages, but they amount to a good deal with the agent who has to do it all himself.

Just here comes in the question of pay. Any one would suppose that a station agent, also a telegrapher, would command a fair salary. Well, here is what the writer says:

One day a neighboring lawyer who knew very much about the nature and extent of my occupation asked me what wages I was getting. When I answered, \$40 a month, he laughed thinking I was joking, but when convinced that I was speaking the truth he said, "I knew you were not half paid for your services, but I surely thought you were getting no less than \$75 per month." A young man may be well enough talented to do honor to the highest professions, but being poor he readily accepts a position on a railroad. After a few years he discovers that his work is continually increasing but his wages remain the same, but as his wages are too low to lay up a dollar he has no choice but must continue to suffer all abuse and do all he can toward accomplishing the impossible duties demanded of him in order to get the insignificant but indispensable wages.

There it is in black and white, \$40 a month—\$1.33 a day.

In cases, too numerous to be catalogued here, when the station agent is not a telegrapher, the latter receive from \$25 to \$50 a month, and the figures conclusively show the estimate managers place upon the ability required for the movement of trains. The *Railway Telegrapher* in an editorial article upon the subject of wages, says:

For instance, we do not believe it would be understating the matter to say that the wages of the ordinary day and night operator will not average over \$40 per month. At some of the larger places a higher salary is paid, but there are many more smaller ones which pay even less. But \$40 is no doubt a fair basis. At the place where this salary is paid twenty-four hours make a day, the same as in all other civilized countries. In order to have continual telegraph service two operators must be employed, one to work days and the other nights, consequently each of them is required to be on duty twelve hours. On most roads trains are run on Sunday as well as week days, and these operators are therefore required to work on an average thirty days each month. Thirty days with twelve hours each, at \$40 per month, equals about 11¼ cents per hour, as the compensation for the telegraph operator. On the same roads where the operator receives \$40 per month, the section man receives, as a rule \$1.10 per day in the winter time, at 8 hours per day, or \$1.25 in the summer time at 10 hours per day. Eight hours per day at \$1.10 would be 13¼ cents per hour, as the compensation for the section man, or 2½ cents per hour more than the operator receives. Now this is the ordinary case and a straight comparison. Whoever can look at these facts and say that the telegraph operator is not underpaid is as blind as a bat. The operator's labor is skilled; it has taken from two to three years to fit himself for the position, and yet he is compelled to work for less

money than the section man whose only qualification must be a little muscle.

Such are the facts which have driven railway telegraphers to organize for protection, and if possible secure fair wages. It is a movement in which all people who travel have vital interests at stake, and yet every movement on the part of the men to better their condition, is resisted by the corporation to the death.

THE *Journal of the Knights of Labor*, of March 19th, contains an article from the pen of T. V. Powderly, Grand Master Workman, on "The New Orleans Massacre"—which starts out with the declaration that "the leading papers of New York and Philadelphia are unanimous in their condemnation of the cowardly assassination of the eleven Italians in New Orleans." What of that? The leading papers in New York and Philadelphia were practically unanimous in opposing the strike of the Knights of Labor on the N. Y. C., and were equally unanimous, by their silence, at least, in approving the employment of Pinkerton thugs for the purpose of shooting down, like "wild beasts," as Abram S. Hewitt puts it, Knights of Labor? Why so quick to quote the press? Why not discuss the case on its merits? Why not state all the facts? The attack on the "better element" is misleading. It explains nothing. It mystifies the situation. It is practically justifying the Mafia, and condemning men who had the God-ordained right to kill the organized band of assassins. Mr. Powderly says:

The case stands thus: The Mafia Society, composed of cheap, ignorant, poverty-stricken Italians, murdered the Chief of Police of New Orleans. The threats of this society murdered the conscience of the jury; the members of the jury became perjurers, failed to do justice, and the "better element" of New Orleans, aping the practices of the Mafia, murdered the prisoners. The reports in all the papers state that it was the "better element" which headed the revolt and committed the horrible butchery. I am glad of that, for, if they were working-men who did it, the press of the country would cry out for the summary punishment of the perpetrators. As it is, they say that there is but little probability of anything being done with the latest addition to the assassins of New Orleans.

Everybody concedes that some of the Italians were guilty and deserved death. No one could blame them for desiring to live. They were to blame for the killing of Hennessey, but the jury was to blame for their acquittal. Why did not the mob kill the men who served on the jury—the cowardly "respectable element" of New Orleans? Had that jury been composed of workmen, had they been bribed into rendering such a verdict, it is altogether likely that the "respectable" assassins would have murdered them too. Really, if any one deserved killing last Saturday it was the jury.

The Mafia, not only murdered Italians and Chief Hennessey, but, according to Mr. Powderly, had "murdered the consciences of the jury." Naturally, if the consciences of the jury had been "murdered" the jury was ripe for perjury. We suppose Mr. Pow-

derly means, the jury were terrorized, were afraid of being assassinated—indeed, there existed in New Orleans a reign of terror. To obey the law, to administer the law, to champion the law, was to invite assassination and, under such circumstances, there is but one remedy, and that is to kill the men who create and maintain such conditions. The men who organize vengeance in such cases are always the "better element," never the worst element.

The term "horrible butchery" is well enough, we do not object. Sometimes we say "horrible hanging," "horrible beheading," etc., but to say that the jury "deserved killing" will not be accepted anywhere as proper. It is not true.

The one thing to do was to break up the Mafia. This has been done. There will be no more of it, for some time, at least, in New Orleans. It took the "horrid butchery" to bring about the reform. It is worth all it cost. Civilization is the beneficiary. The atmosphere is more healthy in New Orleans now. Assassins simply got what they deserved in the quickest way and at the least expense. It is the American way, and domestic or imported assassins will do well to take notice.

WM. D. ROBINSON'S MONUMENT FUND.

Wm. D. Robinson, who died at Washington, Ind., on November 7th, 1890, was the founder of the Brotherhood of Locomotive Engineers, and in doing this great work, he as certainly laid the foundation of the Brotherhood of Locomotive Firemen and all other organizations of railway employes.

In closing our obituary notice in the December issue of the Magazine we said:

In this hour, when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame, the memory of a man who gave the best years of his life for their benefit? Is not the answer, We will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response.

If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

"What ballows ground where heroes sleep?

'Tis not the sculptured piles you heap;

In dews that heavens far distant weep

Their turf may bloom.

Or genit twine beneath the deep

Their coral tomb.

"What's hallow'd ground?" 'Tis what gives birth

To sacred thoughts in souls of worth!

Peace! Independence! Truth go forth.

Earth's compass round,

And your high priesthood shall make earth

All hallow'd ground."

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep, is hallow'd ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallow'd ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the

brotherhood he founded will be his imperishable monument, and that his name in connection with that great order is to increase in lustre as the years flow on. But that does not cancel the debt of gratitude the two great brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unaided, our order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two orders, but would invite all the brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

In discussing the propriety of erecting a monument to perpetuate the memory of the dead philanthropist we said in the April issue:

The idea of building a monument to perpetuate the name and fame of Wm. D. Robinson, originated with the *Firemen's Magazine*. The time has come for action. Contributions should be made. We have said that 25 cents each from the members of the B. of L. F. would build the monument. But we surmise that other orders would want a place in the splendid work proposed, and we have opened in the Grand Lodge office of the B. of L. F.,

A ROBINSON MONUMENT FUND.

Every contribution, however small or large, will be acknowledged in the columns of the *Magazine* under an appropriate head, and when the contributions approximate a sum which gives assurance of success to the enterprise, a commission made up of the members of the various brotherhoods, will be constituted to take charge of the fund, and prepare for work.

Members of the various orders subscribing should designate their calling, and if they will give their address it will be regarded as a favor.

Now, let the good work proceed. Wm. D. Robinson, when alive, was the friend of the workingman. He wrote and spoke and toiled to establish a brotherhood and to teach men the power of organized labor. Railroad trainmen had no more ardent and unselfish friend. Let a monument bear testimony that death did not sever the tie that bound him to the living.

If ever a man deserved the grateful homage of his fellows that man was Wm. D. Robinson. He devoted the best years of his life to the great work of organizing railroad men for their moral and material advancement. He toiled without recompense, he endured privations and made sacrifices, the half of which will never be told. He lived and died in poverty that others might fare better than was his lot. Every man, woman and child who has been, is now, or ever will be the beneficiary of any of the brotherhoods of railway employes owes Wm. D. Robinson a debt of gratitude that never can be paid. Such a man deserves a monument to bear testimony of the love and gratitude of those for whom he accepted poverty, persecution and all their attendant ills, and every member of every organization of railroad employes should cheerfully contribute his mite, small as it may be, to such a noble purpose. Contributions may be directed to the *Locomotive Firemen's Magazine*, *Terre Haute, Indiana*, all of which will be acknowledged in its columns.

THE MAGAZINE AND ITS CRITICS.

The following communication has been received:

CHARTER OAK LODGE, No. 285, B. of L. F.,)
HARTFORD, CONN., March 8, 1891.)

To the Editor of the *Magazine*:

DEAR SIR AND BROTHER:—On page 134 of the *Magazine* for February of the current year appears a communication from Elm City Lodge, No. 284, signed by E. A. Ferrill, the secretary of that Lodge, heartily condemning the policy of the *Magazine* for the past year or more. The editor then proceeds to cut and slash the writer of the article, the members of No. 284, and the Connecticut membership in general, that is, if I am able to comprehend the eight column editorial which follows the article in question. This editorial, in my estimation and also in the estimation of the members of this lodge, was entirely uncalled for and unnecessary, and does not show up the "policy of the *Magazine*" in any better light than has previously shone upon it for the past two years. "The *Magazine* under our management has steadily increased in circulation."

Now I would like to ask you candidly and would like to receive a candid answer, has this increase in circulation been entirely due to the present "policy of the *Magazine*?" or is some part of the credit for this steady increase in circulation due to the ever increasing membership of the order and the consequent placing of our *Magazine* in circles where it was never even heard of before? "Honor to whom honor is due" should be our maxim in "cases like these." Another question: If the *Magazine* under the present management has shown such a large increase in circulation why is it that our Grand Dues were raised at the last convention to help pay the running expenses of the *Magazine*, which it was claimed were running behind? This communication from Elm City Lodge, No. 284, may be a mouse, an elephant, a flea, or a Jersey mosquito. Still the fact remains that it has in a large degree, voiced the sentiments of the members of this lodge. We are willing to admit for the sake of argument that Connecticut is a small State, noted for its long-necked claims and w-o-o-d-e-n nutmegs, but it does not follow that all its citizens and especially those who happen to be members of the Brotherhood of Locomotive Firemen are all blockheads with cast iron brains, neither are they corporation parasites, (very degenerate or otherwise) but intelligent thinking men, even though they live "under the shadows of old Yale." I do not believe that it has been the purpose of Bro. Ferrill, or of any other member of Elm City Lodge, No. 284, nor of any member of Charter Oak Lodge, No. 285, to sneer at the utterances in the *Magazine*, but rather to study them, think over them, and to accept them for what they are worth be their value great or small, and it does not become the editor of our *Magazine* to sneer at the educational facilities that they may have been near but may not have an opportunity to embrace and I fail to see anything in the communication from Bro. Ferrill to warrant such a course on the part of the editor and manager of our *Magazine*. I will now try to point out to you where you have made some of the "scurrilous" attacks referred to in this communication from Elm City Lodge, No. 284. On page 920 of the *Magazine* for October, 1889, appears a communication signed "Pop," which is followed by an editorial attack, as vile as it was unnecessary. On page 1,008 of the November, 1889 *Magazine*, in the closing lines of an editorial commenting upon the opinions of a brother who signs himself "S. W.," appears this sentence: "If men will oppose the change of name, by all things decent let us have reasons instead of rot to answer." Now did it not occur to you that this correspondent expressed his honest convictions and that he expressed them in the best possible language which he had at his command? and then what a withering, blasting, scorching batch of sarcasm on page 245, of the March, 1890 *Magazine* in reply to the defense of W. S. Carter, against a previous sarcastic editorial. Commencing on page 157 of the *Magazine* for May, 1890, you devote a column to "comments on Corbin," which are decidedly out of place considering the vast amount

of space which his name had occupied in the four or five preceding numbers. On page 39 of the January, 1890, *Magazine*, you publish an open letter to P. M. Arthur, which was perhaps well enough; he did not deign to give this letter any notice, so far as I am able to inform myself. Now why would it not have been a commendable course on your part to have let him alone for the future and not keep slinging ink at him as you have done ever since the publication of that letter, notably on pages 621 and 894 of the same year? And what possible use could the readers of the *Magazine* make of the continual harping about Mephistopheles Depew? It does them no good and certainly does him no harm; it only makes it harder for the members of the Brotherhood of Locomotive Firemen who happen to be endeavoring to make a living on the road which he controls. It has been the intention of this lodge for some time to remonstrate with you about these articles but Elm City Lodge, No. 284, has forestalled us, and has taken the words out of our mouths so to speak. Although we do not approve of their utter refusal to solicit subscriptions for the *Magazine*, I will say that it is a very disagreeable undertaking, as it is almost an impossibility to get anybody to pass over a dollar for the privilege of reading such matter as has filled the columns of our *Magazine* for some time. I do not believe that the seal of the lodge was in any manner debauched (as you claim for it) by placing it on that letter. This letter was written by order of this lodge and bears the seal of the lodge as a mark of approval. In conclusion, let me say to you that we hope that you will accept this communication in the spirit in which it is given, that is, a desire to promote the general welfare of the *Magazine* and not to see its columns filled with such matter as they have been for some time past.

Yours fraternally,

A. M. Porter,

Secretary 285.

Charter Oak Lodge manifestly suffered a large amount of chagrin because of the renown Elm City Lodge had secured by writing an exceedingly contemptible letter to the *Magazine*, as for instance, Bro. Porter says, "It has been the intention of this lodge for some time to remonstrate with you about these articles, but Elm City Lodge, No. 284, forestalled us and has taken the words out of our mouths, so to speak." The mortification and vexation must have been excruciating. What does Charter Oak Lodge, No. 285, do to get even and have an inning? It takes the words of Elm City Lodge, not from its "mouth" unfortunately, and redigests them for publication in the *Magazine*.

The editor of the *Magazine* has no apologies to make for his utterances in the *Magazine*. If members of the order deem it prudent to use their mental syringes to squirt their dirty water at the *Magazine* they must take the consequences.

It is not always practicable to bar the door against a class of writers who cannot distinguish between reason and "rot," who have no more conception of argument than they have of the laws which govern the universe, but who, like the fly on the chariot wheel, exclaim, "See what a dust we kick up."

Elm City Lodge, under seal, tried its resources and scribbled. If its experience is not satisfactory it can come again. We dismissed Elm City Lodge, No. 284, with our benediction.

Now, Charter Oak Lodge, No. 285, objects to our allusions to Connecticut, to "long necked clams" and "wooden nutmegs," etc., playful remarks and of no special consequence, but serving to break the monotony of seriousness, when called upon to *spank* correct ideas of things into incorrigible children, such as sometimes get into our lodges and scribble about the "policy" of the *Magazine*. Generally, they know nothing about "policy," couldn't define the term to save them from going pellmell to the everlasting bow-wows. True, a man is not to be scourged because he is ignorant—he is an object of commiseration—but when ignorance plumes itself as erudition, when it vaults into the arena as a lecturer, and with stupidity, impudence, arrogance and malice demands a hearing, it must expect such punishment as the law proclaims its due.

Bro. Porter, in his communication, "signed, sealed and delivered," is of the opinion that our "editorial (criticism) on Lodge 284 was entirely uncalled for and unnecessary," which reminds us of an old Connecticut woman, who, when her minister was quoting St. Paul, on woman's rights, exclaimed, "That's where me and St. Paul differ." The fact is, neither Bro. Porter nor the members of Charter Oak Lodge know anything about editing a *Magazine*. The evidence is overwhelming. They are the victims of egotism. They regard it their duty, though the *Magazine* never attacked Charter Oak Lodge, nor any of its members—never treated any one of them except with Brotherhood courtesy, affability and kindness—never laid so much as a straw in their way, to attack the *Magazine* and its editor. For this procedure they feel no compunction, and when a prudent rebuke follows, exclaim, "It does not show up the policy of the *Magazine* in any better light than has previously shone upon it for the past two years."

Certainly, the "policy of the *Magazine* for the past two years," ten years, for that matter, has been to advance every Brotherhood principle and interest. Charter Oak Lodge, No. 285, conclusively demonstrates that we have not strictly obeyed the scriptural injunction, "Neither cast your pearls before swine, lest they trample them under their feet, and turn again and rend you." If the pearls were trampled into Hartford mud, let them go; we shall continue to scatter good seed. We know old Connecticut is not renowned for good soil—it is famed for "stony ground" where there is "not much earth," where crows and blackbirds and thorns interfere with anything like a decent crop; but occasionally, with a shot gun, the determined agriculturist can shoot a few seeds in between the rocks, and get a return which prolongs existence. We shall not

abandon old Connecticut, famed in story for "Blue Laws," the sad effects of which are visible even to this day and generation.

Bro. Porter quotes us as saying, "The *Magazine*, under our management, has steadily increased in circulation." That's a fact. It may go for what it is worth. There is no spreadeagleism about the declaration. There it stands—look at it, analyze it. There is nothing in the declaration to bring a blush to the cheek of the editor or any member of the order who is in sympathy with the splendid advance the order has made during the past ten years. Only small souled men will find fault with the declaration.

But we claim still more for the *Magazine*, under our management, and the claim is maintained by witnesses of the highest character for thought and scholarship, mental grasp and comprehension of what is excellent. As for instance, this from an economic writer from Jersey City, not far distant from Hartford:

"Your *Magazine* is the best labor publication that comes to my hand. I read it with pleasure and profit. It is so far in advance of other labor organs as to admit of no comparison. It must be a great boon to the men of brains of your order."

These words triumphantly vindicate the "policy" of the *Magazine*, which has been to make the *Magazine* worthy, not only of the great order it represents, but of the commendations of men of brains beyond the boundaries of the order. Such splendid testimony hushes to silence the carping criticisms of here and there an individual or a lodge.

Bro. Porter and his lodge want to know if the "increased circulation of the *Magazine* has been entirely due to the present policy of the *Magazine*?" And he wants to know "if some part of the credit" is not due to the ever-increasing membership of the order? etc. Such queries indicate the level where they were born. It will be ample time to question us, as does Charter Oak Lodge, when we have said that the *Magazine*, under our management, was the only cause of the growth of our order. Any feeble minded adult person should have been able to make that sort of a discovery.

Bro. Porter asks: "If the *Magazine*, under the present management, has shown such a large increase in circulation, why is it that our Grand Dues were raised at the last convention to help pay the running expenses of the *Magazine*, which it was claimed were running behind?"

In asking this question Bro. Porter exposes his ignorance of the affairs of the order. No wonder that a member who would ask such a stupid question, in view of the well established facts, is at war with the *Magazine*. Would

it not be well for Bro. Porter, before he arrogates to himself the duty to discuss "policies" to learn what every member of the order knows, that there has been no increase in the cost of the *Magazine*, but, on the contrary, that there has been a steady decrease in its cost? In 1880, when the present management began, the price of the *Magazine*, which contained 32 pages, was \$1.00 per year, and the annual grand dues were \$1.00 per year. Has there been any increase in these figures? Let the figures speak for themselves: The *Magazine* and Grand dues (both) are now \$2.00 (same as in 1880) and the *Magazine* has been increased to 96 pages.

In order that Bro. Porter, who has shown that he is not a student of the affairs of the order, may comprehend the foregoing statements, we refer him to the printed proceedings of the late convention, held at San Francisco, in which among other things in the report of the Editor and Manager of the *Magazine* (page 309) he will find the following:

Prior to the first day of February, 1887, members of the Order paid \$1.00 a year for Grand Dues and \$1.00 a year for the *Magazine*, and the \$1.00 for the *Magazine* enabled the publication to make a profit, as follows:

Volume IX, 1889, net profit. \$3,411 91
(See report of Editor and Manager, page 171, of proceedings Thirteenth Annual Convention.)

Under this arrangement the General Fund was not only self-sustaining but could be drawn on in case of emergency to meet obligations as the Order might create, as for example:

At the Denver convention in 1883, donations were made to widows and orphans of deceased members, upon claims which had been legally disallowed, but which excited the sympathies of the delegates, amounting to a sum in excess of \$13,000: all of which was paid from the General Fund, as is shown on page 74 of proceedings of the Denver convention.

In this connection, it should be said that but for the earnings of the *Magazine* the donations could not have been made, or, if made, would have required the levying of assessments upon the membership.

At the Minneapolis convention, September, 1886, the law relating to the *Magazine* was changed and the new law took effect January 1st, 1887.

Under the provisions of the new law, which is still in force, the Grand Dues were increased to \$1.50, and of this amount 50 cents was for subscription to the *Magazine*, and as will be seen by the foregoing statement, reduced such subscription to the *Magazine* one-half, that is, from \$1.00 a year to 50 cents a year.

Tabulated, the showing is as follows:

Under the former policy—Grand dues	\$1 00
Subscription to <i>Magazine</i>	1 00
	\$2 00

Under present law—Grand dues	\$1 00
Subscription to <i>Magazine</i>	50
	1 50
Reduction	50

What the convention did was simply to restore the price of the *Magazine* to \$1.00 per year by increasing the grand dues to \$2.00 per year. Under the old rule (when the *Magazine* had 32 pages) members, as stated, paid \$1.00 per year for the *Magazine* and \$1.00 per year for grand dues, total \$2.00. At the Minneapolis convention the rule

was changed and members were charged \$1.50 per year grand dues, no charge being made for the *Magazine*. At the late convention held at San Francisco the grand dues were increased to \$2.00 per year, simply to restore the price of the *Magazine* to \$1.00 per year, it having been reduced to 50 cents per year, as above shown, by the Minneapolis convention, so that now members are charged \$2.00 per year for grand dues without additional charge for the *Magazine*. We trust Brother Porter will have no difficulty in finding an answer to his question in this statement; and if he will give us the names of the 96 page monthlies that are sold at less than \$1.00 per year, we shall be glad to publish the list for the benefit of our readers.

Brother Porter is to be commended for his industry in bringing to bear upon us the now somewhat ancient history in which we gave "Pop" some notoriety which like Charter Oak Lodge he, she, or it seemed to crave. Those who desire to refresh their minds as to the vileness of our language, may consult the directory which Brother Porter supplies. "Pop," "S. W." and the rest no longer interest us. We take no pleasure in counting the dead and wounded. We had thought our Pottersfield was full, but a survey shows us we have room for Brother Porter—and in honor of his distinguished services we'll see that he is buried by the side of his collaborator of Elm City Lodge. We will plant a wild huckleberry bush where they rest, and buy a suitable monument, and we think the epitaph should be "Here lie two clever fellows, who died of scribbling itch and went the way of "Pop."

Now comes a plea for Corbin, the former Czar of the P. & R. What there was in Corbin's "policy" that so much delights Elm City Lodge and Charter Oak Lodge is something of a mystery. Corbin struck down labor organizations. He degraded railroad employes. He treated them as serfs. Two Connecticut Lodges endorse Corbin and fly off the handle because the *Magazine* excoriated him as if he had been a galley slave. We whipped him at long range, because the *Magazine* was published a thousand miles from him, but we would have done the work more thoroughly if the *Magazine* had been published in Philadelphia. For doing this, the *Magazine* earned the puerile hostility of Elm City and Charter Oak lodges.

Then comes a wail for Chauncey M. Dapew, President of the N. Y. C., who permitted Pinkerton thugs to be hired and armed to shoot down workingmen as if they were wild beasts.

As for our open letter to P. M. Arthur bearing "well enough" or bad enough, it required no endorsement from Charter Oak Lodge.

Brother Porter says, his letter "was written by order of this lodge." We do not doubt it. Manifestly, Brother Porter did his best. He intended it for a pronouncement. It was the mountain in labor—and the poor mouse that resulted is on our table, a real Connecticut mouse—and being the same mouse that Elm City Lodge expelled, it has the appearance of being over-worked.

Certainly, as we understand it, we accept Brother Porter's official communication "in the spirit in which it is given," and we want Brother Porter and his lodge to accept this comment "in the spirit in which it is given." The spirit in which we write is that of compassion. We know, where "little is given little is required," and with these reflections we proceed with the regular order of business.

LABOR LEADERS.

The *Railway Service Gazette*, in its issue of March 5th, contains a somewhat extended editorial article, captioned, "What Shall be Done?"

It appears that a correspondent of the *Gazette* appeals to it to at once engage in some very aggressive work in the interest of the laborers of America, "because chains are being forged for their enslavement." The writer wants the *Gazette* to send forth "clarion notes" to "rouse them from their fatal slumber." The correspondent says, "the laborers of America must federate as one man, and our thunders must shake the halls of legislation so long reeking with the corruption of party dishonesty."

To this stirring appeal, the *Gazette* responds in a way indicative of an up-grade pull, with a machine sadly out of fix, poor fuel, and a scarcity of water. But, nevertheless, the *Gazette* sends forth a "warning cry" keyed up to "clarion notes," and well calculated to "rouse labor leaders" wherever they are practicing their "golden calf" idolatry.

The *Gazette* has no faith in "labor leaders" as they exist in this A. D. 1891. It does not refer to one, within the entire range of its observation, worthy of the name of a leader. It says:

While there are hundreds of quacks, who, from the street corners and the cross roads are proclaiming that the way to salvation is perfectly familiar to them, and that they are the leaders appointed by God, we honestly believe the Moses has not yet arisen who will lead the people to the promised land, and that until the people have been far more greatly tried than they are at present, he would indeed have a rocky road to travel, did he attempt to lead them in the true direction of a betterment of their conditions.

Any reference to Moses as illustrative of the condition of workingmen in America may serve to gracefully round up a period, to embellish a sentence and, generally, beautify rhetoric, but it is hardly just. The student of the Bible will naturally refresh

his memory by re-reading the graphic account of the wonderful undertaking of Moses. The bondage, the slavery, the degradation of the Jews, we conceive, was something worse than anything yet experienced by "the laborers of America," with the exception, possibly, of the coke regions of Pennsylvania.

Again, the enslaved Jews never would have got beyond the Red Sea but for the direct interposition of Jehovah, who had to fight Pharaoh with plagues, the recital of which, even now, horrifies the mind. And after all, of the mighty hosts that crossed the Red Sea dry shod, but two were fit to enter the promised land—all had died in the wilderness, and to make matters worse still, Moses, owing to some indiscretion, never crossed the Jordan, never entered the land of "milk and honey," which, to say the least, was pretty hard on a God-chosen leader.

Such facts lead us to the conclusion that the workmen of the United States need not wait for a Moses to lead them from under an imaginary bondage or from the grasp of an imaginary Pharaoh.

Certainly we are not disposed to controvert the declarations of our esteemed contemporary as to the blue outlook of labor in many directions. Nor are we in a position to deny that there are "hundreds of quacks proclaiming that the way of salvation is perfectly familiar to them." But what we do see, is that workmen are everywhere organizing, and organization, to our mind, is a towering evidence of education, intelligence, self respect and independence. What we do hear, is the "clarion" notes of labor speakers and labor writers, urging men forward in the grand work of organization—and to ears attuned to the sounding notes of organized labor, it will be found that the rank and file of organized workmen are themselves labor leaders, that they too know the way to the "promised land"—that they do not propose, either to die in the wilderness, or be fed on manna. They are not waiting for a Moses—nor do they expect miracles to be wrought in their favor.

What, we ask, is a "labor leader?" If there are "quacks" with their cheap nostrums, how shall we know the "simon pure" article, the orthodox remedies for the ills which afflict us?

We take it, that any journal devoted to the interests of labor, and edited with the boldness that distinguishes the *Railway Service Gazette*, is a labor agitator and a labor leader, both in the highest sense of the term. We do not object to the caustic criticism of the *Gazette*, when referring to *pseudo* leaders and reformers—the fact that there are such, emphasizes the splendid truth that the genuine leader and reformer exists. If the quack finds his dupes, it is equally

true that the true man will have supporters. We read with special satisfaction the *Gazette's* lucid exposition of difficulties which confront workmen. The plutocracy is here. Wealth is massing its forces; legislatures and courts are debauched; the millennium looks far distant. There are clouds along the horizon—a storm is brewing. We would withhold no fact within our knowledge. A good general wants to know as much as possible about his enemy, and the *Gazette* is equal to the occasion, when it says:

Some of the very men who rail the loudest against millionaires, are the first to lick the hand of the millionaire that permits itself to be licked, though that hand is blackened with a thousand frauds, any one of which is morally worse than those which place poor men behind prison bars. Other loud reformers when serving on juries, never fail to tilt the scales of justice in favor of the rich and against the poor. Others still will bow, and sneak, and cringe, before the rich man, lacking both in honor and intelligence, while they turn in scorn from the man in rags, though he is honest, virtuous, and intelligent. How many are there, even among the labor leaders and among the labor reformers, who do not bow in worship to the golden calf, who do not honor dishonest wealth, and turn from honest poverty, who do not prize money above merit, who do not give their influence and patronage to the rich, and withhold it from the poor, who do not overlook in the millionaires the faults and crimes they condemn in the poor, who in a word do not each day do something to add to the volume of that mighty stream which with ever increasing current is bringing all the good things to the rich, and away from the poor? Here in Ohio is a railroad man, who with several associates was guilty of a robbery of four or five millions of dollars. The robbery was in no essential less heinous than those that place poor men behind prison bars. He does not even take the trouble to deny or attempt to palliate the offense. He escapes through a technicality of the law, which subservient juries and subservient judges can always find, with the money of other people in his pocket. This man is one of the first citizens of Ohio. Should he come up for office he would be enthusiastically supported by the employes of his own roads, and perhaps other roads. His offense would probably never be mentioned. With such a condition what can we expect from legislation? Why talk of the reforming influence of political parties? But suppose the hearts of the people, the railroad men, the mechanics, the laborers, were all right, what then? Suppose everywhere this man went he was met with the withering scorn and contempt that is awarded the poor man who is guilty of a similar though smaller offense.

The foregoing is an ebon or a lurid picture as one may fancy. It represents labor leaders, Heaven save the mark, as the most abject and despicable creatures that walk God's green earth, or pollute the air with their pestilential breath. Traitors and apostates, no language can fitly characterize them and hyperbole sits dumb in the presence of the task.

Where are they? who are they? what are their names? where do they flourish and stink? We would like to know them that with whips of flame we might help to scourge the scoundrels through the world.

We see workmen everywhere organizing. We see lodge fires blaze everywhere, in the valleys and on mountain elevations. We see the army of organized labor march-

ing with banners flying. We see women, too, lending their approving smiles and words. We see workmen's publications increasing in numbers, in power and influence. We see men, but yesterday, tongue-tied and silent, who to day, inspired by the genius of emancipation, telling the story of their redemption with startling eloquence. We see one of a building trade unions demanding justice of employers, and then we see other "unions" in the spirit of brotherhood, gather around, and proclaim the conquering battle cry, "We are with you." It is federation. There is in it all no "Golden Calf," no idol worship, but evidence that men's hearts are right; that they have clear perceptions of duty; that they are loyal to obligation and that the work of education with them is far advanced.

The *Gazette* having surveyed the situation and found it anything but lovely—a desert without an oasis—about as dreary as Stanley's description of the Congo forest, proceeds to point out the remedy, by saying, "if there is any material change in present conditions the reform must commence in the hearts of the people"—working people, we suppose.

We surmise the reform has come. We are inclined to the opinion that it is growing in sweep and in power—organization is the shibboleth, and the hearts of the people are not beating like "muffled drums" "funeral marches to the grave" of organization.

We are in a state of industrial war, every appeal to legislation to do aught but *undo* is as futile as sending a flag of truce to the enemy for material to carry on the warfare. While the unions, however unconsciously, have tacitly recognized this fact in their federated action, they are beginning to see that in federated union there is still greater strength.—*Rights of Labor.*

Fortunately the more intelligent workingman quickly discovers that his only hope of success in obtaining and maintaining his rights, lies in federation, and it is a singular fact, that those who oppose labor organizations, and those in labor organizations who oppose their federation, while exhibiting, in many instances, great disparity of skill, occupy about the same intellectual level. It is a case in which the common ditch digger and the skilled artisan act together—co-operate for labor's degradation. The motives may be different, but they pull together to secure results which intelligent, independent, self respecting workingmen abhor. In a word, however vociferously they may deny the charge, they work with "scabs."

AN eight-year-old boy in Lynn, Mass., found a pocket book containing \$15,000, and promptly returned it to its owner. Charley Jackson is the name of the honest boy.

A PIGEON, recently, flew from Perigueux to Paris, France, a distance of 310 miles, in 454 minutes, at a rate of something less than a mile in one minute and a half.

THE largest gold mine in the world is in Alaska, and it is now conceded that the United States made money in the real estate deal with Russia.

THE first sewing machine began its mission about forty-four years ago; and now the "Song of the Shirt" has a sadder strain than ever before.

SIBERIA has the deepest lake in the world. Its superficial area is about equal to that of Lake Erie, and its depth ranges from 4,000 to 4,500 feet.

Literary Notes.

The April *Arena* opens with a paper by Prof. Geo. W. Winterburn, M. D., of New York, dealing with the future of philosophy. Dr. Winterburn, who formerly edited the *American Homoeopath*, in his forcible essay reviews the rise, growth, and fallacies of philosophy during the past, pointing out what he believes will constitute the accepted philosophy of the future. He pays a glowing tribute to Professor Buchanan, whose noble face forms the frontispiece of this number. Thomas G. Shearman, in a paper of great strength, sets forth his views on the evils and injustices of indirect taxation. This contribution will command general attention. Its valuable tables of statistics should be preserved by those interested in the problem of taxation. R. Mason Osgood, A. M., M. D., of New York, contributes an interesting contribution on recent discoveries in "Hypnotism." Dr. Osgood is a member of the London Society for Psychical Research and has given profound attention to the marvelous powers of mind which during the past few years have challenged the closest attention of many of the greatest thinkers of the age. One of the most striking features of this issue of the *Arena* is Prof. Jas. T. Bixby's contribution on "Buddhism in the New Testament." It is a reply to Dr. Felix Oswald's paper on the same subject, and is probably the ablest presentation of the Christian side of this problem which has yet appeared.

It is said that Daniel Webster was the first editor of the first college paper published in this country, the initial number appearing at Dartmouth in 1800. Daniel was a great orator, but he didn't know much about editing a college journal. He'd write a two-column editorial without once dragging in the names of Socrates, Demosthenes, or any other of those old fellows who lived before the war.—*Norristown Herald.*

"What 'farnal liars newspapers be," exclaimed Podsnap. "You can't believe a blamed story they tell nowadays?"

"Why, Mr. Podsnap," said Mrs. P., "what awful story hev they been tellin' naow?"

"This paper, Euphemia, says that a count or something has jest blowed out his brains after blowin' in all he had at Monte Carlo."—*Chicago Times.*

A farm journal said: "There is going to be more money in poultry than heretofore." The next day a farmer's wife found a nickel in a chicken's crop, and told her husband it was the first time she ever saw anything reliable in an agricultural paper published in a big city.—*Exchange.*

The kittens grope and tumble around
Ere they get their eyes asunder;
And where the dickens they are, to them
Must be a nine days' wonder.—*Puck.*

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the fifteenth day of each month.

A Foolish Move.

Labor cannot afford to accept a division of stolen property, as a bribe for an active participation in a warfare waged against itself. I quote from a Kansas City daily of recent date, as follows:

One of the most significant labor conventions held in this city for years, took place yesterday (Sunday, February 22d) afternoon in the A. O. U. W. hall at the northwest corner of Fifth and Main streets. Almost 350 representatives of organizations composed of railroad employes were present. Beecher B. Ray, of the Brotherhood of Railway Conductors, presided, with Michael Connelly, recorder of the Switchmen's Mutual Aid Association as secretary.

For four hours the convention lasted. It had met to discuss the question of bringing into one general federation, with a Supreme Council to guide its actions, the Brotherhood of Locomotive Engineers, the Brotherhood of Railway Conductors, the Brotherhood of Railway Trainmen, the Brotherhood of Locomotive Firemen, the Switchmen's Mutual Aid Association, the old Order of Railway Conductors and the Brotherhood of Railroad Telegraphers. The object of the meeting was to ascertain the sentiment of the memberships of those organizations in the part of the country of which Kansas City is the great railroad center. When a standing vote was taken, after speech making which lasted hours, the entire convention rose to its feet in favor of the movement amidst cheers and great enthusiasm. No wonder the convention was enthusiastic. It was indorsing what any number of labor's prominent men, including Samuel Gompers, president of the American Federation of Labor, declared to be the inception of the greatest single labor movement ever undertaken. It was the beginning of a grand federation of all labor organizations, Mr. Gompers said.

Among other things that were said and done, it is reported that

Resolutions were adopted that the members of the convention protest and use all fair means to defeat any legislation to the detriment and disadvantage of the various organizations represented; that they support whatever party contributes most in legislation toward their general advantage. The convention further indorsed the action of the men at Jefferson City and Topeka, who are fighting all legislation tending to reduce freight or passenger tariffs.

Simply pausing to note the fact that a portion of these resolutions pledge the federation, in advance, to the support of one or the other of the two old parties, I wish more especially to call the attention of all true champions of the people's cause, to that portion of above report which reads thus: "The convention further endorsed the action of the men at Jefferson City and Topeka who are fighting all legislation tending to reduce freight or passenger tariffs."

I respectfully submit to all members of the proposed federation that the above language indicates:

1st. An utter misconception of the scope, aims and purposes of the federation.

2nd. A peculiar schism and division in sentiment, with a dangerous tendency existing in the ranks of organized labor.

3rd. A gross misapprehension of the true status of railroad corporations and their capitalized fraud.

a. In that it is assumed that a reduction of freight and passenger rates must necessarily reduce wages of railroad employes.

b. In that it betrays an ignorance of the teachings of experience and the logic of facts, which assert that a reduction of freight and passenger rates, while proving of inestimable benefit to the people, would not injure the interests or decrease the profits of railroad stockholders.

4th. A lack of familiarity with the well worn adage, "It is a poor rule that will not work both ways."

I will present a few ideas in support of the foregoing propositions:

1st. An utter misconception of the scope, aims and purposes of the federation.

Were the question asked, "For what purpose is the federation formed?" no one would, for one moment, think of answering, "To further the ends and protect the interests of the holders of railroad stocks and bonds." Still less would they be likely to answer: "To form an alliance, offensive and defensive, with organized greed and capitalized fraud, in opposition to the people's demand for equity and justice."

It is commonly supposed that the ends to be attained and the principles to be conserved by the federation were the enforced compliance on the part of the railroad corporations with the demands of their employes, and the practical illustration of the basic axiom, that "an injury to one is the concern of all." It has been predicated and predicted of the federation that its mission would be to defeat any attempt on the part of the R. R. corporations to infringe upon the rights, or reduce the wages of their employes, by united and simultaneous action on the part of the federated army of such employes. Indeed, it has been confidently expected that instead of uniting with corporate monopoly, in its aggressive fight against the liberties and fortunes of the American people, the railroad employes of America were organizing to protect their own interests and maintain the present scale of wages to the end that they might not be crushed between the upper and nether millstones of the people's demands and corporate rapacity. That is to say, that in the impending mighty struggle between the American citizens and the almighty dollar, the federation would see to it that the attack of the people's hosts upon an encroaching plutocracy was not diverted against the guiltless army of toilers upon the people's highways.

2d. A peculiar schism and division of sentiment, with a dangerous trend, existing in the ranks of organized labor.

The foregoing resolution in its closest analysis presents this proposition on the part of the federation: That the people in their struggle for liberty and warfare against oppression and spoliation, must not attempt to reduce the extortionate tribute exacted from them, for fear of reducing the wages of the sons of toil who are unfortunate enough to have to depend upon corporate monopolies' generosity for a "bare subsistence."

For what then is labor organizing and what good purpose can be subserved by the federation of labor? Suppose that from the same standpoint and for the same reason the street railway employes of America should oppose all legislation looking toward the imposition of a charge for street railway franchises, and the regulation of rates of transportation. Or the telegraph operators conclude to oppose to the bitter end Wannamaker's postal telegraph scheme. And what if packing house and stock yard employes should unite in opposition to all efforts on the part of the people to destroy the trust known as the beef combine or the "Big Four," and to establish some semblance to competition in the conduct of live stock commission yards. Then the cashiers, tellers and bank employes generally, might steadily oppose the popular demand for the abolition of banks of issue and the issuance of money direct to the people, at a low rate of interest upon approved security. The result would be that sordid selfishness, acting upon an individualistic plane, would clog the wheels of progress of modern civilization, and preclude all possibility of united, collective action in the direction of reform, on the part of the whole people. In this mighty conflict between humanity and gold, all thought of self, from an individualistic standpoint, must be eliminated from the problem, and man must work for man—not for self, but for humanity in general. The question is this: Can labor afford to accept a division of stolen property as a bribe or reward for its active participation in an aggressive and relentless warfare waged against itself?

Besides this, the proposition seems to be based upon a false premise, to wit: That capital pays for labor in proportion to the profits realized. If it is assumed that wages are reduced because of reduced profits, are we also to declare that with an increase in profits capital will voluntarily offer an increase in wages? On the contrary, is it not true that all increase in wages has been forced from unwilling employers by the united demand of organized wage-workers?

3d. A gross misapprehension of the true status of railroad corporations and their capitalized fraud.

a. In that it is assumed that a reduction of freight and passenger rates must necessarily reduce wages.

To begin with: The projectors and builders of railroads never have any money of their own. The original incorporators of railroad companies are generally impecunious exploiters or promoters. It is a fallacy to speak of railroads as on a par with ordinary investments of capital. Railroads are constructed with borrowed capital, and the people furnish the security upon which such capital is borrowed. Such security consists of a charter or franchise and the permission to acquire a "right of way" by the exercise of the delegated power of "Eminent Domain." Upon this security the money is borrowed with which to build the railroad, and in most instances, the bonded indebtedness exceeds by thousands of dollars per mile the original cost of construction. As a rule, all shares of stock represent dishonest and fraudulent additions to the capitalization of railroads, in the acquisition of which investors were systematically swindled, and in the effort to impart some semblance of value to which, the people are continuously robbed.

A few figures must suffice to show the enormity of this swindle and the extent to which the people are being robbed. At the close of the year 1883, *Poor's Manual* had this to say: "It is not probable that the cost of the mileage constructed in the three years ending Dec. 31st, 1883, exceeded \$30,000 per mile. The whole increase of the share capital, \$800,387,208, and a portion of the funded debt, was in excess of cost of construction (a billion dollar steal). If it be assumed that the cost in money of all the roads in operation in the United States, did not exceed, as it certainly did not, the amount of their funded and floating debt, \$3,787,410,728, the actual investment was a most profitable one. The net earnings for this year (1883) were \$336,911,884, a sum equaling about 9 per cent. on their cost."

Note the fact that the highest standard authority upon railroad statistics in the world says that the railroad system of the United States did not cost more than \$30,000 per mile. Now take a glance at the situation at the close of the year 1889. Upon Dec. 31st, 1889, the railroads reporting aggregated 160,544 miles, which at \$30,000 per mile (much too large an estimate), cost the sum of \$4,816,320,000. The net earnings for the year 1889, including rentals and other receipts, above all cost of operation, were \$408,929,487 or 8.49 per cent. upon a cost of \$30,000 per mile. At the same time the roads were stocked and bonded for the enormous sum of \$58,074 per mile, and yet the swindled stockholders wonder why they do not receive larger dividends.

But the indictment does not stop here.

Even assuming that the roads cost \$30,000 per mile, we have yet to deduct the amounts donated by the people in cash and in township, county and municipal bonds and land subsidies. These items would aggregate, so Secretary of State James G. Blaine affirms, more than one billion dollars. Computed upon this basis, the roads paid more than 10 per cent. upon their actual cost, in the year 1889. Now as to operating expenses aggregating \$680,451,610, labor, below the grade of general officers, got just about one-half of the amount, while included in these expenses is the cost of all building and repairs, except the actual construction of new branch roads, side tracks and new buildings. There is therefore no excuse for the statement that the roads cost any more per mile than they did when reported ten years ago. What are the facts in the case? In 1879 the roads were stocked and bonded for \$55,870 per mile, while unfunded indebtedness swelled the total to \$57,728 per mile. In 1889 the roads were stocked and bonded for \$58,074 per mile, while unfunded debts increased the total to \$60,309 per mile. Putting the cost of the roads at \$30,000 per mile this appears to be a clear steal of \$2,308,060,659 on account of roads built in ten years, even if it were not true, 1st. That the roads did not represent a cost of \$30,000 per mile in 1879; 2d. That the cost of railroad construction had steadily cheapened during the decade.

But there is another and more criminal link in this chain of iniquitous conspiracy. Although it is a fact that the bonded indebtedness of the roads increased during the decade (1879-1889) from \$27,489 to \$30,070 per mile, an increase of \$2,591 per mile, yet it is also true that the proportion of stock shares or share capital decreased from \$28,386 to \$27,999 per mile, a decrease of \$387 per mile. The reader is invited to scan the foregoing statement very closely, as therein is laid bare the cause of the stockholder's discontent as well as the origin and full significance of the term "crippled railroads." Railroad magnates on the "inside" or "ground floor" are credited with holding from one to one and a half billions of railroad bonds, and if they own as many as \$1,498,366,439 of such bonds drawing an average of six per cent. interest, they absorb a sufficient amount of the net earnings of the roads to pay a dividend of two per cent. upon the total share capital of all the roads in the United States. Of course, many of these bonds are held by railroad magnates as individuals, but yet, we all know that they were acquired by them as railroad "promoters," and that they cost them nothing, or next to nothing. So then, it is not poor business or light earnings that are making railroads non-dividend paying, but it is the rascality of men in high places, who issue to them-

selves evidences of indebtedness, wholly fictitious, which being a prior lien upon the earnings of the roads, entirely "cut out" the stockholders and rob them of the dividends stolen in the first place from the people.

That this is a correct statement, is proven by the returns of the roads themselves, such returns setting forth these items:

LIABILITIES.	
Capital stock	\$4,485,009 318
Funded debt	4,828,365 771
Unfunded debt	357,477 160
Total capitalization	\$9,680,942 256
ASSETS.	
Cost railroad and equipment	\$8,598,081 477
Real estate, stocks, bonds and other investments	1,177,431 927
Total assets	\$9,775,513 404

So that, to say the least, *Poor's Manual* makes a misleading statement, when it says "The cost per mile of all roads making return, as measured by the amount of their stocks and indebtedness, equalled \$60,309, against \$60,732 for 1888." The roads themselves admitting an over-capitalization of \$1,084,166,619. It may be stated here that the \$2,508,876,599 in bonds issued during the decade was \$1,595,064,599 more than \$12,000 per mile for the 76,151 miles built during the decade; and it is certain that \$12,000 per mile, in addition to the bonds and subsidies voted by the people, is a very liberal estimate for their cost, especially as they were mostly built in that portion of the country where railroad construction is easy and inexpensive.

If the federation is true to itself and its demands, the people's warfare upon capitalized fraud will not have a tendency to reduce the wages of railroad employes. Let the federation prepare itself to become one of the mill stones between which the plutocracy must inevitably, sooner or later, be ground to powder.

b. In that it betrays an ignorance of the teachings of experience and social economy, which assert that a reduction of rates, while proving of inestimable benefit to the people, would not reduce the profits of the railroads.

Under the present system of excessive charges, no one travels for pleasure, and journeys undertaken by rail are either prompted by necessity or made in the regular routine of business. The railroad companies understand this, as witness 1 alf and two-third fare rates given to excursion parties, and to the public generally, upon holidays and happenings of local or national attraction. At present, railway travel is a rich man's luxury. If the fare was reduced from three cents to one cent per mile, the enormous increase in the volume of travel would more than offset the reduction in rates and any increase in expenses caused by the increase in travel. So that while

the railroads would not lose any money, they would come much nearer than at present fulfilling their functions as common carriers. The railroads of a country are the people's highways, and the people would universally travel thereon, if such travel was not such an expensive luxury. A one cent fare, and the total abolition of the pass system (except to employé(s), would increase, rather than diminish the revenue of the roads, and the wages of the employé(s), while it would to a great extent allay the growing animosity of the people toward the railroads. Space will not admit of the presentment of statistics to prove the foregoing general averments. Suffice it to call attention to the fact that at the time the Hungarian Government reduced passenger rates to about one fifth of the former prevailing rates, the increase in travel was so great, that where 225,000 passengers were carried under the old rate, there were 4,357,586 carried under the new rate; an increase of almost 2,000 per cent. against a decrease in rates of 80 per cent. At the same time there was no material increase in the operating expenses, although the gross earnings were almost five times as much as before.

The argument concerning freight rates must be based upon plainly established data in social economy. The farmers and their dependents number at least two-fifths of the population of the United States, and another two-fifths depend upon the prosperity of the farmer for means of subsistence. The farmers, if all enjoyed equal opportunities and privileges, should purchase, use, consume and enjoy two-fifths of the total product of manufactured goods and merchandise produced in the United States and the same proportion of all imported goods. For these commodities the farmer has nothing to offer in exchange, except the produce of his farm (grain and stock). When the farm ceases to produce, all trade and commerce must also cease, as the product of the farm feeds the nation, and pays for all goods, wares, merchandise and commodities consumed, used, worn and enjoyed by the whole people. Whatever portion of the farmers' produce is diverted and absorbed from the direct channel of commodity exchange, while it may tend to enrich a few individuals, has a tendency to impoverish the bulk or masses of the people. Why? Because of one simple fact in political economy, *i. e.* that were all labor profitably employed, there could and would be no surplus. In other words, there is no such factor as "over-production." The trouble is faulty distribution and *under consumption*. The interests of all are reciprocal. The amount of merchandise, commodities, etc. that the farmer can purchase is gauged and limited by the amount of net proceeds he realizes for the product of his farm. The

more he buys however, the more work is furnished the laborer in manufacturing and industrial pursuits. It even takes more clerks to wait upon prosperous than unfortunate farmers. On the other hand the laborer's ability to buy and consume farm products is limited and gauged by the amount of work he procures, and the wages he receives. But the root and basis of this whole reciprocal arrangement is the net price the farmer receives for his products. If transportation and middle men absorb unnatural and unreasonable tolls and fees, then, while a few railroad magnates, and "Bulls and Bears" may become millionaires (as, indeed, many have become), yet the masses of the people will suffer and become impoverished, while legitimate business will languish and die.

The rest of the argument is easy and plain. The farmer's produce, available for exchange, is worth at his market town, its price at the seaboard, *less* freight charges for transportation there. The merchandise is valued at its price at the factory, plus the freight charges from the factory to the farmer's market town. What then will be the effect of a reduction in freight rates? A reduction of freight rates upon farm products will *increase the farmer's purchasing capacity*, because it will increase the *net* amount of money received for his products. A reduction of rates upon merchandise, will *again* increase the purchasing capacity of the farmer, because it will make goods cheaper. These facts necessitate a much greater volume of *western bound freight* shipments; the farmer not only having more money to spend, but being able to obtain a much greater weight of merchandise for each dollar spent. This, in its turn, affords work to thousands of idle artisans and laborers, who at once inaugurate an increased *home* demand for the farmer's grain, which again increases the farmer's purchasing capacity, etc., etc., etc.

Thus the railroads would gain in increased tonnage of western bound freights what they lost by reason of reduced rates.

My bleeding, suffering country! Fellow patriots! Know ye not that it is the vice-like and clinging embrace of the railroad octopus that is paralyzing the energies, benumbing the senses and sapping the resources of the American Republic? The railroads must, they shall reduce their rates and give to the husbandman, the toiling farmer, the fair and remunerative fruits of his toil, to the end that he, too, may buy, freely buy of the product of manufacturing and industrial labor. So shall the whole nation be set at work, and the hum of industry and the whirr of machinery be heard from shore to shore. The transportation question must be solved; it is the key to the whole industrial problem.

4th. A lack of familiarity with the well worn adage, "It is a poor rule that will not work both ways."

In conclusion: Railroad employ  es, least of all men, can afford to forfeit the esteem and lose the sympathy of the general public. During times of railroad strikes the force of public sentiment, if it be friendly to the strikers, is a potent influence in the direction of bringing a railroad corporation to terms. It is very rarely the case that a legislature meets that it is not waited upon by one or more committees from organized bodies of railroad employ  es demanding legislation in their behalf. If there is any one class which more than another, invokes the aid of the law to protect its interests and rights, it is the class known as railroad employ  es. This being the case, what valid reason can they offer for the invocation of legislative protection when they are unwilling to accord such protection to the residue of the people? In the event of a strike is it likely that the people will accord to the strikers the aid of their sympathies if they have reason to believe that the success of the strike means an additional burden of oppression for them to bear? Or is it to be expected that the people will be willing to pass laws for the benefit of railroad employ  es, if it is understood that the benefits conferred by such laws will be used as an excuse by railroad corporations for further extortionate demands upon the people, in which demands the roads will be backed by their employ  es? There should be no schisms or divisions in the peoples' ranks, but they should march in solid phalanx, animated by one spirit, upon the intrenched hosts of corporate monopoly. What will benefit one class which lives by honest industry will benefit all such classes. "United we stand, divided we fall."

KANSAS CITY, MO. *One of the People.*

Brotherhood of Railroad Trackmen.

There has been recently organized a Brotherhood of Railroad Trackmen, whose purposes are set forth in the following preamble:

To unite the railroad trackmen, to promote their general welfare and advance their interests socially, morally and intellectually; to protect their families by the exercise of a systematic benevolence so much needed by their widows and orphans, this order has been formed.

The officers of the new Brotherhood come to us highly recommended and we believe them to be fully competent for the task they have undertaken. The trackmen of the country are greatly in need of organization and should be encouraged in all prudent ways by the members of other brotherhoods of railway employ  es. The Grand Master of the Brotherhood of Trackmen is George E. Gunn, box 238, Charlotte, Mich., and all communications addressed to him will receive prompt attention.

What Constitutes a Scab?

MR. EDITOR:—If you will grant me a little space in our *Magazine*, I will make my first attempt to write a few lines for the benefit of two lodges in particular, which are located in this section of the country. I will avoid the mention of names, as the parties concerned are all members of our order, and probably impressed with the idea that they are *working for the good of the order*.

My intention is to show them where they are in error, or in other words, laboring under false impressions.

In the first place I would ask all sensible and well-meaning brotherhood men, "Who and what they consider a scab?" A scab in my estimation is as far beneath a "Pinkerton cut-throat" as the earth is beneath the sun, he is worse than some afflicted cur, wallowing in a filthy gully, and gasping his last breath. It matters not how good a man may be before he takes this fatal step, whenever he becomes a "scab" he breathes his last breath, I mean his free and easy breath, his conscience is never at ease, he expects to see the finger of scorn pointed at him wherever he goes, and if he is guilty will be remain in the community where his deed is exposed to his fellow-workmen, and try and bring up excuses for his act? I say no. Why? Because it takes a man of good grit and nerve, who might be accused of scabbing, to stand and defend himself, and this grit and nerve a genuine scab has not got—he is a coward, deprived of manhood and honor. Now then, what does a man have to do to become a "scab?" What terrible deed has he to commit to brand him as a scab? He has got to deprive his fellow-creature of his means of support, thus taking the bread out of the mouths of the wives and children of his associates.

Now the question arises, under what circumstances does a man generally commit this terrible deed? Does a man become a scab simply because he fills a vacancy, which was vacated by another because he thought he was not getting enough money for the work he performed, or because he quit on account of his foreman or some other superior officer failing to extend to him as warm a feeling as they did to some one else? I say when a man fills a vacancy of this description, he is not a scab, and yet, how many good men to-day are branded as scabs for just such acts as I have related. What are these so-called *strikes* good for, only to throw good men out of employment and to create what is usually called scabs? What right has one individual to declare a strike, quit work and persuade others to do likewise? Is he doing a good for the order which he claims to be a member of? Has he got any right to go around and tell others that they have to quit work, or they will be branded as scabs if they

continue in their work? This man is not only an injury to himself and associates, but also to the order he belongs to. Such members ought to be expelled immediately and the strike put to an end at once. Nearly all labor organizations, especially those composed of railway employes, are provided with the proper means of adjusting a wrong, which might be perpetrated on any one individual, or on the employes in general.

Since this is the case, why have so many strikes? Why, for every little provocation, cry out *strike*, quit or you will be branded a *scab*?

I have said in the beginning of this article that I would write this for the benefit of two lodges in particular, because a case of the last described is at present under discussion.

An applicant has recently been admitted, after making his second attempt to become a member of our order. He is highly recommended by his general foreman. Every engineer he has ever fired for has a good word for him. Every fireman on the two divisions he has fired on, speaks of him as a sober, industrious and reliable man. It is alleged, however, by one of our members, that this new member had failed to join hands with the strikers of the 1886 strike on the Gould Southwest system. The strike was generally called the Knights of Labor strike. Was the strike endorsed by the grand officers of that order? Positively no. Was it a premeditated or properly organized strike? Did the men on the whole system turn out in a body after all other means were exhausted, to bring about a mutual understanding between the railway company and the employes? I think the reader can answer this question for himself, or rather it has long since been answered by the public. Did Martin Irons and a few others, whose desire for fame and glory was greater than their intellectual ability, consult their grand officers before declaring a strike, which came so near terminating the career of the order of the Knights of Labor? No, for T. V. Powderly, G. M. W. of the K. of L., positively declared that he did not know anything about the strike until it was so far advanced that it was beyond his reach to check it. The letters also that he wrote, showed that he was opposed to the strike, and advised the men to go back to work again.

On the strength of these letters, and a personal request of the Master Workman of Gate City Assembly, No. 3365, K. of L., this new member remained on the coal bin, where he was employed coaling up engines, at the time of the strike. Now, if this new member did such a great wrong by following the advice of the Grand Master Workman and the Local Master Workman, why

was not T. V. Powderly expelled, at once, from the order, since he was the cause of so many men going back to work before the strike was virtually declared off? T. V. Powderly was not expelled, nor cast out of the order as an unfit subject; his fame was still greater, after peace was finally restored; he was re-elected to the high position of Grand Master Workman. This does not indicate that Mr. Powderly had made himself enemies. Then why bar this new member out from the folds of our Brotherhood, after he has worked himself up to the position of hostler, with not an enemy on the road? Some one will probably say now, "Well, why did you not take him in when he put in his first application?" It was done in the first place to gratify the whim of the one who accused him of being a *scab*, he, the accuser, being a member of our order. In the second place, we concluded that it would teach the applicant a good lesson, whether we found him guilty of *scabbing* or not, and at the same time give us a better chance to watch him more closely in the future. This has been done, and the result has already been stated.

Now, let the man whose career has been so spotless and pure that he can say, "Not a blemish rests upon me," pick up the first stone and cast it at our new member and all the firemen whose lot it is to be associated with him.

In conclusion, I will say that we have at last found the means by which these "one horse strikes" are kept down. A Supreme Lodge of the federated orders has been established. It has been a long felt want, but at last we can say "Eureka."

No doubt there are a few hot heads who do not approve of this Supreme Council, because they cannot jump up and cry at every little provocation, "Strike, strike, throw up your job or you will be branded a *scab*." Those, however, who use better judgment and common sense will join in with me and say "Long life to the Supreme Council of the federated orders."

Yours fraternally.

C. J. N.

GEO. W. HURLBUT, a member of Midland Lodge, No. 147, who, on account of injuries sustained some time ago, has been compelled to abandon railroading, has accepted the agency for Kinne's Improved Railway Employes' Guide, Time and Pocket Book, a book specially useful for engineers, firemen, conductors and brakemen, and sold at \$1.00 per copy. Orders addressed to Geo. W. Hurlbut, Lock Box 226, Temple, Tex., will have prompt attention.

Visitor—Do you devote much space in your paper to society intelligence?

Editor—No; society doesn't have more than a stickful of intelligence, at best.—West Shore.

AIR BALLOONING.

WITH REGARDS TO CY WARMAN, EDITOR OF THE WEST-
ERN RAILWAY, DENVER, COL.

Dear Cy, I've got them bad to-night,
The gleeesome imps insist I write
A home-made stave or two,
On sundry things which fill my head,
Before I seek my welcome bed,
Then fire the mass at you.

The various topics which I'll touch
Will hardly interest *you* much,
But they will ease *my* mind;
Too well you know the homely train
Of sprightly fancies in my brain
In doggerel mills I grind.

I'd like to soar the same as you
Above the earth, amid the blue
Of summer's lovely skies;
But when I get on pinions bent,
To pierce the glorious firmament,
My courage quickly dies.

I wish I had a safe balloon
To carry two up toward the moon,
I'd have you come along;
And Cy, within our airy car,
We'd wing our way from star to star,
And fill up space with song.

We'd soar above this sordid earth,
And evermore devote to mirth—
I'd listen while you'd sing—
Suppose I fancy we're afloat
Upon a safe, inflated boat,
And off on joyous wing?

Oh, glory! how the earth recedes,
Its hates and heartaches, strifes and greeds,
Contentions, woes and spleen—
Say, Cy, we've soared aloft too quick,
We should have paused one friend to pick,
And brought along Pauline.

Ah, well! too late! Here, take a smoke,
Don't at the snide I give you joke,
It's not a fragrant brand;
If I'd the means we'd both enjoy
The choicest capaduros, boy,
From Cuba's sunny land.

Oh! isn't this most glorious fun!
We're floating high above each dun
I've hustled from behind;
My heart has bid adieu to care,
And in this pure, delightful air,
I have a happy mind.

See how the smoke we puff is tossed,
And circles like a clean exhaust,
From out an engine's stack!
Bend o'er the car, and Cy, look down
Upon the disappearing town
To which we'll ne'er go back!

Farewell, old earth, to all your ills,
Dead engines, snow drifts, hunger, chills,
Rough joints and stringent rules;
We'll never more return, I hope,
To soil our hands with dirty dope,
Or labor there like mules.

In drudgery I've toiled for bread,
My heart at times weighed down like lead,
But had sufficient cause;
Bereft of hope, avoiding crimes,
Buoyed up again when scribbling rhymes,
Which won me faint applause.

Define me, Cy, the thing called fame,
That's hailed so often with acclaim;
We'll both agree, I think,
It does n't recompense the toil
When sought for by the midnight oil
With weary pen and ink.

Behold that disappearing spot,
Where many years I've vainly wrought
The siren fair to woo:
To-morrow's sunshine will efface
My very name, while off through space
I'm roystering with you.

A sculptured stone is poor reward
To compensate a mouldering bard
When maggots round him crawl.
This flight will both our bodies save,
From all the horrors of the grave,
Which terrorizes all.

Oh, hang such moralizing. We
Are out upon a boundless sea,
Ne'er sailed by man before!
Our air-balloon is swift and strong,
We'll make our hearts exult with song,
And sing for evermore.

The breeze which gently woos us now,
Dispers the wrinkles from my brow,
Cut by the lash of care,
On that forsaken spot I left,
Where night and day I groaned bereft
Of all things but despair.

Now up with speed to airy heights,
Till we behold the grandest sights
E'er seen by human eyes!
My tide of life is bounding free,
And at its flood, for soon I'll see
The glories of the skies!

Behold the brilliant lamps of night
Now beaming on our raptured sight
Adorning Luna's train!
Oh, heavenly joys! How glad I feel!
If up I'd stand I know I'd reel,
As drunk as with champagne!

How often, Cy, in balmy June,
We've gazed in languor on yon moon,
With fair ones at our sides!
We'll soon discover if she's dead,
And if it's true what oft we've read,
That she controls the tides.

Some fellows like to have her dark,
Whene'er they're out upon a lark,
To hide suspicious ways;
But we adore her silvery beams
Reflected in the babbling streams,
Devoid of cloud or haze.

We're heading for the Milky Way,
We'll reach it ere the break of day,
If we maintain this pace!
Throw out some ballast! Let us soar
Up higher still, and evermore
We'll navigate through space!

We'll quaff the sunbright glories deep
When up the Orient he'll leap,
To run another day!
We'll visit realms to man unknown,
And fondly hope Jehovah's Throne
We'll meet with on our way!

See Venus, Cy! We'll steer for her!
You've always been a worshipper
Before her shrine below.
What! not for there? We'll then for Mars—
Here, let us light some fresh cigars,
They'll make our fancies flow.

How swift we cut the atmosphere!
Who'll dare to sing of engineer
And flying steed again?
They're crawling snails compared to us;
Oh! what an advertising fust
Men make about a train.

That star so full of diamond light,
Now bursting on our ravished sight,
Is Saturn, I believe;
We will explore its rings to know,
If what we've studied down below
About them but deceive.

Behold the Dipper over there!
 Out yonder's Cassiopeia's Chair!
 Polaris here you see!
 Now note the Dragon and Giraffe—
 How dare you at such wonders laugh?
 Or is it meant for me?

The Constellations are ablaze!
 And sending forth a song of praise
 Ne'er heard by human ears!
 What melody our hearts entrance!
 It surely fills the whole expanse,
 'Tis "music of the spheres."

What groveling, pigmy, crawling things
 Are earth's great nabobs, princes, kings,
 Compared with you and me!
 Oh, how the life-blood through my veins
 Is coursing in delicious strains!
 Great God be thanked, we're free!

Here comes a comet, Cy, beware!
 'Tis passed, but not before each hair
 Stood straight upon my head!
 The valve-rope pull, old friend, I'm sick:
 With Kitty and the twins, avick,
 I'll soon be in the bed.

Shandy Maguire.

THERE'S A THORN IN EVERY ONE'S BREAST.

DEDICATED TO SHANDY MAGUIRE.

These words I find are filled with great truth,
 For I've observed it closely from my earliest youth
 That those whom we meet who seem to be gay,
 Whose life appears like a morning in May,
 That naught could disturb their moments of rest,
 But, ah! look 'neath the bosom, there's a thorn in the breast.

Yes, their life may appear like the dream of a child
 Who knows not a care; but look at that smile
 That appears on the cheek but lights not the eyes.
 Ah, what is this all but sorrow's disguise!
 Fortune with all of her treasures may bless
 But she can not remove the thorn from the breast.

She may seek to beguile with her glittering gold,
 And take for a little while out of the soul
 Part of its sorrow, its anguish and pain,
 But behold and you'll see it's coming again:
 Fortune is fickle and if she come as thy guest
 Heed not the tale she tells of distress
 For she cannot remove a thorn from the breast.

There's a time when the soul may revel with bliss,
 When the lips are united in affections fond kiss:
 Yes the one that in love when we take to caress
 Will teach us to forget the thorn in the breast.

For behold the young man as he stands by the side
 Of the happy and loved one who shall soon be his
 bride:

Behold the expression on the bride's fair cheek
 With joy so elated she scarcely can speak:
 And behold the fond mother with the babe on her
 knee

How she smiles when she sees it so happy and free,
 Free from the sorrow that manhood oft brings
 And happy as a lark as he soars and he sings:
 When she takes this sweet babe to nurse and caress
 She may forget for a while the thorn in her breast.

But ah! when this babe to manhood has grown -
 And misfortune has claimed it for one of her own,
 When shame and disgrace have tarnished that name
 Which she hoped would be decked with laurels of
 fame.

Then will she not say in her bitter distress
 That there is a thorn in every one's breast?

That bride as she seemed to be reveling in bliss,
 That mother who heals each little bruise with a kiss,
 The rich and the poor, the young and the old,
 And those whose great sorrows have never been told,
 Somewhere in life they'll be forced to confess
 That there is a thorn in every one's breast.

J. G. C.

The B. of L. E. and Federation.

MEMBERS, EDITORS:—In looking over the February number of the *Journal* I see that "X. X." has made another very abortive attempt to defend non-federation. I would suggest to him that he read the letter of T. H. Haines, page 125, in the *Journal* for February, also the letter of C. H. Salmons, page 133, same journal. I intended answering "X. X." but Mr. Haines has answered better than I could and expressed my sentiments exactly.

Judging from his poor, lame arguments, "X. X." is one of those persons whom Mr. Haines mentions as being satisfied with anything the Grand Chief approves and dissatisfied with anything the Grand Chief disapproves; one of "those benighted souls whose intellectual insight seems to be enshrouded in Egyptian darkness," not probably, because they are intellectually weak, but because they would rather have some one else to do their thinking for them and tell them what to do or say. Those were the kind of men who defeated federation at the last convention.

Men who do not think and reason for themselves, but who watch the Grand Chief to see what he approves, or disapproves, and vote accordingly, are a great drawback to any order. Is the Grand Chief infallible? Far from it! That we know by experience.

If the assertion that the strike was "sold out" casts reflections on the Grand Officers or the General Grievance Committee, let the one, or ones, on whom it reflects put the coat on and wear it. Those whom the coat does not fit, do not need to wear it. "A guilty conscience is its own accuser." If the demands of the "Q" men were unjust, why did the Grand Chief sustain the men? Is not "X. X." casting reflections on the Grand Chief?

Federation is not a dead issue and never will be. Before federation becomes a dead issue, there will be a division in the ranks of the B. of L. E. It would not surprise me to see a division at almost any time.

I see by the *Journal* that a charter has been secured in Ohio for another secret order of engine men. Because the men securing the charter choose to start another order of their own, they are called "sore-heads." Are not the ones who term them "sore-heads" really the ones who are "sore-heads?" Even in its infancy this new order seems to have excited the jealousy of an order that boasts of its large membership, and of its ability to take care of itself regardless of any other order, for fear that it may draw into its ranks some of the members of the B. of L. E., (which it undoubtedly will) and become a formidable rival. The men composing the new order I know nothing of, but taking it for granted they are men who do not belong to the B.

of L. E., are there not just as good men out of the order as there are in it? Are they not free men and have they not a right to start an order of their own without being called "scabs" and "sore-heads" simply because they are not members of the B. of L. E.?

Are there not members of the B. of L. E. whom the B. of L. F. expelled from their ranks? Still the B. of L. E. took them in. Why then does the B. of L. E. make a "kick" against some other order taking in expelled members of the B. of L. E.? Let the B. of L. E. scoff at the idea of any order being able to organize and become strong enough to injure them; but they will find they are not the world. So did the O. R. C. scoff and ridicule the B. R. C. Had it not been for the B. R. C., the strike clause would never have been eliminated from the laws of the O. R. C. To-day the B. R. C. is the "thorn in the flesh" to the O. R. C. The new order of engine men may cause even a larger disturbance than did the B. R. C.

The men in the West are more independent and self-reliant than the men in the East, and propose to do their own thinking and reasoning, and not let the Grand Chief or anybody else do it for them. Like the distant mutterings of thunder before a storm, so do the mutterings of dissatisfaction, particularly in the West, portend a storm which may surprise us all by its violence when it breaks over our heads.

Although I do not approve of making in an address of welcome the remarks that D. J. Brown did, still he but expressed the sentiments of the majority of the men in the Western country, sentiments which you may hear expressed on every side of you daily.

As for federation, the men of the West will never let it become a "dead issue."

A. H. McBain.

MONTPELIER, IDAHO.

[The foregoing communication, as we are advised by the writer, who is a member of the B. of L. E., was forwarded to the *Engineers' Journal* for publication, but was declined by the editor, and the writer thereupon forwarded it to the *Magazine*, with the request that it be given space in our columns. As the subject discussed is one in which engineers and firemen are alike interested, and as we believe in a full and free discussion of its merits without reference to whether the views of the writer are in accord with our own or not, the communication, which contains food for thought, to say the least, is given to our readers with pleasure.—ED. MAGAZINE.]

He—And what shall I give you for Christmas?

She—Nothing.

He—What a strange coincidence! That was my idea also.

JAMES McDONOUGH, Esq., for a number of years an engineer on the G. C. & S. F. Ry., has been advanced to the position of traveling engineer, with headquarters at Galveston, Texas. We record the promotion of "Jim" McDonough with special satisfaction, not only because he deserves it as the reward of years of unflinching fidelity to duty, but for the reason that he has been the unwavering friend of the firemen's brotherhood. His name is woven as a garland in its early history. In the "days of small things" he stood by it, watched it, nursed it, and as occasion demanded, fought for it with a courage that knew no variable-ness or shadow of turning. Promotion not only did not dampen, but increased his devotion for the men of the scoop. He did not forget that he had once been a fireman. With him the idea of caste was and is worse than pernicious. Believing that "a man's a man for a' that," he has ever stood for those who needed a cheering word and a helping hand, and to such a man the *Magazine* gladly pays the tribute of its respect. May every ambition of James McDonough be fully realized.

Growth and Work of the Order.

Not long since, while looking through some old papers, I happened to find the first receipt I ever received from the Brotherhood when I joined in September, 1882, which set me to thinking of the great difference in the order then and now. At that time the order was, figuratively speaking, in its infancy, not quite ten years old, a charitable organization. Then the members of the order were paid such wages and worked as suited the master mechanic and round house foreman of the different railway companies. If an individual fireman or a committee of them had the nerve to complain or ask for an increase of wages or a reduction in the hours of labor, or for their rights in regard to runs, seniority in service, what was the result? They were met with a refusal and told that firemen had no rights except to quit if they did not like their job (which is the case on a road I could mention if I chose), or, as was perhaps more often the case, were discharged. What has brought about this great change? The order and the grand officers whom the delegates in the various conventions assembled had the wisdom to select to guide it in its great mission. I have witnessed the growth of the order from infancy to manhood, an order without a rival among the various labor organizations of the land. This order declared itself to be a protective one at the 13th annual convention, when the delegates boldly announced to the world that its members would no longer suffer themselves to be cast under foot by un-

scrupulous officials of the railway companies. They had rights and knowing this dare maintain them by resorting to a strike if necessary to do so. It was perhaps a bold thing for an order so young to do, but it was a wise move and no doubt caused many to enlist under our banner who would not have done so. What benefits have been derived by the change? Wages have been increased so a fireman is enabled to live better, clothe and educate his children better and have a more comfortable home. The great evil of intemperance has been put down amongst members of the order. Runs have been shortened and more time given for rest before being called for duty again. Now the general managers and master mechanics listen to individual firemen or a committee of them, and instead of the old replies, we hear: "Well boys, we will endeavor to adjust these matters satisfactorily to all concerned; we also are glad to listen to any reasonable complaints you may have to make to us." Of course there are exceptions to this rule. Then what follows? The Grand Master is sent for who politely asks such general managers for an interview; should it be denied him what is the next step taken? The Grand Master convenes the Supreme Council. What then has always been the result? The obstinate general manager always gives in to the demands of the order or at least concessions are made and a settlement is reached.

A few words about the Supreme Council: Who first began to talk and write of federation? This order. By whom? The editor of its official organ. What was the result? The federation of the four orders and the organization of the Supreme Council. Has federation helped the orders, either singly or collectively? Their records, so far as I am informed say most emphatically yes. It is with profound sorrow and regret I read Bro. Debs' announcement in the January *Magazine* that he had decided to resign. He has labored long and faithfully for the good of the order. He has been instrumental in making the order what it is to-day through his efforts in the *Magazine* and in his other official capacity. I regret that Bro. Debs has arrived at this decision. No doubt the duties of his office are very exacting and when he makes the change I am of the opinion the order will have some trouble in finding a man to fill his place. I do not think his equal will be found soon. I am sure the best wishes of the brotherhood will follow him in whatever business he may engage. I surmise he will be found battling for the cause of labor in some new field. Under his management the *Magazine* has grown from an insignificant publication to one of the best in the land—may it still continue to grow under whose ever management it is placed in the future. I did not for a mo-

ment think this order had a lodge of the stripe of No. 284. I should like to see some other able pen besides the editor's rebuke them for their want of "sand."

T. P. O'Rourke in the March number criticizes the constitution of the Supreme Council; all laws made by legislative bodies are subject to comment. I wish the members of more lodges would, at the proper time take steps to have more and better laws passed for the benefit of the laboring classes, more especially those who toil on the rail.

LAREDO, TEX.

Fireman.

Sargent at Meadville.

Grand Master Sargent visited Meadville, Pa., on April 2d, and held an interesting meeting which the *Tribune-Republican* reports as follows:

Loyal Lodge, No. 207, Brotherhood of Locomotive Firemen, held their first meeting in their new quarters in the Corinthian block last evening. The lodge formerly met in Arcanum hall, Phoenix block, but some time ago determined to eventually own their own lodge room, hence the pleasant quarters which they now call their fraternal home. The rooms are those formerly occupied by the Northwestern band. The house cleaner, painter, paper hanger, upholsterer and furniture man have had a hand in the grand transformation which has taken place. Everything in connection with the quarters is new and strictly first class. The woodwork has been painted a live color, and the entire side walls and ceilings of the main lodge room, ante-room and reading room have been tastefully papered, the ceiling of the large room in a handsome pannel design, with heavy border and cornice decorations. The lodge room carpet is an elegant Brussels, of bright, cheerful pattern, and is appropriately matched by the very handsome lodge room furniture. The chairs are all of antique oak, high backed, and very fine. The officers' chairs are of a somewhat larger pattern, revolving and on rocker springs. The desks, which were made to order, are of red cherry, as is also the presiding officer's desk. On the side walls are handsome pictures, lodge emblems, mottoes, and the splendid banner some time ago presented to the lodge by its lady friends.

A happy feature of the new quarters is the commodious reading room, divided from the main lodge room by the ante-room. This room is very prettily furnished and will be used by the members of the lodge as a reading and writing room, smoking room and a place to spend a social hour within the provisions of the lodge rules.

At their first meeting in their new quarters, Loyal Lodge had the pleasure of the presence of Frank P. Sargent, of Terre Haute, Grand Master of the order. Mr. Sargent was called here by the claim of Otto Winters, a fireman who claims total disability on account of injuries sustained by a fall from his engine, in this city, about two years ago. Fireman Winters is a member of Loyal Lodge, and, in case of total disability, is entitled to an insurance of \$1,500. The visit of the Grand Master to the city was so timed that he could also spend an evening with Loyal Lodge, and the result was of profit to both the Grand Master and the Lodge. Certainly the members of Loyal Lodge have occasion to feel proud of their new quarters, as they have to feel proud of the personnel of their organization.

Young Hopeful—Say, pa, you must be a pretty strong man.

Father—Tolerably so, my son; tolerably so. What makes you think so?

Young Hopeful—'Cause Uncle John said he went out with you the other night, and you could carry the biggest load of any man he ever saw without showing it.

TO MY PARD.

No, thanks to you pard, I'm not drinking now,
And I'm happy to have it to say,
I haven't touched the cursed stuff
For many a long, long day,
And really I feel better, pard,
My wife is happier far,
And devoutly I wish to persuade you, pard,
To keep away from the bar.

Oh, I used to drink the poison once,
The truth I'll not try to deny,
And the awful feelings I used to have,
Often made me wish to die.
But now the habit I've quit for good,
And I tell you I'm mighty glad,
For I've a wife and two little babes at home,
And my new life makes them glad.

Well, some twenty years ago, or more,
When I was a little tad,
While clinging around dear mother's knee,
Neither fear nor care I had.
I can remember the stories she used to tell,
Of men who drank the stuff,
And their miserable souls would sell,
Nor ever cry enough.

And now, my pard, I can plainly see,
And I don't mind telling you,
That the awful stories my mother told,
Alas! were all too true.
For men who take to drinking, pard,
Believe me, when I say,
Will surely know naught but misery
Until their dying day.

Now, pard, come take a friend's advice,
Don't go again astray,
We'll find a wiser and better way
To spend this blessed day.
Come, my pard, come to my home,
And you shall know I'm happy and free,
And if you are thirsty, my dear old pard,
Why, we'll just take a cup of tea.

T. J. Hogan.

AUBURN PARK, ILL.

THEORY vs. PRACTICE.

Theory and Practice took a ride
Down a very long and heavy grade.
Theory sat on the right-hand side,
While the fireman the pick and scoop applied.
To the sober Practice, Theory cried,
As the train approached the woody shade
Where the "tip" for the long decline is made,
"Say, what do you think? To me it is plain,
But where is it best to hold a train?"

Practice replied from the fireman's seat,
And as if perplexed, he scratched his head,
"To make the work all around complete,
The way we do is hard to beat;
It seems to me it is very meet
That some of the brakes be set ahead;
Not many, of course, but a few instead
Of leaving all for the shack behind;
And to this opinion I'm inclined.

"Sunday school!" Theory proudly jeered,
"Then it's out of love for your fellow shack?"
And wisely stroking his sandy beard
"For fifteen years I've engineered
And never knew that shacks revered
The Golden Rule like that?" But back
I claim a train will hold the track,
By laws of Physics well defined,
Much better if only held behind."

But Practice, in Science far behind
The times, asked Theory to explain
"The laws of Physics well defined;"
For he knew nothing of the kind.
Theory said, "You must be blind!
When you set the brakes ahead, the train
Gets slack; and then you see how plain
It is that couplings joggle loose
And the train is cut in two, you goose!"

Just then the engine "tipped" the hill
And Theory, as ever, shut off steam;
The jolly fireman felt the thrill,
And went ahead with the same good will
With his shining can of oil to fill
The valve cups, when he saw a gleam
Of light in the eye of Practice beam,
As if by some revelation brought,
He seemed to grasp a higher thought.

Now Practice thought his learned friend
Had argued to the point, of course;
And fearing lest it should offend
His wisdom, let the thing depend
Upon the man at the other end.
"For argument from such a source
Needs demonstration to enforce
It's truth," thought Practice, "so we will
Apply this doctrine down the hill."

Their speed was now increasing fast,
And the man behind, left all alone,
Full many an anxious glance he cast
For the head assistant; till at last
When trees and houses all flew past
Like phantoms, feeling that his own
Sweet life was threatened, gave a groan
Of wild despair; and then cut loose
For refuge in the old caboose.

But Theory now began to doubt
The virtue of his cherished rule.
He began to jump around and shout,
And above the din he gave a shout:
"I wonder why you don't get out?"
But Practice, still remaining cool—
One thing he had learned in Sunday school—
Replied again, "Why that won't do
For its sure to cut the train in two."

But the way they rattled down that hill!
The "Seventy" rocked from side to side,
And Theory sadly feared a spill,
Each hair stood up like a tiny quill,
And his short red beard grew redder still.
He shook down the sand and vainly tried
To hold the train. Again he cried
To Practice: "You lazy, stubborn shack,
Get out, or I'll break your worthless back!"

They went through Evona like a flash
And Theory drew a mighty sigh
Of relief to note the din and clash
Decreasing; and the fearful crash
Into which he thought they all must dash
Had been avoided. By and by
With a merry twinkle in his eye,
Practice asked Theory to explain
Where it was best to hold a train.

STANBERRY, MO.

Geo. W. Hall.

Union Meeting.

We are requested to give notice, as follows:

A grand Union Meeting will be held at the Opera House, Waverly, N. Y., Sunday, June 14, 1891, under the auspices of Weaver Lodge, No. 379, B. of L. F., Lehigh Valley Lodge, No. 248, B. of R. T., State Line Lodge, No. 117, S. M. A. A. A public reception will be held at 2 p. m., and will be addressed by able speakers, representing the different organizations. There will be a joint secret session in the evening at 7:30 o'clock, of the above three organizations, and will be addressed by the Grand officers of the same. The object of this meeting is to discuss all matters pertaining to the general welfare and advancement of the organizations. It will be necessary, in order to gain admittance to the secret session, for brothers of the B. of R. T. and the S. M. A. A. to have receipts for the current month's dues, and brothers of the B. of L. F. to have receipts for current quarterly dues, so as to avoid confusion and taking up passes at the entrance. As there will be a large attendance, please notify the secretary of the joint committee the number that will be present from your lodge, so as to enable us to make proper arrangements. There will be ample hotel accommodations for all who desire to attend this meeting. Munson Hall, Secretary, 70 Division street, Waverly, N. Y.

The Policy of the Magazine.

PUEBLO, COL., March 20, 1891.

MR. EDITOR:—In glancing over the contents of the February number of our *Magazine*, I find an article entitled "The Policy of the *Magazine*," and in perusing it, discover that Elm City Lodge, No. 284, has made an attack upon our able and esteemed Editor and Manager, who from some cause, unknown, has aroused the ire and opposition of the aforesaid lodge.

Now, then, if it affords other members of the order the pleasure which I have derived from reading the reply to Lodge "284," I am persuaded they will all say, "All honor to our editor."

In the first place, I look upon the accusations of Lodge "284" in the same light as does our editor, who shows that the members of Elm City Lodge may be in the same fix as the employés of the Philadelphia & Reading, who were compelled by the tyranny of (Zar Corbin to deny all allegiance to our order, shave off their whiskers and keep their coats buttoned up tight, even in hot weather. Oh, what fun it must be to work under such an autocratic power! Possibly the time will come, when the poor degraded employés will ask for permission to eat and sleep.

I glory in the courage of our editor—a man who dare expose to the public such infamous proceedings as are carried on by some of our railway officials. Yes, they are all honorables in the eyes of some people. When a man becomes so degraded that he will lick the boot that kicks him, he will call the kicker "honorable." The dog can't talk, but when he has been licked he wags his tail in token of approbation and submission.

In the first place, what is required to make a railway official honorable? Is it to employ spotters, scabs, detectives and Pinkertons to watch, disgrace or murder all who dare disobey the rules laid down by some men who think they must be looked upon as a little god?

I admit there are some employers who are large souled, large hearted and large brained, who love to see their employés advance in life, love to see them live like white men, love to see them live like American citizens, but they are not everywhere.

In our editor's reply, he has given proof of the actions of the men to whom he refers, and I ask, why do not the parties to whom he refers reply to his statements regarding them? Simply because they know he has told the truth, and the truth will tell at all times. Where is the man who can say that the action taken by C. M. Depew in the late trouble on the N. Y. C. was honorable? Who can say that Corbin's rule was just? I do not think that "284" can say it and speak

the truth, for they know the laborer is worthy of his hire.

Now, I do not write this as an attack on "284," but I must say that we have a lodge the members of which take upon themselves the responsibility of holding up to universal contempt the action of the parties referred to.

I am very anxious to read the contents of our March *Magazine*, to see if "284" will make a reply to our editor's criticism. I will say that all parties who have read the article, inquire "What is the matter with '284'?" I think the members of "284" would feel rather cheap if they knew the sentiment of the lodges with regard to their strange action.

We have Depew, Corbins, Webbs and such men in our Western country, but they know how far to go, and I wonder what the effect would be on Western organizations, if their members were required to remove their beards, keep their coats buttoned up and give up the companionship of their lodges. No, I do not wonder what the reply would be. I know what it would be. The wage workers of the West would never submit to Corbin's rule, they are not of the material of which serfs are made—as well command the Black Hills to march in single file to the seas, as to command Western railroad men to crawl at the feet of a czar.

Yours fraternally,
"59."

Convention of the National Association of Mechanics.

This order now has about 175 lodges, and the annual convention is to assemble in the city of Pittsburg, May 4.

We see by the *Monthly Journal* of the order that business of special importance came up for action; as, for instance, the proposition of a "plan of insurance," as also a plan "to defray the expenses of delegates whenever lodges could be represented at the convention." In addition, the *Journal* says:

The columns of the *Journal* have contained what will probably prove to be the questions of most import to us at present. Such as the all absorbing question of federation, which has been thoroughly discussed from both sides; the apprenticeship system, shorter hours of work, the regulation of wages, strikes, and many others of equal importance.

Manifestly, such questions are of vital importance, and we are free to express the belief that the delegates will settle them in a way that will redound to the welfare of the Association.

Robinson Monument Fund.

The following subscriptions to the Robinson monument fund have been received:

H. W. Hall, Portland, Oregon	50
H. M. Worthington, Marshall, Tex.	\$1 00
Eugene V. Debs, Terre Haute, Ind.	5 00

Total

Remittances should be addressed to *Locomotive Firemen's Magazine*, Terre Haute, Ind.

TACOMA, WASH., April 10, 1891.

MR. EDITOR:—In looking over the March number I noticed the letter signed "Division No. 40." The writer is to be pitied rather than despised. He says he is glad to see the improvement in their *Journal*. Well it wanted improving badly. He says also that the best editorial our worthy editor ever published was the one giving notice of his proposed resignation; well he is quite at liberty to keep on thinking so, that is if he ever has any thoughts, which is extremely doubtful. I know the firemen don't think so. Right here let me tell Depew's fawning clown that when his "Division No. 40" ashes are scattered to the winds of the earth and none knoweth thereof or careth, Eugene V. Debs will have a name that will be loved and honored by every brotherhood fireman in the land. It is with the deepest regret the firemen hear of his proposed resignation and earnestly trust he may yet reconsider his determination and if not, the hearty sympathy and support of the firemen will be with him in whatever he undertakes.

Yours fraternally,
A Brotherhood Fireman.

Ladies' Society of the Brotherhood of Locomotive Firemen.

For some time past there has been a society known as the Ladies' Society of the Brotherhood of Locomotive Firemen, the first lodge being instituted in 1881 by Mrs. E. P. Sargent, whose home at that time was at Tucson, Arizona. To Mrs. Sargent is due the credit of having conceived and brought into existence this excellent organization, the purpose being to cultivate social relations between the mothers, wives and sisters of members and also to render such assistance as was in their power to the Brotherhood of Locomotive Firemen, an auxiliary in fact, to cheer, encourage and support the brotherhood in its chosen mission.

At the late convention held at San Francisco, the Ladies' Society received the official sanction and approval of the brotherhood and since that time active preparations have been made to carry forward the work of the organization until there shall be a lodge of the Ladies' Society for every lodge in the brotherhood, and it now affords us pleasure to say that the Grand Lodge has been fully organized, charters seals, rituals, constitutions and other work have been adopted and applications for charters are in order and will receive prompt attention.

The Grand President is Mrs. Eugene A. Ball, and the Grand Secretary and Treasurer Mrs. James I. Moore, of Stratford, Ontario. All applications for charter and other correspondence should be directed to the Grand Secretary and Treasurer. The full list of officers and other particulars will be given hereafter.

It is to be hoped that the ladies throughout the jurisdiction of the brotherhood will at once enter into the work and organize subordinate branches. The mission of the Society is a most commendable

one and all the mothers, wives and sisters of our members are cordially invited to enlist in the good work, so that when the next biennial convention of the brotherhood shall meet, the Ladies' Society will also be able to hold a convention which shall represent a great and growing organization.

V. G. M. Hannahan.

We record with great regret the fact that Brother Hannahan has been for weeks confined to his home by a serious illness, which has deprived the order of his important services. Brother Hannahan's severe indisposition was brought on by exposure while pursuing his brotherhood work. As we write Brother Hannahan is still under the care of physicians, and under the most favorable circumstances, some time must elapse before he can resume his labors.

The brotherhood, throughout its entire jurisdiction, will extend to Brother Hannahan its sympathy and join the *Magazine* in the hope that he will soon be restored to health.

Grand Dues Notice.

The attention of Receivers is called to Section 122 of the Constitution, which provides that members admitted after May 1st are not liable for grand dues for the year ending August 31st, 1891. The application fee of \$2.00 collected from members admitted after May 1st should be held by Receivers until the regular returns are made in August for grand dues for the year ending August 31st, 1892, and said application fee should then be applied to the credit of said members for the fiscal year last named.

Acknowledgments.

HARRISBURG, KY., March 9th, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I write to acknowledge and thank you for the draft for \$1,500, due me on the death of my loved son, Allie T. Hooe. In giving up my darling boy, who was always true and faithful, the sun has gone down on the home he left behind, and in my sorrow I can but question if there be a God in heaven that is always merciful. Allie's was the bravest death I ever witnessed; he never expressed a fear, and when told he could not live he called to his side an old friend and, laying his dying hand on his mother's head, said to his friend: "Won't you promise me to help my mother when I am gone?" Then turning to me he said: "Mother, I would like to live to take care of you, but if I must die it is all right. I will go to heaven, soon to meet you there." May God forever bless and prosper the order of the B. of L. F., and may the richest blessings attend each and every member of Falls City Lodge. You can never know how my boy loved your noble order. A broken-hearted mother prays God to protect and prosper each and every one of you.

MRS. EMMA A. HOOE.

HALLSTEAD, PA., Feb., 26, 1891.

To the Members of Lackawanna Lodge, No. 283:

GENTLEMEN:—I desire to return my sincere thanks for the prompt payment of fifteen hundred dollars (\$1,500), the insurance due on the policy held by my late husband, Murt Fernan, who was killed in a wreck near Syracuse, N. Y., on the D. & W. R. R., on Nov. 3d, 1890. I also wish to express my appreciation of the kindness and attention shown him at his burial. I have not words to express the gratitude I feel towards your noble order. May the blessings of God rest upon you, one and all, is the fervent wish of yours respectfully,
Katie Fernan.

TEKOA, WASH., March 5, 1891.

To the Officers and Members of Steptoe Butte Lodge, No. 419:

GENTLEMEN:—I wish to thank you for the payment of \$1,500. Insurance due me and my children on the policy held by my late husband, John Wilson, who was killed while at his post of duty on the Meeker hill of the Union Pacific railroad, November 18th, 1890. I also wish to thank the officers and members of Steptoe Butte Lodge, No. 419, for their respect and kind feeling shown to my dear husband after his death and for their kindness to me. If we had better laws for the protection of railroad men while in the discharge of their dangerous duties, there would not be so many empty seats at the fireside and lonely homes. With best wishes for the B. of L. F. everywhere, I remain your friend,

ELIZA WILSON.

SACRAMENTO, CAL., March 22, 1891.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—With profound gratitude I desire to express my heartfelt thanks to your noble order for the prompt payment of fifteen hundred dollars (\$1,500) insurance due me on the death of my beloved son, Fred S. Brouse, who met his untimely death while in the faithful discharge of his duty on the Colorado Midland R. R. I also wish to thank the members of Pikes Peak Lodge, No. 218, and California Lodge, No. 250, for their heartfelt sympathy to me in my great trouble. May God bless and prosper your noble order and spare you from all bereavement, is the prayer of your sincere friend,

MRS. MINNIE SPENCER.

CLINTON, IOWA., March 19th, 1891.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—With heartfelt gratitude I desire to return my sincere thanks to you for the prompt payment of the draft for fifteen hundred (\$1,500.00) dollars, received from Thomas Bulen, Receiver, on the death of my beloved husband, H. W. Stephens; we also extend our sincere thanks to the firemen and engineers for their many tokens of kindness and love bestowed upon us during our great bereavement. Many thanks also for the beautiful floral offerings, and may God bless and prosper your noble order, is the prayer of your bereaved sister,

MRS. H. W. STEPHENS.

EFFINGHAM, ILL., April 10, 1891.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—I would that I could find words to express my heartfelt gratitude for the kindness and sympathy which the members of Peace Lodge, No. 109, St. Louis, to which my beloved brother John A. Poulton belonged, showed me and my folks in our great affliction. Let me add to my other obligations to the most excellent order my sincere thanks for the draft of \$1,500, the amount of insurance. Hoping that the order may be prosperous and thus aid others who are in distress and affliction, I remain

Sincerely yours,

SIMEON A. POULTON.

KEENE, O., April 2, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I hereby acknowledge the receipt of a draft for \$1,500, the amount of insurance due me on the death of dear brother J. F. Stafford. I desire to return my sincere thanks to the brotherhood for the money, and I also wish to express my appreciation of the kindness and attention shown my beloved brother and the respect shown him after death. Words fail to express the gratitude I feel toward your noble order. I also tender my heartfelt thanks to the members of White Breast Lodge, No. 275, Laredo, Texas.

MISS JENNIE STAFFORD.

QUINCY, ILL., April 1, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to express my sincere thanks to the Brotherhood of Locomotive Firemen for the prompt payment of \$1,500 due me on the policy of my dear son, Charles Young, through Mr. W. C. Gallup, Receiver of Success Lodge, No. 31, Trenton, Mo. I also desire to express my thanks to those who accompanied the remains and so kindly assisted at the funeral, also for the beautiful flowers presented by the lodge. May God ever bless and protect your noble Brotherhood is the sincere wish of his deeply afflicted parents.

MRS. S. E. YOUNG,
JOHN YOUNG.

BUFFALO, N. Y., March 10th, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to express my sincere thanks to the Brotherhood of Locomotive Firemen for the prompt payment of \$1,500, due me on the policy of my dear husband, Fred Kern, and also I desire to express my sincere thanks for the beautiful flowers presented by Lake Erie Lodge, No. 211, and also to those who attended the funeral. May God bless and protect your noble Brotherhood. Yours truly,

MRS. FRED KERN.

OMAHA, NEB., March 17th, 1891.

To the Officers and Members of Overland Lodge, No. 121:

GENTLEMEN:—I desire to express my sincere thanks for the payment of fifteen hundred dollars (\$1,500), the insurance due on the policy held by my late husband, Wm. M. Morton. I also wish to express my appreciation of the attention shown him at his burial. Hoping that the Brotherhood will always prosper, and with best wishes to all its members, I remain yours respectfully,

IDA M. MORTON.

TOLEDO, O., March 24th, 1891.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

DEAR SIRS:—Please allow me through the *Magazine* to express my heartfelt thanks for the draft of \$1,500 which I received through members of Maple City Lodge, No. 138, B. of L. F., being in full for insurance on the life of my son Peter Lanser, who died Dec. 9th, 1890. Hoping that the brotherhood will have prosperity in the future as in the past, I am

Very Truly Yours,

MRS. BARBARA LANSER.

BUFFALO, N. Y., March 16th, 1891.

To Lake Erie Lodge, No. 241, B. of L. F.:

GENTLEMEN:—I wish to offer my sincere thanks for a draft for \$1,500, the amount of insurance held by my beloved husband, Henry T. Whitley, and to thank Mr. Crossman for his kindness to me in my trouble. May God's blessing ever rest on the Brotherhood is the sincere wish of

MRS. H. T. WHITLEY.

BROOKLYN, N. Y., February 20th, 1891.

To Silver Mountain Lodge, No. 327, B. of L. F.:

GENTLEMEN:—I desire to acknowledge the receipt of a draft for fifteen hundred (\$1,500) dollars, due me on the policy of insurance held by my son, and to express my thanks to the members of Silver Mountain Lodge, No. 327, for their sympathy and kindness. Very truly yours,

MRS. EMILY BROWN.

CHICAGO, ILL., March 13, 1891.

To the Members of Royal Gorge Lodge, No. 59, B. of L. F., Pueblo, Colo.:

DEAR SIRS:—Please accept the heartfelt thanks of a mother and family for the kindly interest taken in the death of our beloved Frank. I also desire to thank the members of the Chicago lodges who acted as pall bearers. Sincerely yours,

MRS. MARY O'CONNOR.

Addresses Wanted.

THOS. RATCLIFF—A member of May Flower Lodge, No. 415. When last heard from he was at Cole Hill, Ark. Anyone knowing his whereabouts will please correspond with W. M. McKenna, No. 938 East Jefferson street, Louisville, Ky.

JOHN DEAN—A member of Mt. Tacoma Lodge, No. 192, who left Tacoma about a year ago. His mother is very anxious to hear from him. Address Mrs. Sarah Dean, South Prairie, Pierce Co., Wash.

Before Pullman's Days.

ACROSS THE PLAINS IN SIGHT OF THE BUFFALO AND THE ELK.

[New York Despatch.]

It seems almost incredible that previous to 1858 and the completion of the first Pacific railroad, Kansas and Nebraska were vast uninhabited plains, except the settlements along the Missouri river. Denver was a town of 5,000 or 6,000 people, supported by the mines that had been found ten years before in a region then designated as Pike's Peak. Six hundred miles further west, Brigham Young had in 1847 established his peculiar sect in the midst of the desert at Great Salt Lake. In 1848 gold had been found in California. Thousands had rushed there in search of wealth. The base of supplies for the mining settlements of Colorado, the Mormons, in Utah, (the latter discovered mines in Montana and Idaho), and the numerous government posts on the plains and in the mountains, were the Missouri river towns, Kansas City, Leavenworth, St. Joseph, Nebraska City and Omaha, and from here the stage lines started.

Ben Holliday was more an autocrat of passenger transportation beyond the Missouri than is any railway king of to-day. Holding the Government mail contracts, he was the biggest man on the plains, unless one excepts the men who drove his stages. Holliday made and kept in repair the roads, bridged the streams, built ranches or stations every ten or fifteen miles. Here were kept the relays of horses. The stock tenders or ranchmen, lived at these lonely stations, and where it possible gathered hay for the stock, fought the Indians, supplied emigrants and freighters with food and protection; in fact, "run the country," sometimes for good and oftentimes for bad. Holliday had about 3,000 miles of stage line, had 24,000 horses and mules, and 300 coaches. He had to haul corn a thousand miles to some of his stations; hay many hundreds of miles, and fuel one hundred miles and more. Corn cost at the remote stations 15 to 20 cents per pound, hay \$150 per ton, and in one instance, during a blizzard, 50 cents per pound was paid for wood to cook with.

Though the fares were high and the sums paid by Uncle Sam for carrying his mails were great, the risks of loss by hostile In-

dians, the high prices paid for everything used, made the business very risky, financially. In 1865 and 1866 hardly a horse or mule was left on some divisions. The Indians had captured all they cared to drive away.

The first 500 miles of the journey from the Missouri river to the mountains was over a gently rolling prairie, with good roads except a stretch of sandy road at intervals, especially if the Platte valley route was chosen. This was the favorite route because of water being always at hand in the Platte. Over the firm roads of this region you bowled along evenly. In Western Kansas and Nebraska and Eastern Colorado buffalo used to roam by the thousands. It is no exaggeration to say you could ride three days and nights, 300 miles, and never be out of sight of buffalo—not scattering herds here and there, but in every direction buffalo! buffalo! ten thousand and in sight at one time, until you paid no more attention to them than is paid to the vast herds of cattle that have succeeded them in these high plateaus.

Nor far behind them in numbers was the more shy antelope; they, however, would always keep at a safe distance. Elks were not so plentiful, and kept back from the traveled roads. Still, you were frequently greeted with a sight of this stately beast with his six foot antlers. On the mountain divisions the lordly grizzly bear sometimes showed himself to the overland traveler. At the stations you were regaled with buffalo rump or tongue, antelope or elk steak, not always cooked in the highest style, but what it lacked in cuisine you made up for in appetite. It was essentially an age of canned goods. From cans you were served with corn, tomatoes, beans, pineapples, strawberries, cherries, peaches, oysters, lobsters, condensed milk, and butter brought from the states. These goods cost from 50 cents to \$1 per can of about a quart measure.

When you were out of the Indian regions east of the Rockies, you came to the Bitter Creek Desert. Sand, sage brush and alkali were (and are) on every hand, forming the most desolate, dreary region on this continent. Here all the discomforts, dread of Indians and horrors of the first night's ride sank into insignificance as the stage plodded its slow, weary course, three miles an hour; while the sun parches everything in sight, the alkali dust invades every part of your system, and seems to clog the blood in every vein. You would give your boots for a drink of fresh water. Your thirst drives you to drink the alkali water. In taste, quinine is as French candy compared with Bitter Creek water.

Then you reach a rougher but not so desolate a country, with the snow-capped

mountains to the south and west. The beauties of Great Salt Lake and its valley greet the eye of the traveler fifteen days from the Missouri river. Twenty more days and he has crossed the Humboldt Desert, second in desolation only to the Bitter Creek region; has climbed the Sierra Nevadas, and plunged down into the sun-kissed valleys of California.

A journey in a Holiday palace coach meant six days, Missouri river to Denver, fare \$60; fifteen days to Salt Lake City, fare \$125; to San Francisco thirty-five days, fare \$250; meals, \$1.50 each, and if you complained the man who furnished the meal would call your attention to the fact that he was not out there for his health. A stage coach was drawn by four horses on divisions where the roads were not heavy. A team went ten to fifteen miles and was changed for a fresh one. The coaches would accommodate six inside passengers, two on a seat. The stage people, when travel was heavy, would convince you that three on a seat, or nine inside, was much more pleasant and sociable; also safer in case of attacks from Indians or road agents. Beside the inside capacity, any number up to ten could be made very miserable on top. They could ride safely if they were tied on. The first teams out were always sleek, high-stepping, swift roadsters. They would come charging around the corners in the wild western towns, with a dash that would fairly take your breath, glittering with silver-mounted harness.

They were driven by an Apollo Belvedere, the likes of which are never seen nowadays except in Italian opera. He handled four or six chargers with a mastery of reins that was nothing short of art, with swish and crack of whip that impressed you that you would be wafted "Westward ho" at a rate of speed that would make you feel ashamed that you had only paid 15 cents per mile per waft. But this is dress parade. When you find out what the journey really is, you almost conclude to walk to San Francisco, as you would surely do if you had seen one of these teams that hauled you after the dress parade team is unhitched ten miles out. Your first impression is that the journey will be a grand, glorious panorama of green, billowy landscape, viewed from a luxurious seat in a swift moving carriage.

So it is for about three hours. After that the hog in human nature asserts itself, and every fellow looks out for his own comfort. You have exhausted the comfort of every position your cramped quarters will admit of. Each passenger thinks every other one is trying to get more than he is entitled to of the discomforts, and is mad about it. You go to sleep. The coach drops into a rut that you think must be a bottomless pit, and the remarks of your fellow-passengers

produce an atmosphere that serves to confirm the impression. If you get out to walk you are afraid that you will get so far ahead that the coach will never catch you, and the Indians may butcher you alone in the desert. The old-time stage driver is a character that has disappeared.

No man ever occupied a prouder position. He was the monarch of the road; his word was law. His was the favored seat at the meal station. To him was entrusted the lives of his passengers, and the money and valuables of the United States mail and the express companies. Each driver went fifty or sixty miles, and so beset with danger and responsibility was the life of the stage driver that at times of great danger his salary would be \$250 per month. In an acquaintance of years with the drivers on the great plains, I never yet knew one to betray his trust.

Temperance Among Railroad Men.

[National Car and Locomotive Builder.]

Every few weeks we hear of another railroad company having fallen in line with an order issued to trainmen intimating that the drinking of intoxicating beverages, while on or off duty, will not be tolerated, and that men known to frequent drinking resorts will be discharged from the service. The spirit that prompts the issuing of such orders is highly commendable, for it is a melancholy fact that numerous train accidents have been caused by the men in charge being made reckless or careless with liquor. No man of observant habits can mix much with railroad men, who are in the habit of indulging in the use of spirituous liquors, without being struck with the terrible dangers of the practice. For a railroad manager to say that a trainman shall not enjoy himself in his own way and dispose of his time as he thinks proper when he is off duty seems to be an infringement of the man's natural rights; but those who are familiar with the protracted influence of intoxicants, and with the necessity for a trainman having a clear head and unclouded judgment when on duty, will admit that his condition when off duty is a matter of legitimate supervision. The writer has repeatedly, when little more than a boy, done the whole work of operating a locomotive hauling a fast passenger train while the engineer was lying in the tender, unconscious with drink. He has been appalled with the reckless practices of the same man on other days when he came to duty after having enjoyed what he called a night of fun. Under other circumstances the writer has pulled heavy trains at irregular times over a single track when there was not a sober man behind the tender. He has good reason to understand the dangers of drinking habits among trainmen and to

rejoice in the change of sentiment that demands sobriety.

While we zealously favor the railroad temperance crusade, we should like to see it carried on with a little more consistency. Railroad managers who issue orders against drinking ought to show an example in their own habits, and they should require the officers who are in charge of the men to practice the doctrine that is so publicly preached. Trainmen are like other human beings, and they are not likely to be impressed with the necessity for temperance and abstinence on their part when they know that the whisky or wine bottle is an important article in every officers' car, and that other officers charged to enforce the rules of the company, visit the drinking bars and indulge to their heart's content in the beverages forbidden to the lower ranks of the service. Why should a trainman be forbidden to look upon the wine when it is red or the beer that is amber, when train dispatchers and others responsible for the correct manipulation of train orders are considered capable of drinking with judgment? A rule that is good for trainmen is good for all railroad men above that degree, and there will be no successful enforcement of temperance orders until this fact is generally recognized and acted up to.

A correspondent recently sent us a communication in which he commented on the illogical condition of the temperance question on a Northwestern railroad system. The trainmen are supposed to refrain from the use of intoxicating beverages at all times, yet it is a regular practice for dealers in liquors to visit the engine houses with sample cases to canvass for customers. They are said to be pretty successful in their work, and never fail to be on hand on pay day to receive payment for past deliveries and orders for a fresh supply of liquors. The head of a department who lets this kind of work go on, be it by ignorance or by connivance, is not fit to hold a position in charge of men. General managers keep bemoaning the difficulty of restraining the drinking habits among their trainmen, but they generally neglect the first duty as a means of reform, which is personal example. When the heads become examples to all under them and when they take care that their lieutenants are performing a similar duty, they may hope to find the leaven of sobriety working through the whole mass of railroad employés.

Old Lady (from the country)—I'd like to git a pair o' shoes, young man.

Polite Clerk—Yes, ma'am. Something pretty nice, Ma'am?

Old Lady—I want 'em good 'n' stout.

Polite Clerk—Well, ma'am here's a strong shoe, an excellent strong shoe. It has been worn a great deal this winter—

Old Lady—Man alive, I don't want no shoe that's been worn this winter nor any other winter; I want a bran' new pair!—Puck

Josh Billings' Philosophy.

Menny people spend their time trieling tew find the hole where sin got into this world. If two men brake through the ice into a mill pond, they had better hunt for sum good hole tew git out, rather than git into a long argyument about the hole they cum tew fall in.

If you must chaw terbacker, young man, for Heaven's sake chaw old plug, it iz the nastiest.

Truth iz like the burdocks a cow gits into the end ov her tail; the more she shakes them oph the less she gits rid ov them.

There iz 2 kinds ov men in the world, that i don't kare about meeting when i am in a grate hurry—men whom i owe, and men who want to owe me.

There iz always one chance agin the best laid plans ov man, and the Lord holds that chance.

Mi private opinyun about "absence ov mind" iz that 9 times out of every 10, it iz absence ov branes.

The flattery that men offer tew themselves iz the most dangerous, bekause it iz the least suspected.

Take a kitten that kan hardly walk on land, and chuck him into a mill pond, and he will swim ashore. Enny boddy kan apply the moral in this.

The best philosophers and moralists i have ever met have been those who had plenty to eat, and drink, and had money at interest.

It takes a wise man to suffer prosperity, but most enny phool kan suffer adversity.

Pride, after all, iz one ov our best friends—it makes us beleave we are better and happier than our nobors.

How strange it iz that most men would rather be flattered for possessing what they hav not than to be justly praised for having what they possess.

Dog-Gone Keerless.—Neighbor—Mr. Skrimp, I have sad news for you—terribly sad news.

Farmer Skrimp—"Hev' ye? What mout it be?"

"Your wife, in attempting to ford the river this morning, was drowned."

"Humph, that is sorter bad; kinder ouexpected, too."

"Yes, it's bad. She missed the road some way and got into deep water, and she and the horse were both drowned."

"Great geewhillikens, man! you don't mean ter sey the hoss wuz drowned, too?"

"Yes."

"Wal, by jingoes, that is er heavy loss. That air boss wuz wurth er hundred dollars clean cash, an' ther ole 'ooman knowed hit. 'Peers like woman folks is most dog-goned keerless. Dog-gone, neighbor, but the loss o' that air boss is powerful hard ter b'ar up ag'in shore."—*Drake's Magazine.*

City Editor of The Whirled to Managing Editor—I have just had a conversation with a young man who seeks a position as reporter on this paper.

Managing Editor—Does he appear honest and truthful?

City Editor—I am afraid not, sir.

Managing Editor—Does he look sensitive?

City Editor—No, sir.

Managing Editor—Does he seem intelligent and respectable?

City Editor—No, sir.

Managing Editor—Do you think he would have any regard for other people's feelings?

City Editor—No, sir.

Managing Editor—Very well. Ascertain whether he has any conscience, and if not, assign him to work on the society columns.

Sweets to the Sweet—Miss Gotham—You'll join our theatre party to night, of course, Miss Wabash?

Miss Wabash (of Chicago).—What is the play?

"Pygmalion."

"Yes, indeed; with pleasure! You know papa is in the pork business."—*Epoch.*

Miss Parkwood—Do you know, sir, I could sue you for breach of promise?

Mr. Finley P.—Oh, I think not.

Miss P.—Why, did you not ask me to marry you?

Mr. F.—Yes.

Miss P.—And I consented?

Mr. F.—Yes.

Miss P.—Well, sir?

Mr. F.—Well, I didn't promise, did I? You were the one who did that. I presume I had the right to ask you a civil question, have I not, without running the risk of being dragged into court?

Humorist—I have a funny little thing here about Ben Butler, and—

Editor—O, yes; I know exactly what it is. You say that in having his eyes straightened he lost his chance for salvation, upon the principle of "No cross, no crown." We have been offered four hundred and two gems of that kind already.

Humorist—You mistake. Mine has nothing to do with the General's eyes. It—

Editor falls dead.—*Spirit*.

At a Fifth Avenue Sanctuary.—The contralto had contraltoed, the soprano had shrieked for Providence to have mercy upon the choir for its miserable singing, the basso profundo had come up from "out of the depths," and Christian quiet pervaded the stillness.

"And now," said the simple-minded provincial minister who had "exchanged" for the day, "now we will begin the religious services."—*Life*.

Visitor (to magazine editor)—Do you care for any more war articles, sir?

Editor—No, I think not. The late rebellion has been pretty thoroughly written up.

Visitor—My articles would relate to a more recent conflict.

Editor—Indeed? What?

Visitor—I married a widow a year ago.—*West Shore*.

A Sure Sign.—Wife—I am afraid that our daughter is in love.

Husband—I guess not. What makes you think so?

Wife—She sighs dreadfully when reading the marriage notices in the paper, and she is in a deep study for some time afterward. I wonder if it is that young Spec?—*Drake's Magazine*.

Mr. Waffle—Aw, Miss West, kindly allow me to escort you into the banquetting salon.

Miss West—Pardon me, Mr. Waffle, but did you expect to walk, or ride?

Mr. Waffle (standing on her dress)—Why, walk, of course.

Miss West—Then, please, get off the train.—*Smith, Gray & Co.'s Monthly*.

On the Qui Vive.—Lady Bucket (to new neighbor)—Ah! I suppose your dear little ones are quite expecting Master Algernon home now?

Visitor—Excited! Why they've been on the quinine all day.

And it didn't dawn upon her ladyship for hours afterward that her new friend meant *qui vive*.—*Topical Times*.

"My wife has a saving disposition," said Hicks. "When we got our upright piano she made a red plush cover for it, so that the rosewood wouldn't get scratched. Then she covered that with a sort of linen duster arrangement so as to save the plush. I tell you, women have great big minds."—*Harper's Bazar*.

A Teacher—What became of the devils after they were cast out?

Mission Pupil—Give it up, Boss.

A Teacher—They entered into a herd of swine.

Mission Pupil—Say, Boss, don't guy a cove; isn't it?

A Barnum's name signed to that?—*Puck*.

Walter (looking in on a noisy card party in hotel bedroom)—I've been sent to ask you to make less noise, gentlemen. The gentleman in the next room says he can't read.

Host of the Party—Tell him he ought to be ashamed of himself. Why, I could read when I was five years old.—*Pick Me Up*.

A Foolish Idea.—Caller—What do you think of the Berlin idea of uniforming reporters?

American Editor—Put reporters in uniform? Nonsense! Uniformed reporters would be of no more use in detecting crime than so many policemen.—*New York Weekly*.

Robbins—What makes old Bullion, the millionaire, dress so shabbily?

Robbins—Pride of station.

Robbins—How's that?

Robbins—He's afraid of being mistaken for a clerk.—*New York Weekly*.

"You are discontented with the wages I pay you, and yet at Mrs. Brown's you didn't have any more."

"That's so; and I did all the work there, too. But you see you want me to love all your children, and I must have extra pay for that."—*Fliegende Blätter*.

The reporters were supposed to have lied, the lawyers acknowledged that they lied, and it was proved that the witnesses lied—but the account of the divorce suit was the most interesting thing the public had read in many a day.—*Munsey's Weekly*.

Mrs. Inquisitive—Your husband must be earning more than he used to. I see you have a new seal-skin jacket.

Mrs. Straightface—No, indeed; he's learned how to fix the gas meter.—*Brooklyn Life*.

"I believe Gilets is going to write a farce-comedy," said one actor to another.

"What makes you think so?"

"He has subscribed to all the humorous papers."—*Washington Post*.

Wool—Why did Bagley fail in his country paper enterprise?

Van Belt—He struck a town where the people were all first and second cousins; they knew all the news a week before he could get hold of it.—*Harper's Bazar*.

A Snow Squall.—A man named Snow, living in the suburbs, was made a father a few days ago, and he sent this announcement to the local paper: "A little Snow drifted into my house last night."—*Philadelphia Record*.

"Mrs. Small, this coffee won't settle," complained McWatty to his boarding-house keeper.

"Then it is in good company, Mr. McWatty," replied Mrs. Small, frigidly.—*New York Sun*.

The Proper Thing to Do.—"Did you see that article in the paper the other day on how to treat a corn?"

"Yes; I cut it out."—*Town Topics*.

Overlooked in the Printing Room.—Foreman—You didn't put any head on this Jude article.

Head line Editor—No. I didn't think it would be appropriate.—*Munsey's Weekly*.

A barking dog can not bite, but the trouble is that he is likely at any time to stop barking and take a piece out of your leg.—*Somerville Journal*.

"Did the fish man have frogs' legs, Bridget?"

"Sure, I couldn't see, mum; he had his pants on."—*Life*.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

MAY, 1891.

Assessment Notice for May.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., May, 1, 1891.
ASSESSMENT No. 20, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz:

CLAIM No. 425. Frank S. Staser, of Lehigh Lodge, No. 251, was Run Over and killed by Train, April 10, 1891.

An assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership May 1st, 1891, said remittance to reach the Grand Lodge not later than May 20th, 1891, as provided in Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all the benefits of the order, as per Section 52 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. and T.

Notice to Receivers.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., May 1st, 1891.

To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—Your attention is called to Section 122 of the Constitution, which provides as follows:

"All application fees, upon the admission of applicants, shall be applied to their grand dues, provided that a member admitted after May 1st and prior to August 1st, shall be exempt from grand dues until the following fiscal year. Pursuant to the provisions of the foregoing section, you will not remit grand dues to the Grand Lodge for members admitted after May 1st. All grand dues coming into your hands for members admitted after May 1st (which are collected from applicants as application fees) you will hold until you make your annual returns for grand dues (in August) for the year ending July 31st, 1892, when you will credit such members on your statements for said year and remit their grand dues with the rest.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. and T.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER.

TERRE HAUTE, IND., April 1, 1891.

THE

New Catechism of the Locomotive,

BY M. N. FORNEY.

Doubled in
Size.

JUST READY.

Fully Up to Present Practice.

PRICE \$3.50 MORE THAN 500
ENGRAVINGS.

Discount to Clubs. Agents Wanted.

For the past sixteen years the Catechism of the Locomotive has been the best authority and almost a necessity to every Locomotive Engineer and Fireman, and on many railroads it is the standard for examination of Firemen for promotion. So many changes and improvements have been made in the construction of locomotives that the author has revised and re-written the book, adding much new matter and making new illustrations selected from the latest practice in this country.

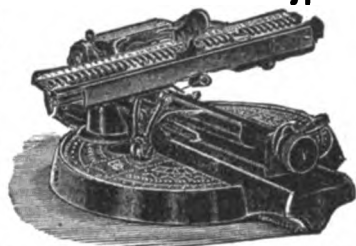

The new edition is about twice the size of the original book, has correct drawings of every part of the locomotive and of the different classes of locomotives in use in this country. It is written in such language as an Engineer or Fireman can easily understand, and it is believed that a study of this book will enable him to thoroughly know his business. There is no popular treatise on the English language which gives so clear, simple and complete a description of the construction and working of the locomotive engine.

The above or any of our books sent free of postage, at the publication prices, to any address in the world. Catalogue sent FREE.

CUSHMAN'S MENTHOL -:- INHALER, —FOR—

Catarrh, Cold in the Head, Hay Fever, Sore Throat, Asthma, Bronchitis, Headache and Neuralgia.

Menthol is antiseptic and analgesic (pain-killing) and being applied directly to the diseased parts by inhalation, has an immediate action and gives almost instant relief. It opens up the "stuffed" and clogged nasal passages in catarrh, allowing the breath to pass through its natural channels; it cures the aching head, destroys the foul breath and leaves a cool, exhilarating sensation. It is endorsed by leading physicians all over the world.

Cushman's Menthol Inhaler has a polished nickel case and can be carried in the pocket, always ready for use. It is neat, clean, convenient; it costs 50 cents and lasts a year—100 treatments for 50 cents and every one a pleasure to take. It is sold under the following positive guarantee: If not as represented or if not entirely satisfactory after a week's honest trial, it may be returned and I will refund the money. At druggists or sent direct by registered mail, prepaid.

Will Protect all Watches
Against Magnetism.

They are Cheap. Protect from all ordinary Magnetic Influences. Reduce wear and tear of the case.

Convenient in Use.
Perfect in Action.
Made in Various Sizes.

PATENTED OCTOBER 29, 1889, AND MANUFACTURED BY THE

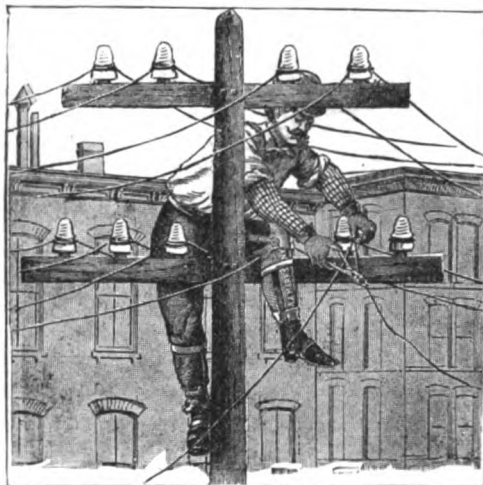

NEWARK WATCH CASE MATERIAL COMPANY,

A. MILNE, PRESIDENT.

NEWARK, N. J.

ARTIFICIAL HUMAN LEGS AND ARMS, (MARKS' PATENTS.)

WITH RUBBER HANDS AND FEET.
DURABLE IN THEIR CONSTRUCTION,
NATURAL IN THEIR ACTION,

NOISELESS IN THEIR MOVEMENTS,
and the MOST COMFORTABLE for the wearer. It is not unusual to see a farmer working in the fields with an artificial leg, or a brakeman plying his brake on a fast running train, or an engineer with hand on the throttle, or a fireman, carpenter, mason, miner, in fact, men of every vocation at labor in the full capacity of their employment, wearing one or two artificial legs with rubber feet, performing as much as men in possession of all their natural members, earning the same wages, in fact, experiencing little or no inconvenience in the use of their rubber extremities.

ALVAH YOUNG is a living example of the remarkable degree to which rubber feet restore lost members. He is a lineman employed by an electric light company. He lost one of his legs some years ago in a railroad accident. He had a Marks' rubber foot artificial leg applied and since then has engaged in active manual labor earning his livelihood. He will climb a pole as dexterously as any of his associates, hold himself on the cross bar with his artificial limb and place the wires in a thoroughly workmanlike way.

ments will be sent without charge. Established over 37 years. Over 11,000 artificial limbs with rubber hands and feet in use. U. S. Government manufacturers.

PRICES REDUCED.

**BAKER'S
TRIPOLINE**

THE BEST METAL POLISH IN THE WORLD.

For this year prices to firemen (as agents) will be: One pound boxes, per dozen, \$2.25; one-half gross lots, \$12; gross lots, \$22.50. Three pound pails, \$5.50 per dozen. Five pound pails, \$8.75 per dozen.

Cash must always come with orders to avoid delay. Bed rock prices are here given to firemen as agents and they cannot and must not expect to buy from dealers at these prices. Samples sent free on application. Address

**THE MATCHLESS METAL POLISH CO.,
88 MARKET STREET, CHICAGO, ILLINOIS.**

\$1,000 FOR AN OLD COIN

**IF YOU HAVE
ANY COINS**

dated before 1871, with plain date, send us a list. We pay high prices for hundreds of dates and kinds. Among coins that we want are: silver dollars dated between 1794 and 1868; dates of half dollars before 1864; quarters of all dates before 1868; all dates twenty-cent pieces; all dates dimes before 1868; silver five-cent pieces before 1867; five-cent nickels of 1877 and 1883; all dates of silver three-cent pieces; nickel three-cent pieces before 1870; two-cent pieces between 1864 and 1873; all large copper cents, also small cents with eagles on, also cents of 1873 and 1877; all half cents; foreign coins, fractional and Confederate currency, etc. For above we pay big amounts over face value, if in required condition. This is a comparatively new business, and by merely keeping your eyes open when handling money, you may find many coins that we want. A short time since (Jan. 23), a Scotchman in an Illinois town found one coin worth \$700. Others have done even better. The New York World says: "Many people have become rich by looking after coins wanted by collectors." The Home Journal says: "Collecting coins is a very profitable business nowadays, as there are but few in it. One Boston broker, Mr. W. E. Skinner, buys from agents all over the country, and pays them big sums for rare coins." Coins that are very hard to find in one section of the country are often easily found in others. Largest business, highest prices, prompt payments, best references. Write at once for further particulars, enclosing stamp for reply, which may be worth hundreds of dollars, perhaps a fortune, to you.

W. E. SKINNER, Largest Coin Dealer in the U.S., 325 Washington Street, Boston, Mass.

*** RAILWAY *
OFFICIALS AND EMPLOYEES'
ACCIDENT ASSOCIATION**

**THE
WHEEL**

Of progress too often becomes the Wheel of Destruction, and at such times the possession of a staunch, true friend to whom the

RAILROADER'S FAMILY

Can appeal in their sorrow is the greatest boon on earth. Such a friend is the **RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION**, of Indianapolis, whose unparalleled growth during the past year, showing an increase of

\$21,000,000.00

Over the previous season, unanswerably demonstrates its overwhelming popularity with the Rail-
roaders of America.

THINK OF IT!

If you should get caught in that fatal accident which visits so many noble men, and leave nothing to your dear ones, what would become of them? A Certificate of Membership in the **RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION** is as safe and certain as a landed estate, and the relief it secures to the bereaved family is flashed over the wires the very moment the news of a stroke of misfortune reaches the Home Office. No sensible Railroader longer doubts it his duty to carry first-class Accident Insurance. Do not postpone until it is too late, but take a membership with us

VARIABLE EXHAUST DAMPER, FOR LOCOMOTIVES.

Patented Nov. 10, 1885.

The use of the Damper, placed under control of the Fireman, assists him in the performance of his duties, so that, according to his testimony, the difference is as day and night, as compared with an engine without the Stack Damper.

RESULTS:

TO THE FIREMAN.—Less labor, no coal gas in the cab, no blowing of cinders and sparks into the front of the cab when open, and easy control of the fire and steam pressure.

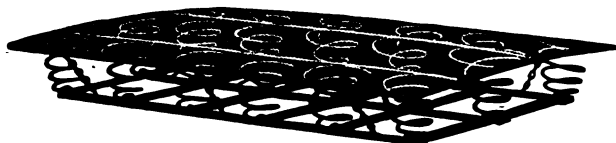

TO THE R. R. CO.—In most cases large saving of fuel, also preservation of the flue joints and firebox, and safety against fire from sparks.

TO THE PUBLIC.—Cleanliness and noiselessness.

Send postal for "Some of the Functions of a Locomotive," written for Locomotive Firemen and others, to

H. A. LUTCENS,
Box 131 PATTERSON, N. J.

FIREMEN, ATTENTION!

Why not make your seat in the cab easy by having one of the BUCKEYE CAB SEATS, like above cut? Have been tested and not found wanting. They are cheap and durable, having steel tempered springs and band steel bottom. Save unnecessary jarring. Over 400 in use. Price \$2.00 per seat not over 24 inches long.

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
 70 Kilby St., Boston. 36 Main St., Norfolk, Va.
 1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

THE MACHINE AND THE MAN.

Mechanical invention is not only the wonder of the age, but it is the supreme wonder—the over-mastering marvel.

Man's inventive genius attacks the impossible of to-day—is laughed to scorn for his temerity—to-morrow the world is amazed at accounts of success, the next day the feat is accomplished. The invention takes its place in the "labor-saving" machines, and men grapple some other impossibility, and the work goes on forever.

Inventions multiply, progress is accelerated, wealth increases, fortunes grow to colossal proportions and ten thousand witnesses stand ready to testify to the marvellous advancement, and the gigantic strides of progress are credited largely to the invention of labor-saving machinery. This progress defies prosaic description, it tasks fanciful expression and challenges arithmetical numbers. Writers never weary of telling the conquests of the machine, of its elevating power and civilizing influences. The inventor of labor-

saving machines begins to tower loftily above warriors of renown. Alexander, Cæsar, Napoleon, are dwarfed when compared with the man who invented the reaper, the mow-er, the sewing machine, and the thousand other machines that have come to *bless* the workingman.

It would be utter folly to complain; to murmur, to lament, to grumble or *kick*, it is believed in many quarters, is to "fly in the face of Providence," that divine over-sight that takes notice of the fall of a sparrow. We do not know why sparrows are specially referred to in the Scriptures. In one case it is said, "The sparrow hath found a nest," which the "Sweet Singer of Israel" seemed to think was worthy of special mention. Again it is written, "Are not five sparrows sold for two farthings, and not one of them is forgotten before God?" * * "Fear not, therefore; ye are of more value than many sparrows."

Some one asks, doubtless, what has all this to do with the subject—"The Machine and the Man?" Well, more or less, as men may believe that

"There's a Divinity that shapes our ends
Rough-hew them how we will."

Hence, the conclusion, that the machine is the order of Providence, and that under all circumstances, man is in the special care of that "Divinity that shapes our ends."

We are told that man is of "more value than many sparrows," and that a sparrow that is sold for *half a farthing* cannot "fall on the ground without your (our) Father"—and the question, can the great boon of the labor-saving machine relieve a man of work and wages, let him "fall on the ground,"

force him into idleness and starvation, without the notice of our Heavenly Father, and if such notice is had, how is it manifested? According to the Scriptures, sparrows were once wonderfully cheap, "five for two farthings," or two-fifths of a farthing each. Now, a farthing is the fourth of a penny, two farthings are half of a penny, or five-tenths of a penny, hence a sparrow was worth one-tenth of a penny, and we are told that a man is "of more value than many sparrows." How many sparrows at one-tenth of a penny each is equal to one man? When the machine is introduced, the labor-saving machine, that takes work from the hand, wages from the pocket, and bread from the mouth, that evicts the man and his family from shelter, drives him out in the highway, how many sparrows, dead or alive, is he worth? What value does the owner of the machine place upon him? How does society estimate him? Is the question hard to answer? Not specially difficult. The labor-saving machine has dismissed him. His occupation is gone. He must live. Somebody must support him. He becomes, to put it mildly, a pauper; he becomes a loafer; and yet, the world shouts "*vive la machine!*" and why not? It is in the line of evolution, the "survival of the fittest," the strongest. The machine is the strongest, and man, made "in the image of God," and but a "little lower than God," is required to give place to the machine, to "horse-power." He has to surrender his place at the banqueting table of nature. The machine has broken his plate, removed the food. "The sparrow hath found a house and the swallow a nest," but the machine has taken the "house" from the workingman. He is less fortunate than the birds, less fortunate than a prairie dog or the fox; in fact, in earth nor air, is there anything animate so unfortunate as the man who must work for bread, from whom work has been taken by the machine. The machine is always in alliance with capital. The capitalist always owns the machine, or, to put it milder, the employés.

As we write we have in view a shop; we see twenty women at work at \$1.00 a day; say they work 300 days in a year, the cost to the employer is \$6,000.

A machine is invented which can do the

work of the twenty women; its cost is \$1,000. It is guaranteed to last ten years. The interest on \$1,000 at 6 per cent. is \$60 a year; the wear of the machine is \$100. It requires one woman to manage it at \$1.00 a day—\$300—we will now say that costs \$50 a year to keep the machine in order.

Now, how stands the account for one year? How much has the machine netted the employer?

20 women at \$1.00 a day 300 days	\$6,000
Machine, \$1,000 at 6 per cent.	\$60
Wear one year	100
1 woman manager at \$1.00 a day, 300 days	300
Cost of repair 1 year	50—510

Net profit to employer	\$5,490
And net loss to the women of	5,700

It will be observed that the net gain to the employer a year was \$5,490, or, in ten years, the life of the machine, \$54,900, a comfortable fortune, and a loss to the women for the same period of \$57,000.

Says a writer in the *Mechanical News* in discussing the "effect of machinery on labor":

The use of machinery is affecting labor in various ways. It affects wages, both in regard to that paid for the amount of the product produced and the amount received per day. It also affects the grade of labor—in some cases elevating and in others depressing it. It also affects the distribution of labor—in some cases throwing men out of their life-long employment, in many cases bringing multitudes of men under the direction of one man, or of a few men. Where there were many small industries in former times, employing a few men in each of many centers, the use of machinery has dried them up, and the same industries are now carried on with massed capital at a few centers. It also results in a new division of labor, and in building up specialties.

In this, whatever may be said of "national progress," there is not one syllable that goes to show that labor as a body is benefited. On the contrary, it does show that labor as a whole suffers. The writer from whom we have quoted says:

In former days a shoemaker made shoes, but now scarcely any one goes to the shoe shop to get them made; he goes to the store and buys them already made, and finds that the "fits" are improved upon from year to year. When one man with a boot-machine can put on 1,200 soles in ten hours, as has been done, or can average half that number day after day, the country shoemaker cannot afford to buy pegs and drive them with a hammer. Capital takes possession of the machines, added capital lays in immense stocks of leather and other supplies, and employs a few men to turn out sufficient boots and shoes to supply the whole community.

The question arises, the old question, the

chestnut question with the bur on, "What are you going to do about it?"

Possibly something of an ameliorating character might be done, were it not for the fact that the moment anything is suggested in the line of the improvement of conditions, the man who suggests any plan of betterment is assailed with foul epithets, often worse than decayed eggs. He is dubbed a crank, dreamer, an enthusiast, a lunatic, a labor agitator, an enemy of order and the foe of capital, and remedies are kicked aside as chimerical and unworthy of consideration.

The inauguration of the eight-hour work-day is profoundly philosophical, whether viewed from a moral or an economic standpoint—and yet, the great body of employers resist it with unabated desperation.

Other remedies, rational in their bearings upon the well-being of society, could be introduced, but the present is the age of the machine, and in its march logic and life go down together. Pleadings for men are of no more consequence than was Noah's preaching to the antediluvians, who took no stock in the flood theory, and who, on the tops of the highest mountains, with the water up to their chins, still believed there was not going to be much of a storm.

THE GREAT COLUMBIAN EXPOSITION.

All the vexatious preliminaries relating to the National and International Columbian Exposition at Chicago have been settled and *work* has begun.

As a means of celebrating the 400th anniversary of the discovery of America by Columbus, the Exposition may be, and doubtless is, the best that human wisdom could devise.

As an epoch it stands out in peculiar grandeur. It was the finding of a new world. It was an event which has challenged genius in vain to write of it in a style worthy of Columbus, and the splendor of the achievement has yet to be told by some unborn Homer.

The purpose now is to do the subject some sort of justice in the way of an exposition—and here we ask, an exposition of what?

Is the demand made that the kings of the

old world shall send their crowns and scepters and royal robes to be hung up in rooms set apart for their exhibition?

Is the demand made that any of the royal breeds of the old world shall come to the new, with their titles and decorations, and parade in Chicago with their gorgeous equipages, out-riders and footmen for the delectation of the populace?

Are American plutocrats invited to exhibit their watered stocks and bonds to the admiring gaze of men and angels, while their owners, clothed in purple and fine linen, strut about the buildings, and like old Nebuchadnezzar, boastingly inquire: "Are not these great buildings and this great exposition things which we have built by the power of our money and for our honor, and to impress upon all observers the fact that we are on top?"

It does'nt make a particle of difference whether such demands are made or not, the plutocrats have secured control of the great Columbian Exposition, and it will be managed in their interest. The nabob class grappled it from the first, and up to this day no other class has been recognized, or if recognized, the recognition has been that which the servant receives when his master nods his head.

The question arises, What are to be the attractions at the great Columbian Exposition?

The answer is, such things, and only such things, as labor makes it possible for the plutocrats to exhibit.

The very buildings are eloquent epics in honor of labor. Work and skill, from the breaking of the sod to the last touch on the domes of the buildings—all, everything, everywhere, thrills the air with the sounding praises of work.

Neither in Congress nor out of Congress, when the question of appropriations was up for debate, was one word ever said of the one class, and the only class that by any possibility could make the Exposition possible.

In the selection of officers, by whatever name designated, workingmen were tabooed, as if they were a pestilence, and selections were made from a list of speculators, third-class lawyers, broken down politicians, not one of whom by any possibility outside of a

miracle could make any one thing or design any one thing that would sell for five cents to a junk dealer. There are scores of them, and their mercenary proclivities were so conspicuously exhibited as to call for a halt and a rebuke from Congress.

So far the entire business has been aristocratic and plutocratic, and just how low the price of labor could be depressed has been the only one thing indicative of what the commissioners call economy; in all else boundless extravagance has distinguished every move on the Exposition chess board, and the indications are the same policy will be pursued to the end.

Why should it be otherwise? It was so when Egypt's slaves built the pyramids. The same when the Persian slaves built the hanging gardens of Babylon; the same when all of the seven wonders and the seven thousand wonders of the world were built, and now is to be repeated at Chicago, where workmen must be content to earn \$2 a day and receive on an average \$1 a day upon which to rear families and lay the foundations of such colossal fortunes as will keep their remains, when dead, out of Potter's fields.

We may not know as much of Columbus as could be desired, but he was not born with a silver spoon in his mouth. From a boy before the mast he became an expert sailor and navigator, and may have had an idea that the brains of the world were not monopolized by plutocrats, the prevailing sentiment in the United States, and one which finds loud expression in all matters connected with the Columbian Exposition.

There have been several international exhibitions in the United States and elsewhere. If all that was said of them could be printed in books, it would require a search warrant and a Pinkerton detective to find in them all, so much as a hundred lines eulogistic of labor—all the credit goes to kings, aristocrats, plutocrats, and numberless smaller fry—the fawning sycophants of wealth, the buzzing, blue-tailed flies, who are so delighted with being permitted to be in the presence of the rich that they flaunt their degradation as fools do their caps and bells.

Europe is to come to America to see how great we are, how effectually we emanci-

pated one class of slaves, and how adequate is our power to compel white men as well as negroes to wear fetters. They will see thousands of working men, answering to numbers, known by figures, as Texas steers are known by their brands.

The Exposition, to inquisitive Europeans, will enable them to learn that in the way of plutocrats, America is abreast of Europe and going ahead at a thundering gait. They will see the American Congress in session and American Legislatures in session, and hear repeated the old *chestnut* that the members of these bodies are the "servants of the people," but will readily see that they are masters rather than servants, and that between the laws they make and others not made, the plutocrats manage to rob the "dear people," as owners of sheep ranches shear their sheep, and though they will hear much about the sovereignty of the people, they will readily appreciate the hugeness of the joke and the thinness of the sham. They will see that what we call American is eminently European, and that all power is vested in money, whatever may be said to the contrary.

The climax of proprieties would have been reached, since the Exposition exposes nothing but the triumphs of labor, to have designated representative men in the ranks of labor to have shared in its glory. The task would have been an easy one—men thoroughly equipped for the work could have been named, and in the act, justice to labor would have been recognized and appreciated.

But such selections would have displeased plutocrats and snobs, and the great Columbian Exposition will be run in their interests. Sic transit—Yankee Doodle.

HELP us in the good work of erecting a monument where grand old Wm. D. Robinson sleeps his last sleep. Every fireman in the land should be proud to contribute to such a purpose.

HAVE you contributed to the Robinson Monument Fund? The fund *will* be raised and the monument *will* be erected. Don't you want to help mark the spot where the old hero sleeps?

THE TRAMP.

We clip the following pen picture of the "tramp" from the *Chicago Herald* :

The time of the year for violets, and also for tramps, is drawing near. Did you ever stop and think just what it means to be a tramp? It means no work, no money, no home, no shelter, no friends. Nobody in all the world to care whether you live, or die like a dog by the roadside. It means no heaven for such rags to crawl into, no grave to hide them out of sight and no hand stretched out in all the world to give the greeting and the good-bye of love. It means nobody in all the world to feel any interest in you and no spot in all the world to call your own, not even the mud wherein your vagrant footprint falls; no prospect ahead, and no link unbroken to bind you to the past. I tell you, when we sit down and figure out just what the term means, it will not be quite so easy next time the wretched tramp calls at our door to set the dog upon him or turn him empty-handed away. Let them work, you say. Look here, my good friend, do you know how absolutely impossible a thing it is getting to be in this overcrowded country for even a willing man to find work? It used to be that "every dog had his day," but the dogs far outnumber the days in free America. I know well-educated, competent men who have been out of employment for months and years. I know brave and earnest women, with little children to support, who have worn beaten paths from place to place seeking, not charity, but honest employment, and failed to find it. What chance is there for a ragged tramp when such as these fail? Remember, once in a while, if you can, that the most grizzled and wretched tramp that ever plodded his way to a pauper's grave was once a child and cradled in arms perhaps as fond as those that enfolded you and me. Remember that your mother and his were made sisters by the pangs of maternal pain, and perhaps in the heaven from which the saintly eyes of your mother are watching for you his mother is looking out for him. Perhaps—who knows?—the footfall of the ragged and despised tramp shall gain upon yours and find the gate of deliverance first, in spite of your money and your pride. Stranger things have happened.

In the foregoing there is abundant food for reflection. From the center to the circumference of the country, on all the highways and byways, the tramp may be seen. He is always ragged, always hungry—often filthy, often vicious—always the victim of misfortune.

The advent of the tramp is of recent date. He is the product of the war of the rebellion. He came, strange to say, when peace was declared. When the armies were disbanded and the soldiers came marching home, with waving banners, shouts of victory and bands playing national anthems in

honor of a Union "one and indivisible," the tramp made his appearance. Families were broken up, children scattered, and employment almost impossible. Men started out to find work. Then the tramp was an honest, courageous man. His purpose was to find work; but all over this broad land the same conditions prevailed.

The war created intense activity in every department of industry. When peace came, the reaction was universal. The demand for army supplies ceased; shops were closed, and the army of idlers increased at a fearful rate. To add to the grimness of the situation, there came a financial, mercantile and industrial panic, brought about by bankers, gold speculators—the men who had grown rich upon the misfortunes of others. Before the fierceness of the storm the strong and the weak went down together. Failures were piled upon failures; bankruptcy was universal. Factory, forge and shop were silent. Gloom enshrouded the land. The cry was gold! gold! gold! Confidence was wrecked and the workingmen of the nation were the victims of untold calamities, and tramps multiplied.

The haggard truth, that "idleness is the prolific parent of crime," was brought into fearful prominence. The cry was "work!" but there was not work for all. Multiplied thousands were idle, and were steadily drifting into criminal habits. The result was inevitable—a crime committed by one tramp was charged to all the unfortunate class. Suspicion was everywhere aroused. The tramp, without home, friends, money or work, became an outcast—a vagabond. The hand of society was against him, and his hand was against society, and now the country is confronted with the fact that it has an established vagabond class known as the "tramp." These outcasts are everywhere, and their number is steadily increasing. They are found by the wayside, in barns, under haystacks; they beg, they steal, and are incendiaries or murderers, as suits their necessities to live. They are on all the railway trains, stealing transportation at the risk of their lives. During the inclement season they herd together in cities, and when summer comes they tramp throughout all the rural districts, and every-

where are regarded as the enemies of society.

The picture is not overdrawn. It is needless to say there are honest tramps seeking for employment, ready and willing to do an honest day's work for such wages as they can obtain, but they seldom, if ever, get credit for their good intentions, and are classed with the vicious.

It is well, just here, to inquire if the industrial system now in vogue in the United States is favorable for the increase of the tramp army?

It will not be denied, that now, as never before, industries are being controlled by the few. Necessarily so, because the few have secured vastly the largest per cent. of the wealth of the country. The few, so to speak, are the generals of industry, and hence the commanders of workingmen. Their authority is supreme—absolute. There is no appeal from their decision. Courts cannot interfere, as for instance, when the papers announce that certain corporations have dismissed from employment *certain* hundreds of employes, or have, for their convenience, "locked" them out. There is no appeal. Work and wages cease. Wages down to a point that barely sufficed to keep soul and body together, have all been expended. Henceforth what? What of the future? Does the corporation care? Does the general commanding inquire? Does society interest itself in the matter? Do Christians contemplate the grim situation of the unfortunates with prayerful solicitude? Not a bit of it. The discharged employes are required to face the storm as best they can. There are always some heroes in such calamities who survive, strong men who can battle against adversity and live, but there are a far greater number who go down; who, disheartened and despairing, give up the struggle and join the army of tramps.

Here we ask, what force or forces are employed to counteract such disasters? We know of but one—ORGANIZATION. It is the one force that antagonizes the tramp policy of the Generals of Industry—the commanders of workingmen. It is the one thing needful in times like the present, when industries are consolidating into great trusts, and one man, by the exercise of the

power born of consolidated wealth, remands men, at his will, to idleness and to all the woes which idleness inflicts.

We do not contend that organization, as it now exists, is equal to the emergency, for, stately as it may appear to some, it still lacks the essentials of invincibility. But the movement is in the right direction. Hopes brighten as we contemplate the trend of workingmen's thought and aspiration. The one thing wanting is the unification of workingmen's organizations; not "amalgamation"—the term conveys no proper idea of requirements. To illustrate our idea: Take the carpenters' movement. Their demand is an eight-hour day, certain stipulated wages, etc. Carpenters form one class of the "building trades." There are others, the stone masons, the brick masons, the plasterers, the plumbers, the hod carriers. These all belong to the building trades. If there is a lock-out of the one, let it be, by the commanding power of unification, the lock-out of all. Let the hush of Pompeii come upon the city when the Generals of Industry pursue a policy that remands any one of these trades into idleness, relying upon *scabs* to do their work. This would prove availing; this would make organization invincible; this is federation—it is organized victory.

Take a textile factory, where there are pickers, carders, spinners and weavers, and other distinct departments. If each is organized, and all are federated, the General of Industry—the arrogant commander of wage workers—will consider long and well before he attacks the united body—before he issues his commands to replenish and multiply the army of tramps.

It is not required to proceed further with the illustration. To use a phrase, the reader will readily "catch on."

We do not hesitate to admit that the outlook sometimes is gloomy. The resources of the Generals of Industry are so vast and so quickly applied that resistance seems, sometimes, almost vain. But the fact remains, hopes center in organization and unification—in federation. Without it, tramps will multiply as the sands of the desert. Workingmen, if they hope for security from the corporation, will not emulate the confid-

ing lamb in the presence of the wolf, the fool fly, when listening to the flattering siren song of the spider. When too late, they will say farewell to independence and join the ranks of idlers and fall into line with the army of tramps.

THE PLUTOCRATIC PROGRAM.

Coming events do cast their shadows before. The man is blind who fails to see along and athwart the pathway of labor shadows of fearful portent.

The mariner, in mid ocean, does not, as he scans the skies, treat with indifference a dark cloud, however small, that lifts its head above the horizon. He does not become frightened and demoralized, but he does think of his ship, of mast, sails and ropes, and life boats. He will know that his ship is in the best possible trim to outride the storm, if it comes.

No friend of labor, who is in any sense capable of estimating the outlook, will deny that along the horizon, and steadily mounting upward are evidences of a coming storm. The almost universal verdict is, that there is for labor in the United States an impending crisis.

We are no alarmist. We are not of the family of soothsayers, astrologers, and seers. We are not learned in mystical lore, but we sometimes, like thousands of others, see the shadows of coming events. Claiming no exceptional acuteness of hearing, we know that even now, there is fighting going forward on the skirmish line which divides the laboring and the capitalistic classes. The rattle of the musketry is heard from Pennsylvania, and in a hundred other localities, attitudes demonstrate that plutocrats, having sown to the wind, the harvest of whirlwinds may come.

In this connection the following, from the *Lumber Trade Journal*, is reproduced, that our readers may have some idea of the program of the plutocrats:

We think it is now a well established fact that all great reforms must come by education. If we would instill temperance principles into a country, we must commence at the cradle. If we would save our currency from being debased, we must teach the people the value of an honest dollar, and so we opine if we want to rid ourselves of labor troubles, we must educate the workingman.

What is the cause of all this discontent of the laboring classes all over the country? We answer, it is the education they are receiving at the meetings which every union man is compelled to attend, from the walking delegate and other agitators who are making their living, and good living, too, at the expense of the laboring classes. If the laborer always worked whenever he had employment at the current rate of wages, and at the ruling number of hours per day, there would be no use for the walking delegate and for hall hire and monthly dues, etc., and so to create this demand for his services the leader must invent grievances and stir up strife, and so he is ever trying to educate the workingman that he is not getting his due, and that the way to get it is to strike and boycott.

Now, if this is ever stopped it must be stopped by education. The evil can undoubtedly be mitigated by the union of employers, but it cannot be cured until you show the laboring classes that it is more money in their pockets to work contentedly and do the best they can than by strikes and other evil behavior.

We are of the opinion that it can be clearly demonstrated that the conduct of the workingmen in following the advice of their leaders has cost them thousands of dollars, days and weeks of hunger and privation and other discomforts; and so we think the employers should at once commence, and by literature and lectures and other means demonstrate to the wage-earners the utter uselessness of strikes. A few thousand dollars judiciously expended would work wonders. Fight fire with fire; don't let your employes hear the walking delegate's side of the story without hearing your side also.

We think the solution of the whole question lies in this. If you have got a good case, you can make it clear even to the most ignorant, but you cannot expect to do it except by a thorough systematic campaign. Such a system once started would starve the walking delegate into honest work inside of a year. The same bureau, however, that takes up this side of the question must also take cognizance of the fact that many employers are abusing their employes, and these must be disciplined. All this is not an impossibility. The employer, as a rule, is the workingman's best friend and best qualified to guard his interests. Once make this known and the question is solved, and the way to do it is by education.

It is an old saying that "straws show which way the wind is blowing," and here comes a *Lumber Journal*, which shows us which way saw-logs are going; or, which way they will go when the plutocratic dam breaks, which way they will go when the storm cloud, now rising, bursts, with Vesuvian fury, upon the country.

The plutocratic policy is to annihilate labor unions, labor organizations; and when their halls are silent, and their watch-fires are extinguished, when eviction succeeds and the members of labor unions are disorganized, then degradation begins, and the

distance to the bottom will be speedily reached.

The *Lumber Trade Journal* says the discontent of the laboring classes results from the teachings of union meetings, where "walking delegates and other agitators" are instructors. This education, the writer in the *Journal*, who is simply a flea in the hair of the plutocratic dog, would overcome by a different education, the instruction being given at another school and by a different class of educators—and here the scheme is given away. While denouncing workingmen's unions, and the education of the members in union schools, the stupid ass proposes "Unions of Employers" as the counteracting force.

There are already, everywhere, unions of employers, unions of corporations, trusts and syndicates—all engaged in denouncing "labor agitators," all proclaiming the calm and contentment which distinguishes slavery, where men wear their fetters uncomplainingly, content with such privileges as their masters see proper to grant.

The writer in the *Lumber Trade Journal* forshadowed what is in store for workingmen. Employers are to form unions, and these unions will federate—form an alliance—and then will begin a "thorough systematic campaign." The "walking delegate," the labor "agitator" is to be starved into silence. Union education is to be suspended. Unions and Brotherhoods of every name are to be overthrown by the power of plutocratic education, which, if success attends it, will reduce workingmen to a condition, compared with which the negro, in "old plantation times," was an autocrat.

When the plutocrats—the Carnegies, Goulds, Depews, *et al.*, succeed in their educational schemes, workingmen will be content with "the current rate of wages and the ruling number of hours per day;" they will then have their *numbers* and brands, as so many Texas steers, and do the bidding of their masters.

Well, the announcement is made, the program is published—workingmen may contemplate it at their leisure.

What will be their response? We conjecture it will be in all regards worthy of them, especially those who are enrolled in

unions, brotherhoods and associations. We conjecture an immense army of workingmen will stand by their organizations, stand by their flags, stand by their principles; stand by their schools and their education; stand, however fierce the storm, and if fate decrees their overthrow, it will be like that of Samson's when, in the might of his superhuman power, he wrested the pillars of the temple from their foundations and overwhelmed his enemies in a common death.

EMPEROR WILLIAM'S COURT.

Germany, under its young Emperor, has a court, which is said to be essentially changed in many respects as compared with the reign of previous monarchs. There is more style, more splendor, gold lace, gold buttons, swallow-tails, knee-breeches, plumes, etc., and it is said that the American minister, William Walter Phelps, and his wife, do not permit any European huckleberry to be arrayed more gorgeously on court occasions than our own American persimmons; as a result, when Mr. Phelps joins the procession of high-cockalorums—ladies and gentlemen who pass in review before the throne, he is decked out in satin knee-breeches, silk stockings and pumps with gold buckles, in a black claw-hammer coat, with claws as attenuated as those of the Prussian eagle, and carrying under his arm a hat with a most enticing plume gracefully reclining among the silk plush and gold buttons, and Mrs. Phelps, on one occasion, led the lovely ladies of the American legation dressed in a petticoat of white crepe, trimmed with real ostrich feathers around the hem, and her train and low-cut corsage were of silver and brocade satin. The American ladies, led by Mrs. Minister Phelps, wore trains each eight yards (24 feet) long, and the Empress is said to have exclaimed, in the best English she could command: "Madame Velphs, dem gosdumes hav my royal approval; dem drains ish vat I calls Shim dandies, dere ish no—vat you calls 'em—muskeeders on dem gourt gosdumes."

THE Robinson Monument Fund is growing.

FINANCIERING.

A writer in the *Farmers' Voice* asserts that the government has been loaning money to one class of citizens at one per cent. and that now these citizens want the Government's money without paying any interest at all. The writer illustrates as follows:

Take two men at the close of the war. One buys a farm for \$10,000; the other buys Government bonds for \$10,000. Both are investments; the farm and the bond. Both represent value, and have a buying and selling price. The money in the bonds, without any labor of the holder, has paid a much larger interest. It is true than has the money in the average farm, with all the hard work of the farmer and his family. Those favored few, the special class "of the people" who own the bonds, can take them to Washington, deposit them in the treasury (say \$100,000.) They are safer there than at home. Those who bought them still own them. The interest on them never stops. It is regularly and promptly paid. And, on those bonds as security, Uncle Sam—the Government—loans this special class "of the people" \$90,000 in money, which they take home and, as middlemen, loan this Government money to the farmers and others "of the people" at 6, 8, 10 12 or more per cent. interest.

These favored citizens are the national bankers, and the writer asks, "why not let the farmer have the same chance with his property? There are many reasons—cogent reasons—which the writer does not seem to have thought of. In the case of the banker, he first *plants* down the cash, \$100,000 for the bonds. He then takes out \$90,000 in bills—and goes into the banking business and frequently fails—but in so far as the \$90,000 in bank bills is concerned it makes no difference whether the bank fails or not. A national bank bill of a broken bank, is just as current as the bills of a solvent bank. The \$100,000 in bonds are behind the bills. The Government sells the bonds and redeems the bills. It is this one feature that maintains the national banking system.

Now, suppose the Government should loan the farmers \$350,000,000 and take mortgages on their farms for security? Suppose the farmers should fail to keep up the interest? What then? Foreclose, take the farms, evict the farmer and his family—set them adrift *a la* Ireland. Well, God help the farmer, when that evil day comes.

We are not the advocates of the national bank system. If the Government must issue the "fiat money," let it be "Green-

backs" and do away entirely with national banks. They are no longer a necessity.

LABOR IN ENGLAND.

On April 10th Mr. William Smith, First Lord of the Treasury, announced that the Queen of England and Empress of India, had been pleased to appoint a Royal Labor Commission, to inquire into the relations existing between capital and labor, the cause of strikes, and to ascertain if there is any better method of quieting workmen than starvation, imprisonment, exile, and shooting them. The Queen named the commission, as follows:

The Marquis of Hartington (Liberal Unionist); the Earl of Derby (Liberal Unionist); the Right Hon. Sir Michael Hicks-Beach (Conservative), member for Andover and Chancellor of the Duchy of Lancaster; the Right Hon. Sir John E. Gorst (Conservative), member for Chatham and Political Secretary of the India Office; the Right Hon. A. J. Mundella (Liberal), member for Brightside, Sheffield; Sir Robert N. Fowler (Conservative), one of the members for the city of London; the Right Hon. Leonard H. Courtney (Liberal Unionist), member for Bodmin, Cornwall; Sir Edward J. Harlan (Conservative), member for North Belfast; Joseph Cheney Bolton, member for Shropshire, Scotland, and Chairman of the Caledonian Railroad Company; Mr. William Gerald Balfour (Conservative), member for Central Leeds; Mr. Jesse Collings (Liberal Unionist), member for Bordesley, Birmingham; Mr. Thomas Burt (Liberal), member for Morpeth, England; Mr. William Abraham (Liberal), member for Rhondda, Wales; Prof. Marshall; Sir W. Lewis, manager of the Butte Docks at Cardiff, Wales; Mr. Ismay, one of the Directors of the White Star Steamship Company; Mr. David Dale; Mr. George Livesey Tunstall, a prominent cotton manufacturer; Mr. Samuel Plimsoll; Mr. Madsley, an operative cotton spinner; Mr. Thomas Mann, the labor agitator; Mr. E. Drew, Secretary of the Board of Conciliation of the Iron and Steel Trades; Mr. Hewlett, Manager of the Wigan Coal and Iron Company; Mr. Tait, Chairman of the Glasgow Trade Council; Mr. Austin, Secretary of the Irish Democratic Labor Federation, and Sir Frederick Pollock, editor of the *Law Quarterly Review* and the author of a number of legal works.

It is probable that workmen, employees, millionaires and politicians will note with some care what this Royal Commission will have to say about capital and labor and the cause of strikes. Already the American press has commenced commenting upon the subject.

The *New York Times* of April 11th, remarks that labor in England, as well as in the

United States, is equally a political trouble, because of trades unions and the organization of unskilled labor, and because the right of suffrage has been greatly extended, and adds:

There is no more reason why they should refrain from this than why the people should refrain from it who follow the trade of owning land in Great Britain, and who have for a good many centuries been framing the laws of the country with a single eye to their own interests. But every member of Parliament has now a distinct interest in knowing what "Labor" thinks and what it means to do, and would be very glad of any information upon the subject of which a Royal Commission could put him in possession. There is really, however, nothing that the most learned and industrious Royal Commission can do in the way of suggesting legislation for labor. It can inculcate upon employers and employed the desirableness of treating each other with justice and kindness, but these admonitions are not likely to be any more effectual from a Royal Commission than from the pulpits of Great Britain, from which they are presumably uttered every Sunday. The belief that a man is entitled to benefit himself by every means in his power, provided that in doing so he annoys nobody else, is as firmly held in Great Britain as anywhere else in the world, and there is really nothing else to be said in furtherance of the claims of organized labor.

It is not for us to say what laws England requires to counteract in any degree the legislation that has been going forward "for centuries" in the interest of the landed aristocracy—but from the fact that the labor agitation in England has brought about the appointment of a Royal Commission, it is reasonable to infer that some legislation is desirable and that it will be had, or more strikes will result.

It will be noticed that the New York *Times* is confident that the Royal Commission can do nothing except to recommend mutual kindness and justice on the part of "employers and the employed"—and that, according to the *Times*, this is all that can be said "in furtherance of the claims of organized labor."

Just what a Royal Commission may or can do in England we have no means of knowing, and at best we care little for commissions, little for the professions of mere politicians, but, should the time ever come in the United States when workingmen are united upon propositions of justice to themselves, what they ask for will be granted.

At present, though organization is going

forward, capitalists are exerting their power to destroy unification of purpose in matters of supreme moment. Till this is changed, there is little hope for workingmen. Wages will remain as near starvation point as possible and the work of degradation will proceed.

A PLUTOCRATIC GOVERNMENT.

Is it premature to suggest that a plutocratic government in the United States in the not remote future is not only possible, but is well up toward the head in the list of probabilities?

Does some one inquire what is meant by a plutocratic government, or a plutocracy? We will permit Mr. Webster to explain. He says a plutocracy "is a form of government in which the supreme power is lodged in the hands of the wealthy classes; government by the rich."

At present, numerous writers, orators and statesmen, legislators and others of less note, aver that ours is a government by the people, that it is not a plutocratic nor an aristocratic government, but a democratic government. The averment, if we consult constitutions, is true; but if laws and decisions of courts are investigated it will be found that much is going on in the way of government strictly in accord with Mr. Webster's definition of plutocracy, "a government by the wealthy classes; the rich," and if the question is asked, what are the facts upon which such assertions are based, the reply may be prudently made that Mr. Thomas G. Shearman, in the January *Forum*, prints a table showing how the wealth of the country is distributed at present, as follows:

CLASS.	Number of families.	Total Wealth to families.	Average Wealth to families.	No. individuals to family.	Average to individual.
Rich . .	182,000	\$43,300,000,000	\$237,912	5	\$47,582
Middle	1,200,000	7,600,000,000	6,250	5	1,250
Working	11,620,000	11,200,000,000	964	5	193
Total .	13,002,000	\$62,000,000,000			

Referring to Mr. Webster's definition of Plutocracy, a government by the rich, the

foregoing figures must impress every candid mind that the United States is approaching plutocratic conditions with fearful rapidity; indeed, Mr. Shearman says that "the evils" of "such an unequal distribution of wealth are even more serious than any here suggested, and might possibly include the destruction of republican government, which is even now little better than a form among us."

It is now seen that of the estimated wealth of the country, \$62,000,000,000, 182,000 families, out of 13,002,000 families have possession of \$43,300,000,000—equal to \$237,912 to a family, or \$47,582 to each member of the plutocratic family, allowing five individuals to a family. While this is true of the plutocratic class, the 11,620,000 families of workers have only \$11,200,000,000 of the wealth of the country, equal to \$964 to the family, and \$193 to the individual.

It will be borne in mind that the exhibit we supply is not furnished by an anarchist, a socialist, a "labor agitator," but by one of the clearest headed thinkers of the times, himself a man of ample fortune—a lawyer who does not consider cases of small fees—nor is he particularly opposed to millionaires. He sees the drift of affairs, and points out inevitable results, unless some means can be devised for a more equitable distribution of the wealth that labor creates, nor does he hesitate to say that the plutocrats have now such an influence upon political affairs that our republican government is "little better than a form among us."

In this connection it should be said that labor organizations have one supreme purpose in view, and that is to inaugurate a system of distribution of wealth whereby an individual worker may have more than \$193 and the individual plutocrat less than \$47,582, or that a family of five workers shall have more than \$964 of the country's wealth, while a plutocratic family of five has \$237,912 of the country's wealth.

To accomplish their patriotic purpose labor organizations would have wise laws and honest courts, and these things which must be had if a republican government is to be a fact rather than a form they would secure by argument, reason and the ballot. If a change of programme can not be brought about by such means then a plutocracy will

be, if not already established, a "government by the rich," and when such a government is in full operation in this "land of the free and home of the brave," what will follow need not here be conjectured. History repeats itself, and those who study history need not err in their conclusions. There is a time to apply remedies, the time is now—the present, and it will be well if legislatures and courts give the subject special consideration.

CAUSE AND EFFECT.

The Chicago *Times*, some weeks since, published a communication "designed to prove that a sad harvest of ruin is to follow such scenes of splendor and misery as are constantly recorded in the daily papers." The *Times*, commenting upon what it is pleased to characterize the "earnestness and sophistry" of its correspondent, says:

Because a Vanderbilt wedding occurs at one end of a street and a mother dies of starvation at the other, it is argued that there is a direct connection between these events. Because the cost of a single one of 295 diamonds in a gift to the Vanderbilt bride would have saved the life of a starving woman, therefore the many who are poor must rise against the few who are rich and overthrow the law which protects all. There has been surfeit of such sophistries. They have been the stock in trade of visionary would-be reformers who lack the capacity of logical thought and readily assume that because two events have been coincident they have also stood to each other in the relation of cause and effect.

Well, what argument within the entire range of logic, has been or can be formulated to prove that the circumstances related by the *Times* did not "stand to each other in the relation of cause and effect?" The *Times* seeks to dismiss the statements of its correspondent as "senseless prattle" rather than bestow upon them the consideration their gravity merits. The communication refers to a diamond wedding gift and on the same day the death of a starving woman, and thereupon constructs an argument of cause and effect. The *Times* admits that the money squandered by the over-rich in New York would temporarily relieve the distress of the poor in that city; but, says the *Times*, "it is also true that if every dollar spent by the Vanderbilts and other wealthy residents of New York were thrown into the lap of poverty, there would still be those in the slums

probation of Mr. Macon in the House of Representatives, ran its blue pencil through "11¼ pounds of cheese at 25 cents—\$2.81." They drew a line at mourning which exhibited itself in the shape of an excessive consumption of cheese.

Take the average congressman or ex-congressman, and measure him by any prudent standard, and his funeral is of no more consequence to the people than that of any other man in the community, and the fuss that is made over his remains is altogether superfluous; at any rate, if the funeral is to be a gaudy, jim-dandy affair, let his estate pay the bills. It is bad enough to print at public expense the ridiculous harangues which congressmen inflict upon the country when one of their number hands in his checks. Five thousand dollars a year is ample pay for a congressman, and not one in forty of them, to save his soul from perdition, could earn that sum in any legitimate undertaking.

THE COKE REGIONS.

Those of our readers who keep abreast of the rapidly moving procession of events, will not ask why we use for a caption, "The Coke Regions," nor will they require us to give a graphical location of "the coke regions." Nevertheless, we will state that the coke regions to which we refer are located in the great state of Pennsylvania—a state which derives its name from William Penn, whose motto was, "Peace on earth, good will toward men." It is the state which once had for its most distinguished citizen, Benjamin Franklin—the printer, the philosopher, the statesman and diplomat, the illustrious man whose name and fame is imperishable.

Pennsylvania is the state where the Continental Congress convened when Jefferson wrote the Declaration of Independence, declaring that "all men are created equal and are endowed by their creator, with certain inalienable rights, among which are life, liberty and the pursuit of happiness." Pennsylvania is the custodian of old Independence Hall, and the old Independence bell, which in the darkness of the struggle for freedom pealed forth the glad tidings that a new nation was born. Pennsylvania, popularly known as the "Keystone State,"

with a past record which placed it by universal consent as the brightest star in the constellation of states symbolized by stars on the blue field of the National ensign, is fallen from her sublime elevation, and is now so degenerate that to attempt any just characterization of the degradation that has befallen her would be futile.

A state of boundless mineral wealth, designed, we may assume, by Providence, to bless those who should fall heirs to it, is made by men, and by statutes, by the practices of bribed legislators and debauched courts to bring about conditions of unparalleled atrocity.

The coke regions, and the anthracite coal regions, stand together in all the indescribable horror of plutonic blackness. They are twin hells, each with its supervising satan and retinue of imps, the supreme purpose being to impoverish, rob, degrade and starve workmen to death.

The records of these regions have been written, and men and angels, we opine, have stood aghast at the horrors, vivid as lightning, were made to pass in review.

Things have for years steadily gone on from bad to worse. Degradation has taken on more and more repulsive aspects. Squalor and filth, in hut and hovel; men reduced to beasts, half starved, with a hunger pang in every breath; women and children, burdened with every woe that tyranny, enforced by insatiate greed could devise, have made the coke regions the infernal regions of the earth, the likeness of which never sent a thrill of joy throughout the regions of the damned; scenes of woe and distress, of cruelty and death, such as Dante, in his wildest fancy, never pictured.

Naturally Americans could not endure such infernal sway, and foreigners, accustomed to privations—human cattle, beasts of burden in their native lands—have flocked to America to better their conditions, because, they said, nowhere can it be worse than to remain where we are.

They came by the thousands to the land of Penn, of Franklin, to the land of the free, were offered work and accepted it. They delved, they wrought, they lived in huts and habitations inferior to the lairs of wild beasts. They said: "This is worse

than the lands from which we emigrated." They became restless under the sway of such human monsters as Corbin and Frick, and as a last resort struck for their lives. Human, they bore their degradation to the last extreme, and then revolted.

Then came eviction from their miserable huts. Men, women and children, with their pots and ketties, ragged blankets and filthy bunks, were all tumbled into the high-ways together to endure, unsheltered, half clothed and unfed, the pitiless blasts, to die unwept and unsung, that Frick and his associate tyrants might add altitude to their fortunes.

And is this all? No. The guns of Pinkertons, "deputies" and citizen soldiery have been brought to bear upon the "mob" of starvation victims; blood has flowed like water, and amidst scenes of carnage where death gurgles and moans, and the agonizing cry of women and children blended in a protest to heaven, Frick triumphs. More foreigners, starving, degenerate people are railroaded by thousands to delve in the bowels of the mountains and light the fires in the coke ovens, and once more set the wheels of industry and death a going.

An armed peace will in due time be proclaimed. Silence will once more brood over the coke regions, and Frick will be on top, but like Vesuvius, there will be mutterings and smoke and premonitions of an eruption, and at no distant day there will come another volcanic vomiting of fire and blood, disorder, distress and death.

We have painted no fancy picture; no wealth of words could exaggerate the scenes enacted in the coke regions of Pennsylvania; in fact, take the every day reports, toned down to suit the oppressors of the workingmen, and the picture requires no extra touches to horrify beholders.

There is a class of drivelling writers, subsidized by the plutocrats, who seek to account for the infernalism in the coke regions by denouncing the emigration laws of the country. But it won't work. Such men as Frick and Corbin care nothing for nationality. If they did not have Huns, Slavs, Poles and dagoes to degrade they would, as they have done, reduce Americans born to the same level.

The problem is presented for solution, and workingmen need not be told that the purpose of the plutocrats is, if they can, to reduce all to the same wretched level.

The hope of toilers lies in organization and federation. If these fail, then a Johnstown dam of plutocratic power will overwhelm them in irretrievable disaster.

A NEW DEPARTURE IN CRIMINAL PROCEEDINGS.

Coroner Levy, of New York, must be a remarkable man, the one man in the great city of millionaires who dares do his whole duty, regardless of the financial or social standing of those who are required to answer for "manslaughter," or any other crime with which he is required to deal.

Some time ago there was a frightful wreck on the New York, New Haven, & Hartford Railway, in the New York City Fourth avenue tunnel. A number of persons were killed and wounded. The N. Y., N. H. & H. is one of the most prosperous railroads in the country. It pays large dividends on all its investments of cash and water. It is a fabulously rich corporation, but it was too poor to properly guard the lives of passengers in the Fourth avenue tunnel. Its policy was so astoundingly parsimonious that it declined to properly illuminate the tunnel through which trains were constantly passing, crowded with human beings. The directors of the road, though rich as cream, studiously and determinedly refused to obey the law of New York relating to heating their cars with steam, and persistently used coal stoves. Of the six persons who lost their lives in the tunnel February 20, 1891, it was shown that at least two of them were burned to death, a result traceable to the coal heating stoves. Said ex-Mayor William H. Wickman in an interview with a New York World reporter:

Whatever may have been the cause of the accident, whether it was the fault of Fowler, the engineer, or whether the trouble lay with the signals, it was proven beyond all peradventure that the immediate cause of the death of at least two of the victims was fire, and while the remaining four received injuries in the collision it was also proven that they were badly burned. It was also shown that when the coaches, which were in the accident, reached the

Grand Central depot, fifteen minutes before leaving on that fatal trip, the fires in each stove were replenished. Sweeny, who was rescued from the burning car, swore that when he escaped from the car it was ablaze and the floor was covered with live coals from the overturned stove, and so intense was the heat he was unable to give heed to the cries for aid from the poor woman who was roasting to death at his side.

But Mr. Depew says, urged the reporter, "there is no shadow of law under which the directors of a railroad can be held for the consequences of accidents."

Who should be then? replied Mr. Wickham. The poor man called "Slope," who only carried out his instructions when he replenished the fires? Every director of the road knew that the laws of this state expressly prohibited the use of coal stoves in passenger coaches, and ever since the passage of the law in 1887 they have been trying to evade the change, made necessary then, by legal technicalities. On the system of which Mr. Depew is the head, steam heat is used, and it cannot be, however many roads he may be director of, that Mr. Depew can claim the same exemption from familiarity with a road running over the system under his control, with its cars coming into the Grand Central depot, with offices in the same building as his own, as from a road in Duluth and its bridges and girders.

The jury believed, as they say in their finding, that death was caused by burning and that the New Haven Railroad Company was responsible therefor, and as the officers and directors of the road are responsible for its management, they are surely accountable for the results of that management.

I believe that this verdict has the approval of the entire community. And these gentlemen may have an opportunity of establishing before a jury their alleged irresponsibility for the management of their own road and for the evasion of the laws for the protection of the traveling public made by the legislature.

The foregoing enables the reader to have a very clear conception of the case; it enables him to estimate the courage of the coroner and his jury. Hitherto railroad magnates, directors, *et. al.*, have escaped all responsibility for disasters. Trains are wrecked, men and women have been killed and maimed by thousands, and the verdict has been, so far as officials were concerned, "nobody to blame." Sometimes an employé has been made to carry the burden of responsibility, but the directors, never. The New York verdict changes the drift. The coroner's jury had the courage to put the responsibility where it rightfully belongs, and a number of very distinguished gentlemen, among them Chauncey M. Depew, have been arraigned for "manslaughter," and have had to give bail, each one of them, in the sum of \$25,000 to appear and

answer for the crime. Coroner Levy said, in reply to Depew's attempt to escape responsibility:

In answer to Mr. Depew's query as to how it could be possible for a man who, like himself, is a director in over thirty railroads, to be personally cognizant of the details and conditions of each of these roads, I have only to say, that in my opinion, no honest man should attempt to "direct" more affairs than he is able to. There is no reason why any man should be a director in thirty railroads, and the fact that he chooses to be so does not, in my opinion, relieve him from the responsibility of mishaps on any one of those roads. My advice to President Depew and his friend President Roberts is not to attempt to direct more than they can control.

We do not presume that any of the directors who are responsible for the horror in the tunnel will be properly punished. They have millions of money at their back and at their beck, still, there stands the verdict, rendered by honest, intelligent men, that they are guilty of "manslaughter." That will stick to them, and it may lead, as it ought to lead, to numerous reforms in railroad management.

ONE BILLION.

Referring to the fact that the late Congress appropriated \$1,000,000,000, the New York *World* has made some calculations that will attract attention. It says it is more money than all the workers in the protected industries of the country can earn in three years. The entire wheat crop of the country for three years would not more than equal the amount. "If the money were in \$1 bills, and the bills placed end to end, they would reach almost half way from the earth to the moon. They would encircle the globe four times at the equator. If an expert cashier could count 100 of these bills a minute, and work ten hours a day without a pause and 365 days a year, it would take him nearly fifty years to count the whole. If the whole sum were in gold and loaded in freight cars, filling each car to its full capacity of 40,000 pounds, it would require a train of 100 cars to transport the gold from place to place. In silver, about 1,500 freight cars would be required." By such estimates the people are able to understand how the money goes, and workingmen can obtain an idea of the task there is before them, and in addition, can estimate the power of the "coming billionaire."

CONDITIONS.

Our attention is called to an article in the *Christian Union*, by Rev. George Thomas Dowling, D. D., in which the learned divine(?) brings his love to bear upon the rich and the poor his purpose being to persuade the poor, that after all they are as happy as the rich and should therefore be contented with their lot. Those who read the meditations of the pious D. D., will readily see that his anxieties circle around the rich—and his solicitude is so pronounced that it is more than probable his salary will be raised. The rich man, this ambassador of the "King of Kings," assumes may "step up or down at will, while the poor must be content with what chance offers for bettering their condition." What the *chances* are for the poor to better their condition the Rev. Dowling, D. D., fails to point out, but he tells his readers that "nothing but his own inclination prevents the rich man from making himself a pauper," while "inclination does not solve the problem for the poor man." The poor man, manifestly, has no inclination to make himself poorer—and God knows, in thousands of instances he could not, if he had the inclination—and if he has an inclination to rise he must wait for a chance—inclination is of little consequence to him, and in a vast majority of cases where a *chance* arises, some one gets in ahead and the poor still languish waiting for another chance to rise.

The theory of the Rev. Dowling, D. D., suggests a scrap of *divine* history, which we deem it worth while to reproduce in this connection as it illustrates that some centuries ago, another *force* than "chance" made its appearance as follows:

Now there is at Jerusalem by the sheep *market* a pool, which is called in the Hebrew tongue, Bethesda, having five porches.

In these lay a great multitude of impotent folk, of blind, halt, withered, waiting for the moving of the water.

For an angel went down at a certain season into the pool, and troubled the water: Whosoever then first after the troubling of the water stepped in was made whole of whatever disease he had.

And a certain man was there which had an infirmity thirty and eight years.

When Jesus saw him lie, and knew that he had been now a long time in that case, he saith unto him, Wilt thou be made whole?

The Impotent man answered him, Sir, I have no

man, when the water is troubled, to put me into the pool: but while I am coming another steppeth down before me.

Jesus saith unto him, Rise, take up thy bed and walk.

The incident discloses a new departure in human affairs—a new force—things that the Rev. Dowling, D. D., fails to see. It no longer requires that an angel should come down and trouble the waters that men may be cured of their infirmities. Everywhere the waters are troubled—and a voice says to every poor man, every workingman, "Rise," and in obedience to the command they are rising. They are not waiting for chances and opportunities, but are creating them. Every lodge room is a Bethesda—and even an infirm *scab* may be cured of his diseases, and be redeemed from corporation slavery.

The rich, for whom the titled fat-salaried clergy are so exceedingly solicitous, may not like the command to "rise," which workingmen are heeding and obeying, but their antagonism is losing its potency. The inclination of workingmen is finding practical means for assertion. They are no longer waiting for some one to put them into the pool; by the mighty force of organization, they go in—and confident of the righteousness of their cause, they are prepared to fight a good fight for the emancipation of labor; they are prepared to "withstand in the evil day, and having done all to stand."

The platitudes of the pulpit, the degeneracy of the church, the debauchery of legislatures, the corruptions in high life, the arrogance of the rich will not swerve them from their course—animated by the declaration of the "carpenter's son," who said, "My father worketh hitherto and I work," they will work on and work ever, work if required, as do the corals who lay the foundations of continents in the depths of the sea, and build until their superstructure rises above the waves and is clothed in eternal verdure.

In Russia the press censor permitted a Moscow editor to say: "It is our opinion that Russia needs new railroads and will have them," for which the censor was fined \$300. The czar don't permit editors to say what Russia needs.

LAW.

It is said that man is "fearfully and wonderfully made." What of law? What of the administration of law? What of legislators, law-makers, lawyers and judges? Are they not all "fearfully and wonderfully made?" Does not the contemplation of the mass often excite universal disgust, contempt if not abhorrence?

A writer in the *Farmers' Voice* remarks that "the poor are annually defrauded out of millions simply because they know it is useless to take their matter of a few dollars to court, that even should they be awarded their claim, that the court charges and lawyer fees would bring them out loser." He says "cold cash outweighs justice in our courts generally," and that "it is a fact apparent to every intelligent person who has given the subject candid thought, that no department of government is so well fortified and equipped to abridge the liberties of the citizen as the judicial department, and that they have manifested a tendency in that direction cannot be questioned." The writer refers to the practice of judges to construct their opinions, which are simply the opinion of others handed down for generations. He says: "Go into the court room when court is in session and you will invariably find the court and his legal coadjutors rummaging through musty digests of superior tribunals for parallels, and when found, the matter is settled notwithstanding the court when induced, subscribed to an oath to render verdicts according to law and evidence to the best of his ability, he generally uses the ready made article, and saves himself the trouble and inconvenience of counseling the statute." As a result, says the writer:

The Dred Scott Decision is in full force to-day. It now distinguishes between poverty and wealth. Just the same as it was originally, only differently applied, that's all. Sharp, the millionaire boddler of New York stole enough to have imprisoned fifty thousand poor men for ten years each, an aggregate of five hundred thousand years imprisonment. He didn't go to prison.

The Star Route thieves, did they go to prison? No, no. But if they had been of the poor class they would have whiled away the after portion of their lives within prison walls. Put the question where you may, to honest intelligent men and they will

tell you that cold cash has nine chances to poverty's one in our courts.

The bloody soul of Jeffreys can congratulate himself that his advanced system of jurisprudence, so long dormant is at last revived and dominates modern Christian civilization of America.

Is there no way by which we can get rid of this dead body (the dead past). Our jury system is a relic of the dead past, with scarcely any modification. Barbarous in the extreme.

Where an honest difference of opinion exists in the jury box, which is a very common thing, the law, or stuff we term law, demands unanimity, in so doing asks men to sacrifice their honor and violate the oath they subscribed to, to render verdicts according to law and evidence to the best of their ability, and I have known juries locked up for days and nights to compel the sacrifice.

But there is not anything strange about that, the living of the present are governed by the dead of past ages. No two classes of men so obstruct progression as the lawyer and clergyman. The law of progression, naturally, if not obstructed retires ideas and customs of past decades and adopts in lieu thereof, ideas and customs befitting the present. But this the lawyers and ministers have never learned. The lawyer believes the dead should rule the living, the minister is bound and handcuffed by creeds and dogmas constructed out of the superstition that reigned in mediæval times, by men he would not acknowledge his peers, intelligently.

If there happens to come before our modern courts, a case for which a European precedent can't be found, the judge trembles and the lawyers turn pale. Lord, Lord, what's to be done, the dead past has furnished us no precedent.

Such are the views of law and of courts that are finding wide publication and are permeating the minds of the people.

APPROPRIATIONS.

When it is remembered that labor produces all the revenues, the appropriations made by the last seven Congresses supply abundant food for reflection.

The 45th Congress appropriated	\$ 703,695,953
" 46th " "	727,696,603
" 47th " "	777,685,948
" 48th " "	655,239,402
" 49th " "	746,243,511
" 50th " "	817,878,075
" 51st " "	1,006,270,471
Grand total	\$ 4,417,338,956

This is an average of \$388,197,040 a year for the general government. State and municipal appropriations will about duplicate the amount. Now, then, not a dollar would be raised but for labor. Why not have a Department of Labor, as well as a Department of War?

The New Orleans Mafia.

FOR a number of years the citizens of New Orleans have known of the existence in their midst of an organized band of murderers known as the Mafia—murderers every one. Organized for assassination, and bound under oath to commit the crime whenever ordered to do so, necessarily everything connected with the order, even its existence, was shrouded in darkness. As occasion required, for vengeance or money, the assassinations were committed, the victims were found, inquests held, verdicts rendered; beyond this, darkness—impenetrable mystery.

The Mafia, organized for murder, was also organized to protect the murderers. To such human tigers truth had no sacredness. The required perjury was always ready. If money was needed it was forthcoming; if not on hand a levy was made, and the victim, in mortal fear of the stiletto, paid.

There came at last an opportunity to bring the thugs to justice, to penetrate the mysteries of the oath-bound assassins, and a courageous officer availed himself of it, and while pursuing his purpose with high expectations of success, was shot down by members of the gang, and again mystery enshrouded the affair.

After months of searching, seconded by every law-abiding man in the city, proof accumulated against certain persons satisfying every fair minded citizen that the right men had been found. Arrests were made, proof adduced and indictments followed. Then came the trial, with the astounding result that justice had been defeated; that the law, administered in the usual way, could not reach the criminals; that perjury and bribery would continue to triumph, and that the murderous gang, made bolder by victory, would continue to terrorize the city, and that no official was safe if he dared oppose the Mafia.

The people of New Orleans—the sovereign people—the people, who make constitutions and laws, at this supreme juncture decided to take the law into their own hands and administer it. The people said, "We who make laws, judges and juries, we who are supreme, we will rid New Orleans of the Mafia." They not only said it, but they did it.

The killing of the eleven members of the Mafia gang of murderers created for a few days widespread comment and not a little excitement among Italians, in which the Italian minister at Washington took a hand, forcing Secretary Blaine to send a dispatch to Governor Nichols, of Louisiana, in which established forms of official communication were not punctiliously observed; but when all the facts were known the general verdict followed, "Served them right." That is to say, every man killed ought to have been

killed, but the killing should have been done according to legal forms.

Manifestly, Americans, as a general proposition, are law-abiding. We speak of communities. They are not anarchists; but there are exceptions, and these exceptions are found under all administrations and under all laws, human and divine.

The people of New Orleans had lived for years knowing that in their midst there existed an oath-bound gang of murderers. Multiplied murders had been perpetrated, and finally a peace officer of high repute had been shot down like a dog because in the interest of life he sought to bring the secret murderers to justice. This was the horrid culmination. Perjury and bribery in alliance with the Mafia had defeated the law, defeated justice; and the people of New Orleans, confronted with a condition of things that froze their blood, determined, in the name of self-preservation—the highest law, the supreme law, the law written in the hearts of men—to rid the city and the world of men incomparably more dangerous than mad dogs.

Men may moralize as they choose. Stilted encomiums may be paraded about "higher civilization," "Christian civilization," "savagery," "mob rule," and a' that, but the eternal truth remains that man's vengeance, like God's, cannot always be restrained.

Laws at their best are but the expression of certain powers, under certain conditions, but there are conditions wherein law fails to meet requirements; hence, revolutions in which fundamental laws are swept away—laws under which abuses defied laws, defied conservatism—when good men, men devoted to peace, builders of civilization, and persons worthy of confidence, determined, for the public good, to resort to reserved powers. Under such circumstances to apply denunciatory epithets is in effect to applaud the crimes that menace society and embolden the criminal class. To so much as intimate that the citizens of New Orleans were law-breakers in any odious sense is to do violence to the law of self-preservation. To chatter about savagery is to uphold the worst forms of savagery known to America—a studied, trained, organized savagery, which places every man in peril who dare uphold law, and makes cowards of entire communities. For such a state of things there is but one remedy—a popular uprising, a cyclone of vengeance, a storm of retribution if need be such as overwhelmed the cities of the plains, since it were better that cities should be as dead as Sodom or Pompeii than exist under the control of organized assassins.

It were useless to moralize. No diplomatic correspondence, no threats, no intimidation will change the estimate all civilized men will have of organized murderers

or change methods of riddance when patience has been exhausted. Then the murderers will be removed, then the storm will break forth and will rage in proportion as resistance is offered.

There need be no question about results nor croaking about methods. There need be no graphic descriptions, no harrowing recitals. It is simply fighting the devil with fire. No community disgraces itself when it resolves to break up organized bands of home-made or imported thugs. To lament their death is as foreign to decency as to deplore the killing of hooded cobras or man-eating tigers in India.

When men become so beastly, so inhuman as to plot murder in secret and execute their hellish policy in secret, there is but one remedy and that is to kill them. They have ceased to be human, and must be recognized simply as the most deadly enemies of society.

John M. Danforth.

The Single Tax.

IT IS an axiom with single taxers that active opposition is preferable to a passive acceptance of their doctrines. My thanks are therefore due to Mr. Charles Marshall for his able and incisive criticism of my April article. Mr. Marshall is a keen critic and an able writer, but (with all deference to the gentleman's judgment) he is looking at the "single tax" question wrong end foremost. I have not the least doubt but our cause has been injured in the minds of some by persons who have assumed to speak on matters of detail with a show of authority which they did not possess. For that reason I expressly stated that I did not wish any statement of mine to be considered as emanating from an authoritative source. I try to apply the test of reason to all questions which I take it upon myself to investigate, and make it a rule to be very cautious about accepting any doctrine upon second-hand evidence. I do not mean to say that my reasoning is always correct; far from it. No person can be absolutely sure on this point until their conclusions are put to a practical test. What I mean is that instead of accepting second-hand conclusions and explanations as a correct representation of a doctrine in which I have become interested, I go to the fountain head, and to the best of my ability try the conclusions which I there find by the canons of logic. After I have once accepted a doctrine I will maintain it as against all the "authority" in Christendom, until it be shown that the reasoning upon which it is founded is in some important particular defective. With this preface I will state the basic principle of the "single tax," and will then proceed to examine the validity of Mr. Marshall's

arguments. All wealth belongs exclusively to its creator. Nature returns wealth to labor, and to labor only. Therefore the right of the individual to the exclusive possession of the fruits of his own labor rests on the warrant of nature. The value of land is not in any case the creation of the individual who owns the land—it is created solely by the growth of the community. With every increase in population the value of land rises; with every decrease it falls. Therefore this value which is created by the community should be returned to the community for the support of the community.

Now I submit that Mr. Marshall's argument nowhere touches this principle. He has occupied himself principally with a hair-splitting examination of the value of words. That the value of land is the creation of the community, and that it can be ascertained with ease and almost absolute correctness, is not a matter of opinion at all, it is a *matter of fact*, admitted by all who have the least knowledge of the subject, whether they profess "single tax" principles or not. Now, this question admitted, what matters it that there may be a difference of opinion as to what forces operate to create that value? Does the fact that it appears to me that the value is created by competition, based upon expected profits, and that it appears to some one else that some other force operates to create that value, affect the basic principle in the least? Certainly not. In reality it is a mere matter of speculation, and not worth arguing over. I am not dogmatic; I do not say that my theory is correct, I can only give it and state my reasons. There is on the shores of Saginaw Bay a nitro-glycerine factory. It is situated far from any habitation and in the midst of a vast extent of practically worthless land, a marshy prairie, covered with water for a large portion of the year. Nobody wants this land; it has no value. Yet this nitro-glycerine manufacturer uses a portion of it and must derive a profit from its use, else he could not carry on his business, and if fifty more persons wished to engage in the manufacture of the same article there is plenty more of the same kind of land that can be had for the taking. Now, is it not clear that in this case profits have nothing whatever to do with the value of this land? Suppose this man makes \$100,000 a year, is his land any more valuable because of it? Certainly not. But now suppose the site where this factory is was the only site in the neighborhood where it was possible to erect a factory of that kind, and there were a number of persons who desired to manufacture nitro-glycerine, is it not clear that competition for the use of that site would give it a value? and that competition would be based upon the profits that were ex-

pected to arise from the use of the land in that business? It seems so to me. Now if Mr. Marshall will take up "Progress and Poverty" and turn to the chapter on rent, page 122, he can read as follows: "Until its ownership will confer some advantage, land has no value. * * * Land value does not arise from the productiveness or utility of land. It in no wise represents any help or advantage given to production. No matter what are its capabilities, land can yield no rent and have no value until some one is willing to give labor or the results of labor for the privilege of using it; and what anyone will thus give, depends not upon the capacity of the land, but upon its capacity as compared with land that can be had for nothing. *

* * Rent, in short, is the price of monopoly, arising from the reduction to individual ownership of natural elements which human exertion can neither produce nor increase. *

* * * For it is clear that the effect of competition is to make the lowest reward for which labor and capital will engage in production the highest they can claim, and hence to enable the owner of more productive land to appropriate in rent all the return above that required to recompense labor and capital at the ordinary rate—that is to say, what they can obtain upon the least productive land in use (or at the least productive point), where, of course, no rent is paid. * * * The cultivation or other use of land will always be carried to as low a point of remuneration, all things considered, as is freely accepted in any other pursuit."

Now turn to book IX., chapter I, page 313, and read as follows: "*For this simple device of placing all taxes on the value of land would be in effect putting up the land at auction to whoever would pay the highest rent to the state. The demand for land fixes its value, and hence, if taxes were placed so as to very nearly consume that value, the man who wished to hold land without using it would have to pay very nearly what it would be worth to any one who wanted to use it.*"

Now, this may be accepted as authoritative "single tax" doctrine. I have italicized some portions to which I wish to particularly call Mr. Marshall's attention, and I submit it to him without comment; he can form his own conclusions.

Mr. Marshall demands of "single tax" men that they "cease quibbling and state boldly and concisely what plan they have adopted," etc. Now I can assure Mr. Marshall that "single tax" men have formulated a plan, one upon which we will all agree, and we propose to stick to it.

On page 20 of every issue of the *Standard* may be found the platform adopted by the National "Single Tax" Convention, held in New York city in September, 1890. For Mr. Marshall's benefit I quote as follows: "Since in all our states we now levy some tax on the

value of land, the single tax can be instituted by the simple and easy way of abolishing, one after another, all other taxes now levied, and commensurately increasing the tax on land values, until we draw upon that one source for all expenses of government, the revenue being divided between local governments, state governments and the general government, as the revenue from direct taxes is now divided between the local and state governments, or, a direct assessment being made by the general government upon the states and paid by them from revenues collected in this manner. *

* * In assessments under the single tax all values created by individual use or improvement would be excluded, and the only value taken into consideration would be the value attaching to the bare land by reason of neighborhood, etc., to be determined by impartial periodical assessments."

Is there any quibbling about this language? Anything ambiguous? I submit that there is not. If Mr. Marshall is in doubt as to the meaning of this language, it is not the fault of the single tax men.

Mr. Marshall next proceeds to an entirely unwarranted assumption. How does he know that I am not ready to prepare a single tax bill to go before Congress? Single tax men are circulating a petition in all parts of the country, for the express purpose of bringing the question before Congress—the petition at this writing contains 104,000 names, and it is expected that it will go before the 52d Congress with at least 175,000 names. Mr. Marshall may rest assured that this petition will be backed by a bill, if there is the least show in the world of its getting a hearing.

Now for Mr. Marshall's "spectacular theory." All revenues are certainly derived from labor, but it by no means follows that because the single tax would create larger revenues the effect would be to increase the burdens of labor. Labor now pays all the revenue demanded by the government, and in addition to this, a vast sum in economic land rent, which goes into the pockets of a comparatively few persons, and for which labor gets no return. The single tax would divert this economic rent to its proper use, viz: The support of the government; and in lieu of this, labor would be released from the payment of all other taxes. Who can say, with truth, that labor would not be the gainer?

Now for Mr. Marshall's "clean cut statement." I can assure him that single tax men will recognize no dilemma in determining the value of these lots. B's lot would be taxed precisely the same as A's. The fact of A's improvements, or the profits he was deriving from them, would not have the slightest effect in determining the value of his lot. If his improvements were worth

\$100,000 instead of \$5,000 it would still be the same. The value of his improvements are wholly the result of his labor, he has either made them himself or paid someone else for making them. Therefore, they belong exclusively to A; the profit that arises from the use of these improvements is wages and interest—the natural returns to labor and capital, and being wholly the result of A's exertions, not one penny of such profits can in justice be exacted from A in any form. Now, it would not be sought to determine the value of B's lot from A's, but reversely, the value of A's lot would be determined from B's. B's lot has the same site value as A's, and presumably B or any other person could put B's lot to the same use as A's lot was put, and derive the same profit. The expectation of this profit would cause competition for the use of B's lot, which competition would give the lot a value neither greater nor less than the value of A's lot, and this value is what the single tax would take. Now, the fact of B being poor and A being rich does not affect the ethics of this case in the slightest. The illustration is an unfortunate one upon which to attempt to sustain an ethical argument. B pays \$1,000 for a lot for which he knows he has no present use. He knows that in the natural course of things it will take him ten years before he can put the lot to its intended use. Now, what induces him to sink that thousand dollars in the lot? Why, he knows that it is a good investment, he knows that if he waits until he wants to use the lot, that the chances are 1,000 to 1 that he will have to pay vastly more than \$1,000, and he knows that by acquiring title to the lot he can hold it out of use as long as he pleases, and that all the increment of value will accrue to his benefit, and that, without the slightest effort on his part. Thus, it is speculation, pure and simple. Now, if it is wrong for the rich man to speculate in land, is it not also wrong for the poor man? Mr. Marshall is mistaken if he imagines that I desire to put this question in any other than its true light. There is too much of this talk about "the rights of the poor," as if there was one code of right for the rich and another for the poor. There is no code of right but the natural right, and with that poverty or riches has nought to do. Statesmen and demagogues shout themselves hoarse over the rights of the poor, and with all their shouting poverty is increasing and becoming more hopeless with every passing day. Let us talk more of justice, and less of rights. Give the poor justice and their rights may be safely left to take care of themselves. Now, there is not the least doubt, but (supposing the single tax inaugurated) the selling value of B's lot would disappear, and if he could neither use it nor pay the rent, he would be compelled

to give it up to some one who could use it. Thus, B would seem to be an absolute loser. but, in reality, as all other lots would stand on the same footing, B would be none the loser, as he could get a lot that would answer his purpose by simply paying its rent. For a logical presentation of the effects of the single tax upon individuals and classes, I refer Mr. Marshall to Chapter III, Book IX, "Progress and Poverty." I have not space to elucidate here.

I want to reproduce Mr. Marshall's next argument. He says: "Suppose one farm in Dakota produces fifty bushels of wheat to the acre, why not expect the same from all the arable lands in the state, and tax them accordingly?" I am persuaded that this play upon words was offered as a bit of comedy; it surely was not intended as an example of logical reasoning. The fallacy involved in this proposition, is the very obvious one, that the fifty bushels of wheat is the only element of profit that may be expected from the land under consideration, whereas, it is a well-known fact that land that will produce twenty bushels of wheat in some parts of Dakota, is more profitable to cultivate than land that will produce double that amount in some other parts of the state. Is it not a source of profit to a person to enjoy good transportation facilities, the use of good schools for his children, churches, the society of his fellow man, and the numberless other advantages that can be found in well-organized societies? Suppose Mr. Marshall should receive positive assurance that there was land in the interior of Patagonia that would produce 500 bushels of wheat to the acre, and that he was offered all of that land on the sole condition that he go and cultivate it. Would he go? I fancy not.

As to the abandoned New England farms, of which Mr. Marshall speaks, I know nothing about them, and cannot undertake to express an opinion, but I imagine we have cases here in Michigan which are analogous to the ones he mentions. There are in this state tracts of land known as "pine barrens," that is, land from which the timber has been cut. This land is beyond the margin of cultivation; it will grow no crops and is practically worthless; there is no competition for it; nobody wants it, and I doubt if any one who is familiar with the character of the land would accept 1,000 acres of it as a gift. Yet assessors continue to place a value on this land and levy taxes on it. Why? At one time this land was covered with pine timber, and was immensely valuable. A tax was then levied upon the land, and was paid by the owners without protest. But as soon as the land was denuded of its timber, the land, from the nature of the soil, became worthless for any purpose, but the assessors continued

to tax the land upon an arbitrary value of their own creation. The owners naturally evaded the tax as far as possible. Some of them abandoned the land entirely, others, in the faint hope that the land may develop latent possibilities of some kind, purchase their own land at the delinquent tax sales through agents, and for a few cents per acre—always a sum much less than would suffice to pay the taxes, if paid in the regular manner. Now, I imagine that it is some such condition as this which prevails in New England. If Mr. Marshall can demonstrate that the lands he speaks of yield no rent, and still have a value, I shall be much pleased to see the demonstration.

W. P. Borland.

Give.

THE term "give," has a variety of meanings, but primarily it means "to bestow without receiving a return, to confer without compensation." So says Webster.

The man who accepts a gift knowing his inability to make return—to offer compensation, is then and there a mendicant. He then and there takes the first step in the downward career of degradation. He then and there parts with his independence, his self-respect, his manhood, or so much of these redeeming qualities, as to beget feelings of dependence.

I must not be understood as referring to family relations—parent and child—brother and sister, but rather man to man in all the relations of life, where self reliance is recognized as a crowning virtue.

It is not to be presumed that Jehovah, being "no respecter of persons," created rich and poor. The distinction has nothing God-like to recommend it. It is human, and even a severer term could be used, when reference is made to the classification.

If we were to go back to the beginning, and could explore affairs at the dawn, we should see just what is going on before our eyes to-day—the strong enslaving the weak—the rich growing richer by robberies, and the poor becoming poorer because they were victims of pirates. The rich gave, the poor accepted the gifts, among which was the privilege to live.

The centuries have come and gone. There have been wonderful changes in the physical condition of our planet, but human nature remains unchanged. It was said eighteen hundred years ago, "Ye have the poor always with you," and it could have been said, "Ye have the rich always with you" with equal propriety. Then the rich "devoured widows' houses;" then they imposed grievous burdens upon the poor. They are doing it now. Then they robbed and gave alms. They are playing the same

game now, and will continue doing business at the old stand until Gabriel blows his horn, unless some way is found to arrest the piracy—and it must be said in all candor, that the outlook is not hopeful. Indeed, it is to be doubted if before or since the flood—if before, or since the dawn of the "Christian era," the exhibition of the baser characteristics of human nature were ever more conspicuous and repulsive than at present, and this thing called "giving," adds to rather than detracts from the hateful aspects of the subject.

There will be those, doubtless, who having read thus far will conclude that the writer hereof is not only a vagarist but an enemy of the poor; that he would at once put an end to all forms of benevolence, advise the rich to hoard and hold on to their ill-gotten gains, though thereby the poor all perished. Such readers misapprehend the thought and the purpose of the writer. On the contrary, since the poor are always here, and since it seemed to be practically impossible to arrest the robberies going forward, any amount extracted from their stolen treasures and bestowed upon the most helpless of the poor should meet with approval. It is at best but little, as compared with the sum total of the stealings, but may be regarded as better than nothing at all. Lazarus, at the rich man's gate, would doubtless have felt thankful for a scanty supply of food, however disgusting, from the slop bucket in the rich man's kitchen, as would have been the dogs that licked his sores. And Dives, had his soul been as big as the little end of nothing, had he given the beggar something, could have written a book, like Carnegie on the importance of giving as a means of inheriting the kingdom of heaven.

I do not suppose that there is an economic nor an ethical question better settled than that conditions expressed by the terms rich and poor are totally and eternally at war with the Creator's plan. They exist because God's laws have been violated; violated to such an extent that on one occasion, "it repented the Lord that He had made man on the earth." So criminally had man violated every law, that his Creator said, "I will destroy man whom I have created from the face of the earth." In this, we have God's estimate of man. To formulate one less complimentary is totally out of the question. Just what were the exhibitions of man's depravity in those far away days it is not necessary to inquire, but if they were more infamous than robbing the poor they deserved a baptism of fire instead of water. But however severe the punishment, human greed very soon obscured it and the infernalism began again and is as rampant to-day as at any period in man's history.

Those who are at all observant of things transpiring every day on every hand have not failed to make a note of the fact that the greed of gain is now more aggressive, more unscrupulous, and callous-hearted than ever before within the realm of authentic history. To grab, to hold, to crush, to impoverish and degrade the poor and the weak, are the supreme characteristics of the times in which we live.

But there is a deal of giving and the fact is played for all it is worth, to condone the crime of stealing.

Take for instance Mr. Rockefeller, President, and chief owner of the Standard Oil Trust, an organization the wealth of which almost defies computation—an enterprise which has collateral enterprises spreading out like the legs of a tarantula—schemes within schemes, every one of which is as certain death to rivals and to competition as the fang of an asp is to its victim. Is it surprising that its president has the means of giving? Not at all, nor is it strange that in the name of John the Baptist, whose home was the wilderness, whose costume was a leathern girdle, and whose meat was locusts and wild honey, he should give \$2,000,000 to found a religious university in Chicago, the city of saints.

I have read in the *Firemen's Magazine* that of the 12,000,000 families in the United States, 250,000 of them have secured three-fourths of all the wealth of the country, \$46,500,000,000, leaving \$15,500,000,000 for 12,000,000 families, that is to say that each one of the 250,000 families have \$17,200 while the 12,000,000 families have \$251 each: a more revolting picture it would be difficult for the *Magazine* to paint.

The few in this high noon of our Christian civilization, have secured about all the wealth of the country. The masses are down to \$251 each, not enough to build a millionaire's pig pen or a dog cote; practically the 250,000 plutocratic families have got all the wealth and if the remark of the Master that "Ye have the poor always with you" was true in Judea, it is a thousand times as true in the United States of America, where for four hundred years the emancipating, redeeming and soul-saving machinery of the church has been in constant operation, always urging the rich to give, because the assertion is made, that "God loves the cheerful giver."

I notice in a recent issue of the *Philadelphia Ledger* an article on "true giving." The writer remarks that "getting and giving seems at first sight to be so entirely opposite in their nature that we hardly suppose it possible for the same person to excel in both," and adds, "nothing is clearer than that we cannot give that which we do not possess. If we have no money, we cannot bestow alms, or found institutions, or endow

hospitals, or provide for any of the thousand needs that only money can supply." The question that just here arises, relates to "getting," the processes by which men get, that they may give.

The plutocrat Carnegie's conscience is exercised over the question of giving. He wants to be, in the language of the Sunday school song:

"———An angel
And with the angels stand
With a crown upon his forehead
And a harp within his hand."

He talks incessantly about giving and is so concerned about his soul that he rushes into print with his theories to make it appear that he is a modern Abou Ben Adhem, who loves his fellow men, and by giving taffy to the recording angel, can get his name in the list of those who love the Lord. But he fights shy of his methods of getting.

Carnegie employs 5,000 men and pays them on an average 50 cents a day less than they earn. This is putting it low. By this operation he pockets in stealings \$2,500 a day, or, \$782,500 a year, and in 25 years has piled up a surplus by his methods of \$19,562,500. At 6 per cent. this colossal sum total of robbery yields Carnegie \$1,173,750 a year, and while he blubbers about how he can give, he continues the business of getting.

Mr. Rockefeller, president of the Standard Oil Company, pursues precisely the same game, has a much larger piracy fund than his fellow-philanthropist, Carnegie, is a devout Christian and bombards the "throne of Grace" with prayers of classic elegance, which will do to print in the *New Jerusalem Banner* without change of punctuation, or the remodeling of a sentence.

As for Jay Gould, the lamb-shearer par excellence, he has not bloomed out as a philanthropist, as yet. Jay has an idea that if he wants a legislature or a court or a congress, the way to do is to buy them, just as he does stocks—and as for Heaven, should it ever occur to him that he needs an interest in it, he will consult George and offer what he thinks is a fair price. At any rate, he is not writing *Magazine* articles, like Carnegie, showing how to give of his boundless stores of swag secured by his shears, or squeezed out of his half-paid telegraphers.

The Vanderbilts are in the giving business, but their idea is to give their employes *baths*. To keep their employes well washed seems to be the controlling purpose of their gifts, and to see that the Pinkerton fund is sufficient to equip an army of thugs upon the shortest possible notice to quiet workingmen who believe, if they were honestly paid, the ceaseless howlings about giving to the poor would be greatly modified.

Who doubts that there are 10,000,000 wage-workers in the United States?

Who doubts that these wage-workers are robbed of fifty cents a day, or that they earn fifty cents a day more than they are paid?

Rob these men of fifty cents a day for twenty-five years and you have a sum total of robberies of \$38,125,000,000. And, having robbed labor of this amount, one sees without difficulty the cause of universal poverty and the necessity for giving.

But is it giving? Are such men entitled to be known as philanthropists?

Was the world ever confronted with such brazen impudence?

Does not the contemplation of the subject create a greater confusion of ideas than there was confusion of tongues at the building of Babel?

How long, O Lord! how long will the sham prevail? When will workingmen demand and receive what they earn? Echo answers, when.

George Norman.

The Railroad Problem.

FROM the *General Manager* (an illustrated journal which seems to stand in about the same relationship to the railroad interests of the United States as do *Puck* and *Judge* to the Democratic and Republican parties), I clip the following extracts:

Between the upper and nether millstones of the president, who, according to Mr. Stickney, is not fit to be trusted "with a cent out of sight," on the one hand, and the wreckers and scaplers on the other, both the employees and the stockholders of many of our railroads bid fair to be squeezed flatter than the much talked of pancake.

Speaking of the Chicago & Alton Railroad the *General Manager* goes on to say: "Something fearfully wrong there must be, when the only road in all our Western country that pays an 8 per cent. per annum dividend preferred to let its cars stand idle for a whole six months rather than carry freight at the rate which its competitors were offering. Either the theory of the men who run the one road that pays 8 per cent. to its stockholders is entirely wrong, or else the reckless policy of the men who manage the competing lines must be surely and swiftly pushing those lines to the verge of bankruptcy and ruin."

Notice the cunning assumption with which this journalistic apologist for fraud classifies the railroad employees with the grist of fraudulent and fictitious stock shares, which are to be squeezed (ground?) in a metaphorical mill, instead of assigning such employees their true position as one of the mill-stones of that mill which one of these days will grind the blood-sucking leeches to a fine powder.

As to the alternative assertion that "the theory of the men who run the one road that pays 8 per cent. to its stockholders is

entirely wrong," I should say that if the term "wrong" is used in the sense of unjust, inequitable, dishonest, then, most decidedly, is the policy of those men radically, flagrantly, eternally wrong. In the first place no investment or industry can by any means realize 8 per cent. upon capital invested without robbing some other interests or industries. The legitimate earnings of capital or money do not amount to 8 per cent. per annum. Railroad bonds should be, and generally are, as good securities as government bonds; and we all know that United States bonds could be readily negotiated at two and one-half per cent. Not only is this the case, but the wrongfulness of this theory or policy is intensified in degree by the fact that the stock upon which the Chicago & Alton pays 8 per cent. per annum represents *not* the cost but is in addition to the cost of the road, said cost being represented by mortgage bonds, upon which the road is paying an average of almost 7 per cent. Turning to Poor's Manual for 1890, I find (in round numbers) that the Chicago & Alton owns 549 miles of road and leases 300 miles. The 549 miles owned are bonded and stocked for \$50,250 per mile, being preferred stock, \$3,479,500; common stock, \$14,115,000; funded debt, \$9,921,850. The road owned could very easily be duplicated for the amount of the bonded indebtedness, or \$18,072 per mile. The net earnings of the road from traffic alone were \$2,944,880, besides which it received \$273,874 as interest and dividends upon stocks and bonds (mostly its own or those of its leased lines) owned by it, but not included in its statement of funded indebtedness. It paid \$823,494 interest upon its outstanding bonds, or nearly seven per cent. upon the cost of the road. Besides this it paid \$1,407,712 in dividends, spent \$197,869 in the purchase of sinking fund bonds and "other property," and passed \$120,201 to the credit of its surplus fund. Its net earnings from traffic paid the princely income of slightly more than TWENTY-TWO PER CENT. upon the cost of the road at \$25,000 per mile. Yes, indeed! there is something radically, intensely, fearfully wrong about "the theory of the men who run the one road that pays 8 per cent. to its stockholders." *En passant*, it may be remarked that the C. & A. has a surplus fund of \$2,715,800, and has paid off nearly two million dollars of interest-bearing securities.

Why is it that the editor of *General Manager* and other journalists of that ilk cannot see that what is called the "railroad problem" is simply an effort upon the part of the people—farmers, manufacturers, merchants and mill men—to confine the railroads within the same limits of commercial law and usage which they themselves have to conform to and abide by. When we buy a

suit of clothes, a pair of shoes, or a locomotive, we pay such a price as pays interest upon the capital invested *only*. By what right or rule of commerce, then, do the railroads assume that they are being badly treated and crowded to the wall, because the public is unwilling to be taxed in transportation rates to pay interest upon two or three times the cost of the agencies of transportation.

The truth is that the railroads were almost universally built with borrowed money, and the bondholders represent the cost of the roads, and in many instances much more than their cost. The stockholders are simply and purely parasites, living upon the body corporate, who have no more connection with the legitimate capitalization of the railroads than has the Shah of Persia. It must be remembered that all interest upon bonds and dividends upon stock is paid out of the net earnings—i. e., out of what remains after all operating expenses are paid, including the enormous salaries of high-priced officials, the necessary repairs upon the road and all taxes. Now take the very conservative statement of *Poor's Manual*, that the bonded indebtedness of the roads fully covers their cost, and we have, to start with, the sum of \$79,532,883 paid in 1890 as dividends upon stock that was literally stolen from the people.

Now deduct from the bonded indebtedness of \$4,828,365,711 the sum of one billion dollars as the portion of the cost of the railroads paid by the people in cash, municipal, township, county and state bonds, land subsidies, etc., etc., and at 5 per cent. interest you have another sum of \$50,000,000 unjustly taken from the people. In short, a proper condition of affairs would be the capitalization of the roads at \$3,750,000,000 at 3 per cent. interest, when railroad bonds would be equally as good securities as government bonds, and the total net earnings required would be the sum of \$112,500,000, which, added to the cost of operating for 1890 would make a total of \$787,231,517, or \$205,625,339 less than was extorted from the public during that year.

Now as to the cost of building a railroad, I will offer a few suggestive items.

The Railroad Commissioners of the State of Kansas, in their 1890 report, while making a labored effort to make the cost of railroad construction appear as large as possible, say:

It is quite common, however, for inflated orators to assert that from \$100 to \$100,000 per mile is all that a railroad legitimately costs, and that all capitalization above that is "water." We have in the reports from which the foregoing figures have been taken, an itemized account of the actual cash cost of 1,885 miles, 1,000 miles being in Kansas. We refer to the Chicago, Kansas & Nebraska Railroad. All of this road has been built within the last four years, under most favorable conditions as to cost of labor and material, and built by or under the auspices of a company whose financial credit was high, enabling

it to place securities upon the market upon very favorable terms, yet the actual cost and outlay for road and equipment up to June 30, 1889, was \$29,264,197.33, or \$21,083.93 per mile. There is no water in this.

It is true that all the railroad mileage in the state has not cost so much per mile as the C., K. & N. lines, but some has cost a good deal more (I do not believe it). It would, in our judgment, be a moderate estimate to put the actual average cash cost of the total railroad mileage of Kansas, including equipments, at the cost of the C., K. & N. lines, or \$21,083.93 per mile.

In their zeal to make a case for the railroads, these servants (?) of the people forgot to state that there were shares of stock amounting to \$2,540,800, or \$2,408.31 per mile, issued to "counties, cities, townships and individuals, in exchange for aid, bonds, etc.," so that these exploiters have only the sum of \$18,675.62 per mile invested in the road. They also forgot to mention the fact that the Chicago, Rock Island & Pacific Railway Company, under whose benevolent (?) "auspices" this C., K. & N. road was built, has since foreclosed upon the road and rendered the stock spoken of worthless in the hands of the confiding "counties, cities, townships and individuals" who generously afforded their aid.

But how do business men and associations of business men figure on the cost of such roads? From the *Railway Review* of March 14 I clip the following:

Texas—The Business Men's Club, of Dallas has determined to build a railroad from Dallas to Alexandria, La., on the Red River, a distance of 275 miles, and from Dallas to a point in Youngs county, a distance of 125 miles, making an aggregate of 400 miles. The cost of construction has been estimated at \$5,000,000. Three hundred and seventy thousand dollars has been subscribed by fifteen members of the club, and the managers of the club say they will have no difficulty in securing funds. The projectors of the enterprise are: John N. Simpson, Alex. Sanger, B. Blackenship, Henry Exalls, J. S. Armstrong, E. P. Cox, Chas. W. Guilde, T. J. Oliver, W. W. Leake, W. H. Lemmon, Jas. Moroney, Jas. Simpson, J. C. O'Connor, C. E. Wellesley, Byron T. Barry, T. L. Marsallis, J. L. Boyd, O. P. Bowser, C. W. Gano and W. C. Connor.

This estimate, it will be observed, is only \$12,500 per mile.

Now, see the charming simplicity with which railroad corporations, used to the game, lay bare their schemes for gigantic jobs against a confiding and admiring public. From the same issue of the *Railway Review* I clip as follows:

Chicago & West Michigan.—Treasurer Charles Merriam has issued a circular, giving particulars concerning the proposed extension from Traverse City to Bay View, and the financial methods for the prosecution of the enterprise. The circular, in part, is as follows: "The extension to Traverse City last year was profitable to this company, and to add still more to its income producing power, it is desirable to control a line extending further north from our terminus at Traverse City to Bay View, two miles beyond Petoskey, in all a line of about ninety three miles. To this end, parties acting in our interest have organized a corporation under the laws of Michigan, called the Chicago & North Michigan Railroad Company, and have taken the preliminary steps towards locating and constructing the new line. This proposed new road will run through an admirable timber country, and a thorough examina-

tion of the section has fully confirmed the directors in their belief that it will prove both a wise and profitable undertaking and that it should be constructed at once. Charlevoix and Petoskey, two of the objective points, are already quite noted summer resorts, and travel to and from those points is rapidly increasing. In view of the great advantage to our road from controlling the business of this new line, your directors have agreed to find the means of constructing and equipping it and to permanently operate it as a part of our line, upon terms which will result in the Chicago & West Michigan Railway Company becoming the owner of substantially the whole stock and of the entire bond issue of the new road. The shares and bonds to be thus acquired, your directors now offer to the stockholders of the Chicago & West Michigan Railway Company. The bonds will be delivered with the guaranty of the Chicago & West Michigan Railway Company of principal and interest, and the stock will be entitled to the same dividends that may, after its issue, be paid upon the stock of the Chicago & West Michigan Railway Company. The issue of first mortgage bonds will be limited to \$18,000 per mile. This company reserves the right to issue its own shares to subscribers, instead of or in exchange for the shares of the new company, if it shall be found practicable and desirable to do so."

Note the fact that the railroad building this extension to its own line proposes to issue the stocks and bonds of such extension to *itself*, and the further fact that the extension is to be bonded for \$18,000 per mile, and we may be sure that the capital stock will be in no less amount. The road will probably *cost* about \$12,000 a mile.

KANSAS CITY, Mo. *One of the People.*

Single Tax Platform.

SO much has lately appeared in these columns on the subject of single tax that it is probably well to take the platform as it was given by its father, Mr. Henry George, to the *World Almanac* for 1890, and consider it in detail and see if it has all the merits claimed for it. Mr. George says:

The single tax contemplates the abolition of all taxes on labor or the products of labor—that is to say, the abolition of all taxes save one tax levied on the value of land irrespective of improvements.

Will not the levying of the single tax on land be a tax on labor and its products? It has been repeatedly stated that labor creates wealth, and that without it there could be no wealth. The foundations of the immense fortunes of the Vanderbilts, the Astors, of Gould, Mackey, Fair, and hundreds of others have all been the product of very hard labor, carefully saved and invested. Let us suppose that six young mechanics of different trades, having saved a sum of money, conclude to buy some lots in a small town. They do so, and although they are not a bit richer than they were before, the Single Taxer says that since they have put their money in land it must now pay taxes. Is not this very money that was used in the purchase of this land a product of labor, and should it not be exempt from tax according to single tax theory?

Since in all our states we now levy some tax on the value of land, the single tax can be instituted by the simple and easy way of abolishing one after another all other taxes now levied, and commensurately increasing the tax on land values, until we draw upon that one source for all expenses of government; the revenue being divided between local governments, state governments and the general government, as the revenue from direct taxes is now divided between the local and state governments, or a direct assessment being made by the general government upon the states and paid by them from revenues collected in this manner.

Why should all taxes be taken from everything else and the whole burden of taxation be thrown on land? Ought not the owner of a thousand dollars' worth of personal property, which can be stolen, carried away or destroyed very easily, to pay as much or more for the protection of his property by the government, as the owner of a thousand dollars' worth of land, which cannot very easily be stolen from him, and therefore does not need as much protection? The estimated wealth of the United States for 1890 is about \$36,465,000,000, of which \$15,050,000,000 is in lands and forests and \$18,460,000,000 in houses, but as the houses are not to be taxed by the single tax, it would probably leave only \$5,000,000,000 as the value of the land on which these houses stand, and this, added to the other land, would make about \$20,000,000,000 to be taxed for the benefit of the whole wealth of the country in land, animals, railroads, public works, houses, furniture, merchandise, bullion, shipping and sundries, and if 2 per cent. on the whole valuation were needed for taxes it would require more than 6½ per cent. on the land value, or practically put the farmer and landholder to paying taxes equal to the average interest on their land values. Is this the fair thing?

The single tax is not a tax on land, and therefore would not fall on the use of land and become a tax on labor.

It is a tax, not on land, but on the value of land. Thus it would not fall on all land, but only on valuable land, and on that not in proportion to the use made of it, but in proportion to its value—the premium which the user of land must now pay to the owner, either in purchase money or in rent, for permission to use valuable land. It would thus be a tax, not on the use or improvement of land, but on the ownership of land, taking what would otherwise go to the owner as owner and not as user.

If it is to be a tax on the value of land, why should there be exceptions made, because some may not be as valuable as other, and who is to fix the limit between valuable land and land of no value? If it is worth little, let it pay in proportion, but do not try to exempt some and shift the burden on others, or there will be more inducement for fraud than before.

In assessments under the single tax all values created by individual use or improvement would be excluded, and the only value taken into consideration would be the value attaching to the bare land, by reason of neighborhood, etc. Thus the farmer would have no more taxes to pay than the speculator who held a similar piece of land idle, and the man who on a city lot erected a valuable building

would be taxed no more than the man who held a similar lot vacant.

As the value created by improvements is not to be taxed, how are we to arrive at a value? Manhattan island 400 years ago was bought for about forty dollars' worth of goods. Is that the true value of the island now, that is, leaving out of the calculation the improvements made on it or in the country? Would not the building of Philadelphia, nearly 100 miles away in one direction, or of New Haven or Albany in the other direction enhance the value of Manhattan Island? How then can we get rid of the value caused by improvement, and is it not labor which, at the behest of capital, has made a square foot of land in New York worth as much now as the whole island was originally bought for? If it is to be taxed at its present value are you not taxing the product of labor?

The single tax, in short, would call upon men to contribute to the public revenues, not in proportion to what they produce or accumulate, but in proportion to the value of the natural opportunities they hold. It would compel them to pay just as much for holding land idle as for putting it to its fullest use.

To illustrate this point let us suppose that our six young landholders go to use their lots, each according to his taste and ability. Mr. A. puts up a saloon and dwelling worth \$3,000, Mr. B. a store and dwelling costing the same; Mr. C. puts up a house costing him \$2,000, Mr. D. is content with a \$1,000 home, while Mr. E. is not able to build, but plants trees, flowers and vines to beautify it, while Mr. F., being of a practical turn, plants potatoes and vegetables. As improvements are not to be considered, must each of these six pay an equal amount of tax? A. may be piling up money rapidly with his saloon; B. may make a fine living out of his store; C. has a fine home for his family; D. has a good shelter from the storms; E. can in due time feast on his fruits or inhale the perfume of his flowers, while F. can eat his potatoes and cabbage, and still all pay the same.

The single tax, therefore, would:

1st. Take the weight of taxation off of the agricultural districts where land has little or no value, irrespective of improvements, and put it on towns and cities where bare land rises to great value.

It would be an utter impossibility to take the tax from agricultural lands and throw it on the land in cities and towns, because for every acre located in a city or town there would be about a thousand acres outside of their limits, and to make one acre pay the taxes on a thousand would amount to a confiscation of the land, and would be a greater evil than all the evictions that ever took place in Ireland.

2d. Dispense with a multiplicity of taxes and a horde of tax-gatherers, simplify government and greatly reduce its cost.

As far as common people are able to see there does not seem to be any very large

horde of tax gatherers, for they only see or hear of the assessor once a year, and the collector sends his bill that often. Of course we know that there are special taxes on whisky (if that was taxed out of existence altogether it would be the greatest blessing to the country and to labor that could be bestowed) and tobacco, and on some imports also; but as it is claimed that the tariff acts as a protection to our labor against the competition of cheap labor of foreign countries, it would hardly be supposed that advocates of American labor would favor its abrogation under any circumstances.

3d. Do away with the fraud, corruption, and gross inequality inseparable from our present methods of taxation, which allow the rich to escape while they grind the poor. Land cannot be hid or carried off, and its value can be ascertained with greater ease and certainty than any other value.

By the present system of taxation a thousand dollars worth of property, no matter what kind, is supposed to pay its share of the burden in equal proportion with each other thousand dollars' worth, but that it is not done is owing, not to any fault of the system, but to a sad laxity of morals on the question of taxation, which permeates all classes of society, and to the easy going disposition of the officials entrusted with the duty of assessing and collecting, and until these matters are improved no system of taxation will be a success. Having had the privilege and pleasure (?) of serving as assessor, I have become somewhat posted on the laws, and find them equitable and fair, but in the execution of my duty I soon became aware of the fact that I was expected to be a little easier on those who had voted for me than on those of the other party, but I am glad to say that party considerations were not allowed to influence my judgment in making out my assessments. As long as the tax officers are elected by the people and are eligible to reelection, the temptation to reward party friends for past, or for future votes, will be strong, and ever be a menace to securing just and equitable assessments. This evil is augmented by the prevailing laxity of morals on the subject of taxes, which is so great that persons otherwise honest in their dealings with their fellow-man, think it no harm to conceal the true state of their affairs, and thus cheat the government and the rest of the community, for when the government does not get its just dues from them, some one else has to pay an extra share. Nor is this evasion of taxes confined to the rich, for, to their shame be it said, many poor men are just as guilty, and instances are not rare where men have not been assessed for any property, and have failed to pay even the single dollar poll tax levied in some states.

4th. Give us with all the world as perfect freedom of trade as now exists between the states of our

union, thus enabling our people to share through free exchanges in all the advantages which nature has given to other countries or which the peculiar skill of other peoples has enabled them to attain. It would destroy the trusts, monopolies, and corruptions which are the outgrowths of the tariff. It would do away with the fines and penalties now levied upon any one who improves a farm, builds a house, erects a machine, or in any way adds to the general stock of wealth. It would leave every one free to apply labor or expend capital in production or exchange without fine or restriction, and would leave to each the full product of his exertion.

Free trade is not the remedy for all the ills which afflict people, or some nations would be on the pinnacle of prosperity. The workmen of America, as a rule, favor protection in some form; it is among the farmers we find the most free trade advocates. The six men above alluded to are not taxed because they have lots with a saloon, a store, a fine house, a common house, fruit trees or vegetables on them, but they are taxed for their value, and ought to have paid taxes for the same amount, even before it was paid out for the land and its improvement. These men were not any richer by their investment in land, nor were they made any poorer by it, so as their wealth remains the same their share for the support of the government should be the same.

5th. It would, on the other hand, by taking for public uses that value which attaches to land by reason of the growth and improvement of the community, make the holding of land unprofitable to the mere owner and profitable only to the user. It would thus make it impossible for speculators and monopolists to hold natural opportunities unused or only half used, and would throw open to labor the illimitable field of employment which the earth offers to man. It would thus solve the labor problem, do away with involuntary poverty, raise wages in all occupations to the full earnings of labor, make over production impossible until all human wants are satisfied, render labor-saving inventions a blessing to all, and cause such an enormous production and such an equitable distribution of wealth as would give to all comfort, leisure, and participation in the advantages of an advancing civilization.

In the case of the six men is F. to be driven to give up his lot by the heavy taxes on it, because after having made a start in saving and buying the lot, he has been hindered from accumulating more to build with, and thus be put back by the action of the single tax which was to prove such a boon to labor? Or shall he be forced to put up another store thus halving the business of the first one and making poor investment for both? Or, suppose a line of railroad is built and operated through a section of country; are the adjoining owners "to put their land to its fullest use" by building a railroad on their land? This idea of forcing men to use their land may do to talk about, but certain laws of demand and supply will have to settle the point.

The ethical principles on which the single tax is based are:

1st. Each man is entitled to all that his labor produces. Therefore no tax should be levied on the products of labor.

Being based on abnormally selfish principles, it would ignore all duty of man to his God, his country and his family, for it is evident that he wants "all" he can earn, and intends to use it on himself.

All men are equally entitled to what God has created and to what is gained by the general growth and improvement of the community of which they are a part. Therefore, no one should be permitted to hold natural opportunities without a fair return to all for any special privilege thus accorded to him, and that value which the growth and improvement of the community attaches to land should be taken for the use of the community.

This sounds very much like the dead-beat's motto: "The world owes me a living, and I am going to have it." The world does not owe a living to any one, nor is any man entitled to an equal share in "the gain by the growth and improvement of the community where they live," *unless he has done his share to earn it.* The indications, as judged by the platform, are that the share for the common good contributed by Single Taxers would be very small, for after having driven the landholders to sell out, they would not be able to buy the land, for they are not able to pay taxes at the rate of 1 per cent.; therefore it is not to be presumed that they would ever buy, or be able to pay 5, 6 or 7 per cent., as the single tax would require. Instead of all the good predicated upon the introduction of this system, it would seem that it would ruin more men than it would enrich, and instead of peace and plenty, it would bring ruin and disaster, and still leave the question of equal taxation unsolved. A great deal of patriotic talk is now being indulged in on account of the squabble with Italy, but the best way of showing patriotism is to put your hand in your pocket and cheerfully contribute your share to the support of the government in times of peace as well as to fight for it in time of war.

Wm. Weiler.

Labor and the Single Tax.

IN saying that capital is not necessary to the production of wealth, we state an absolute fact. But while it is true that man might live, and supply all his simply animal wants without the aid of capital, it is also true that without the aid of capital progress would be impossible; and if this factor were eliminated from production, man would be worse off than the veriest savage. I cannot, at present, think of a people who do not employ some capital in ministering to their wants. In short, to use the words of Henry George, "Progress and Poverty," chapter III, book III, "When we come to analyze production we find it to fall into three modes, viz.:

"Adapting or changing natural products, either in form or in place, so as to fit them for the satisfaction of human desires.

"Growing, or utilizing the vital forces of nature, as by raising vegetables or animals.

"Exchanging, or utilizing so as to add to the general sum of wealth, the higher powers of those natural forces which vary with locality, or of those human forces which vary with situation, occupation, or character.

In each of these three modes of production capital may aid labor; or, to speak more precisely, in the first mode capital may aid labor, but is not absolutely necessary; in the others capital must aid labor, or is necessary."

There are many who assert that interest is the robbery of labor, and that before labor can be free, interest must be abolished. Those who make this assertion are evidently thinking of interest only as that which is paid by the user of capital, to the owner of capital. But this is not all interest, it is only some interest. When we place animals on a stock farm, or put away wine to improve with age, we receive an increase from the use of capital which is just as truly interest as though we had lent our capital to another and received payment for its use. So also when capital is used in exchange, there is a benefit from the increase, or greater value of the things exchanged for, which accrues wholly to capital, and is thus interest. Now it is clear that capital will not assist labor in the first mode of production, unless it receives a benefit equal to what it could get if employed in the second or third modes. It is also clear that labor will not assist capital in the second or third modes unless it can get a return equal to what it would get if expended in the first mode. In other words, neither labor or capital will be devoted to any mode of production while any other mode which is open to them will yield a greater return. Now it is evident that where natural opportunities are free, labor and capital may engage in any mode of production, and claim the entire product; capital taking as its share the natural power of increase which attaches to capital generally, and labor taking the balance. Where natural opportunities are all appropriated, labor and capital can only claim as their reward that part of the product which is left after the payment of rent. Thus wages and interest depend not upon the produce of labor and capital, but upon what is left after rent is taken out, or upon the produce which they could obtain from the poorest land in use.

To recur again to the words of Mr. George, "The wealth produced in every community is divided into two parts by what may be called the rent line, which is fixed by the margin of cultivation, or the return which labor and capital could obtain from such natural opportunities as are free to them

without the payment of rent. From the part of the produce below this line wages and interest must be paid; all that is above goes to the owners of land. Thus, where the value of land is low, there may be a small production of wealth, and yet a high rate of wages and interest, as we see in new countries. And where the value of land is high there may be a very large production of wealth, and yet a low rate of wages and interest, as we see in old countries. And where productive power increases, as it is increasing in all progressive countries, wages and interest will be affected, not by the increase, but by the manner in which rent is affected. If the value of land increases proportionately, all the increased production will be swallowed up by rent, and wages and interest will remain as before. If the value of land increases in greater ratio than productive power, rent will swallow up even more than the increase; and while the produce of labor and capital will be much larger, wages and interest will fall. It is only when the value of land fails to increase as rapidly as productive power, that wages and interest can increase with the increase of productive power. All this is exemplified in actual fact."

Now, I fancy some person will say, "If all this is true the 'labor problem' can be settled by simply abolishing rent." It is the vital principle of the economics of "anarchy," that rent, interest, and taxes are robbery, and should be abolished. Now, if rent were an arbitrary thing it might be abolished. But rent is not arbitrary, it is natural, and cannot be abolished. For just as certain as there is some land that will yield a greater return to labor and capital than can be secured from an equal exertion of labor and capital upon other land, just so certain will the exclusive right to the use of that land yielding the higher product be a privilege for which labor and capital will be willing to pay. The only question is shall this payment be made to some individual who did nothing to create the rent, or shall it be made to the community as a whole which did create it? In common speech we apply the term rent to payments for the use of machinery, buildings, etc., as well as to payments for the use of land. But in the economic meaning of rent, only that part of the payment is rent which constitutes a consideration for the use of the land; payments for the use of buildings, machinery, or other improvements being properly interest, as it is a consideration for the use of capital. We also think of rent only when owner and user are distinct persons. But there is also rent where the same person is both owner and user.

Where owner and user is the same person,

whatever part of his income he might obtain by letting his land to another is rent, and the return for his labor and capital is that part of his income which they would yield him did he hire instead of owning the land. Now if I buy land for a small price, and hold it out of use until I can sell it for a large price, I have become rich, not by wages for my labor or interest for my capital, but simply by the increase in rent. Now in a rapidly progressing country, like the United States, where there is a swift and steady increase of population, it is just as certain that rent is bound to increase as that night will follow day. This certainty of increased prices through the increase of rent, produces what might be called a combination among land holders and tends to the withholding of land from use in expectation of higher prices, thus forcing the margin of cultivation farther away than is required by the necessities of production. Let a man start out from the east in search of the margin of cultivation; he will travel over thousands upon thousands of acres of virgin soil before reaching the point where land can be had free of rent. He is forced so much farther than he otherwise need to have gone, by the speculation which is holding these lands out of use in expectation of increased value in the future. And when he settles, he will from the same cause take up (if he can) more land than he can use, thus in turn forcing those who follow him farther on than is necessary, and carrying the margin of cultivation to still less productive, because more remote points. The same cause operates in rapidly growing cities, to force the margin of the city farther away from its centre than is necessary. If the land of superior quality as to location was always fully used, before land of an inferior quality was resorted to, we would see no vacant lots left as the city extended; neither would we see miserable shanties in the midst of costly buildings. These vacant lots, some of them extremely valuable, are withheld from use because their owners, not being able or willing to improve, prefer to hold them out of use in expectation of an increase in value, rather than part with them to those who are willing to improve them. This speculative increase of rent is a direct injury to labor; it must not only relatively but absolutely decrease wages. For the cause which limits speculation in commodities, viz.: the tendency of increased price to draw forth increased supplies, cannot operate to limit the speculative advance in land values. For land is fixed in quantity. Human agency can neither increase nor diminish it. The only limit to the price of land is the minimum required by labor and capital as a condition of engaging in production. And as wages cannot be reduced below the point

at which laborers will consent to live and reproduce, nor interest below the point at which capital will engage in production, this point is the only limit which restrains the speculative increase of rent. We will next consider the effect of taxation upon commodities and land values, and I think it will then be clear how the "single tax" will benefit labor.

W. P. Borland.

[TO BE CONTINUED.]

Codification of the Single Tax.

HAVING been for years a constant writer on economic subjects, I have noticed that certain minds will never grasp the principles of the single tax, unless they are shown that, when the time comes, man shall have no trouble in codifying that single tax of ours. Men have never had any trouble in codifying iniquities. Why should they be unable to codify righteousness? and the single tax is but righteousness applied to taxation. After a great deal of thought on the subject I finished a few months ago, a crude, business-like draft of such a codification, as follows:

Taxation being the most basic and transcendent function of human societies it underlies all the other conditions in the social compact. Hence, taxation should rest on fixed scientific principles, far above all political intrigues, far above all partisan ambition. Until that is done civilization must be a failure as it has so far been. Therefore, be it enacted:

First. Lots and plots of land left unimproved, or with not over one-third in useful, fixed improvements of most of the ten nearest similar lots and plots around, shall, on demand of two local citizens, be advertised for sale at auction, for at least two weeks in November of each year, to be sold during the third week of January next, to the highest bidder for annual land rent (single tax), and willing to pay the actual commercial value of fixed improvements, if any, annually estimated and revised before the sale by two or more local experts, chosen in annual elections; the old holder to retain his property if outbidding at least five dollars the highest land rent bid, when land contains improvements.

Second. All land assessments to rest on such above mentioned transactions in their approximate relations to respective localities, according to the best judgment of the above said experts, and to stand for three years, except in cases where some palpably unjust discrimination has taken place, when sale at auction can be forced next year, on the dates and rules above specified, so as to check all favoritism in land assessments. (No one will have any interest to force sales of land paying the full rental value.)

Third. On demand of two local citizens all improvements visibly estimated at overvaluations, this endorsed in writing by ten local property holders, shall be advertised and sold at auction on dates mentioned for land transactions, to the highest bidder, without reference to the land assessment, if that is correct, thus to check all attempts to avoid land sales at auction for under assessments because of over-estimated improvements.

Fourth. The tax and valuation books to be opened every Saturday evening to the inspection of any citizen.

Fifth. The annual sales to be enforced and presided over by the local citizens demanding them in case of neglect by the local officials so to do, in all cases subject to revision by all bidders.

Sixth. Only the actual market value of what is conducive to human comfort or to efficiency in production shall be included in the annual estimates of improvements by the local officials, so as to discourage all recklessness or useless expenditures tending to complicate the enforcement of correct land assessments.

Seventh. The people in annual elections shall fix the proportion of the tax fund to be applied to national and state expenses, balance to be left for local needs, each political organization to propose its own proportions for the majority of voters to decide upon.

The annual land values of our railroads, \$250,000,000 (5 per cent. on \$5,000,000,000) would to day suffice for our national expenses, if we should decide to stop recklessness in pensions, and let local appropriations be faced by the local land values of each municipality, as in ethics it should be.

Now, let me say a few words about Mr. Marshall. In his last criticism he says that he has not studied the single tax. Why has he not? If he had he would catch the spirit of what different writers say on the subject, even if they do not always happen to use the most precise language. Mr. Marshall has a bright mind, and a little study would enable him to see what he cannot see to-day, and he would be a great help to the good cause of social improvement.

Referring to those two men, A. and B., of Mr. Marshall, with similar lots, A. with capital enough to improve his lot, B. having to wait ten years to accumulate sufficient capital to improve his. Under the single tax B. would never be foolish enough to hold that vacant lot for ten years because he would be sure of having any similar convenient lot as soon as he had capital with which to improve it. The single tax would be a supreme negation if it enabled any one to hold valuable land for ten years totally unimproved, and to ask, as Mr. Marshall does, if revenues can be derived from any

other source than labor, is to ask if our planetary system can derive heat from any other source than the sun, or if we, on earth can derive moisture from any other source than our surrounding oceans.

When labor is free from the Satanic grasp of monopoly labor shall have no trouble in paying the revenues that labor owes to the social organization and are created by organized society, THE ANNUAL LAND VALUES.

Of course some farming belts are unproductive. Can there be any industry really productive when we transfer all profits to the gambler and monopolist through the most ridiculous methods of taxation under the sun?

José Gros.

The Results of the Revolutions.

THE revolutions of the South and Central American States are so frequent as to be a matter of jest to the more civilized and settled countries of the world. They are, however, but the natural features of the great transition that is slowly taking place, the conversion of the Spanish-American oligarchies into English-speaking republics. Two prophecies may be safely made, each intimately connected with the other, one that, in the future of the world, English will be the universal language; the other that, in the years to come, all nations will dwell under a republican form of government. The close student of current events will see many indications which point to the ultimate fulfillment of these predictions, which will come through many trials and tribulations, through financial upheavals and moral earthquakes. Serene and triumphant, the Republic of the United States floats upon the high waves of success as a magnificent inspiration toward which the despot-ridden people of the world look with longing eyes. Naturally the oldest and strongest of the monarchies offer fewest opportunities for revolution, and while from Russia come the despairing cries of the oppressed and from Germany and England the loud murmurs of the discontented, the toiling masses realize how utterly useless would be any attempt to change the long-existing and strongly-intrenched forms of government.

It is under the weaker powers that hope holds out the flattering allurements of the overthrow of tyranny, and the efforts toward this end are usually successful in proportion to the intelligence and self-control of the people. Switzerland is a bright example of the triumph of republican principles. France owes her present enviable position to a series of seemingly fortuitous events, which while apparent calamities, led to the formation of what promises to be a stable and prosperous republic. The foundation of the Portuguese kingdom is tremb-

ling, but the people are not quite ready for the transformation. Coming then into the new world, with the greatest republic on earth as its centre and balance, we find the commotion running to the north and to the south like a succession of earthquake shocks which threaten at any point a terrific upheaval. In the British American provinces, where the people are cool and patient and slow to act, the leaven works slowly although none the less surely. In the Central and South American provinces the ferment seethes and boils. The people are restless, dissatisfied, unstable and wholly wanting in self-control. Broken up into many divisions, warring with each other, the prey of the speculation and the ambition of other countries and the victim of the same evils among the powerful leaders within their own boundaries, their history is but a series of revolutions.

Brazil and Chili have made most claim to political and financial respectability, but the latter country is in a fair way to lose entirely her former prestige. Her President, Balmaceda, has quarrelled with the powerful families who have constituted a ruling aristocracy, wielding a virtual control of governmental affairs. As a consequence, a tremendous insurrection has been organized which has seized upon the Chilean fleet and is using it to bombard the President's troops in the seaport cities. As Chili is really nothing but a strip of sea coast, the troops have little opportunity to cope with the enemy and the prospects are that Balmaceda will be forced to resign and his successor will but repeat the programme. Brazil has gotten rid of her Emperor, who was virtually a figure-head, and has declared a republic which is more in the nature of a military dictatorship. The first ministry resigned and her President, Marshal de Fonseca, rules by his troops. The Argentine Republic is immersed in financial ruin, Peru is practically bankrupt, which adds to the general dissatisfaction of the people. Uruguay is in the same state, and only awaits the foreclosures to precipitate disaster. Similar conditions exist in the Central American States, where the upheavals among the people keep pace with those of the volcanoes, and the rotation in office is so frequent as to make one dizzy in the contemplation.

Through the throes of insurrection and revolution shall be born eventually republics that shall endure. It is not the province of the great mother-republic to take the government out of the hands of these peoples, even though they be poorly fitted to administer unto themselves. But it is our duty, and one which we will jealously perform, to see that they are permitted to work out their own salvation and that no foreign power comes in to deprive them of

this privilege. While they will profit largely by education and by experience, they will receive their greatest aid through contact, acquaintance and admixture with the English-speaking race. It is pervading the world and carrying progressive civilization to all the earth. These people to the south of us, struggling with their governmental problems, need something more than the example afforded by our republic, something more than a reciprocity of commerce, they need an interchange of people, and with the prospective railroads and steamship lines, this want will be supplied. Eventually, and this is no Utopian dream, the new world will present, from north to south, an unbroken series of peaceful, prosperous and permanent republics.

Ida A. Harper.

MEDITATIONS.

I stood in the potter's field thinking one day,
Over the mounds where unfortunates lay;
Noting the graves of the luckless and poor,
Thinking of all they were called to endure,
Ere they were stricken by want and disease,
Which ended their lives and brought to them peace;
There they were huddled together like stones,
With barely a handful of earth on their bones.

Soggy and wet was the soil on each mound,
Rank were the weeds which encumbered the ground,
Rude were the marks on the boards at their heads,
Telling who slept in the mud streaming beds:
Here it was, "Father, for whom we do mourn,"
There it was, "Mother, who'll never return."
Over beyond 'twas, "A sister we love,"
Or a brother now happy in heaven above.

I up on the hill 'neath the evergreen trees,
Where the foliage rustles and ways in the breeze,
Up where the grasses are nurtured with care,
And flowers spread perfume abroad in the air,
Monuments rise of the grandest designs,
Richest of marble from Italy's mines,
Telling of loved ones inurned below,
And wept for in couplets of classical woe.

There I stood thinking, my brain ever rife,
Trying to solve the great problem of life;
Asking myself why should these in the tomb
Sleep their last sleep mid the verdure in bloom,
While the poor lorn ones over the way
Slept in wet mud holes, scarce hid in the clay,
Where the rank thistles and burdocks just hid
Hemlock and pine of the cheap coffin lid?

Answer me, clerics, whose Scriptural lore
Aids you earth's mystical things to explore?
Tell me why here on this earth must the poor
Suffer and sink when they cannot endure
All of the tortures which poverty brings,
Cruel and crushing in deadliest stings,
Then, when at last it deprives them of breath,
Why must their bones be afflicted in death?

Come solve me the problem, where is the reward
Held in store for the poor? Is the fault with the
Lord?

Are you sure that a man linked to sorrow and strife
After death is assured of eternity's life?
Is religion dealt out in our churches to-day
With regard for hereafter, regardless of pay?
Is the Gospel alike for the Christians and Jews?
And impartially preached to your flocks in the pews?
Do you favor the rich man and scoff at the poor?
Are the mendicants driven away from the door?
Are you careless of bodies and seek but the souls?
Do you mete out salvation according to tolls?
Can a poor man have services read o'er his bier
Just the same as the rich man, with hearts as sincere?
Now, awaiting your answers, I'll pause with my pen,
Then, perhaps, reverend friends, I will write you
again.

Shandy Maguire.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the tenth day of each month.

Automatic Couplers.

Mr. W. Hodgson has seen proper to attack the position I took in commenting on the existing diversity of opinion among railroad officials on the coupler question and thinks I am indebted to some officials for my information on the subject. In regard to the first point, I wrote to show that after years of agitation and discussion there appeared to be many defects in the one adopted. On the second point it may suffice to say that I first served as a brakeman, 27 years ago, that I got up an automatic coupling, or rather two of them, 23 years ago, and have since served as fireman and engineer some thirteen years, so that I may have found out something by experience without asking officials for information on these points, or taking their opinions as facts. For instance, when the superintendent of a road told me that none of their men were ever hurt in making couplings I did not accept it as a fact, and when I told this to a group of employes of his road I had still greater reason to doubt his statement, for in that group of about ten or twelve, four held up mangled arms and hands as proof of the Superintendent's lack of truth or memory. Having experienced the danger of a brakeman's occupation, I hope that, while I have had my say about the vertical coupler, no one understood me as decrying the necessity of a reliable automatic coupling, for there certainly are dangers enough in railroading without incurring any needless ones.

In considering the question of an automatic coupler, the very first question to arise will be the cost of construction; less than a dollar for both ends of a car ought to be cheap for the extra cost of an automatic coupler. Simplicity is required as bringing down the cost, but if the work of balancing the link and dropping the pin is all done by one piece of iron hung by one pair of bolts, it is hardly possible to simplify it much more without having the ability of producing results from nothing.

Next as to cost of maintenance, there being few parts with no springs and so placed as to be out of the way of all impacts by other drawheads, there can be no breaking of the parts except by the utter destruction of the whole drawhead. Another point is that the

coupler should be so applied as to not be liable to be frozen up in wet and cold weather, as those are the worst times of the year for the men. It should also have the capacity of being readily coupled to other cars without incurring extra danger. On this point a vertical coupling fails woefully, for in hundreds of cases in my personal experience I have found that numerous attempts have been made at greatly augmented risks to secure a coupling between a link and pin and a vertical drawhead. Hundreds of couplings, which would work all right if they were to be used only in conjunction with their own kind, fail utterly in mixed trains and many are not even tried because the whole of the cars would have to be changed at once and even if they were the cars of no other road could be coupled to them.

Having weighed these points in getting up my coupling I may be pardoned for thinking that I know something about the subject and, possibly I might be able to give some pointers to those who may not have given it much attention.

Reply to "Eccentric" has a special article in the May *Magazine* "Eccentric." for my benefit, in which he proposes to get Mr. Lockwood after me, claiming that I did not treat "the quotation correctly or in my usual fair manner." Thanks, "Eccentric," for giving me credit for fair play in general, and I hope you will also give me the same credit on this subject. I do not propose to be led into any discussion of the subject in any form with Mr. Lockwood, but for the sake of courtesy to "Eccentric," I will say that I cannot see what he wants me to argue on in the quotation taken from the corrected answer as given by him in the May *Magazine*, page 416, which I again produce:

The bottom of the wheel is at rest, that a point above this point of rest, which you can neither see, conceive or measure, has commenced a movement as compared with the top, the top is moving at four times the speed.

This is the paragraph on which "Eccentric" wishes to hinge an argument, but it does seem to me that this is even worse than the making and setting up of a straw man for the privilege of knocking him over, for in the straw man there is some material, at least, even if it is not very strong or substantial. In the above we have the bottom of the wheel at rest (that is without any motion), next a point above this point of rest, which you can neither see, conceive or measure, which has commenced or is making a movement compared with which the top moves four times as fast. Now I have repeatedly called attention to the fact that four times nothing is nothing, nor can any process of multiplication be devised by

which any number can be produced by multiplying nothing. This being incontrovertible, there is no use whatever in prolonging an argument which starts out on such premises, for as the foundations are laid in error, the whole structure erected on it is also wrong. Mr. Lockwood has been asked time and again to explain himself on this point, but has each time evaded the question and thought proper to assert it over and over and over again without giving reasons for his belief.

Vulcan.

Locomotive Building in Arkansas.

The first locomotive built in the state of Arkansas was recently turned out of the St. L., I. Mt. & S. shops at Baring Cross by Master Mechanic, Mr. H. C. McKelvey. It was built according to the specifications of the above named gentleman and fitted with all the latest improvements of our late Master Mechanic, Mr. Frank Reardon, now Gen. Supt. of Mechanical and Car Building Departments of the Missouri Pacific System. Mr. Barnes, Back Shop Foreman, who superintended the building, is entitled to great credit for the carefulness taken during the construction and the skill shown in every particular. This engine is somewhat of the Baldwin type in appearance but the machinery is similar to the Grant, and far excels both in appearance and work any locomotive ever sent to this state from the East. It was built purposely for the fast passenger service between Little Rock and Texarkana, where it is now running, hauling an average of nine coaches, including chair cars and three and four Pullman sleepers, over grades from fifty to eighty feet per mile, time forty to forty-five miles per hour, average coal consumption fifty-six miles per ton. I think this will meet the record made by the Webb Compound on the P. & R. or any other engine under similar circumstances. The dimensions are as follows: Cylinders 17x24 with four driving wheels of 63 in. diameter, boiler 277 in. long and 73½ in. diameter, fire box 77½ in. long by 35½ in. wide with 198 two-inch flues and weighs 76 tons in working order. I shall be pleased at any time to hear or read in these columns of some engine doing its work so economically, that is on so small an amount of fuel. I think in the above case we have got the required amount of heating surface that has so long been discussed in these pages, also a boiler extremely large in proportion, so what more can we desire. Three years ago, at this point, we burned wood in our locomotives but since that time have been burning what is commonly known as Arkansaw coal. It is a kind of hard coal and produces no smoke whatever. The success that has been achieved with this coal during the last three

years is astonishing and if our progress is as rapid in the next three years as in the past I am inclined to think we will be burning the matter used at present to produce combustion.

A. Wade.

Free Steaming Locomotives.

Mr. Mitchell's paper on the Free Steamer interested me a good deal, and I think his suggestions for designing a free steaming boiler very good. But some of his rules for firing and statements about the adjustment of appliances I cannot indorse. That the diaphragm plate does not increase the draft seems perfectly plain, as anything interposed between the flues and exhaust nozzles will evidently have a tendency to check the draft. So that raising the movable part of the plate would *increase* the suction through the flues, because there would be less obstruction between the flues and the stack opening. I was disappointed in not finding anything about the adjustment of the draft pipe in connection with the diaphragm plate in extension front boilers. Mr. Mitchell claims that the distribution of the draft through the grates depends on the position of the movable part of the diaphragm plate. Others claim that the distribution depends on the position of the draft pipe. I have seen free steamers with the deflector down to the third row of flues and the draft pipe up in the stack and down over the nozzles. I have also seen cases of free steaming with the pipe an inch above the nozzles and three or four inches below the opening from arch to stack and the plate raised up to the fourth row of flues or higher. I have also known of cases where an engine steamed well with the draft pipe on the back end of tender. Some men claim that it is all in the position of the plate and others that it all depends on the position of the pipe. I have always thought that there was a certain position of the pipe relative to the position of the plate and *vice versa*, that should always be observed. I wish the inventor of the extension front would tell us just what he expected the action or effect of these two parts of the device to be. Mr. Mitchell also neglects to mention anything about the brick arch or whether there should be any difference in the adjustment of the front end in connection with it. To Mr. Mitchell's first rule for firing I must object. The cases are so frequent where nothing but a heavy fire will do, that I think the use of the word "never" is putting it too strong. Never is a big word and covers a good many life times. I do not lose sight of the fact that Mr. Mitchell states a rule, to which, like all rules, there may be exceptions. But there are so many exceptions in practice to this rule as to seriously impair its force as a

rule of general application. Grate shaking is another thing about which Mr. Mitchell and myself do not agree.

I never saw a lazy man who liked to shake the grates. If the coal used burns up clean like "Indiana block," or "Hocking Valley," very little shaking will do, but with much of our Western coal a little shaking at a time and often will give better results in handling the grates.

* *

Pulling the Fire. We all know that fire will not burn without air. Take a lighted candle and put it in an air tight vessel and it will soon be extinguished. Take the same candle and expose it to a strong wind and it will also be extinguished. Thus we see that a flame can have too much or too little air. But before we can have fire at all we must have heat enough so that the oxygen of the air can combine with the carbon of the fuel. Now in the case of the fire in the fire-box of a locomotive we have the air and the carbon and the necessary heat for the combination of the two elements. But if from any cause the temperature falls below that at which the oxygen and carbon combine, the fire will be extinguished. And that is just what takes place when an engine "pulls her fire."

If from any cause the draft is unusually strong and the fire thin over the grates there will be so much cold air forced through the grates, and hence through the fire, that the temperature will fall below the igniting point, or degree of heat at which the elements, oxygen and carbon, of combustion will unite, and the fire is completely or partially extinguished. Pulling the fire indicates too strong a draft, unless it should occur when the engine slips badly or is worked very hard when the fire is light.

A. H. Tucker.

CHILLICOTHE, MO.

CLEBURNE, TEX., May 5, 1891.

MR. EDITOR:—I am pleased, as I sit here with the advance copy before me, to note how readily my question has been answered by "Vacuum" and "Vulcan," and let me say that the reasoning of "Eccentric Strap" in settling the little controversy before mentioned was in that same line, with this one exception to "Vulcan," he says "except the throttle be opened to get the help of steam." Now I am of the opinion, and from what "Vacuum" says I believe he concurs in the opinion, that the admission of steam under the circumstances will be of little avail; at any rate I so convinced the contestant and in a very few minutes, too. The point is this, the great velocity of steam will cause it to seek a place of exit; this is readily found through the open port and broken cylinder

head, and there being nothing to impede the travel of the steam in that direction I fail to see why it should attempt to confine itself to such a small cavity as is contained in the other steam chest and cylinder, and as you might say, renouncing its individuality, be content with the amount of expansion it could have in an ever decreasing space when by acting naturally it could have the entire space of surrounding atmosphere to expand in until expansion ceased to exist and condensation took place. The amount of good you could accomplish would be about as much as the little end of nothing whittled down to a fine point, with or without opening the throttle.

The way I was called into the matter was this: Some months previously an engineer in taking an engine over the road on one side had a similar experience and although he had ample distance and time to stop if he could have had any pressure in the right cylinder, he did not stop nor even materially check his speed and went into the rear end of a train with very near as great speed as when he discovered the train almost a quarter of a mile away.

I am greatly pleased that so deep a thinker as "Vacuum" has passed me such compliments as are herein shown and I sincerely hope that while I am enjoying the fruits and rewards of study and investigation, Bro. "Vacuum" is no less favored as it is evident that his mental capacity renders him eminently capable of holding down the right hand side.

"Uncle Silas," after being in the shop for repairs for some months, comes out again and, like all new engines should be, he is a snorter; he has limbered up his machinery and went after those "newspaper dudes," in a way calculated to make their heads swim and if they have any brains they will probably decide quite different when they manage to spell out "U. S.'s" little "kik," and I am inclined to the opinion that the misspelling used by "U. S." is most appropriate on the theory of diamond cut diamond, and if you deal with a fool do not argue rationally for his mental calibre is not great enough to comprehend your sayings.

I presume all the old readers remember my illustrations of lame engines and how to remedy the same, also my late explanation of how I made it backwards saying ahead where I should have said back and vice versa; it was all theory with me then, but very recently it has proved out in practice. I departed on a very lame engine—when cut back in the second notch she only had three exhausts; it took me a little time to locate it for certain and then, when at a tank, (the first one out), I moved the blade; it improved the engine but left her still lame, but before I got through I had her square and without much trouble either.

Now a little question: Supposing the arch bars of one of your tank trucks break entirely in two, can blocking be successfully used to bring engine in, and if so, how?

Eccentric Strap.

Current Notes and Comments.

The Railroad of the Future. One may be pardoned for believing that the electric railway system, of which the road now in operation between Gravesend and Coney Island is the model, will be a thing of universal adoption. The overhead electric car has begun a revolution which may solve all the problems of rapid transit and fulfill all prophecies concerning the mission and uses of electricity as a motive power. The triumphs of electric power are so quick and marvelous in their succession as to exceed the most exacting demands of present industrial advancement, surpassing even the most extravagant conception of inventive genius. The possibilities of its power have ceased to be so much a study of the scientist as are the growing needs of devices for its modified use and control. It is only within the brief period which has elapsed since the introduction of the overhead electric street railway car that we have conceived the idea of a general adoption of electric power on the present steam railway systems. The successful operation of the street car is accepted as a first step in its general adaptation to great railway systems. Within this brief period the idea has become wonderfully popular. That this should be so is marvelous. Never before in the history of the world has an innovation upon established usages and methods affecting the interests of all the people been met without resistance. It has not had so much as the opposition of prejudice. It is not only received upon the faith of the people, but welcomed as something to be desired. But, however readily the people have comprehended the new order growing out of scientific advancement in this and other movements, they have not been quick enough for the spirit of the times.

While we have graciously acknowledged the possibilities demonstrated by the present stages of development we have reserved the greater triumphs of genius for some remote period or generation of the future. And while we have been thus dreaming of that slow and gradual process by which all great movements have hitherto worked a change, the genius of the present has solved the problem; and, lo! we are now in the midst of the revolution. The elevated electric railway is pronounced a success. Doubling the speed of the steam locomotive the electric motor has come to take its place for traffic and travel. And its speed is almost unlimited, the possibility of carrying all the freight of the nation in rapid transit is claimed for it. Among other superior claims is that of absolute safety. This, of course, as well as all other questions concerning the new system, is to be a matter of investigation and experiment, having all the advantages of the many great improvements to which the application of electric power may be susceptible.—*Mining Industry.*

The above is a fair sample of the "gush" published in praise of the electric railway, and would be enough to make a steam engineer and fireman hide their heads in shame at having been so long an aider and abettor in locomotion by steam, were it not that the system still has some unsolved problems which it will take some time and considerable thinking, and it may be a change in natural laws, to yet work out. As for instance, the following from the *Railway Age*:

A well known electrician, being requested to state within what distance an electrical train could be brought to a standstill without blocking the wheels when running at a speed of 125 miles an hour, esti-

mated the distance at 7,000 feet, or a little more than a mile and a quarter. Assuming these figures as correct it would demonstrate the utter futility of using such high rates of speed, even when their possibility has been accomplished, for any other purpose than very long distances. It is estimated that to make this stop for a weight of forty tons would require a brake pressure of 3,000 pounds. In order to attain this speed a locomotive of 530 horse-power would be required.

Just think of it! Going at such a rate of speed that it would take a mile and a quarter of braking to come to a stop. Distance signals several miles from the point of danger and home signals to be safe, at least one-half mile away. It is true that we are a fast nation, but it is an open question whether we are yet ready to be loaded into vehicles shaped like cartridges and shot from station to station like cannon balls, at the risk of meeting some impediment to our rapid progress with dire results to all concerned. As the electric model has a bad habit of leaving the track before it has reached its greatest speed, it is to be presumed that the public, before committing itself to its care, would require the electric roads to have the rock-cuts and curves cushioned, so as to make sudden stops as easy as possible. But it is probable that on roads designed to run with such speed, the curve will become a thing of the past and tracks will be laid in straight lines from point to point, thus eliminating the danger from tipping over around the curves. As trains run more than twice as fast in getting over the road, single track roads would equal a double track road as now run, but as trains would be liable to meet on the road sometimes, and as switches form curves which are objectionable, some different mode of passing trains could be provided. Some time ago announcement was made of a plan for passing trains by running one over the top of the other on a track carried for that purpose on the roofs of the trains, but our electric road would have the advantage over any scheme of that kind, for as before stated, its cars are built with conical ends so as to overcome the air resistance, and would thus form a well shaped projectile to fly through the air, the trucks acting as ballast and keeping them from turning over. Now, as a speed of say 130 miles would send our trains at the rate of nearly 200 feet per second, and as it is a well known fact that a falling body falls only sixteen feet per second, it is evident that if a train be run up an incline so graded as to point sixteen feet higher than the rail at a point 200 feet away it would clear the intervening space at a jump. If the trains were so timed, the one having the right of way would be coming over the 200 feet of track while the other was jumping over it, thus avoiding the need of switches or the carrying of track on the roofs. It may be pleaded that this would require a nice adjustment of time, but the electric conductor

of the future will always have his train on time as he will not be at the mercy of the poor engineer who cannot make his time, or the still worse fireman who cannot "keep her hot."

As it would take an ordinary team about six seconds to cross a single track during which our electric train would run nearly 1,200 feet, it is evident that grade crossings would be too dangerous, but this could be obviated by the same method as was proposed for meeting trains, by getting the proper elevation and taking a fly over the road or street without in any manner stopping or interfering with its traffic. The same course might also be adopted with most of the smaller draw-bridges which form so great an impediment to rapid transportation in many parts of the country. As variations in the force and direction of the wind might cause some deflection it might be necessary to erect funnel shaped guides at the different alighting points, but having suggested the main features, we will leave the working out of the details to those especially interested in the roads.

Ambulance. Some police and fire departments of our larger cities have for some time, been instructing their members in a few rules of "First Aid to the Injured," and no doubt much good has resulted from these efforts. Railroad men are liable to severe injury perhaps to a greater extent than any other class of workmen and no doubt many whose injuries are not necessarily fatal, are allowed to die for want of knowledge of what to do for them. Mr. Forney has a valuable chapter in the "Catechism of the Locomotive," treating on the various injuries of the body to which railroad men are most liable, but as the book is not yet in the hands of all the men, and as many even of those who have it, do not pay any special attention to this part of the book, much suffering which might be alleviated, and some deaths which might be prevented, still occur. Below will be found an account of the examination of a class of English railroad men, who, it appears, have taken hold of the matter and have been able to pass a satisfactory examination. While it is not good to ape everything simply because "it is English, you know," there certainly can be, no objection to our following an English pattern if it is to be for the good of suffering humanity. So let us hope that we shall have a systematic study of this neglected part of our education:

On the 22nd ult., Dr. Prier, appointed by the St. John Ambulance Association, held an examination of the class at Wolverhampton Station, when eighteen presented themselves for the first, and eight for the second examination.

W. R. Dock street, Newport, Loco. St. John Ambulance Class. Thirteen members of the above class including the Instructor, Mr. C. H. Parry, night loco foreman, and Mr. Wm. Hughes, secretary, presented

themselves for their final examination, before Surgeon-Major Wm. Taylor, M. D., of Cardiff, on the 22nd ult., at the loco. offices, Dock street. After putting the members of the class through a very searching examination, Surgeon-Major Taylor briefly addressed them, expressing his entire satisfaction with the members of the class, and that it would afford him much pleasure in recommending the whole of the members then present for their medallions. The class, in the first instance, consisted of twenty-five members, of whom twenty-three received their first certificate. Since then one has died, and thirteen have been removed for promotion, to other stations, there being only nine at Dock street of the original class. One man came from Chester, one from Bristol, one from Cardiff, and one from Pontypool Town, to pass their final examinations.—*Great Western Railway Magazine.*

Railroads in Politics. As might be expected, the hostile legislation in which some of the Western states have engaged is likely to bring about the combination of railroad men to fight for their interests, for to our shame be it said that politics and statesmanship have so degenerated as to mean nothing more than bread and butter. The farmer thinks he has a hard life of it with interest on his debts, and taxes to pay, and with the cut-worm, the weevil, the drought or the storm to destroy his crops. He looks this way and that to discover the reason he does not get along easier and better, and seeing that the railroads earn a good deal of money, he concludes that they are the cause of his getting so little, without stopping to think that what may look like a large sum, is but a very small return for the money invested, and that if it had not been for this investment he would be worse off than he is now. So to better his condition he attempts to make that of railroads worse, ignoring the fact, just as true in the body politic as it is in the physical body, that one sick or disabled member will have a deleterious effect on the whole, and hinder a healthy development of all the other organs. The capitalist, finding that he is denied the right of earning a fair percentage on the money invested, refuses to go on with the work of internal improvement, and tries to economize on the lines already in use, by running a less number of trains, and getting their work done cheaper by paying lower wages. This arouses the railroad employé, who finds that he is either out of work and has no money to spend, or else that his income has been greatly curtailed. He finds that this is owing to the combination of the granger element, and he says that "if they can hurt me by their combination, I will combine and fight against them," and thus the internecine war is waged to the injury of both parties. An Eastern paper thus happily defines the situation in Iowa, the most aggressive of the Granger States:

Iowa boasts that its percentage of illiteracy is the lowest in the Union. Her claim to rank as the most intelligent of the states is seriously impaired, however, by the fact that the idiot who hit a railway

torpedo with an axe, "just to hear it crack," was an Iowa man previous to the explosion.

If the railroads of Iowa were earning a fair percentage on their investment, they no doubt paid fair wages to their employes, and these in turn created or helped to create a home market for the farmer in which he could obtain a fair price for his farm products. Destroy the earning capacity of the roads and you also destroy their paying capacity and that of their employes, and this will destroy the home market so far as they are concerned, and thus one acts on the other for good or for evil.

If the railroads of Iowa were making too much out of their investment, what was there to prevent the farmers from participating in the rich returns? There is no law that would prohibit them from buying any number of shares in the railroad, as the market is free to all. The answer might be that the farmers were too poor to buy railroad shares, but if a very high income is to be had from shares it would pay to borrow money at legal interest to make the exorbitant profits credited to the railroads. Or, as competition is said to be the life of trade, the farmers might build a competing road of their own and thus be able to carry their own goods and those of the whole community and let the "bloated stockholders" of the opposition lines look elsewhere for their profits. The farmers will have to use business methods in dealing with the problem or they will have to be prepared for a coming struggle at the polls, in which all other interests of the State will be massed against their restrictive legislation, and it will be easy to see that the tide will flow the other way and perhaps to the opposite extreme. The press is full of articles showing a great revulsion of sentiment on this point, and a marshaling of forces for the coming fray has commenced and will no doubt continue until the next election, which will decide the future policy of the State.

* *

Temperance. We want the name of every baseballplayer who will pledge himself to work hard and earnestly for the rehabilitation of the national game in 1891, and will pledge himself to not drink a drop of intoxicating liquor from April 1 to October 15, next year. We want to publish the roll of honor. Come, boys! Who of you are in earnest? You who do not drink at all need not be ashamed to proclaim it. Let us unite in making drunkenness in baseball odious. Send in your names.—*Sporting Times*.

The above extract from a paper devoted to sports is certainly a surprise to most people, for as a general thing we find more or less drinking connected with these sports, and to have a paper emanating from such a source and published in the interest of the "sporting fraternity" come out and deliver so strong a plea for temperance and even for total abstinence was certainly a surprise to

me, and ought to impress the motto of our order on sobriety, very strongly on our membership. If in the best interests of baseball it is necessary to have sober men, and total abstainers, how much more is it essential in the great game of railroad life, where the chances for a "close run" do not involve a simple "put out," with the privilege of another trial in the course of the game, but where it may mean the crippling for life or even the death of the player. Let us, therefore, having taken sobriety as our watchword, add total abstinence to it, for then only can we be safe from overstepping the line, as too many so-called temperate men can testify to their shame and sorrow, and let us not be made to blush by being outdone in this matter by an association of "sports."

Wm. Weiler.

Thos. Pray, Jr.

The *Electrical Age*, of New York, in its issue of May 2d speaks of Thos. Pray, Jr., an occasional contributor to the Mechanical Department, in terms most complimentary, as will be seen by the following extract:

Mr. Thomas Pray, Jr., the Consulting Engineer, has recently located at room 133, *Times* building, this city, and his services are now available for the measurements of steam or electrical power, in any part of the country, as may be required. Mr. Pray has an experience of many years in his line, has been engaged in the construction and operation of electric dynamos, incandescent and series lamps, plants and power stations, and now devotes himself to the indicating engines, for economy, or power as desired. He also makes all the tests of any electrical plant, both in the steam and electrical departments, and reports on the condition and results. He was employed by the Cramps on the second official trial of the U. S. cruiser, "Baltimore," and in the readjustment of her steam machinery, on the horsepower trial, made a handsome bonus of \$120,000 for his clients. He was also employed by the Quintard Iron Works of this city, on the second trial of the U. S. gunboat "Concord," in January last, and is now engaged on some large ships on the steam power. Mr. Pray is busy with steam tests and changes in steam machinery of ships and on shore, to increase their efficiency. He has also had an experience in the making of high potential incandescent lamps up to 180 volts, and is the inventor of a peculiar filament for series lamps which has attained a very high efficiency and a maximum life, of which some figures are given below. He will give his assistance in this department if desired. Tests have been made of some of his lamps on series circuits, and some remarkable results have been attained.

The filaments used in these lamps are the invention of Mr. Pray, and when taken out for the purpose of noting the effect upon them of the intense and prolonged current, were found to be as dense as steel needles. Mr. Pray has produced lamps ranging from 15 volts, giving eight candle power, to 180 volts at 16 candle power, some of which are now in successful operation, having run over 10,000 hours.

Mr. Pray is the author of the well-known work, "Twenty Years with the Indicator," which has had a very extensive sale among steam users, and he now has two more works on steam in press.

Mr. Pray, who, by the way, has a brief article in the Mechanical Department of this issue, is one of the most prominent consulting engineers in the city of New York, and

his published works are regarded as high authority on the subjects treated. He is a man thoroughly wedded to his profession, thinks deeply, writes clearly and forcibly and is making his mark in the world of thought.

Funny Locomotive Practice.

I have just been handed a bound copy of your *Magazine* for 1890, and my attention called to the statements made on page 789 regarding the diagrams that were sent you at your request, by me, and shown on page 499 of the same volume. The writer goes on to make his own statements, certainly not from any data in the article upon which he is writing—nor from any authority to use such absurdities by remotest inference from the original. In the table on page 789 he gives the "rate of travel for steam through ports per minute in miles" as "4,885" or 25,790.8 feet per minute exactly. To the man of ordinary common sense this statement is ridiculous, and if the rest of his absurdities are as reliable as this one, there is little need of further or particular data. As a matter of fact the speed of steam in that engine at that time and under the conditions stated in the May number was between 6,500 and 6,800 feet per minute, with the link in full throw, and the engine pulling her whole capacity. The firing of steam at 26,000 feet per minute is not to my knowledge, very often attempted by men who know a little something about steam, and in their experiments in that line they do not show any such steam lines as those on page 499 Vol. 14, to which your readers are referred. Long absence and not seeing your *Magazine* with any regularity is my excuse for not sooner calling attention to the matter.

Thos. Procy, Jr.

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, room 26 Atlantic building, Washington, D. C., expired during the month of May, 1891, and are now free to be used by anyone, viz:

Dumping Car, J. E. Bemis.
Safety device for car trucks, M. M. Barry.
Brake, C. E. Coombs.
Railway Gate, J. Keister.
Apparatus for recording speed of cars, Speed & Poage.
Device for registering the slipping of wheels, J. W. Boyle.
Car Coupling, R. B. Tait.
Rail Joint, W. N. Hutchinson.
Car Axle Box, L. Schulze.
Stock Car, S. W. Remer.
Car Coupling, W. D. Rinehart.
Electro Magnetic Brake, F. F. Achard.
Condenser for Steam Cars, A. G. Buzby.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents, by applying to Mr. Brock, whose address is as given above.

The Longest Systems in the Country.

The tendency of the age is toward consolidation, and nowhere is this more strongly emphasized than in the railway service. From time to time we read of combinations and consolidations, but the actual results of this movement are not appreciated. The total railway mileage of the country is estimated at 160,000 miles, and of this aggregate no less than 100,000 miles are controlled by fourteen companies, an average of over 7,000 each. That is, two-thirds of the total mileage of the country is in the hands of fourteen corporations. The order of the interest:

	Miles.
Vanderbilt lines, including Chicago & North-western	15,663
Gould lines, including Wabash, but not Central Branch U. P.	11,879
Huntington lines, east and west of Mississippi	9,038
Atchison and St. Louis & San Francisco	8,965
Union Pacific	8,648
Pennsylvania	7,664
Richmond Terminal	8,169
Chicago, Burlington & Quincy	6,883
Canadian Pacific	6,766
Chicago, Milwaukee & St. Paul	5,678
Chicago, Rock Island & Pacific	4,587
Northern Pacific and Wisconsin Central	4,129
Grand Trunk	4,101
Louisville & Nashville	3,827
Great Northern	3,278
Illinois Central	2,875

Rivalry of Death.

A writer says: We spent some hours in Peoria, Ill., the whisky metropolis of the world. We had a good opportunity to study the bloody business in its hideous aspects. Here human beings vie one with another breeding plagues and torments, and rival each other in multiplying the misfortunes of humanity. One of the leading citizens of this rum-sodden city said to us that his only or highest ambition was to erect the biggest distillery on earth and make more whisky than any other man in the world. He said his greatest anxiety was to get men enough to drink his whisky; that he would have his own way in spite of God and humanity, and outstrip every rival in the rum business if he could, and then in a dying hour jump the fence into eternity. That is the class of fiends this infernal traffic produces, who flood the earth with ruin and blood. They have no conscience. This man has built two of the largest distilleries on earth. One of these vast breathing holes of hell here is capable of rotting 10,000 bushels of grain a day. The foreman of the distillery said he got 20 quarts of whisky from a bushel of grain. This would figure over 1,587 barrels of whisky in a day if the concern was run at full capacity. Some idea of the extent to which these distilleries deal out destruction may be found in the fact that the revenue tax from this precinct upon whisky this year is \$18,400,000.—*Domestic Journal*.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the *tenth day* of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, INDIANA.

THE FINANCIAL VALUE OF HOUSEWORK.

Dr. Lyman Abbott tells this story on himself. One day he was in his library, deep in the study of the industrial question, to which he had given much time and thought, when his wife came to consult him in regard to some trouble with a servant. "My dear," he said, "you should not disturb me. I am endeavoring to solve the industrial problem of the universe." "Well," she replied, "if you will solve the industrial problem of this household I'll solve the industrial problem of the universe." No doubt every housekeeper has felt at times as if she would rather undertake the latter task than the former. Her perplexities are just as trying and just as hard to overcome as those which harass the business man or the student, and from one standpoint, just as important. But this is the very hardest thing the housewife has to contend with, that her work is not appreciated at its financial or its industrial value. It is not a bit more necessary for the comfort and well-being of humanity that homes should be provided than that they should be well managed; in fact, the man furnishes the house, the woman makes the home. It requires quite as much knowledge and energy to form an accomplished housekeeper as it does a successful business man. But this truth is not generally recognized. Housekeeping is supposed to come naturally to women and they do not receive any particular credit for it, and yet in all its various details it demands a skill, judgment, discretion and experience, which if applied in any other direction would produce remunerative results.

The writer recalls a family of three sisters and a brother, dependent upon their exertions. The brother and two sisters have occupations that take them away from home. The third sister does all the housework, has the meals ready on time, keeps everything in order, goes to market, does the mending, and yet not one of the three regards her as earning any money. She has no fixed salary and receives from all of them less than any one of them earns although she works more hours and harder than they do. There is no

intention of being unjust, it is simply the common view that is taken of domestic service. The same thing may be seen in many families. The boys work outside, the girls inside of the home. The former have their wages to spend as they please, the latter have whatever father and brothers choose to give them and it is not usually as much as they could earn by working away from home. Then they become dissatisfied with the situation and go into the stores and factories and offices, and immediately the cry is raised, "What is going to become of the homes, the girls are all forsaking housework and taking up other occupations?" We see husband and wife working together, he at his trade or profession, she at her business, which is housekeeping. She works as hard as he does and more hours out of every day, and yet all of the joint earnings of the two belong to the husband, and the wife gets just what he chooses to allow her, and has no authority over the expenditures that he wishes to make out of these joint earnings. After they have worked together and accumulated property, should she die first, she cannot dispose of any part of it by will. Should he die first, he can will all of it away from her except one-third.

All of these inequalities come from the old and deeply rooted idea that household labor has no financial value, and for this very reason women get discouraged and discontented over their daily tasks. It is perfectly natural that people should want to be compensated for their work. Men would not do very much of it if they did not receive a certain amount of money for it. This disposition is growing among women, and if they are not remunerated in dollars and cents they want to feel that at least their work is appreciated as being important and as requiring some ability. Now we submit this proposition: If husband and wife start out together, he doing his part and she doing hers to make a home, if she does her duty as a wife and mother as well as he does his as a husband and father, should not the money that comes into the partnership be shared equally? It is true that the wages are paid to him for his labor, but her time and strength have been required for her family so that she could not go out into the world and work for a salary. Should not his earnings form a common fund and, after all the necessary expenses of the household have been paid, should not one-half of what is left belong to the wife? One more question: If men continue to refuse to recognize this principle, and women continue to take advantage of the constantly increasing opportunities for making money, will not the time come when they will hesitate to sacrifice a life of independence for the dependent position of a wife?

A PLEA FOR MISS WILLARD.

The *Magazine* for April contains a severe criticism of Miss Frances E. Willard for her defense of banker Kean, of Chicago, the notorious embezzler. While Miss Willard has given some cause for censure by her letter, it must be permitted the Woman's Department to defend women where it is possible to do so. When Mr. Kean's failure was first announced, the newspapers were especially severe upon him because he was a pillar in the church and a leader in the temperance movement. Miss Willard's life is devoted to these two institutions and she is very sensitive to attacks upon them; just as the B. of L. F. would be to attacks upon railroad men or the cause of labor. Without waiting for developments, she wrote her spirited protest against the censure of Mr. Kean because he was a prominent church and temperance worker. The letter appeared before the trial was held. Investigations showed that the banker was not entitled to any sympathy or excuse, and that the causes of religion and temperance were among the chief sufferers from his dishonest methods. Miss Willard's mistake was in writing the letter upon the impulse of the moment, without waiting for the evidence, a very common failing among women. She has the highest sense of integrity and of justice and would be the last one to condone rascality.

THEO. A. OGDEN, of Chicago, sends an excellently written sketch of the fifth annual ball of S. S. Merrill Lodge, No. 188, but we cannot depart from the rule adopted at the last convention of the B. of L. F., which prohibits the publication of social events in the *Magazine*. This ball occurred in April and the description sent could not reach our readers until June. As there are 447 lodges, exclusive of the Ladies' Auxiliaries, and as all must be treated alike, we would have to publish over 500 descriptions of entertainments, etc., if only one notice were given to each lodge. Our friends will recognize the impossibility.

We have been lenient with those writers who have failed to sign their name, wishing to give all an opportunity to become acquainted with the requirement, which they now have had time to do.

OVER forty of our contributors have remembered the Woman's Department this month. Most of the communications are very acceptable and will appear in due time.

If our correspondents will pay full postage on their letters, the editor will have more money for ice cream.

"A FIREMAN'S Loving Sister," of Downing, Mo., writes in praise of Reno Lodge, No. 258, to which her brothers belong, and also compliments the *Magazine*.

THE "waste basket" is waiting for all future letters upon the management of husbands. No further information is needed. Give the poor men a period of repose.

VIRTUE'S PATH IS NARROW.

Each and every one is beset with an unforeseen danger of some kind. We know not when it will come upon us; we are in no wise capable of giving the exact longevity of our future. We count on the morrow so much to be accomplished, which is certainly right; for we are not destined in this world to work out our salvation? We resolve to fill this coming day, this hopeful morrow, with good deeds and good work. But it comes and we no longer count it the time coming, but are engaged in the work of today, and at its close the resolutions that were to bring satisfaction and comfort are not carried out. We do not fulfill them. Something has occurred that marred the beauty of acts intended to bring fruit. Why is it? Alas! human nature of to-day is weak, as it is surrounded by pitfalls, the gaieties of the world. We by our own conscience are prompted to confess that this life gives not satisfaction, but, as it were, we are merely here to spend our earthly existence at the expense of the soul, and the forfeit being a terrible price. At times the soul is overtaxed. It may be a credit or a debt, but how often is the voice of a sad refrain coming home to us that the scales are weighted down with high-priced follies. Is there a remedy? There is, but we in our weakness are afraid to purchase it, and our thoughts dwell on the empty nothingness of the world until time is becoming short and we wake from the stupor that has held us in bondage only to realize that we abandoned the yoke of sin alas! too late. With hope at times sunk to a low level we feel that indeed our life is full of disappointments. Only for a time is it so, for the delusions of the world rise before us and hope again becomes strong within us and aids us in attempting to grasp at the glimmering phantom that causes us to again forget our God and Heaven above. True, it sometimes happens that these golden delusions sought after become our captives, and for a time we are possessed with the spirit of satisfaction, but they fade away and become things unreal, and once again we find ourselves pursuers of the world's delusions. Thus on and on we fly through time until the gate of our life is almost closed, and at this crisis the question of When shall we die? is upon us. We must leave it unanswered and contemplate the question of How shall we die? It startles us, and we realize that the pleasures we thirsted after were but fleeting, and in our fear we endeavor to retrace our steps to the narrow path of virtue, but the vast accumulations of our vain follies are so impenetrable that it is almost impossible for us to gain this narrow path, and thus it seems clear to our distracted mind that this great universe which so often causes us to sacrifice virtue and throw a dark shadow over the garment of purity, is in reality the tempter of our fruitless actions.

Now, let us consider the question of How shall we die? It has been represented in various phases. We see some, as it were, depart this life enfolded by angels' wings, with that peaceful smile of resignation, after having bravely fought through the ranks stationed between this life and life eternal. And again, we see others who stopped in the very midst of their fight, and with their earthly object nearly gained suddenly cut off. Then it is that the departure is not wished for, but on the contrary, strong defiance to master that terrible end, Death. Let us then be prepared so that when our life is over we may meet our Divine Master with a joyful and eternal welcome.

We can not answer these two difficult questions of when and how shall we die? Nevertheless they fre-

quently come home to us. Leaving these we will briefly reflect upon Where shall we die? Who can tell this? Will we die at home, surrounded by loving friends, those near and dear to us, or will we give up our life far from them in a land destitute of friend or relation, with no soothing prayer or sympathy to alleviate our last awful moments? But let this consoling thought remain with us, that after having spent our life in accordance with the best we know how, though so often gone astray, yet so often repented, we shall one day arrive safely at the gate of the Mansion afar, and entering will rejoice with all the loved ones who have gone before.

Rev. D. L. Spookendike, D. D. L.

STIOUX CITY, IA., March 9, 1891.

HOW BEN PURTEL GOT HIS WIFE.

The very climax of ugliness was Ben Purtel. His face was as freckled as the most bespotted turkey egg; his nose supported at the bridge a huge bump, while the end turned to one side; he was red-haired and every hair stood as if it cherished the most supreme contempt for its next neighbor; his form was as uncouth as his face was ugly. But what was very strange, he had a most handsome, bouncing, blooming wife, such as can only be grown upon a country farm.

"How in the deuce," said I to Ben one day, "did you ever get such a wife, you uncouth, mishapened, quint-essence of monstrosity." Ben was not at all offended at my impudent question, but proceeded to solve the mystery thus:

"You know Kate was always called one of the very prettiest 'gals' in all these parts and all the young 'fellers' tried to 'catch' her. Well, I used to go over to old 'Uncle Sammy's' just to look on, you know, and cast sheep's eyes at Kate; but 'Lord sakes,' I had no more idea that I'd get Kate, than a Jerusalem cricket could hide in the hair of old Sammy's bald head. One day when Kate 'sort o' made' fun o' me, and it always killed me, sure, I went home with something like a rock jostling 'round in my breast, and swore I'd hang myself with the first plow-line I found."

"Did you hang yourself?" I asked, seeing Ben pause with apparent regret that he had not executed his vow. "No, daddy blazed off at me so, for not taking old Billy to pasture and 'skeered' me so bad I forgot all 'bout it. Well, I reckon 'bout a year after the hanging scrape, I got up and scraped my face with daddy's old razor, and put on my new linsy coat and copperas breeches, that mammy had dyed with sassafras bark, and other fixens, and went over to old 'Uncle Sammy's'. When I got there I found that Joe Sharp and his two sisters were there, and that the order of the day was to go 'muscadine hunting.' Joe Sharp was flying 'round 'Miss Kate this,' and 'Miss Kate 'tother,' when we came to a nasty, black, muddy slough that we had to cross on a log, and nothing would do but that Joe Sharp must lead Miss Kate across. They'd got 'bout half way 'crossed' when in went a 'tarnation' big bull-frog and in went Miss Kate to her waist in the nasty, black, muddy slough. Joe was running backward and forward on the log 'hollering' for a pole to help her out, but I was in there and had her out in less'n no time. By and by Joe comes up and says 'Miss Kate, are you hurt?' My dauber was up and I couldn't stand it; I just caught him by the seat of his white trousers and the back of his coat collar and gave him a toss. Maybe he didn't go clear under when he struck the water but I didn't wait to see him out. Me and Kate struck right for the house. By and by Kate says 'Ben, just let me hold on your arm a little, my knees feel 'sort o' weak.' I made a tremendous effort to say something nice but 'cuss the luck' I couldn't 'git' my mouth off no how. By and by Kate says, 'I think that Joe Sharp is a good-for-nothing, cowardly, sneaking, nobody, and if he puts his head in our house again I'll sue him with dishwater, sure.' I made another tremendous effort to say something nice but 'cuss the luck,' nothing could I say. By and by Kate says, 'Ben, I feel that you're my protector and I think dad is 'bout right when he says you're worth all the boys in the neighborhood. I made another tremendous effort to say something nice and out it popped sure

enough. Says I, "Kate, if you're going to have me, just say so right up and down." Kate hung down her head and kind o' sighed but didn't say anything and says I, 'Kate, if you're going to have me just squeeze my hand,' and she 'squeezed' it right straight. 'Great jimmineys,' how I did feel! I felt as if a stream of warm sassafras tea, sweetened with molasses was running through my bones. I caught her 'round the neck and kissed her square in the mouth and she never tried the first time to 'git' loose. Old Sammy was mighty well pleased about the thing, and so was the old woman, and we got married the next fall after the muscadine scrape.

ELMIRA, N. Y.

A Fireman's Friend.

GALVESTON, TEXAS, March 24, 1891.

Editor Woman's Department:

In reading the March Magazine this evening, which was the first chance I have had, I took in the Woman's Department, and noticed where our noble friend Jim Dooley was giving his idea on how to manage a husband. I must say that our worthy friend has got some very good ideas about how a wife should manage her husband, but I think he is after something else. I think he is hunting for a wife and has taken this method to obtain one, but he has taken the wrong way to catch one. This sweet way he has to tell how he feels when on an engine with a married man, especially when he says it makes him feel queer when he sees a married man take a nice lunch out of his seat-box and clean it up, and he either has to take a hand-out on the fly or run around a meal, or come to his room of a cold night and find everything all thrown around. I must say he tells a very sympathetic story about how he feels, and all of that, but I don't think he will gain much sympathy from our lady friends that way, for they are all onto his little tale of woe. He would better take some other method to gain the love and affection of our young lady friends, but I can't say anything, for I have been in his same fix. J. D., old boy, cheer up, and get yourself a little wife, and surprise all the I. & G. N. boys, and have that little lunch basket yourself, and then you won't have to catch hand-outs or run around meals, for you bet. I am in the same fix you are about meals. There is many a meal I have run around and many a hand-out I have caught on the fly, but I think I will change that little tune myself and get a wife to fix a lunch basket up for me. Now, one thing more I will say before closing, I would advise our young lady friends to keep their eye on J. D., for he means business. I will say one thing more for myself, and that is this: I used to roam over the same grounds as J. D., but I think I am about to stop and settle down.

I will close with my kindest regards to our editor and all our lady readers, and hope I will hear about J. D.'s wedding soon.

Yours truly,

Narrow Gauge.

[The writer of this is evidently a little jealous of Mr. Dooley's success with the ladies, but the right kind of a man need not go begging, for there are plenty of nice girls who will make first-class wives.—ED.]

WATERVILLE, ME., March, 1892.

Editor Woman's Department:

Sisters and friends of the Woman's Department, not far from the sea coast, in the Kennebec valley in the old Pine Tree State, there is a small city noted for its first-class schools and Colby University, and also the fast horse, Nelson.

This has been my home for seventeen years. I am an engineer's wife and would like to correspond with some of the lady writers of the West through the Magazine. I am

Annie L.

[Write to Mr. E. V. Debs, Terre Haute, Ind., for all missing numbers of the Magazine.—ED.]

SAN ANTONIO, TEX., March 20, 1891.

Editor Woman's Department:

I believe I have not written a letter for the *Magazine* for three months, but work has been my excuse and I think I need no other. I have read every letter in the last number; some of them I have read. (Thanks to "Engineer's Wife" for her appreciation of my letter; to like it is more than some people do.) But this morning the spirit has moved me to write and I have dropped everything. Now, I will shock some of the ladies, but really I have left my dishes unwashed while I idle my time in writing, but if by so doing I may be so fortunate as to help some lady out with a troublesome spring suit for herself or daughter I shall not think the time wasted, for I am going to write about dresses this morning. We all wear them, and some of us make them, so we have a common interest. As the styles this spring are plain front skirts, or principally so, no doubt some of the ladies will be pleased to know how nicely they can make over some of last spring's dresses, so I will tell you how I made one last week. The dress in question was a gray serge and had been worn two seasons. It had been made with a kilted front and sides and a shirred back drapery, and of course there was a quantity of goods in it. The lady had it all ripped and dusted nicely, and the threads all picked out, but there were a few soiled spots on the front skirt, and the basque was much the worse for wear. The spots had a suggestion of grease with dust settled in. I placed the goods smoothly on the table with a piece of old cloth beneath it, then with gasoline and a sponge removed every particle. (Let me say here that there is nothing like gasoline for taking out grease, and it does not injure the color, not even the most delicate shade.) I have washed whole dresses in gasoline without ripping a stitch. I put the gasoline in the tub and after dusting the garment to be washed, I put it in and use the board, and when I have rubbed it sufficiently I wring or press it out as well as I can, and hang it on the line in the air for it to evaporate. In a short time, except for the smell, it is like new. It should be aired a day or two till the scent leaves it, and after pressing you will be surprised to see how nice it looks. Garments cleaned in this way do not shrink nor streak in drying as they do when water and soap are used. I have washed my husband's pants and vests with splendid success. Even his hats I have cleaned beautifully by using a sponge or brush.) But my goods, I believe, is still in process of cleaning, or at least I have left it lying on the table a good while. Now, I will proceed to make the dress. After it was all cleaned I planned the dress. The goods was 12 inches wide, and by cutting the skirt lining to make the front width 21 inches at the bottom and 16 at the top, the side gores 14 inches at the bottom and 9 at the top, I had to put a small gore on each side at the bottom of the goods to make it the width of the bottom of the skirt lining, and as the color was plain it did not show after sewing and pressing carefully. Then after sewing up the linings and pressing seams and putting a facing of the lining on the under side of the bottom 6 inches deep, I placed the goods smoothly on the table with the lining on top, with both lower edges perfectly even, the middle of the front width of lining exactly on the fold of the goods, then basted the lining smoothly to the goods all the way round, up each seam and down the middle of the front, then cut around the lining, folded and laid aside until the basque and back drapery were arranged. Then came the back of the skirt, the lining for which I made 30 inches wide from top to bottom, faced it up on right side with a piece of goods four inches wide, and on the under side with a piece of lining 6 inches; cut a placket and hemmed it, and then my lining was finished and I began my back drapery. There had been originally two full breadths in the back drapery which, after cutting off the old hem and basting it, I laid in fan plaits (which is done by laying a deep plait at the top and letting it flare gradually to the bottom to one-third the width of the top), basting them all down and staying them twice across with tape, the first about one-third the distance from the bottom and the second about 8 inches from the top. Then I put a facing about 8 inches long on the left

side of the top for a placket, as this drapery is fastened at the side where the back is joined to the side gore. I then put a band 8 inches long on the top, and a button-hole, and, behold! my back drapery. Next came the basque, and had I not had any amount of experience I should have thought it impossible to get anything like a respectable-looking basque out of it. The elbows were worn through and the waist quite too short. I cut a new lining (which is always best, as one gets a more satisfactory fit), and as I had previously cleaned and pressed and picked threads, I placed the lining on the goods and basted all around the edges and across waist line. I then cut the edges smooth and cut it longer in the waist, as I had, in cutting the lining, cut it sufficiently long in the waist. Now, if those who have the *Delineator* for April will turn to page 272 and diagram 385, they will understand just how the basque was made. To those who have not got the *Delineator* I will say I cut a piece of goods 4 inches wide and on the bias, and fitted it (after lining it with crinoline) to the lower edge of the basque, letting it extend around to the side-form seam. I then took goods lengthwise and laid the plait and pleced it carefully to the back to make the coat back, and over the seam I put lapels like pockets, with a button on each upper corner, and six down each side on the plaits. I finished the neck with a bias standing collar, then from some pieces of goods left from the skirt I cut the uppers for the half leg of mutton sleeves; from the uppers of the old sleeves I cut the under portion for the new. I faced them, leaving a small opening at the wrist at the back seam and finished with three buttons. I then pieced the odds and ends together and pressed and hemmed till I had sufficient for a 4 inch rose plaiting for the foot of the front of the skirt which extended to the back drapery; then after basting the back lining to the drapery the skirt was sewn together, the under facings were carefully caught down over the seams to hide edges, and pressed, then the braid put on and pressed. Then the skirt was put on the lady who was to wear it and the fullness at the waist was laid in plaits to fit the figure, 8 inches being calculated for the back breadth, then the band put on and buttons and button-holes, and hangers, and two pieces of rubber fastened to the seams where the back is joined to the side gores, for pull-back, and then the skirt was finished, and it really was pretty. Of course the seams of the basque were finished and whalebones attached, and no one would have recognized the dress. It might have been made with the plaiting of another color, as well as the lapels and collar and cuffs, and it would have had a brightening effect and been very pretty.

It is surprising how one can economize if one only has a little patience, a little ingenuity and a will. There are so many ways of making a little go a great way, or making something out of nothing, so to speak. I really feel grieved to see how some ladies go through life with little or no thought of saving, or economy, or of helping their husbands. One lady acquaintance once told me she would not keep a dress as long as I do; she did not see the sense of it. Well, I make my clothes last years, yet they are never out of style, and I have a sense of being decently and well dressed, and when I tire of them or see that I can make them over to better advantage for the children I do so, and get a new one for myself. Now, I know this is a long letter, and it will be a tiresome one for the firemen, but I hope it will not be for their wives, but if any should find it so I will put her down as one of those who have no thought of economy or her husband's purse. I will write soon again and tell those who do not know how to cut, baste and fit a basque that will feel comfortable and not twist to one side, that is, if the editor will allow.

It is with pride I sign myself

Beile, a Fireman's Wife.

[This is a very useful and helpful letter and we hope the writer will keep her promise and write another. This department is not published to interest the firemen; it is for the benefit of women. The former have nearly ninety pages a month and they do not need any especial attention from the few

remaining columns, except in the indirect way in which both sexes have a mutual interest.—Ed.]

LAREDO, TEX., March 22, 1891.

Editor Woman's Department:

As to-day is Sunday and I have nothing to do, I will try and write a few lines to our welcome *Magazine*. I wish some one from White Breast Lodge, No. 278, Laredo, Texas, would write and let people know that it is not like McGinty, for McGinty went down and No. 278 is going up grade just as fast as she can, and the boys seem to be glad that they are living. And why don't some of our firemen's wives and sweethearts write, and don't be ashamed to say "I am a fireman's wife," or "I am a fireman's sweetheart," for they are good, noble men. If any one wants to get me fighting just let them say anything against a railroad man, for I am a railroader's daughter, and I am proud of it.

There is much to live for after all. There is much more good than bad in life, and if we only know how to gather the good and let the bad go by, all of us can be happier than we think for, if we only stop borrowing trouble long enough to think. The seasons come and go—come and go, the years go by and drop off as time's huge pendulum swings into the realm of God with its freightings of life, death, love, hate, labor, gossip, scandal, enterprises, successes and failures. To-day as I look out of the window the rain beats fast and furious upon the forms and into the faces of those who speed along, anxious to reach shelter. The passenger train is just passing by and the rain is falling so fast and the wind blowing so strong that I could not see the number of the engine. One day we were in the round house where these great, wonderful, powerful locomotives are housed, petted, caressed and cared for while resting from the running they are forced to. How carefully the men in blouse and gaiters examined every portion of the ironwork and saw that all was right. The engineer came into the round house; he noted how well the cleaner and inspector had done their work. The fire was crackling in the fire box. The engineer mounted the steps and stood in his cab, and he rode out of the building along a switch to the place on the main track where stood the long train of cars to be drawn to their destination. When the fireman sounded the signal bell the engineer pulled a lever and a bar and something else with a handle to it, and slowly the train crept and wound its way out from the depot, over switches and onto the stretch of track that led away to the south. How they sped along the heavily ballasted track at the rate of forty-five miles an hour, hard jostling and easy riding, sudden transitions, as on they sped to the end of their run. What a pleasure it was to have the poor fireman and engineer home once again. We thought and thought as we gazed out from our room window; the twilight shadows fell softly all about us; the sun went down in its bed of roses and pinks and carnations and forget-me-nots in the West. The evening song birds came out to say and sing their "good night, and sweet dreams" to each other. The angels of the air came to us in troops; they entered our heart and under the influence of home lined it with velvet and hung upon the walls out of common reach the ugly weapons brave men must use at times. They fill our soul with thoughts, and here are some of them: Offerings from the gods to one who prayed to know the way and have strength to run it properly. Those hands and ridging muscles, they are the engine on and in which the spirit rides to its school, its college, its work, its reward. Look at the perfect physique, the engine; thought is the engineer. There is a race to run, a sea to sail over, a sunset before you, a race for life, a rest, a reward, if you can only keep on the track and out of the ditch.

I will not say any more, as my letter is too long already. Buenos noches, *Señorita*.

Happy Tot.

[Come again, and sign your own name.—Ed.]

CLINTON, ILL., April 6, 1891.

Editor Woman's Department:

It must be that the approach of spring has a tendency to brighten us up mentally. I know from Mrs. Harper's assertion that she had over thirty letters intended for the last *Magazine*, that a letter from me is not needed, but if I get one written I will send it and she can use it should there be a slack, sometime. We will soon be deep in housecleaning again. I am sure we will be glad when it is all over and we are nicely settled for the summer, but please don't be too smart and try to get ahead of some of the neighbors and have all the family sick with cold. La grippe has done sufficient damage this season. I love a clean house, but not a clean cold house. Indeed, I think there are few places so disagreeable. Every one feels cold and unhappy and miserable from the time the stoves are taken out till the sun has thoroughly warmed the atmosphere. The only way to avoid this state of things is to leave the stoves where they are till the sun has done his part, then we can do ours without endangering our health or that of our family. If prophecies fulfilled will make croakers happy they certainly deserve to be happy now. During the past beautiful winter they lost a great deal of the benefit of it while they were worrying over the "cold, late spring we were sure to have in consequence." It does seem so silly when we stop to consider how much present enjoyment we willingly deprive ourselves of while trying to borrow trouble from the future. I like to borrow and lend in a neighborly way but I must say I would rather *lend* trouble than *borrow* it. The most of us have a present supply equal to our courage to bear it. Too many of us are like the old lady who, when asked how she felt, said with a sigh, "I feel better, but I always know when I feel better I am going to feel worse."

"Friar Tuck." I enjoyed your letter immensely, principally because you are so honest. I had a good laugh when you told how you would have your intended treat you, but I have a bone to pick with you, nevertheless. Supposing you and your gushing intended had been engaged for some time, when, for some reason or without reason, you became estranged and never married, do you think the next man she fell in love with and who thought her all he wished, would enjoy knowing she had gushed over one or more men before meeting him? I think it would hurt you a little to know that you were not the first man your sweetheart had lavished her kisses and caresses on. How humiliating for her to meet those men after having married you, and how exasperating the thought would be to you that some man or men could say of your wife, "She was one of the gushing kind and we had lots of fun before she married him." This is just what you men must be prepared for if you select a girl who has no more dignified modesty than to allow herself to gush.

All the arguing in the world will not change my opinion of the girl or the habit, so we will agree to disagree. I will not quarrel with "one of the best boys in the world." *Mrs. L. H.*

[Mrs. H's ideas are sound. Her hints on housecleaning should have been written in February to reach the readers in April. Thanks for appreciative words.—Ed.]

VANCEBORO, MAINE, April 12, 1891.

Editor Woman's Department:

To-day, as I have just finished reading the *Magazine*, I thought I would write a few lines. I only wish the *Magazine* came oftener, for I take great pleasure in reading it, especially the Woman's Department. There are some dear, good sisters and I like to hear from them often. I cannot advise as to managing a husband, for I have had no experience, but, like most others of my sex, I live in hopes, and perhaps in some future day I can write on that subject. The B. of L. F. is in a flourishing condition here and the boys are all true to the good old cause. Wishing them God speed,

A fireman's friend, Naa.

NIGHT.

Darkness once more enshrouds the earth,

And silence reigns supreme;

Hushed is the tuneful song bird's mirth,

While in the firmament there faintly gleam

The twinkling stars, whose soft, pale light,

Dark shadows cast amid the gloom of night.

The murmuring breeze is borne with solemn sound

'Unto the listening ear from far away,

While nature rests in silence, deep, profound,

Unbroken by the turmoil of the day;

And God, the ruler of the light,

Keeps watch o'er all throughout the lonely night.

Night with its sombre shadows bringeth fear,

And fills the heart with sorrowful unrest;

The storm-tossed mariner sees not the danger near,

As rides the ship upon the wave's bright crest;

He doth not see the iceberg towering high—

When, lo! the ship has struck in passing by.

But when for us the storms of life are o'er,

And weary, aching hearts are laid to rest—

When we shall reach that bright celestial shore,

Where dwell the good, the pure, the blest,

We'll hail with rapture Heaven's transcendent light—

For us there'll be no darksome night.

Mrs. Nellie Bloom.

WEST OAKLAND, CAL.

MINNEAPOLIS, MINN., March 30, 1891.

Editor Woman's Department:

Circumstances have compelled me to refrain for some time from taking advantage of the editor's cordial invitation to make use of the lath string, and hence my letter may be somewhat late. I never fail to read the contributions to this department, but I might have remained a silent but amused and instructed reader had it not been for "Pebble's" letter in the February issue relative to "sparking." I think, in fact I am certain, that I am an ardent admirer of the gentler sex, and feel rather mean when I consider that I am about to willfully disagree with a lady, and one, too, whose experience in the art of sparking is evidently far ahead of my own. I feel obliged to commend her, however, before I presume to constitute myself a critic, inasmuch as any remarks and "pointers" on the art of courting must, of necessity, be extremely acceptable to such of us as are still numbered among the old and crusty sojourners in bachelordom. Yet, underneath her seemingly well-meant remarks there seems to lurk a sneer, and this sneer is directed at the callow youth who essays to "spark." Alas and alack! boys, we are undone. How vain are all our attempts to do or be anything.

"Sparking is a science," says "Pebble." Well, we will all admit that, I think, without argument. Still, if my own experience in that line may be taken as a criterion by which to judge, the assault upon the loved one's affections need not be so intensely scientific as to be distressing, as there is very rarely any energetic attempt at self-defense. (Excuse my impertinence, girls. "Pebble" gave "us" worse than that, although not so openly. Men can not be expected to be so subtle in their mode of attack as the ladies are.) Who ought to study the science of "sparking." "Pebble"? Do you think a small, a very small amount of instruction would prove hurtful to the fair damsels themselves? Some are quite awkward about courting. They seem to want to do first class love-making but fail, plainly through ignorance. What success could the most accomplished lover expect if he tried to spark a log of wood?

My conceit is singing its death song. I feel most uncomfortably humble when I reflect that possibly my terrestrial angel used to call my would-be graceful actions "antics," and liken my devotion to the abject submission of a canine. "Grandma" was right; it is plain she understood the value of a young man's affections. They should not be laughed at. Even though my own head is bald I sympathize with the young man and would see him have fair play.

Of course, "Pebble," your "untaught beau," should not have followed you about so persistently, but if it annoyed you, why did you not sit down?

This might not have proved so highly entertaining as the exercise of "walking and walking till you were all tired out, just to see him follow," but it would hardly have been so fatiguing as so much pedestrianism. If it was such a delight to see him "follow" why did you not tie him behind a wagon and then you could have reclined upon the green sward or sat on the fence and watched him follow to your heart's content, and when the "following" was over you would have been tolerably fresh instead of being all tired out. Your information as to what your method of courting would be, were you the beau, I accept meekly and gratefully, as I think all "untaught beaux" will do, but permit me to remark that I fear your armor is rather weak in some places. Of course you wouldn't forget that you were a gentleman because the constant pulling out of your pocket-book to pay for livery rigs, concert tickets, ice cream and oysters would cause that fact to loom up glaringly before your mind's eye. As regards "retracting our steps immediately," why, "Pebble," some of us do, or rather we used to until the girl jilted us because she said we were afraid to stay out after 4 A. M.

So you would tell her you loved her right away, would you? No, "Pebble," perhaps you think you would, but you wouldn't, really. Archimedes, you will remember, bragged that with a fulcrum on which to rest his lever he could move the world, but I'll wager my subscription to the *Magazine* that he didn't tell Mrs. Archimedes he loved her the first time he tried. It may not seem hard to a disinterested spectator, but most men would rather face a loaded cannon than run the risk of hearing that fatal "I'm sorry, but—"

In conclusion, in behalf of my sex, I would entreat the ladies not to cause us unnecessary anguish by criticising our style, or rather styles, of courting. We submit tamely to be torn in fragments as husbands, but don't attack such an ancient institution as "sparking." Let us court in our own way. We, perhaps, have our own ideas about how our advances should be received, but of course—we'll we can't post the girls because, somehow, they seem to do it better than we could, even when they are quite unsophisticated.

Without a "spark" of malice I am yours,

W. J. F.

[There are as many ways of courting as there are boys and girls to court and be courted. But as it was once said, "All roads lead to Rome," so all genuine "sparking" should lead to marriage. And yet the ways are devious; there are long lanes and short cuts and crooked roads and thorny paths and flowery walks. If our young folks can agree upon any method that will apply in all cases they will do something that their elders never were able to accomplish. The discussion is open.—ED.]

SHERMAN, TEXAS, March 20, 1891.

Editor Woman's Department:

I am not a constant reader of the *Firemen's Magazine*; but, having seen a few numbers, I thought I would add my mite.

I see much is being said and written about managing husbands. I do not know whether the discussion is open yet or not, but I think the time to begin managing them is while they are at home with mother. If mothers would teach their boys to love and obey them in all things they would not have to be managed by a wife. Think of this, mothers, while your boys are under your care. Train them to be good and noble men and in a few years you will not hear anything about managing husbands.

I have a brother who is a fireman on the N. P. R. R. in Washington. He came home on a two weeks' visit the first of this month, after an absence of nearly two years. You may guess how much pleasure it gave us to have him with us again, if we were only for a short time.

Mrs. M. B. M.

A WOMAN AND HER LITTLE GIRL.

As I waited at the station,
 Something less than half awake,
 On my ears, grown tired of listening
 For the train I meant to take,
 Fell a sound of childish laughter,
 And immediately after
 Came a vision would have charmed me,
 Were I—what I'm not—a churl.
 'Twas a pretty little woman
 With a pretty little girl.

Her lips—I mean the woman's—
 There was mischief in their smile.
 Her cunning feet—the baby's—
 They were dancing all the while.
 And no form was ever neater
 Than mamma's, and nothing sweeter
 Than her plump, white neck—the wee one's—
 And the wayward little curl
 On the forehead of the woman
 With the pretty little girl.

When the locomotive whistled,
 I was prompt as you may guess,
 To protect the winsome couple
 From the jostling and the press.
 Happy chance—to safely guide them,
 Happier still—to sit beside them
 And watch their winsome ways, until
 I found my heart in peril.
 And stole a sudden kiss from her—
 I mean the little girl!

Then I wondered if I quizzed the
 Little girl about her pa,
 And should get a pensive answer
 From her blithe and bonny ma.
 Would it make me broken hearted
 Should she softly sigh "departed."
 But the locomotive whistled,
 And I helped them through the whirl
 To the arms of—"John," said mamma,
 "Papa," screamed the little girl.

M. G.

LAREDO, TEXAS, April 26, 1891.

TARRYTOWN, N. Y., March 31, 1891.

Editor Woman's Department:

Ever since I married "my Jack" (then a fireman), four years ago, I've been a reader of the *Magazine*; I read all but the "Mechanical." You certainly have a great deal to put up with. Time and again you've requested your correspondents to comply with certain rules of the *Magazine*: from their failing to do so one would think they had very little regard for your time and patience, which must be all the virtues in one, or you couldn't stand them. A large majority mention the waste-basket, but will do nothing to avoid it. If I were in your place, I'm afraid I'd be tempted to make that (the W. B.) the future home of quite a lot of the letters. I'm glad our "husband managing sisters" have decided to quit managing and give us something new. Although I have read every method of "how to manage a husband," not one would suit my case, for it seems to me "that husband of mine" needs different management every day in the week and twice on Sunday. Still, I dare say, he's no worse than the general run of well managed ones. To kiss and hug, grin and dance attendance on a man, is not by any means my idea of "managing" him. I think

"Those managed best of all
 Are those managed not at all."

I agree with our friend Shandy: "I never can get the right kind of a pull on the check-rein to manage my Jack." The January number brought the sad announcement of Mr. Debs' retirement. Now, that's what I call "hard luck;" we (the B. of L. E.) may, somewhere in this vast army of toilers, find another Eugene V. Debs, but I doubt it. I can forgive him for leaving us on one condition—that he *does* (as rumor has it) found a labor paper; then, though he has left us in one sense of the word, we can still feel he is with us (the working people).

Although the B. of L. E.'s *Journal* made "a miserable effort" at attacking the speech made by Mr. D. J. Brown, at the convention of the B. of L. E., I think (as does the *Journal*, if the truth were known) it was "simply immense," and a carload of "Chauncey's speeches" couldn't come up to it, in my estimation. I felt like hugging Brother Brown when I read it. If I represented the B. of L. E., I'd put Brother Brown (where he belongs) in Grand Chief Arthur's place. Just about now Arthur seems to have "Chauncey Mephistopheles" in his eye and can't see what's good for him. If he called on Chauncey as "a friend in need," I'm afraid he'd be answered in his own words, "Mind your own business." Chauncey has the "price," but over and above that, "he ain't in it."

With best wishes for all in favor of woman's rights and federation, I remain
 Annie Rooney.

LEADVILLE, COLO., March 15, 1891.

Editor Woman's Department:

Having been a constant reader of the *Firemen's Magazine* for some time and not seeing anything about Cloud City Lodge, No. 196, I thought perhaps I might say some words of the esteemed members of that lodge.

They are a set of jolly, gallant boys, eager to lend a helping hand to any brother or friend in trouble or distress.

And as for the *Magazine* I think it one of the most interesting books I have ever read. I must say I am partial to the Woman's Department, and think it is a grand thing to have the privilege of praising the noble railroad boys for their brave deeds done while at the post of duty. And the sisters write such lovely letters. It does one good to read them.

As this is my first attempt at writing for the public, I sincerely hope you will make all allowances.

If this escapes the waste basket and finds a corner in your valuable *Magazine*, with your permission I will come again. Wishing the noble Brotherhood success in all undertakings, I will close.

M. I. P., a fireman's daughter.

[We publish this letter entire in order to call attention to several points. The writer says she is "a constant reader" of the *Magazine* and then in every paragraph ignores requests that have been made till our readers are tired of seeing them. The first paragraph is taken up with saying that she will tell us something about Cloud City Lodge. She then tells us they are "a set of jolly, gallant boys," which information it is hardly worth taking up space to impart. Next she says "it is such a grand thing to have a Woman's Department in which we can have the privilege of praising the noble railroad boys," although our correspondents have been asked repeatedly not to do this very thing. Another paragraph is then devoted to a reference to the "waste basket," after one hundred requests that our contributors will not use this hackneyed and worn out phrase. Take out these objectionable points, which have been referred to again and again, and what is there in the letter that should entitle it to a place in our overcrowded columns? And yet we get at least a half dozen letters each month that are a fac-simile of this, and always from persons who state that they have been "constant readers of the *Magazine* for years." Now will not this correspondent try once more and tell us something about Leadville, which is said to be a most unique and interesting spot?—Ed.]

CARLETON, ST. JOHN, N. B., March 9, 1891.

Editor Woman's Department:

Perhaps you would like to hear from this part of the world, so I have concluded to write a letter to the many sisters, whose names seem so familiar to me. I have been a reader of the *Magazine* for a number of years, ever since Justice Lodge was organized, and I don't remember seeing anything from St. John in the Woman's Department. There are plenty of ladies who could write much better letters than mine if they only would.

Many of you have never seen St. John. It is one of the largest cities of the Dominion and has upwards of 60,000 inhabitants. About fourteen years ago it was nearly destroyed by fire, but it is now a beautiful city, with many handsome buildings; and with its beautiful harbor and scenery is very attractive to visitors, of whom we generally have a good many.

Our city is growing in popularity as a summer resort, and is well worthy a visit from pleasure seekers. The beaches afford splendid chances for boating and bathing, and the climate is very healthful.

Well, "Shandy" has some very comical ideas of how husbands and wives should be managed, but as I am not married I am not going to say anything about it, only this. If I had a husband like he makes people believe he is, I should think I had my hands full. But "Shandy" has been down this way and we know he is not so bad as he makes believe he is.

What a treasure some one is missing while Jim Dooley remains single. Poor fellow, I hope he will soon have a nice, little wife to take care of him and his lunch box.

Why don't every one choose her own topic and then it would make a variety and be more entertaining to us all. I am afraid I am imposing by making my letter so long.

Hoping that the firemen may never be able to abolish the Woman's Department, for if they do they lose the best part of the *Magazine*, and with good wishes for all the Brotherhood, I sign myself

A fireman's daughter, S. L.

[We would much prefer that our correspondents should choose their own subjects, and only suggest one occasionally to keep up an interest.—Ed.]

GOODLAND, KAN., March 11th, 1891.

Editor Woman's Department:

Well, I am glad that piece of work is so nearly done.

What was it? Why it was cutting up and salting down two pigs. Now, did any of you ever know a man to be at home when needed? And I only had an old case knife and a hand-saw to "dissect" those pigs with. Oh! the graceful (?) curves and lines I did cut with that old knife. I know if the butcher could have seen me he would have liked to hire me at a good salary, but I wilted when it came to the heads, and if some one else does not come to the rescue, they will have to remain intact or—in the soap grease.

Our lodge (for the women are as much interested as the men), is reported as gaining in attendance, but must need some financial improvement as I had a receipt for an extra assessment handed me to care for.

If advice will not be out of place, I would like to say to the members of this, and all other lodges, don't ask the lodge to carry you unless strictly necessary. It is sure to create a you-needn't-to-have-done-it feeling when they see you buying things for yourself that their families have to do without in order to keep a good standing.

If all sons were sure to follow in their fathers' footsteps, the C. K. & N. need not fear getting out of employes. Such a crop of little railroaders, from engineers to car repairers.

It is a stormy night, so I sit up waiting for "12" and my old sweetheart to come in, and expect to be rewarded with, "Why didn't you put a big chunk of coal on the fire and go to bed?" You are so foolish to sit up waiting for me." So good night and pleasant dreams to all.

Phillipa,

MONTPELIER, IDAHO, May 1, 1891.

Editor Woman's Department:

The *Magazine* at hand. I will begin by saying something of women's dress in general, a subject on which all women should have something to say. Think of the heavy skirts, of the numerous and unnecessary petticoats, of corsets, pads, cushions, steels, of low necks and short sleeves, of long hair pinned up in brain-stupefying coils, with diamonds that drag and tortoise shells that break, of bodices that button in all manner of odd places, where fastening them becomes a difficulty—at the side, under the arm, on the back and shoulder; of trains, their length, their weight, their costliness and absurdity (they give splendor to society, to be sure, and are good encouragement to the silk trade); of other useless adornments: of fans, and the effect the use of them implies; of all of these mystic things and more than these, all for the want of intelligence in woman's mind to discountenance such follies in the way of clothing. Comfort is the main thing to be considered in the clothing of human beings.

From the earliest age of history down to the present time the race has shown a barbaric tendency toward a superabundance of adornment, which is most fatal to intellectual progress. From the fig leaf man came to the wearing of coats and skins; then followed the absurd trinkets, such as beads, belts and head ornaments, which would make a savage look ridiculous. Women should not wear such useless things as these. Look at the superior comfort and physical strength enjoyed by men. How long would their physical strength endure if they were weighted down with the heavy skirts worn by women? Could they walk forty miles a day in women's shoes? Could they fire an engine in women's corsets? No. It is plain to see men enjoy superior physical strength, largely because they are properly clothed. There is no reason, either in law or nature, why they should possess these advantages. Women, by adopting their style of dress, will secure a great deal of their muscular physique. Men and women are viewed as being merely equals, but there is a distinct division between them, and the question of clothing is the most important thing to be considered. Certain objections may be raised against my views in behalf of trade, the question of what would become of a large portion of trade if women quit wearing such foolery. But I say the freedom, health and comfort are more to be considered than any trade. The liberty, the perfect liberty of woman is what we have to strive for through the physical condition boasted of by her, would-be oppressor—man.

W. B. Richmond.

ST. JOSEPH, MO., March 21, 1891.

Editor Woman's Department:

For the past few months I have been a constant reader of your valuable *Magazine* and I like it very much, especially the Woman's Department. My husband is a member of the B. of L. F. He is out on the road now and I thought I would write a few lines for the *Magazine*. I think the article signed "F. M. S." and published in the March *Magazine* in regard to managing a husband, is very good. In regard to having their meals ready when they come home, we can't always do that for we don't know when they are coming. My husband always tells me when he goes out on freight, not to depend on him being back at a certain time for he might not come. But he is on the passenger now and I know when to expect him; but sometimes they are late and I get fooled then; but I always do my washing and ironing when he is away and try to have everything in order so that I can visit with him when he gets home.

I have tried some of the recipes in the *Magazine*, for plain cake, and like them very well. I never leave anything for my husband to do, when he gets home, for he is always tired enough, so when he gets home he can sit down and read the paper and rest, for he is very fond of reading. I always think how hard he has to work while I sleep, and so I think we can afford to do the housework without asking them to help. As this is my first attempt into your circle, I will not make my letter too lengthy. Wishing the *Magazine* and the B. of L. F. success in the future, I remain, a fireman's wife.

S. L.

TO THE MAGAZINE.

O beloved, beautiful *Magazine*,
I write these verses so true,
Because my boy is a fireman,
And is so devoted to you.

For over a year he has held you
In fond embrace in his hands,
As he eagerly devoured your contents,
While you spoke of other lands.

And while seeking for information,
Which he always found you contain,
He still turned to the Woman's Department.
From so doing he could not refrain.

And as he treasures you safely,
With many more at your side,
With the coming hope that his many friends
Will read you with a fireman's pride.

While you go among your readers,
May they handle you with much care,
For the information you give them
Cannot be found elsewhere.

A Loving Mother.

GLADSTONE, MICH., April 10, 1891.

FAITH.

Have ye faith in one another,
When you meet in friendship's name?
For the friend should be a brother,
And his heart should feel the same.
What tho' your paths in life may differ,
Since the hour when first you met,
Still have faith in one another—
You may need that friendship yet.

Have ye faith in one another,
Nor to a doubting heart incline;
Doubts will make this world a desert
Where the sun will never shine.
Tho' you have some transient sorrow
That overshadows you to-day,
If you have faith in one another,
Sorrow with you will not stay.

Have ye faith in one another?
Then let honor be your guide.
Let no angry words be spoken,
What else others may betide.
Grief and troubles may assail us—
Yes, I have no doubt they will;
But have faith in one another,
For faith will conquer every ill.

Pansy.

TUSCUMBIA, ALA., April 4, 1891.

HAYDON, ONT., March 22, 1891.

Editor Woman's Department:

To pass away the time (as I am absent from school to-day) I will talk to you for a little while.

But you will have to excuse the mistakes, as I will probably improve later, seeing I am only fourteen years old. Oh! such a horrid day as it has been. Raining all the time. I have just been reading some of the letters in the February *Magazine* and have found them very interesting. My brother has been two thousand miles away for over two years and is now a fireman and a pretty good one, I guess, although I have never recognized any of his letters. Wouldn't I like to step into his home some day unexpectedly? I guess he will be not a little surprised when he sees this. I think firemen ought to write as well as their "female relations." What do you think about it, Kattie? I can see the water rushing busily along (as the mill-pond is very close), and it reminds me of the danger a fireman is in, as the train rushes over high bridges which might at any moment give way. May you all be kept safe and be kept cheerful by your jolly little wives, and those that are minus a wife by some one else. If this is accepted I will call again. I remain a fireman's loving sister.

Ethel.

[Ethel's letter might serve as a model for some of her older sisters.—ED.]

CHIPPEWA FALLS, WIS., April 9, 1891.

Editor Woman's Department:

I see some mention in the *Magazine* of changing the subject of the letters in this department, and giving the question, is "Marriage a failure?" a rest. Now before this is actually done I would like to have my little say about this interesting problem. "Yes" must certainly be the answer to it if the husband be shiftless, a drunkard, or possessed of any other of those divorce court evils, or if the wife be wasteful, dirty, or a scold. But in too many cases none of these ills exist, or only slightly, and yet home is not always a place of peace and a comfort. Why this is so may be a conundrum to unmarried people, but married ones know there are always little annoyances, small themselves, but which, coming in twos and threes, wear and tear the nerves and temper to pieces. In order that home may be what it should be, father, mother and children must do all in their power to make each other and themselves comfortable. If the husband comes in tired, teach the older children to amuse the baby while the wife gets the meal ready, or does anything else he wishes. I believe in waiting on my husband sometimes, but think he should not allow himself to get so used to it that he would expect it every time, as very often I am more tired than he; then he should at least make as little work as possible for me to do if he does nothing to help me.

I think where none of the great evils exist that more depends on the wife than on the husband in making home happy. In regard to meeting your husband with a smile, I don't believe it means you are to have a grin on your face, but that you are not to greet him with all the ill-humored remarks you may have heard, or tell him how cross baby has been, and how big your grocery bill is, but are to be as pleasant as possible, and if you have nothing particularly agreeable to relate, ask him about his trip and let him do the talking. On the other hand, should not the husband be a little bit agreeable, too? I lived neighbor to a man once who was a splendid, good husband, only he was cranky and so unpleasant around the house when he had his spells you would wish to be fifty miles away. He liked to see the house in order, and when he lost his temper over some of the little things mentioned before, he used to remark, not very gently or gracefully, either, to his wife, that her house was always upside down. Yet she was a good housekeeper, and kept things in their places better than the majority do with children. This same man would sail right past half a dozen empty nails, and hang his coat, vest and hat on the machine, throw his neck-tie and pipe on the table, when the cupboard was standing nearer to him, with one drawer assigned him for his handkerchiefs, ties, sleeve-holders, etc., and a box in said drawer for pipe and tobacco. Some men look on their homes as mere boarding houses, and think if they provide board and clothes for a woman she should have no other thought in the world but her husband's comfort and enjoyment. Now to such men I would like to give a pointer. Didn't your wife have a living before you married her, and in some cases a better one than she did afterwards, and worked not half so hard? Is this, then, what women get married for, to be less than hired girls? for you would never talk to a hired girl as you do to your wife, sometimes, or you would have a new one every week. You would also have to hand over at least ten dollars every month, and very few women of my acquaintance put that amount in clothes for themselves every month. No, Mr. Men, please remember women like their own comfort as well as men do, and employ their time making home and all in it as comfortable and happy as possible. Let the men do their part, too. Every good woman will have her husband's clothes clean and mended when he wishes to change, will keep her children, house and herself as clean and neat as she can. And now, gentlemen, you all like your wife to look young and pretty, so do all you can to help her keep so as long as possible. If you go for a drink of water and find the pail full (of emptiness), forbear the remark that there is never any water in the house when you want a drink. Rather, think how many weeks it is since you brought in a pailful, and make

APRIL 1, 1891.

tracks; and if you come in sometimes and find things not as straight as they might be, don't growl, but help just a little, and you will be surprised how soon things will get to rights, and you will feel so proud of yourself. This is all, provided you have a wife who, you know, tries to have the house in order when you are home, and does her washing and such things, when she can, while you are out. To women who do not do the right thing I have nothing to say.

To their husbands I would remark: Gentlemen, do your part and make them do theirs, by fair means or foul. Now, sometimes instead of taking a couple of the boys in for a treat, take that money and treat yourself and family to a dozen bananas or something else. Occasionally, also, take your wife out somewhere, if only to a free concert. Such things brighten life. Let each do as he or she would be done by, then everything will be serene. But if one follow this rule and the other do not, then I say to this one: Hold your own, regardless of a little discord, as man and wife are equal, and all should remember it and act accordingly.

Margretta.

[A very good letter. Come again.—Ed.]

PUERLO, COLO., April 14, 1891.

Editor Woman's Department:

In perusing the contents of the *Fireman's Magazine*, there is always one part which is devoted to the interest of our fair sex. The part referred to is very interesting, owing to the fact that all concerned have a different method of managing affairs. One fireman's wife says why not have the men write and inform them the way in which they would like to have the ladies act. Well, now, each may have his own way in the managing of an unruly husband or wife, but they can all rest assured that there is only one way in which they can arrange matters satisfactorily, and that is kindness. It takes all kinds of people to make the world, and there are some very queer people in it, so queer at times that kindness is at a loss how to proceed. For instance, how many of our young ladies and gentlemen ever think how they should act? One wife says she is entirely at a loss what to do so that she can secure a kind word and look from her better half. Why not try contentment for a while, with a little patience thrown in for balance for the afflicted parts. And how many men are there who never give a single thought to the comforts of home: all some care for is that everything is in proper shape upon their arrival. Little do they think how long the poor wife has drudged and toiled to make things look attractive. And then to have a husband come and not say a kind word to her for the trouble she has taken in making his home beautiful, is pretty hard. If men were only a little more sensible to the duties involved there would be less trouble. What does a home-coming mean to us all? Does not your wife look for your return with joy? Is she not anxious until you return, and does she not regret your departure, fully knowing that she may never see you alive again? Think for a moment how the news of your death strikes on your home. It may be you are on your first trip after marriage, and it may be years later, but depend upon it, the blow is severe at any time I speak of. Loving wives and husbands who are all the world to each other, why not try to come home in this way? Surely there is enough music in your cranium to whistle or sing your favorite air, or come in the house with a little life in you. You may be tired out, but you are not so tired but that you could say a kind word, which at once throws all doubts and fears aside. As to your being out of sorts, execute a step or two like you used to in the ball room or at a party, and you will see the effect. Also let the wife do the same and then see how things proceed. Of course you want some amusement, but what were your earlier days for? You must remember that you now have a home to care for, and that should be amusement for you. Let your wife and little ones join in. Don't be crank; show your manhood as it should be shown. Also let the wife do the same, and love and affection will do the rest. Wishing all success, I remain

A Fireman.

Editor Woman's Department:

I like the little *Magazine* very much, and am especially interested in the *Woman's Department*. I enjoy reading the advice given as to how to "manage" a husband. As I am not the happy possessor of a husband, am unable to state how I would or would not do. But when I do get one I hope he will not have to be "managed." And should it become necessary, I think I shall try to do it with pleasant words, smiles, and good dinners, and will expect him to return the compliment with an unlimited amount of pie and cake, and a nice, fat pocketbook.

I think it is a wife's duty to make the little home as cheerful and pleasant as possible and give some attention to her personal appearance; strive to be just as cute, pretty and attractive in the presence of that dear, good husband, as she was when he was her lover and they spent so many happy evenings together.

I am very much in favor of "Buckeye's" style, in your last issue, of "managing" a wife. Would like to hear from him again. Wish there were more like him. I suppose I ought to tell you that I have a sweetheart. Well, I have. Of course, all girls have, but they do not all have one like mine. He is a fireman. He is also Secretary and Magazine Agent of one of the lodges. And in conclusion I will say that if I am not Mrs.—oh, well, I mean that fireman's wife—before the year ends, I'll know the reason why.

If this, my first attempt at writing for your *Magazine*, is considered worthy of publication I would be pleased to see it in print, and you will perhaps hear again from

Jewel.

[Put the name of your town or city at the head of your letter next time and send your true name or we will have to leave you out.—Ed.]

BALTIMORE, MD., March 31, 1891.

Editor Woman's Department:

My pen has been idle so long it has become rusty, nevertheless I will make one attempt to write a letter to the journal. I have been a constant and devoted reader of your worthy *Magazine*, and I am always interested in its columns, and as I have not known any one yet to send a few lines from Palapaco Lodge, 432, I thought perhaps I might say a few words in favor of their esteemed members. I hope that all my sister friends may join in and wish them great success, for it is a noble organization of brave and true-hearted men, and I hope that our dear brothers of 432, who but a few months ago joined their hands together, may every Sunday bring forth new members. Work on, dear brothers, work on in faith. Let doubt ne'er turn their steps aside, for though thy love may seem in vain, a rich reward awaits for service wrought, that seems to you so worthless now.

With best wishes and earnest prayers for all the brave boys who shovel coal, and the noble Brotherhood. May God bless the B. of L. F. and especially No. 432.

With best regards and kindest wishes,

A Fireman's Friend.

[You should not be so selfish as to ask God to bless No. 432 more especially than any other lodge. Come again and tell us something about Baltimore, your magnificent Johns Hopkins University, your Peabody libraries, your monuments, Druid Hill Park and your many great attractions.—Ed.]

NOTICE.

Will all secretaries of the Ladies' Societies of B. of L. F. send their addresses at once to Mrs. James L. Moore, Important business, Box 380, Stratford, Ontario.

"A TRIP ON THE WINDY."

You will leave Nashville on No. fifty-nine,
And back on 56, I'll put it into rhyme.

On a dark, dreary night,
And drizzling rain,
With five hours rest
And a heavy pulling train.

You will leave Nashville yard
Tolling the bell,
As to whether you get back
No one can tell.

We never think of that
But look at the bright side,
Attend to business strictly
With eyes open wide.

The first meeting point
Is at Kingston Springs,
A very nice place
For a great many things.

You will go there on time
And water you will take,
And the next meeting point
It is impossible to make.

Then you strike a hill five miles long,
The hill they call "twenty-nine,"
To stay with the engine you must be very strong,
Especially when rawhided to make the time.

It is up to Ridley's tank,
And oh! what a sin,
You are compelled to stop
And pull the pin.

You will hit the hump
With a terrible vim,
Put the cars in siding
And back again.

Then up to White Bluff,
And an order you will find,
To go over to Burns
And get two cars of lime.

Then down to Dickson,
And two hour's switching to do,
And it's pull up and back in, Billie,
Whenever you get through.

We have missed the meeting point,
Just as I expected,
I would have run faster
But I am afraid the boss would have objected.

Is the indicator at work?
The conductor says "no,"
And when No. 60 comes
We are going to let her go.

Then it's one eye out the front window,
The other one in the fire-box,
And when she strikes a curve
Great Scott, how she rocks!

You will roll 'em, and roll 'em
The rest of the night,
And you'll catch time at McKenzie
Just about daylight.

The engineer will oil around
While you take coal,
Then put out the headlight
And you are ready to roll.

You leave McKenzie
Just a little bit late,
That is a meeting point
For fifty-nine and fifty-eight.

You will sail over to Martin
As you can,
On nine different tracks,
Down and take sand.

You will go to the terminus of the line
Right on time,
The time we are due
Is ten minutes after nine.

You will go to bed
And sleep very fine,
This is the best I can do
For a rhyme this time.

N. S. B.

[That is a very hard trip, and we'll all
take a rest.—ED.]

LOUISVILLE, KY., March 25, 1891.

Editor Woman's Department:

Men! men!! men!!! I am so sick of reading about men and unmanageable husbands that I am threatened with a spell of hysteria. They are all going to have their own way whether or no, so just leave them alone, and, dear sisters and fellow creatures, look up and ahead to that dear Adamless Eden beyond, for methinks we will have it all to ourselves bye and bye.

I think it would be a good idea for a personal correspondence to commence. I would like to correspond with some of the ladies.

"Kittie B." have you any babies? If you have, why did you not take care and aft that mother that was disappointed about her baby boy? I have a boy five months old and I think how nice it is to have him to go to and cry when I am vexed or disappointed—and smart,—he is as wise as his parents now.

Oh, how I do wish I was a real fine housekeeper, so I could brag a little in here to you all; but if I did my neighbors would send in a petition to have me excluded. I am just wild to write more, even if my dinner dishes are not washed, but I'm afraid of those [—E.D.s.] at the bottom of several letters I've seen.

J. W.

[Wash the dishes and call again.—ED.]

TUPELO, MISS., April 7, 1891.

Editor Woman's Department:

I have been reading several of the *L. F. Magazines* and have enjoyed reading them very much.

I have just finished reading a letter from a young lady who says she is not married but will be soon. I think she would better wait till she gets him (before she says soon), for boys are liable to forget some of their most faithful promises.

I have a particular friend on the K. C., M. & B. R. R., who has asked me several times to write to the *Magazine*, and I fear when he sees this in print, he will become somewhat disgusted with school girls. I am nothing but a careless school girl, but not so careless as some would think for. You will find most girls more ignorant than boys, especially railroad boys. They have so many more advantages than we girls. They go everywhere and see all the pretty young ladies, so much prettier than the old ones. But the old saying is never to desert an old friend for a new one. It is very seldom that I see any of my railroad friends, and I don't have a conversation with them often enough to know what they would like to have published in their *Magazine*.

I have written too much now, for it is my first. Best wishes to No. 29 and her Master. May God ever let his richest blessings be with the B. of L. F. is the earnest wish of

Electa Lynn.

[If the writer of this letter is a "school girl," as she says, she will, we trust, permit a criticism. Judging from her letter, it would be impossible for her to be any more "careless" than it indicates. It could scarcely be prepared for publication and part of it had to be omitted. It was no worse than many others we receive; but where the writer is a woman of years, who has, perhaps, had no early advantages, or where she has a house and a family to look

after, mistakes are excusable. But in such cases as the above, where the writer is in school but is old enough to talk about getting married, as she does, there is little excuse. Her "particular friend" will certainly be "disgusted" if ever he gets a letter from her. To her, and to all young girls who write for the Woman's Department, permit us to suggest that they read carefully the directions that have been published from time to time. If they cannot avoid poor penmanship and faulty spelling, they can at least write neatly and plainly and follow the formula that has been so frequently given.—Ed.]

KYLE, TEXAS, April 5, 1891.

Editor Woman's Department:

As I am a constant reader of the *Firemen's Magazine* and take great interest in the Woman's Department, I will endeavor to write a few lines for that department. There seem to be very many different ideas as how to manage a wife. I have no wife to manage but may have some day. Had I a wife I don't think I would try to manage her at all, for a wife (as I understand it) should be capable of managing herself. I want to ask you men who have wives, how many of you told your wife before you married her that you intended to manage her? Methinks if you had told her that, you would not have got her. I am sure I could not get a wife were I to use that expression. The average marriageable man of to-day thinks, "Well, now, if I can just keep my bad habits and weak points from her until I get her it will be all right. I can take my mask off then and she cannot discard me as she would before she married me, had she known me as she will know me." But I think different. Young man, appear what you are, but do not try to appear what you are not. Just say, take me as I am or not at all. I would like to hear from some good writer through the columns of our *Magazine* who can tell me how to judge a good wife. I have not seen anything of that kind in the *Magazine* since I have been reading it. It seems to be a married folks' paper. Why not give the single folks a chance? I am sure they can keep up as interesting and lively correspondence as the married people. As this is my first entrance in your circle, I will close. I remain a friend to the *Magazine* and its readers. Charlie.

[If the married folks have a monopoly of the Woman's Department, the young folks have no one to blame but themselves. Their letters are welcome.—Ed.]

Editor Woman's Department:

I have been a reader of your valuable *Magazine* for some time past, and I assure you it is very highly appreciated by me. Having just finished reading the March number, and being much pleased with it, the thought came to me, "Why can't I contribute something to the Woman's Department?" It is my first attempt, but I will risk it.

I have several friends among the firemen, and therefore I am interested in their welfare. They are, as a class, straightforward and whole-souled boys, and this I can truly say of the members of "Gate City Lodge, No. 93," some of whom I have had the pleasure of meeting.

The question that is agitating the minds of the curious people, especially the ladies, is, "Which of those two brave firemen of the lodge will succeed in winning the affections of a certain young lady?" as they both seem deeply concerned in her future happiness. There are a number of the boys leaving the ranks of "single blessedness," and I agree with a letter written some time ago signed the "Farmer's Daughter," that there should be some imported; and we would not object to the importation of such men as "Jim Dooley." I think if he would make a

trip to Iowa he wouldn't have any cause for regret, as the girls are noted for their good cooking, and he seems to be of the same sentiments as Owen Meredith, when he says.

"We may live without poetry, music and art,
We may live without conscience, we may live without heart;

We may live without friends, we may live without books,

But civilized men cannot live without cooks."

So he would be compensated for his trip. However, I appreciate his letter ever so much, as it presents a great deal of common sense, and shows that if a woman tried to please "Jim" it wouldn't be in vain. Wish there were more such men.

The letters of the "Fireman's Mother" and the productions of "Shandy Maguire," etc., are also read with much pleasure by the ladies.

It was suggested some time ago that we exchange receipts, crochet patterns, and ideas of fancy work. If such would be permitted, I would gladly give my meager knowledge on such matters.

As it is getting late I will close for this time. Wishing that God's choicest blessings may ever attend this noble order, I am a sincere friend and well-wisher,
Hazel.

[Yes; receipts and practical suggestions of all kinds are in order.—Ed.]

OUR FIREMEN.

Gentle, loving, kind and true,

Are our locomotive firemen;

Steady, willing all the time,

Seems to me you cannot tire them.

Always ready when they're called on,

To bestow a willing hand,

On some poor and helpless loved one,

Trying to drag o'er this land.

When their duty calls upon them,

Oh, how quick they are to go,

But they know not when they're brought back.

It may be on a stretcher low,

Not one moment is he idle.

Always working, never stops

When he sees his place of resting

Till he makes his engine pop.

From the early dawn of morning

Till the set of sun at night,

Tolling steady with his engine,

Fighting out the awful fight;

Always striving for the better,

Always striving to do good,

Never idle, always working,

See, he's joined the Brotherhood.

Now, I will conclude by saying

To our firemen, brave and true,

Oh, may Heaven's choicest blessings

Ever hover over you.

And when the toil of life is ended,

And the noble fireman's done,

May he have a place in heaven,

Which he has so justly won.

A Fireman's Friend, R. H. L.

SAN JOSE, April 3, 1891.

In loving memory of my dear friend,

BERT RIDDLE.

Loving friends, weep not for me,

I long to be at rest,

How happy, happy I shall be,

Pillowed on my Saviour's breast.

'Twas sad to see thee breathe thy last,

But Jesus said lovingly, "Come;"

Now thy sufferings all are past,

And thy sweet spirit rests at home.

Oh, the hope, the hope is sweet.

That we soon in Heaven shall meet,

There we all shall happy be,

Rest from pain and sorrow free.

From a Fireman's Wife of Willow Grove Lodge, No. 434.

BENNETT, PA., April 14, 1891.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

TO THE FEDERATED ORDERS OF RAILWAY EMPLOYEES.

Every consideration of fealty to right and justice demands that the *Locomotive Firemen's Magazine* should now, as it has done in the past, advise its readers, especially the members of the Brotherhood of Locomotive Firemen, of such facts as may come to its knowledge, derived from unquestionable sources, calculated in any wise to promote the interests of the federated orders of railway employes, and, as certainly, and if possible, with more distinctness, lay bare such other facts as the editor believes have a tendency to detract from the prosperity and power of such organizations and eventually disrupt federation.

Profoundly impressed with the fact that a crisis has come in the affairs of the federated orders imperatively demanding plain speech, and with unqualified friendship for each of the federated orders, I shall write of recent incidents, which, under the most favorable presentation are well calculated to arouse feelings of despondency in the ranks of the most hopeful.

No one, I assume, has entertained the idea that any organization of men, however guarded by declarations of principles and the enactment of wise laws, could fully overcome man's fallibilities. No such claim by any sane man was ever advanced, but it has been assumed, based upon self-evident truths, that in "unity there is strength," and, therefore, that organizations of workingmen, having interests in common—mutual interests—could promote the welfare of their members by federation; that in federation the largest possible power of human effort could be exerted; that by federation the wrong could be cloven down, and the right enthroned; that by federation, principles of justice could be established and maintained; and that not only the welfare of workingmen would thereby be promoted but the prosperity and happiness of society as well.

Such propositions have never been denied. The opponents of federation have

simply made objections, but have offered no arguments, because there were none at their command. The principles upon which federation is based are as eternal as any axiom in mathematics. In every arraignment they can stand any test that enmity or ignorance can devise. If, in a contest, victory comes—as come it has in the past, and is destined to come in the future to men who are capable of comprehending the power of federation—its advocates and defenders may of right be jubilant; and when defeat comes—as come it has in the past when the right has been overpowered and crushed, the eternal truth that "in unity there is strength," and that in federation that strength can be secured in the largest measure, has never lost a fraction of its claim to recognition. On the contrary, it stands as the rallying point of workingmen, and will remain as immovable as the eternal hills as long as heartless plutocrats devise methods of cruelty and injustice to labor.

Notwithstanding such things, there is serious trouble existing in the Supreme Council of the federated orders of railway employes; troubles which had their origin in matters as foreign to federation as it is possible to conceive, but the parties involved, being related to the Supreme Council by virtue of the membership of the orders, a few of whose members disagreeing upon a comparatively trivial matter were permitted to generate irritations and animosities until the Supreme Council was, by call, convened for the purpose of restoring amicable relations.

In laying such matters before the members of the Brotherhood, I am compelled to indulge in details to enable the reader to comprehend the situation.

In the yards of the C. & N. W. Ry. at Chicago there was a yardmaster by the name of McInerney, and a switchman by the name of Crow.

McInerney was a member of the Brotherhood of Railroad Trainmen, and Crow was a member of the Switchmen's Mutual Aid Association.

Between these two men feelings quite the opposite of amicable existed, and as a result, McInerney discharged Crow.

It is not surprising that the switchmen in the yard, at once rallied to the aid of their fellow member and championed his cause. They appointed a committee to visit the railroad official who had authority to reinstate Crow, and an hour was set by that official to meet the committee and hear the grievance. When the hour arrived Superintendent Miller, the official in question, failed to show up, notwithstanding it was his own appointment.

This treatment of the switchmen on the part of Superintendent Miller, had the effect to temporarily demoralize them, and

the result was a strike of short duration, continuing only a few hours, and causing little embarrassment to the road, and though brought about by the neglect and improper treatment of Superintendent Miller, was not justifiable under the laws of the switchmen's organization nor the laws of the Supreme Council.

The switchmen, though Crow had been reinstated, smarting under the action of McInerney towards Crow, demanded and secured his discharge as yardmaster.

These incidents, naturally involved the two orders—the B. of R. T. and the S. M. A. A., both members of the Supreme Council of the federated orders—and as a consequence, a call was made for convening that body to investigate the situation, and it convened for that purpose in the city of Chicago on April 13.

When the Supreme Council had convened, it was found that there was really no business to be brought before it of a character demanding anything more than the friendly advice of its members, to heal any wounds that a mere personal conflict between two members of the body had inflicted.

The good offices of the members of the Supreme Council were promptly tendered and amicable relations it was believed had been established. At any rate the surface indications were satisfactory and the outlook promised harmony.

On May 16th another demand was made for convening the Supreme Council, and on that date it did convene again in the city of Chicago, the call growing out of the following order issued by the authorities of the Chicago & Northwestern Railway:

The switching service of the Chicago & Northwestern Railway Company, as at present performed, is not satisfactory to the public nor to the management of the company; therefore, all yardmasters and switchmen now in the employ of this company are discharged from its service on and after 7 A. M., May 14, 1891.

In reorganizing the switching service of this company's lines preference will be given to such men previously in its employ as are, in the judgment of the company, capable and worthy.

S. SANBORN, General Superintendent.

Approved: J. M. WHITMAN, General Manager.

The foregoing is probably the most extraordinary order ever issued by a railroad corporation in the world. It should be understood that on the part of the switchmen there was neither a strike nor a contemplated strike; that the men were at their posts performing all of their duties. No note of warning had been given, and yet like a thunderbolt from a clear sky came the order which in an instant remanded about four hundred workmen into idleness and shrouding hundreds of homes in gloom.

I confess that I cannot contemplate such an exhibition of corporation power for an instant without a shudder. It is an exhibition of autocratic power that ought to ex-

cite universal alarm, an exhibition of vengeance that startles like a midnight alarm bell. I do not believe that workingmen can contemplate it without realizing that it portends calamities for them in the near future of a character that defies exaggeration.

It is said that the three highest prerogatives of law are to take a man's life, to deprive him of his liberty and confiscate his property. In view of such powers what must be the sensations of a workingman, or the friend of a workingman, when he reads the order I have introduced, driving four hundred or more men into idleness? An order, which in depriving a man of work and wages, invites penury followed by hunger and rags, and all too often deprives the wretched victim of shelter. Nor is this all—nor the worst. Such orders recruit the ranks of criminals, people jails and penitentiaries, and provoke suicide. Nor is that all, or the worst of all. Such orders break up homes, scatter families, degrade women, make them the prey of lustful scoundrels, and cover the body social with cancerous blotches that cry ceaselessly for redress.

My readers have read the order and the order was the immediate cause of convening the Supreme Council of the Federated Orders of Railway Employés in Chicago May 16th, 1891.

What could the Supreme Council do to mitigate the woes of the crushed switchmen? There was no strike. What then? This:

The Switchmen's Mutual Aid Association, one of the members of the Supreme Council, arraigned the Brotherhood of Railroad Trainmen, another member of the Supreme Council, for having entered into a conspiracy with the officers of the Chicago & Northwestern Railway Company to deprive the members of the S. M. A. A. of employment, and that the order of the officers of the C. & N. W. Ry. was the direct outgrowth of that conspiracy.

The officers of the Switchmen's Mutual Aid Association boldly made the charge of conspiracy, and it was the *grievance* which they presented to the Supreme Council for its action.

The officers of the Brotherhood of Railroad Trainmen *did not deny* the charge. They virtually confessed that they had formed such an alliance, and that but for such a league the switchmen would not have been dismissed.

The reader has the case as succinctly as it is in my power to state it.

From the first day that I heard of a purpose to organize a Brotherhood of Railroad Brakemen I have been the earnest friend of the order, now the Brotherhood of Railroad Trainmen. I have sought on all occasions

in its youth and in its maturer years to aid its progress. This is said without any attempt at self-laudation, and could be said by me only under such extraordinary circumstances as make it necessary for me to recite a record which that order has made, and which I deplore.

Here let me say that the charge of conspiracy made against the B. of R. T. by the grand officers of the S. M. A. A. was fully sustained, in fact, was not denied.

It requires an effort to comprehend the depth and sweep of the enmity that could have prompted such a betrayal of trust, of confidence and of obligation. It is probably without a parallel. I know of nothing approximating it in the affairs of brotherhoods of workingmen. To illustrate it, darker records than labor organizations furnish must be sought, and how and where to find them will readily be suggested.

I write of these transactions, because I heard the testimony as it came on the heated breath of the officers of the S. M. A. A., because I heard the admissions, the equivocations, explanations and extenuations of the defense—each one of which made the case more wretched and added to the enormity of the wrong complained of.

I desire to have my readers fully aware of the explanations of the officers of the B. of R. T. This is due them. With these explanations they must go before the great Brotherhood of Trainmen. With these explanations and extenuations they must stand before all organized railway employes, before organized workingmen in every department of labor, and with these explanations and extenuations they must stand at the bar of public opinion.

I have, as I write, before me the utterances of the Chicago press pro and con, but I prefer to place matters on record as I saw and heard them myself.

In the first place, the officials of the B. of R. T. charged the switchmen generally, and particularly on the C. & N. W. Ry., as being insubordinate, fomenters of trouble, and as disregarding of the laws of their own organization and of the laws of the Supreme Council.

Suppose, for the sake of argument, I admit the truth of such allegations; in what

It is well known, that in all organizations, there have been restless men, chafing under restraint, and ready to take the law into their own hands for the purpose of redressing grievances, and would it not be the height of presumption on the part of the officers of the B. of R. T. so much as to intimate exemption for their order?

But such explanations, in the case under consideration, serve only to aggravate the charge the officers of the S. M. A. A. brought against the officers of the B. of R. T., since, though it might be true that certain members of the S. M. A. A. had been premature in seeking to right certain grievances in the past, at the time the conspiracy was formed between the officers of the C. & N. W. Ry. and the officers of the B. of R. T., the switchmen on the system were attending to their duties with as much loyalty to the interests of the road as were the members of the B. of R. T., and these switchmen would now be at work instead of being idle except for a conspiracy to strike them down unwarned entered into by the B. of R. T.

What is offered by the officers of the B. of R. T. as extenuating the character of the plot to down the switchmen on the C. & N. W. Ry.?

In this connection, I refer to the order of the railway officials. It will be noticed that every switchman and yardmaster in the employ of the company was at once and at the same time discharged. Look at it, probe it, analyze it, and then hunt through all the tomes of fact and fiction, and nothing like it can be found in human edicts against workmen. Union men and non-union men alike felt the crushing blow, not one escaped. When the Creator in His wrath decreed to send a storm of fire and brimstone upon Sodom, the old patriarch, Abraham, interceded for the doomed city. He pleaded with God, and put the question, "Wilt thou also destroy the righteous with the wicked?" and Jehovah said he would spare the city if there were "fifty righteous" in it. Abraham then proposed "forty-five." Then "forty" was proposed, then "thirty," then "twenty" was named as the number, and finally God said He would not destroy the city, as decreed, if "ten" righteous could be found in it. Sodom was the wickedest city at that time in the world, and yet, ten good men could have saved it from the storm of Jehovah's wrath.

Who pleaded for the switchmen on the C. & N. W. Ry. system? What Abraham went before President Hughitt and asked if there are fifty, forty-five, forty, thirty, or even ten good switchmen on your roads will you withhold your cruel decree? or "will you so modify it as to retain the good men, whether union or non-union men?" In all the wide world no such sympathetic man could be found. President Hughitt kept his plans

secret, except to his own officials, and the officials and committee of B. of R. T. Did the Grand officers of the B. of R. T. interpose in behalf of the doomed switchmen? Was there among them an Abraham whose heart could be touched by a knowledge of the impending disaster that was soon to overwhelm them? The testimony in the case supplies no fact glowing with such fraternal light. On the contrary, it was desired to have the official decree, like a Kansas cyclone in a village of hay stacks, strike down all, because it could then be pleaded that the officials of the corporation and the B. of R. T. had not discriminated against members of the S. M. A. A., that the decree, like the heavenly rain, had fallen upon the just and the unjust alike.

In all the long history of duplicity, was there ever anything quite so thin as such a deception?

But the conspiracy disclosed another feature, which was designed—*heaven save the mark*—to enable the Trainmen to remain true to the laws of their order and to the laws of the Supreme Council.

I have said that the conspiracy, like all such schemes, was concocted in secret. Had the switchmen been apprised of it, they would have struck, and would have been justifiable in so doing. If they had struck, no trainmen could have taken their places except as *scabs*, but it was held by the officials of the B. of R. T. if the switchmen's places were vacated by a discharge, then they, the trainmen, could take their places without violating any law.

I ask the reader to ponder this phase of the conspiracy. I ask every large-hearted member of the B. of R. T. to give it his unprejudiced consideration. I invite every member of the B. of L. F. and of B. of R. C. to bestow upon this phase of the conspiracy special attention.

The testimony is, that the grand officers of an order, a member of the Supreme Council, deliberately enters into a plot to drive certain members of another organization, a member of the Supreme Council, out of employment.

The plotting officials keep the doom of hundreds of switchmen a profound secret, because, upon this secrecy depends the success of the conspiracy. If known, the switchmen would strike; if they struck, though their positions would be vacated, the trainmen could not take them without violating laws, but if they were all discharged, in accordance with the terms of the plot, then, in that case, the trainmen could take their places with impunity. In that case, they would be *law-proof scabs*—*legul scabs*, recognized by the laws of their own organization and the laws of the Supreme Council, and any grievance growing out of such acts of perfidy, could not be dealt with by the Supreme Council.

I assert that every member of all of the organizations of railway employes should give this technical excuse for treason careful consideration.

Regardless of the objections to repetition, I desire to present to the reader the theory of the conspiracy entered into between the officials of the C. & N. W. Ry. and the B. of R. T.

Independent of any federated compact, each labor organization, standing by itself, it has been held, by all honorable workingmen, that for one organization to plot and scheme to down another organization was an act, in all regards flagitious, and deserving of condemnation, the accepted theory being that one labor organization should seek to promote the welfare of others, for, although marching under different banners, the purpose of all is the same—all seeking to lighten the burdens of labor and increase the happiness and prosperity of toilers.

Just here comes into full view the still higher obligations imposed by federation. The theory of friendship and good will supposed to animate all labor organizations in their intercourse with each other, becomes, in federation, a matter of plighted faith and of obligation, under the sanction of law—a solemn compact, a union of hearts and a union of hands—a compact having for its supreme purpose, help in time of need; a compact glowing with a double share of the fraternal spirit, and pledged to every reasonable sacrifice to maintain the right when any party to the compact was attacked by the common enemy.

In this federation of organizations of railway employes the S. M. A. A. and the B. of R. T. held honorable membership. If either of them was in trouble it behooved the other to lend every possible assistance to secure relief—to remove embarrassments and make its way smooth.

Now, then, the S. M. A. A. had had some trouble with the officials of the C. & N. W. Ry. These troubles, so far as the switchmen were concerned, had been adjusted. But the railroad officials were anxious to discharge them. Although a great and powerful corporation, in view of the power believed to exist in federation, it hesitated. It dared not strike down its switchmen. Here and there one or more could be removed, but to remove them all, when they were peacefully at work doing their duty faithfully was a contract the C. & N. W. Ry. did not care to take.

In this dire dilemma the B. of R. T., a member of the federation, came to the rescue of the railroad officials, and a conspiracy was hatched. Then Benedict Arnoldism crept in, but, unfortunately for the switchmen and for federation, no Major Andre, with the documents in his boots, was captured, and on May 14th the conspiracy tri-

umphed—the switchmen felt its crushing power—the trainmen took the places of their *federated brothers*, and the grand officers of B. of R. T. shook hands with the officials of the C. & N. W. Ry., while the overpowered switchmen, powerless and moneyless, are permitted to stare the future in the face and accept with such stoicism as they can command, whatever fate, conspiracy and treason have in store for them.

The Supreme Council, convened May 16, found itself powerless either to approve or rebuke the B. of R. T. But a vote was taken on the merits of the grievance submitted by the S. M. A. A. against the B. of R. T., upon which *nine votes were cast—six sustaining the grievance and three in the negative.* The B. of L. F. was deprived of its vote on account of the inability of the Vice Grand Master, who was in Georgia, to reach Chicago in time for the meeting, the laws of the Council requiring a full representation. How the B. of L. F. would have voted, is not known, but how I would have voted is sufficiently indicated in the foregoing.

I do not hesitate to believe that the enemies of federation will greatly rejoice over what they will designate a collapse of federation. They will meet each other with smiles, and as they clasp hands, say, "I told you so." Corporations will chuckle over the victory. But I surmise that their greatest satisfaction will be derived from the belief that they have succeeded in arraying two great orders of railway employes in open hostility to each other, and in practically wrecking the Supreme Council of the federated orders.

As was to have been expected, the *Railway Age*, the acknowledged friend of the corporation and the implacable foe of labor organizations, heartily approves the course pursued by the B. of R. T., and in a leading editorial glorifies the *loyalty* to the corporation displayed by that organization.

Just here the questions arise, are the two great organizations, the S. M. A. A. and the B. of R. T. opposed to each other? Is it to be believed that the Brotherhood of Trainmen is committed to the relentless policy of exterminating the S. M. A. A.? Has the unfortunate episode I have related, wrecked the Supreme Council? I do not hesitate to answer in the negative.

I do not underestimate the gravity of the situation—nor do I underestimate the broad common sense of the rank and file of the men who constitute the membership of the federated orders. They are men who comprehend right, justice and fair play. There is in their ranks an abiding faith in fraternity, fellowship, good will, in the blessings of organization and in the strength of federation.

That our good ship, federation, is in a storm, I have shown; that it is beating

fiercely upon her, is readily inferred; that there have been hidden reefs and treacherous currents in her pathway is now known, but she is not wrecked. Above the howlings of the storm is heard the clear voice of Frank Sweeney, pledging that the order of which he is Grand Master will *never* scab.

In this supreme hour the requirement is to find the wrong and extirpate it, crush it.

I believe that passion will subside, that those who have thirsted for revenge are satiated. I believe that wrong has accomplished the largest measure of damage in its power and that now the champions of the right in the federated orders will demand, in no uncertain tones, that the fullest reparation shall be made by those who have been or may be adjudged in the wrong and that the mandate will be obeyed.

The Supreme Council meets in annual session June 15th, 1891. It will be a full meeting, and its action will doubtless be decisive.

In the meantime the friends of federation, of justice, of right, of fair play, and the enemies of conspiracy, treason and duplicity, should manfully discuss the questions growing out of the record I herewith submit.

It was a dark day for federation, for liberty and independence, when Washington, with his ragged, half starved and half frozen veterans suffered at Valley Forge. It was a gloomy time, when Gen. Greene, in the Carolinas, was required to uphold the flag of independence with soldiers, many of whom were as naked as when they were born, and wore upon their shoulders tufts of moss, upon which to carry their muskets, but the cause these immortal men fought and suffered for, supported by federation, finally won.

The federated orders of railway employes are pledged to principles which grow in importance as the months go by. To read the order of the railroad officials, issued May 14, by which four hundred or more honest men were banished from work tells in letters as vivid as the lightning's flash, what there is in store for organized labor. If the bolts of corporation vengeance can be stayed, federation alone is equal to the requirement. I believe federation has come to stay, and believing that means will be devised to strengthen and perpetuate this bulwark of workingmen's rights, I close this communication.

EUGENE V. DEBN.

AS WE go to press Grand Master Sargent is confined to his room with a severe attack of "La Grippe" which, it is feared by his physician, will deprive the order of his services for a couple of weeks at least. The many friends of Brother Sargent, in and out of the order, will earnestly hope for his speedy recovery.

FACTS VS. OPINIONS.

In the B. of L. E. *Journal*, for April, we find an article, page 360, captioned "Our Opinion."

It should be said, and here and now it is eminently proper to make the avowal, that opinions are not facts, nor is it essential that there should be an element of fact in an opinion—as for instance, the B. of L. E. *Journal* may entertain the opinion that the moon is a big green cheese, or express the opinion that to call a dog's tail a leg constitutes it a leg, and then assert that the dog has five legs, and if it were to declare such opinions it would be quite as near stating facts as it has done in the article referred to, captioned "Our Opinion."

The burden of the article to which reference is made is to make it appear that the *Journal* has always been animated by the spirit of brotherly love in its dealings with "sister associations," and having established a continental reputation for such sublimated charity and good will, it has a right to exhort other publications, their editors and managers, to be guided by its luminous example. It intimates, that in its relations with "sister associations," it has followed the Scripture admonition, "Love thy neighbor as thyself."

There are in all communities men who are "opinionated," full of self conceit and vanity, who, regardless of what men or angels think or know, entertain the opinion that they are as near perfection as was the old prophet Elijah; that they are prepared for translation, and should always be watching for a chariot in which to make the journey to realms of supernal delight. These unfortunates are oblivious of the fact that they are of the earth, earthy; that upon them no miracle has been wrought which extracted the devils from their nature and sent them forth to afflict swine; that they were never "called" to exhort "sister associations" or brother editors in matters relating to duty or obligation, and that their "opinions," in the shuffle and deal, are of no more importance than the opinions of any member of any "sister association."

Throughout the *Journal's* article, captioned "Our Opinion," there are two distinguishing features, one of which is cowardly innuendo, and the other self-landation, both characteristic of mental infirmity.

That our readers may fully appreciate the fact that the *Journal* is lacking in everything indicative of courage in its attacks upon others, that it resorts to innuendoes, the weapon of guerrillas, that it dare not name those it assails, we quote a few of its expressions which are conclusive. It says:

It must be apparent to the readers of the several official publications of railway orders—and we could with propriety include publications whose editors are obligated to the several associations—that during the past two or three years there has existed a de-

sire, either by those in authority or by the members, to create a diversity of opinion calculated to impair the usefulness of the several brotherhoods. There may be those who are undecided in their opinions as to whether the authors were actuated by personal motives or not, yet to the casual observer it is apparent that the good old Scripture admonition ("Love thy neighbor as thyself.") was not observed; nor was that fraternal feeling evinced in their articles and editorials which is essential to success in dealing with mankind. Occasions might be mentioned where the pages of these publications contained not only discourteous articles condemning a sister association but direct attacks upon the officers.

In the foregoing, reference is made to "editors" who "are obligated to several associations," who have labored "to create a diversity of opinion calculated to impair the usefulness of the several brotherhoods." Who are these editors? Why are they not named? Why seek to stab them by innuendoes? Such questions are pertinent, but the *Journal* has cogent reasons for not naming them. Again says the *Journal*:

It is a source of pride, not only to the Grand Officers of the B. of L. E., but to a large majority of the members, that we have remained impassive throughout the whole controversy, and no scurrilous attacks, bitter taunts or despicable methods were indulged in through the columns of the *Journal*. Such jargon and insensate arguments as we have perused in some of their publications, filling columns with what is known as "rot" and mud-slinging from men who are supposed to be honor bound to the cause of labor, can be considered in no other light than that of originating from a diseased brain, whose pin-head is overburdened with insipidity.

Now then, who are the editors who write "jargon and insensate arguments?" who are the editors of "diseased brain?" "pin-headed" editors who write "rot?" Why not name them—why emulate the Chinese and throw "stinkpots?" Why play skunk or cuttle fish? Why play the role of prairie dog, bark, and hunt a hole? Is such a programme manly? Does it indicate courage? Is it the proper thing to denounce "editors" of the organs of "sister associations," as being "pin-headed"—with "diseased brain?" Is that an exhibition of loving thy neighbor as thyself? Is not that sort of journalism scurrilous? Does such literature breathe a fraternal spirit? Are opinions, couched in such filth, of any value whatever to the members of "sister associations?" Do they promote harmony? The answer to such interrogatories will always be in the negative, when honest men give their "opinion."

What is the record of the B. of L. E. *Journal*? What is the record of its chief editor? We deal in no innuendoes. Honor, manliness, courage, all things decent, recognized among gentlemen, ignore the weapon.

The B. of L. E. *Journal*, under the control of its chief editor, could have been of incalculable service to "sister associations." It could have exhibited a fraternal spirit. It could have said generous words. It could have extended a helping hand. It could have earned the right to advise and to exhort. It could have shown that it heeded

the "scriptural admonition, love thy neighbor as thyself." It could have stood forth as the champion of labor, and won universal gratitude and applause. It occupied a favorable position. It was the organ of a great order of workmen, thousands of whom profoundly sympathize with the members of "sister associations" when struggling for existence against the power of the enemies of labor.

Just here it may be prudent to inquire, who is the author of the following Christian, "love thy neighbor or thyself" declarations: "I want no entangling alliances;" "I never have and never will cooperate with any other labor organization;" "I say to other organizations in plain English to mind their own business;" "a four dollar a day man has nothing in common with a one dollar a day man;" "to make an eight hour work day will give workmen just that much more time to loaf around saloons," etc. Surely such sentiments of "brotherly love" from the lips of a professed follower of Jesus should animate the kindest feeling and profoundest appreciation of "sister organizations." Isn't it strange that such gems of generosity, such pearls of wisdom should be treated with impious, imperial and "impassive" contempt?

Did the B. of L. E. *Journal*, under the control of its present chief editor, ever voice a sentiment of fraternity towards any of the "sister associations?" We answer NEVER. No word of friendship, no word of fellowship—no word, animated by the "scriptural admonition, 'love thy neighbor as thyself,'" ever glowed upon its pages.

The members of "sister associations" wondered at this tomb-stone silence. Members of the B. of L. E. were equally amazed. They did not hesitate to declare, thousands of them, that the policy of the *Journal* was heartless and in flagrant defiance of the welfare of workmen. They ridiculed it, and denounced its editor with merited severity—a cold, selfish, heartless editor, incapable of sympathy with "sister associations."

In all these years of struggle when "sister associations" needed a friend, the editor says: "We have remained impassive throughout the whole controversy." Does the *Journal's* editor know the meaning of the term *impassive*? He evidently intended to say "passive," but he stumbled upon the right word to express his character and his policy; as immovable as marble, as cold as ice, utterly regardless of the injustices inflicted upon workmen; willing to see them defeated, their rights cloven down and their aspirations to better their condition come to naught, so long as he himself could ride on the wave of prosperity.

Take for instance the B. of L. E.; from the date of its organization, through all its

years of struggle for existence, it never had so much as *one word* of recognition or encouragement from the B. of L. E. *Journal*. We challenge the pages of the *Journal* from the day the present editor was placed in charge of its columns. He was dumb, silent, cold, and treated the Firemen's order as if it had no existence, or was too contemptible to have recognition.

When and where did the Engineers' *Journal* say a kind word for the Firemen's *Magazine*, the Trainmen's *Journal*, the Switchmen's *Journal*, or any of the long list of official organs of "sister organizations" when they first saw light and were struggling for recognition—for a place to stand? Will the Editor refer to the page and volume where the evidence of the "Love thy neighbor as thyself" doctrine can be found in relation to the journals of "sister organizations?"

But the Brotherhood of Locomotive Firemen grew; became strong and influential without the aid of the B. of L. E. *Journal*, and now the *Journal* sets up a whine that there is not that friendly feeling which should characterize "sister associations"—intimating that all these years it has been practicing the scriptural admonition to "Love thy neighbor as thyself;" that it has always been preaching "brotherly love;" that it has been animated by a fraternal spirit, etc., to the tail end of the list of the most shameless hypocrisies that were ever concocted.

Take the Brotherhood of Railroad Trainmen and the Switchmen's Mutual Aid Association, and the same callous-hearted policy has distinguished the B. of L. E. *Journal*. When these orders of railway employes were in their infancy, when kind and encouraging words, had they weighed a pound each, would have been worth their weight in gold, the B. of L. E. *Journal* NEVER mentioned them. It stood aloof from them. It was "impassive," insensitive to every demand for kindness and encouragement. They might live or die, sink or swim, it was all the same to the B. of L. E. *Journal*. It was for itself first, last, and all the time, and was willing, if it survived, the rest might perish.

This self-sufficiency which, with disgusting frequency, breaks forth in the columns of the *Journal*, taking the shape of bravado, that "unaided and alone, the B. of L. E. has become great and powerful," is an "opinion" without a fact for a basis. What is the fact? Firemen, brakemen, conductors and switchmen, organized and unorganized, have EVERYWHERE and ALWAYS stood by the B. of L. E. in every struggle, and it never achieved a victory that it did not have the support of all these men in the train service, and but for this aid the B. of L. E. would not to-day have the record of which the *Journal* boasts.

There is not an instance on record where

the B. of L. E. has not had the support of all other employes and all other protective organizations in the train service. Notwithstanding these facts, the *Journal* has always taken to itself, and for the order and its grand chief the entire credit of all that has been accomplished.

Doubtless the editor of the *Journal* was animated by "brotherly love" when he had the great strike on the C., B. & Q., which cost the Firemen half a million dollars, declared off without so much as consulting them. Or, it may be, to take a more generous view of the matter, that the Brotherhood of Locomotive Firemen was so insignificant that he entirely "overlooked it."

To expose mendacity, to unmask hypocrisy, may not be an agreeable task, but when duty demands it there should be no shirking. We do not hesitate to declare that the B. of L. E. *Journal* never helped any sister organization. Its pages declare the fact. We have all the volumes of the *Journal* since 1870, and have scanned them. They tell a continuous story of heartless neglect of all "sister associations." They arraign, indict, and convict the editor-in-chief of unfeeling neutrality, indifference, "impassiveness" towards all "sister associations." The northpole is not more barren of violets than are its pages of kind and generous words for struggling organizations of railway employes. If, therefore, there is any want of "friendly feeling," if the B. of L. E. *Journal* is despised rather than loved, it has itself, and only itself, to blame.

Its assertion that it has been dumb and "impassive" in no wise rescues it from its dilemma. If it had no "opinion" when "sister organizations were in trouble and in need," its flaunting "our opinion" now, when they are powerful and prosperous and abundantly able to take care of themselves, is nothing less than steel-clad impudence, that makes its policy still more notoriously obnoxious.

We give it as "our opinion" for the benefit of the *Journal*, and the opinion is susceptible of incontrovertible proof, that it is a fact, that as a rule, brakemen, switchmen, firemen, conductors (and a large number of Brotherhood engineers) hold the *Journal* and its "impassive" policy in supreme contempt. To state this fact may be "scurrilous," it may be "mud slinging," it may be considered "jargon," "insensate," "pin-headed," and if so, the *Journal* and its apologists can make the most of it.

The *Firemen's Magazine* has pursued a different policy. While laboring for the good of the order of which it is the organ—it has with such ability as it could command, helped all other protective organizations. What is the result? Kind words from all quarters, and from all labor publications are showered upon it. There is not an excep-

On the other hand, what is the fact relating to the B. of L. E. *Journal*? There is not one labor publication in the land that has a friendly word for it.

Here we place the *Magazine* and the *Journal* side by side. Let a vote be taken. We stand ready for the count—for the verdict.

We feel assured that the labor publications of the land would vote unanimously for the *Magazine* as being their friend and supporter, and against the *Journal* as being cold and selfish, and guilty of pursuing a policy antagonistic to the welfare of workmen.

The *Journal* may set up the claim that recently, in its "links," it has shown some consideration for "sister associations." This may be due to its assistant editor, but it is too late to redeem its past record from deserved obloquy. The "sister associations" no longer stand in need of the *Journal's* "opinions," good, bad or indifferent. They have struggled to assured positions and can take care of themselves.

The *Journal's* whinings are not unexpected. It is reaping a legitimate harvest of contempt. If it thought it could plant thorns and gather grapes, or pluck figs from thistles, it is just now finding out its mistake. To find the reason why, it can consult its own pages at its leisure for all needed information, and, in the words of D. J. Brown, of the B. of L. E., the editor of the *Journal* need not go "beyond his own threshold."

If any one would take the full measure of the *Journal's* heartlessness, let him seek through its pages for generous words of the founder of the B. of L. E., W. D. Robinson. During all his sad and self-denying life, the *Journal* treated him with disdain, and the grand old man entertained for the *Journal* an intelligent and lofty contempt, as just as it was withering. When, we enquire, did the *Journal* ever say a generous word of the humble old philanthropist, whose lofty monument is the Brotherhood of Locomotive Engineers, which the chief editor has so shrewdly utilized to butter his bread on both sides, to increase his bank account, to stuff his bed and pillows with down, give him dainty food, and enable him with the pomp and circumstance of a millionaire to stick his pedal extremities under Chauncey M. Depew's mahogany and bask in the smiles of that oily-tongued representative of "horny-handed" labor? And the answer is, when?

When did the *Journal* deign to mention the name of W. D. Robinson in any terms of praise? Why should the grand old man, for such he was, be eternally ignored, ostracised, tabooed by a publication the existence of which he had made possible? The reasons are easily suggested and ought to be printed with a black border. They would tell

a tale of envy, selfishness and hard-heartedness that would make a heathen blush. Oh, yes, "Love thy neighbor as thyself."

But W. D. Robinson did get a notice, we learn, from the chief editor of the *Journal* in the Pittsburg convention, over which, for sweet charity's sake, a veil as impenetrable to light as sheet iron, should be drawn. And in the *Journal* for December another notice, written as if the *Journal's* space was worth \$1,000 a square inch, appears at the tail end of that publication. It has a black border, and if W. D. Robinson were alive, if he could move his lips and his eloquent tongue as when his heart throbbed with love for the great order he founded, when his eyes flashed with the fires of indignation at the mention of the *Journal* and its chief editor, he would exclaim: "If you have any regard whatever for any of the proprieties recognized among gentlemen, for God's sake spare me your praise and continue as dumb when I am dead, as you have been ignoble and envious when I was living."

Take another instance of the *Journal's* "impassiveness." John A. Hill, a member of the B. of L. E., was called from the foot-board of his engine to take editorial charge of a paper in the city of New York, published in the interest of locomotive engineers. It was a time when the young editor would have set a high value upon kind words and encouragement. Did he receive them from the B. L. E. *Journal*? Not a word. Why? Can the editor explain? Doubtless. Will he explain? Never. Why? Because if he were to explain honestly, he would be supplying matter for an epitaph which would make granite blush. He doubtless imagined his silence would prove a barrier to Hill's success, and must realize how mistaken he was in the "opinion," and how effectually Hill's success renders his silence or expressed opinions valueless.

It might be well to ask the great orders of Trainmen and Switchmen how much they are indebted to the *Journal* for their phenomenal success. Put the same question to any labor organization in the land, and the answer will be, "Nothing at all."

The brakemen, switchmen and firemen in a hundred contests have stood by the engineers when their assistance was needed, and when these gallant men formed their organization the *Journal* could have given them words of cheer, but it was not built that way; it had not one word to say, it studiously, persistently and perpetually ignored them, treated them with silent contempt; and now the *Journal* presents the shabby spectacle of whining for their friendly recognition.

"Sister organizations" have become strong and influential in spite of the *Journal's* "opinions," selfishness, bigotry and big-

headedness, and now it realizes the necessity of their "good opinions," which it might have had from the first, if its policy had been generous instead of selfish.

The attitude of the *Journal* towards federation has been in keeping with its policy towards "sister associations." Wanting in power to defeat it, it barks at it, and yet, federation is an established fact, and is accomplishing anticipated good.

We dismiss the *Journal* and its opinions. We have stated a few facts which arraign and convict the *Journal* of having pursued a policy dimetrically opposed to its present professions—facts recognized by thousands of members of the B. of L. E. and the members of all "sister associations."

We could wish that the B. of L. E. *Journal* had experienced a change of heart, and that its professions were not like Dead sea fruit—but we do not believe it has changed at all, and if there is a semblance of a changed policy on the part of the *Journal*, it results from a pressure within the B. of L. E. it can no longer withstand, a change which, in "our opinion," is due to some extent to the policy pursued by the FIREMEN'S MAGAZINE.

The time is coming, as we believe, when the great Brotherhood of Locomotive Engineers will be in friendly alliance with other organizations of railway employes, when "brotherly love" will prevail, when words of kindness will be spoken, when there will be fraternization and equality of rights, born of mutual respect, but never while the *Journal* remains under its present control and management. And this is not only "our opinion" but a fact, as unyielding as a stone wall.

JOS. R. BUCHANAN.

The name of the gentleman which heads this notice is the editor of the Labor Department of the American Press Association, with headquarters in the city of New York. He has had control of several labor papers, and is one of the most thoroughly posted men in the country upon all matters relating to labor.

Mr. Buchanan wields a vigorous pen, thinks deeply and reasons cogently, and we are glad to know that in the wide field he now occupies he is doing a noble work for the wage-earners of the country.

THE SUPREME COUNCIL.

The Supreme Council of the Federated Orders of Railway Employes, will meet in annual session in Chicago on the third Monday in June (June 15), for the transaction of such business as may be required.

If any of the members of the B. of L. E. have propositions to make, or any suggestions to offer, if they are forwarded to the Grand Lodge in time, they will be properly presented to the Supreme Council for action.

THE O. OF R. C.

Twentieth Annual Convention of the Order of Railway Conductors, Held in the City of St. Louis, Mo., Commencing Tuesday, May 12, 1891.—The Order Maintains Its Attitude as Voiced at Rochester, 1890, and Declares for Federation by a Vote of 393 to 7.—Wm. P. Daniels, Grand Secretary and Treasurer, Succeeds Himself by a Majority of 38.

The twentieth annual convention of the Order of Railway Conductors met in the city of St. Louis, on Tuesday, May 12th, 1891.

The Order was given a public reception on the morning of the 12th, in the entertainment hall of the exposition building, which was tastefully decorated for the occasion.

The attendance, in point of numbers, was all that the most exacting could have desired, and in the audience were a large number of ladies whose presence lent a charm to the occasion.

Many prominent Missourians were present, and a large number of representative men of railroads and of organizations of railroad employes were in attendance, giving assurances of their friendship and good will.

The Rev. Wm. B. Messick, of the Methodist Episcopal Church, opened the exercises with prayer. Governor Francis, who was expected to address the Conductors, being unavoidably detained, Hon. J. J. O'Neill delivered the welcoming address, which was received with demonstrations of approval.

To the address of welcome, Grand Chief E. E. Clark responded in a felicitous and appropriate manner, fully maintaining the dignity of his position and evoking the hearty and enthusiastic applause of the audience.

Hon. J. C. Tarsney, of Kansas City, Mo., was next introduced and made a telling speech, in which he referred to the duties and responsibilities which are inseparable from the position of a railway conductor.

At the conclusion of Mr. Tarsney's remarks, Frank P. Sargent, Grand Master of the Brotherhood of Locomotive Firemen, and President of the Supreme Council of the Federated Orders of Railway Employes, was introduced and his arguments relating to the benefits to be derived from federation were logical and commanded earnest attention throughout. The address of Bro. Sargent was received with demonstrations of enthusiasm and approval. At the conclusion of Bro. Sargent's address, Messrs. W. P. Daniels and D. M. Vinting appeared upon the stage and each held the attention of the audience for a time. Their remarks were in a happy vein and were well received.

Immediately following these gentlemen, Geo. W. Howard, Grand Chief of the Brotherhood of Railway Conductors, was introduced. The various orders of railway em-

ployes have no champion on the platform more courageous and efficient than G. W. Howard. During Bro. Howard's remarks he declared that the most amicable feelings existed between the B. of R. C. and the O. R. C., that the supreme purpose of the orders was to promote the welfare of railway conductors, and in proof that he voiced the real sentiments of the orders, Grand Chief Conductor E. E. Clark, and Grand Chief Conductor, G. W. Howard, in the presence of the vast audience clasped hands in token of that fraternal spirit which should animate all the orders and brotherhoods of railway employes. The incident was electric in its effects, and the audience responded with prolonged cheers.

The regular business of the order began in the afternoon of the 12th, in Addington Hall, and the convention was called to order at 1:30 by Grand Chief Clark.

During the third day's proceedings of the convention the question of federation came up for action. And in this question connected with the deliberations of the O. R. C., the *Magazine* confesses to have felt a lively interest from the first and has watched with becoming solicitude the steady advance the theory of protection has made in the order since this *Magazine* began the discussion which led to the organization of the Supreme Council.

It will be remembered that in 1889, at Denver, the O. R. C., by an overwhelming vote *sat down* upon becoming a protective or a *striking* order. At Rochester in 1890, one year subsequent to the action at Denver, the revolution in the thought of the order had become so pronounced that the non-striking law of the order was repealed and now we have the satisfaction of reproducing from the columns of the *St. Louis Globe Democrat*, of May 14th, the following:

When the meeting was called to order again the report of the committee which was appointed at the last year's convention of the order in Rochester to take care of the motion which was propounded then to join the Federation of Railway Employes was received. The report was brief and to the point, without any superfluous language whatever, and strongly recommended amalgamation. It was received with loud and continued applause. The motion was then laid before the convention for its consideration, and the debate began.

Mr. Edward E. Clark, Grand Chief Conductor, was the first speaker. He was very much in favor of amalgamation, he said, and believed that almost incalculable benefits would be derived from it.

Charles H. Wilkins, Assistant Grand Chief Conductor, spoke at some length in somewhat the same strain as Mr. Clark, and believed that such an union would in every way prove beneficial to the O. R. C. He also gave a slight sketch of the movement in favor of federation, and resumed his seat amidst loud applause.

Mr. Austin Bruce Garretson delivered an excellent speech on the benefits to be derived from amalgamation, which was full of many brilliant quotations, and on the whole was a magnificent effort, and possibly won the convention over in favor of a union. He was frequently interrupted by outbursts of applause and sat down amidst tremendous cheering.

W. P. Daniels, Grand Secretary, delivered an excellent speech in favor of federation, and it was received with loud applause. The discussion was then closed and it was foreseen that the order would join the Supreme Council of the Federation. A few minutes recess was taken, and the friends of the motion to amalgamate were firm in their convictions that it would be carried, very nearly unanimously. After the recess was over the convention sat down to business again, and a couple of marshals were deputed to search for the four delegates who had sought the seductive coolness of the neighboring saloons. After some little trouble they were brought in and the balloting began.

It took nearly fifteen minutes to get all the ballots in, and then the same length of time for the Secretary to count them.

The Secretary soon announced there were 293 votes for a union with the Federation and seven against. For a moment not a single person in the hall moved, and then with one accord they broke out into tumultuous applause and loud cheers, which lasted for some minutes.

The *Magazine* most cordially felicitates the O. R. C. upon its action. The vote for federation—protection—was practically unanimous; the minority of "seven" is too small to require comment.

In the way of conversion, if that is the correct word, we know of no more notable instance of the convincing power of truth than Mr. Wm. P. Daniels, Grand Secretary and Treasurer of the O. R. C., supplies, and we think the great Dr. Watts was prophetic when he wrote and sang:

"While the lamp holds out to burn," etc.

And we take this early opportunity to congratulate the G. S. and T. upon his "change of heart," fully believing that while he found the way of the transgressor to be a hard one to travel, he will now enjoy many delightful hours while communing with his reconstructed conscience, and become conspicuous as a "defender of the faith" this *Magazine* has so often and so persistently recommended.

In the election of officers, Mr. W. P. Daniels, G. S. and T., was elected to succeed himself, a high compliment, and the *Magazine* again congratulates him, remarking *en passant*, that he has his change of attitude on the question of protection and federation to thank for his victory over his opponents.

We notice that the delegates were elegantly entertained while in St. Louis under the auspices of the Division of that city, in the way of a banquet and ball, in all regards up to every social requirement.

The question of permanent quarters was discussed, but no final action was taken, hence Cedar Rapids, Ia., will continue the headquarters of the order.

As is usual at such conventions, a large amount of business was transacted, in which the public has little concern, and were it anxious to know could not be accommodated. The order adopted the biennial plan of holding conventions instead of meeting annually, as has hitherto been done.

The *Globe Democrat*, of May 21st, says:

This morning at 9 o'clock a special train composed

of ten Pullman palace cars and one baggage car will pull out from the Union depot with nearly 400 conductors on board and 160 ladies. They will be absent exactly ten days, going from here to Kansas City, to Texas, and returning here by way of New Orleans. A grand reception has been arranged for them in Jefferson City, Kansas City, Galveston, where a ball will be given them in the evening; New Orleans, and a big reception will be given them here again, with a closing ball at Liederkrantz hall.

There is but one complaint to be made against the conductors, and that is the way the newspaper men have been treated by them. It was something almost incomprehensible to them why a reporter should attempt to gain any information concerning what was going on inside after he had been told to get away by the sentinels, and attempted to treat them as an honest citizen would treat a thief whom he found in his house. Last night, however, they capped the climax, by bodily ejecting the reporters who were sitting quietly on the stairs waiting for the adjournment of the protracted meeting.

The next convention of the order will be at Toledo, May, 1893.

THE JOURNAL OF THE BROTHERHOOD OF RAILWAY CAR MEN.

The *Magazine* takes special pleasure in announcing the appearance of the *Journal of the Brotherhood of Railway Car Men of America*. No. 1, Vol. I, is on our table, and is in all regards a highly creditable beginning.

The Brotherhood has been in existence about two years and has thirty-two lodges organized, with a membership of about 3,000, and now that a wide-awake organ of the order has been established at Minneapolis, Minn., we feel assured that greater progress will be made. The editor, Mr. Keliher, in his salutatory says:

In starting a journal our Brotherhood has taken a wise as well as an important step; and to issue a journal that will do justice to our cause and fearlessly champion our rights, one that will educate our members in the duties we owe to ourselves and others, is an undertaking of rather massive proportions.

Brother Keliher has not overestimated his task, but with the assistance of the members of the order he will find increasing satisfaction in his work.

The *Journal* is published monthly at \$1 a year, and the membership of the order will find it worth ten times that amount in keeping them posted in all matters relating to their welfare.

We welcome the *Journal* to our exchange list and to the ranks of bold defenders of the rights of labor. May it have all deserved success.

Mr. H. A. LUTTGENS, the inventor of Luttgens' variable exhaust damper, has written a treatise on "Some of the Functions of a Locomotive," to which we call the attention of locomotive men. It is a pamphlet of twenty pages, illustrated, and contains matter both interesting and instructive to engineers and firemen. This treatise can be secured by application to the author, H. A. Luttgens, Box 131, Paterson, N. J.

THE STRIKE AT TRINIDAD.

In the month of April last, a strike occurred on the Union Pacific, having its center at Trinidad, Col.

That our readers may have a clear conception of the matter we insert the following document:

PAN HANDLE LODGE, No. 193,
TRINIDAD, January 25, 1891. }

Messrs. A. P. FREDERICK, Train Master,
F. E. BISSELL, Superintendent, and
R. J. DUNCAN, General Superintendent.

DEAR SIRS:—We the Brotherhood of Railroad Trainmen (Conductors and Brakemen) employed on the Second and Third Districts of the New Mexico Division of the Union Pacific System, do respectfully present to you the following grievances which now exist upon the above Divisions, for your considerations and adjustments.

Article I. Schedule for Chicosa and Maxwell Branches.

For Conductors, \$100.00 per month, 26 days to constitute a month; 10 hours or less to constitute a day; 35 cents per hour for all over 10 hours. Sunday work to be counted as over time.

Art. II. Schedule for Chicosa and Maxwell Branches.

For Brakemen, \$70.00 per month, 26 days to constitute a month, 10 hours or less to constitute a day; 25 cents per hour for all over 10 hours. Sunday work to be counted as over time.

Art. III. For unloading stock and loading stock on the Second and Third Districts 35 cents per hour for Conductors and 25 cents per hour for Brakemen.

Art. IV. The schedule of pay of the Chicosa and Maxwell Branches to govern all other branches that may hereafter be operated on the Second or Third Districts.

Art. V. The above schedule to take effect on February 1st, 1891.

Yours very respectfully,

(Signed), T. D. SHAPCOTT, Chairman.

(Signed), J. W. COLBERT, Sec'y Local G. C.

(Signed), N. H. KING.

Approved by Pan Handle Lodge, No. 193, January 25th, 1891.

(Signed), J. D. WHITEHEAD, Sec'y.

It appears, that from some cause, not explained, the foregoing proposed schedule did not receive prompt attention—nor, in fact, any attention at all, or, to put it mildly, was never submitted to Mr. S. H. H. Clark, General Manager of the road, an official justly distinguished for fair dealing and prompt action.

We think it may be said, that the precipitancy and unwarranted action of the employes was largely owing to the seeming neglect on the part of the officials addressed in the document we have published, but since it appears in the correspondence that Mr. Clark, the General Manager of the Union Pacific, was totally ignorant of the demand made by the employes, the wrong inflicted upon the road by the strike cannot be extenuated.

Moreover, had the grievance, of which the employes complained, been of sufficient magnitude to warrant a strike, then, in that case, those of the employes who were members of railway employes' organizations were bound by every consideration of fealty to law, to have proceeded according to law, and because they did not do this, because they violated and trampled upon the laws of their

orders, their action became reprehensible and subjected them to charges and arraignments in the orders of which they were members—a case in which, in so far as locomotive firemen, members of the B. of L. F., were concerned, admits of no extenuation whatever, as was indicated by the action of F. P. Sargent, Grand Master of the order.

And here we desire to say, that the B. of L. F. has enacted certain laws relating to grievances and strikes, laws which, while designed to secure the rights of members, as certainly are designed to invade no right of railroad companies. They are laws designed to secure fair play by the most conservative methods, and to do no wrong to anyone, and this policy is emphasized by the laws of the Supreme Council of the federated orders, and it is because these laws were violated by the Trinidad strike that the Grand Lodge and this *Magazine* condemn the action of the Brotherhood firemen who were engaged in it.

Fortunately, the Trinidad strike was of short duration, and no great harm was done. Nevertheless it serves, or ought to serve, as a warning to those of the various organizations who are disposed to be hot-headed and to engage in unlawful proceedings, since they should learn, by the penalties which the laws of their organizations inflict, that they cannot violate them with impunity, and thereby reduce them to a farce.

The fact is fully disclosed, that had the complaining employes been patient and waited until Mr. Clark had had an opportunity to investigate the grievances, everything would have been amicably settled and full justice would have been done, for we hold, that of all the General Managers of great systems of railroads in the United States, not one has earned the prestige of honorable dealing with men such as that which, by common consent, has fallen to the lot of S. H. H. Clark, General Manager of the Union Pacific system, as an evidence of which we here insert his letter to the committee of the striking employes, which breathes throughout a spirit of honest dealing, fair play, and a desire to maintain amicable relations with the men in the employ of the Union Pacific system. Here it is:

OMAHA, April 28th, 1891.

MR. S. D. SHAPCOTT,
MR. J. W. COLBERT,
MR. C. W. THOMPSON, } Committee.

GENTLEMEN:—After the interview of to-day in the presence of Messrs. Sargent, Clark, Wilkinson, Vroman and others, at which all details of the recent trouble at Trinidad were fully considered and understood, I feel it my duty, as general manager of the Union Pacific system, to advise you in the interest of yourselves and that of the company that I cannot consent to entertain at this time the proposed advance of wages in your request of January 25th, 1891.

Admitting by reason of the delay in forwarding said application to this office for my consideration, and offering no excuse in behalf of my subordinates for their seeming negligence, still am of the decided opinion the course taken by the employes at Trin-

dad was unwarranted, and is disapproved not only by myself, but by the Chief Officers of the labor organizations of this country; hence this decision without giving further details, all of which were well presented at the aforesaid interview. Therefore, have to say that the employes engaged in the serious difficulty at Trinidad having resumed their relations with the company do so without prejudice to themselves and, such being the case, it is my desire that all matters connected with this strike, including your original application, which is the foundation of said trouble, be wiped out entirely and negotiations be taken up on altogether a new principle. In other words, let everything connected with this difficulty be forgotten and forgiven, to the end that we may commence anew, hoping thereby to establish more friendly, harmonious relations between employers and employes, believing both will be mutually benefited thereby and all interests materially improved.

I need not tell you it is my earnest desire to treat all men connected with me in business in a fair, frank, gentlemanly manner; listening to their complaints, granting them if I can consistently do so, if not shall not hesitate to so state, giving my reasons therefor. I cannot succeed as manager of this corporation unless I have the respect and confidence of the officers and employes associated with me in handling the property. This I ask; this I shall endeavor to secure through just, honorable treatment.

In conclusion, respectfully request you begin afresh your negotiations, placing them in the proper channel, which if done, I can promise the same shall have my earnest, honest attention at the earliest practicable moment. Yours truly,

(Signed) S. H. H. CLARK,
General Manager.

In closing this article, we desire to say that organization has the supreme purpose in view of inaugurating an era of simple justice to all concerned by the power of argument, reason and arbitration, and that the laws governing the federated orders simply amplify these propositions. In making strikes seldom and difficult, it makes them just—and as they can, under the law, occur only when everything else has been tried and has failed, they should have the unqualified approval of the membership of the federated orders, and the approval of every railroad corporation in the land.

THE AMERICAN NONCONFORMIST.

In the list of our exchanges, which includes some exceedingly bright publications, *The American Nonconformist*, published at Winfield, Kansas, under the editorial control of Henry Vincent, is one of the most courageous. It has a mission, the object of which those who read it will compre-

TO MEMORY TRUE.

EUGENE V. DEBS.

Eugene V. Debs, by far the ablest labor speaker and writer in America, has resigned his position as Grand Secretary and Treasurer of the Brotherhood of Locomotive Firemen, and editor of their *Magazine*. Debs has not yet vacated his office, but stands ready to do so when his successor is appointed. To the honesty, intelligence, ability and untiring energy of Eugene V. Debs; the B. of L. F. owes its present prosperity, and probably its existence, and we do not doubt but that the members of the order give him full credit. We were in the order ourselves when the sun didn't shine very often.

It is to be regretted that Brother Debs has decided on this step—it will be hard to fill his place—but as far as he is personally concerned, he has the necessary qualifications to leave more fame and fortune behind him than can be found within the necessarily prescribed limits of one order.

Eugene V. Debs is not a man who needs the offer of a "place"—he will make a place for himself.

He has not, as yet, publicly announced his plans; but it is pretty generally understood that he will start a paper. If he follows any old plan, or cites any precedents to go by, it will be the first time he has done so; and if does not show us something new, crisp, clean and sharp, he will fall to continue on the lines he has long ago established.

Eugene V. Debs is a labor agitator, and is proud of it. He is as honest as daylight, and does not hesitate to aid what he thinks is right, and kick what he thinks is wrong—and it where he may.

When he dips his pen in gall and reaches for a victim, he flays him alive—there is no mistaking what he means. Sometimes we have thought he fought too courageously, defeated the ends he sought by bearing down too hard; but we have only to think how, years ago, he borrowed money to pay up the debts of the Brotherhood; we have only to think of the millions of dollars that he has collected in pittances, and paid to the widows and orphans of the order, without the loss of a penny; we have only to think of the money, meals and encouraging words he has given to suffering brothers or "the tramp;" we have only to think of the sleepless nights and days he has worked over his books and his copy to keep up the spirit and interest of the order, when we love him more and more.

He has made mistakes and made enemies—only the fool has no enemies—but he has already contributed a lifetime of good to his fellow man.

Eugene V. Debs has a warm place in the hearts of thousands of American railroad men, who stand ready to aid him in any undertaking he may put his hand to—he can have half our shirt "on sight."

The foregoing complimentary notice is from the pen—better far, from the heart—of John A. Hill, editor of the *Locomotive Engineer*; a man who, graduating in the train service of railroads, and, promoted to the editorial control of one of the leading railroad publications of America, has earned the right to speak of a fellow toiler, a comrade in the ranks, and to make his own estimates of them, after years of service, every hour of which has been open to inspection.

We are not unmindful of the fact, that there may be those who will not hesitate to arraign us for egotism, self-conceit, and self-importance for reproducing in the *Magazine* Brother Hill's encomiastic words, and upon that point we shall not join issue with them. To have earned such a laudatory verdict from one capable of arriving at just conclusions after analyzing work and character, and who is known to be the soul of honor, and whose courage is as chivalric as

his motives are pure, we do not hesitate to admit is in the nature of a priceless benefaction, a souvenir to be treasured and to be handed down, like an heirloom, and retained as an inheritance which money cannot purchase.

But the generous words of Brother Hill, have, if possible, a still more valuable significance. He writes of a member of a great order with which he was once associated, in its days of gloom—and perhaps, makes the pardonable mistake of crediting him with more than his full share of service in bringing that order to its present position of commanding influence, but he does not over-estimate the zeal which has animated us to achieve satisfactory results. We have simply worked with others equally loyal and courageous, who never, no matter how fiery the ordeal, “bowed the knee” to a false god, and we have an idea that they will share with us, because it is their right, in every word of commendation that falls to our lot.

We shall not gainsay the declaration that we have “made mistakes and made enemies,” but both, if made, were made in the line of duty. No created mortal has been exempt from mistakes, wherefore, if “misery loves company,” the man who makes mistakes does not have to complain. Certainly, enemies are not to be coveted—they should not be needlessly made, but if in the conscientious performance of duty they are made, there is nothing left but to choose between fight and flight. We have chosen the first when fealty to the Brotherhood presented the alternative.

But, such matters aside, the magnanimous words of Brother Hill for the nonce makes us oblivious of battle fields, and calling Burns to our assistance, we say to Bro. Hill and to every friend in love's shining circle—

And here's a hand, my trusty fiere,
And gi' us a hand o' thine—
We'll take a cup o' kindness yet
For auld lang syne.

THE BROTHERHOOD HOME—CHICAGO.

In the city of Chicago an institution known as the Brotherhood of Railway Employes' Home, has been established and is, we are glad to believe, doing a good and noble work.

In connection with the “Home,” a journal entitled *The Brotherhood Home Journal* has been established, and we notice with much satisfaction, that it has met with “phenominal success” being on a “paying basis” in the short space of “four months.” *The Journal* makes the following announcement:

The object of the Home is the support and management of an institution for the care and education of totally disabled railway employes who

are permanently disabled from performing railway duty.

The organization of the “Home” seems to have had special consideration as is seen by the *personnel* of its officers, as follows:

HON. L. S. COFFIN, President.

DR. F. M. INGALLS, }
FRED R. KETCHAM, } Vice Presidents.

ABE L. FISH,

J. B. SPENCER, Secretary and Treasurer.

DR. F. M. INGALLS, Editor and Manager
Journal.

REV. J. P. BRUSHINGHAM, Chaplain.

In the issue of the *Journal* of April 15, we find the following editorial paragraph:

Is there a member of your lodge who is totally and permanently disabled from following his usual avocation and who wishes to learn some light trade or business at which he can earn a good living in reasonable hours? Or one who is unable to work at anything and has to depend on his lodge for support? Then have your secretary send at once to the secretary and treasurer. Mr. Jay B. Spencer, suite 10, 166 Randolph street, Chicago, for a blank application for admission to the Home. When received see that it is properly filled out and promptly returned so that the brother may come to the Home as soon as possible.

It is not necessary that the disability should have been of recent date. All that is necessary is that the brother should have been a member of the order when injured and is in good standing now.

We hope that no brother in need of such benefits as the Home has to offer will allow any feeling of false pride to stand between him and it, but will come to us feeling that he is to receive nothing but what is his own by right of faithful service to his country and his order.

We also notice that the receipts of the Home from donations for the month of March amounted to \$151.30. Of this amount we notice the B. of R. T. contributed \$67.65, B. of L. T. \$10, O. of R. C. \$35.25 and B. of L. F. \$6.50. Total credit to brotherhoods \$119.40. The remainder is credited to individuals, without reference to organizations.

We reproduce these figures for the simple purpose of showing that the “Home” is recognized by the members of the various brotherhoods.

The “Home,” from the first has had our sympathy and support. We have believed that such an institution, properly managed, would be of incalculable service to disabled railroad employes—and that the membership of the various orders could contribute to its support with the assurance that their money would be well invested.

It is doubtless believed in some quarters that the “Home” ought to be under the management of the various orders whose members contribute the bulk of the funds for its maintenance. We do not hesitate to admit the plausibility of the proposition, but we do not regard it as either conclusive or essential. In fact, we are convinced that there are many well grounded objections to such a policy.

In discussing such questions, human nature must be taken and accepted as we find

Digitized by Google

preme Chaplain, G. M. Campey, Toledo; Supreme Trustees: W. R. Johnson, Nashville; W. W. Low, Altoona; S. J. Tomblin, Chicago; J. Longhurst, Detroit; W. F. Walters, Columbus; W. H. Randall, Memphis. The last named was chosen Supreme Organizer, but resigned and George Scott, of Columbus, was elected to the vacancy. Twenty supreme chief deputies were also chosen.

The delegates, during their stay in Columbus, had their photographs taken in a body, and when the time for final adjournment had arrived the conclusion was, that good work had been accomplished and that the outlook for the new order was in all regards auspicious.

WORKINGMEN IN PENNSYLVANIA.

On April 13th the following Associated press dispatch was flashed over the country:

Gen. Wiley is by no means confident that all trouble in the coke regions is at an end. Bloodshed and violence, he is quite sure, will result if the troops are withdrawn. Therefore, he thinks the soldiers may expect a long siege in the mountains. General Wiley came down from Mt. Pleasant yesterday and spent the day in town. In an interview he said: "Everything is quiet at present in the coke regions, but that indication is due wholly to the presence of the troops. The strikers are cowed by the uniforms and arms of the soldiers, and will offer no violence so long as they remain."

"The presence of the militia is essential to peace up there. The governor is anxious to maintain this order, and as he is kept advised of the situation I am sure he will not endanger life and property by recalling the troops. For as soon as they are withdrawn there will be an outbreak. Of that I am confident. There are several thousand men in the coke regions who are anxious to go to work but who are afraid to do so. They are not afraid of personal violence while under protection of the guard but fear that their homes would not be safe. Therefore they remain idle, though hunger and want cause great suffering among them. They are assured protection but they know that they would be subjected to besides actual violence. They would be annoyed until their lives became a burden. Wherever they turned they would find an obstacle that caused them annoyance, though they were not injured."

"Besides these men, who are anxious to work, there are thousands of others who would be compelled to work despite everything if they were not under the especial protection of the strikers. As long as they are fed and cared for they don't care about toiling. But how long can the strikers continue their work of supporting these men is a question. As soon as they fall they will find the men drifting back to work in such numbers that the strike will seem to be broken at least. That is the time I dread. It will occasion strife that will result in the loss of life and great destruction of property, I think. I truly hope the day is far off when such will occur, but to my mind it surely will come unless the labor trouble is amicably settled."

Now it is in order to read up the condition of workingmen anywhere and everywhere in civilized lands, and if there is anything to parallel the condition of workingmen in Pennsylvania the facts ought to be known, so that the American Congress, when again in session, could devote a day to the discussion of sympathetic whereases and resolutions. It would give American orators an opportunity to do a deal of spreading the screaming, in which all sorts of labor troubles could be indulged in by the institutions, the sovereignty

of the people—good wages, boundless supplies of bread and meat, and to the "homes," the "sweet homes," of American workingmen.

Thousands of men on the verge of starvation, surrounded by soldiers with shotguns, etc., is a horrifying picture that could not be duplicated in any land, civilized, half civilized, barbarous, savage or enlightened, on the face of God's green earth. For years the coke-makers and miners of Pennsylvania have steadily and studiously pursued a policy of starvation and degradation and the harvest has come.

The miserable victims may be and doubtless will be starved into submission, or they will be shot to death, as has already been done. But the Fricks *et al.* will simply be emboldened, and in due time there will be another whirlwind, or, finally subjugated, the human wretches will sink into irredeemable degradation and bondage. The work is going bravely on.

B. OF L. F. AND B. OF L. E.

From time to time we are in receipt of letters, from members of the B. of L. F., asking our advice, as to the propriety of withdrawing from their parent order, to join the B. of L. E.

It will be seen, we think at a glance, that such advice cannot be prudently given by the *Magazine*.

There was a time when we would not have hesitated, indeed, did not hesitate to commit the *Magazine* to an outspoken policy in the matter under discussion. Fortunately, the *Magazine* can now say that it is a matter of personal choice—the determination of which, relates solely to the individual—about which, whatever may be our private opinion, the *Magazine* may prudently keep out of the controversy.

A locomotive fireman, promoted to the position of engineer, may elect to remain in his parent order—or, he may elect, for reasons which he deems sufficient, to withdraw and join the B. of L. E. It is purely an individual matter, in which there may be circumstances operating for or against withdrawal.

The B. of L. F. is committed to general federation of all the organizations of employes engaged in the train service of the country, and the presumption is that in due time the B. of L. E. will be fully identified with the Federated orders. Certainly it is eminently prudent to believe that eventually the logic of fact, reason, argument, and justice, will prevail, and that independence and self-preservation will overcome all objections to federation and bring about an era in which equity will be the distinguishing feature.

WM. D. ROBINSON MONUMENT FUND.

Wm. D. Robinson, who died at Washington, Ind., on November 7th, 1890, was the founder of the Brotherhood of Locomotive Engineers, and in doing this great work, he as certainly laid the foundation of the Brotherhood of Locomotive Firemen and all other organizations of railway employes.

In closing our obituary notice in the December issue of the *Magazine* we said:

In this hour, when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame, the memory of a man who gave the best years of his life for their benefit? Is not the answer, We will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response.

If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

"What hallows ground
where heroes sleep?
'Tis not the sculptured
piles you heap!
In dews that heavens far
distant weep
Their turf may bloom,
Or genii twine beneath the
deep
Their coral tomb.

"What's hallow'd ground?
'Tis what gives birth
To sacred thoughts in souls
of worth!
Peace! Independence!
Truth go forth.
Earth's compass round
And your high priesthood
shall make earth
All hallowed ground."

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep, is hallowed ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallowed ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the Brotherhood he founded will be his imperishable monument, and that his name in connection with that great order is to increase in lustre as the years flow on. But that does not cancel the debt of gratitude the two great brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unaided, our order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two orders, but would invite all the brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

In discussing the propriety of erecting a monument to perpetuate the memory of the dead philanthropist we said in the April issue:

The idea of building a monument to perpetuate the name and fame of Wm. D. Robinson, originated with the *Firemen's Magazine*. The time has come for action. Contributions should be made. We have said that 25 cents each from members of the B. of L. F. would build the monument. But we surmise that other orders would want a place in the splendid work proposed, and we have opened in the Grand Lodge office of the B. of L. F.,

A ROBINSON MONUMENT FUND.

Every contribution, however small or large, will be acknowledged in the columns of the *Magazine* under an appropriate head, and when the contributions approximate a sum which gives assurance of success to the enterprise, a commission made up of the members of the various brotherhoods will be constituted to take charge of the fund and prepare for work.

Members of the various orders subscribing should designate their calling, and if they will give their address it will be regarded as a favor.

Now, let the good work proceed. Wm. D. Robinson, when alive, was the friend of the workingman. He wrote and spoke and toiled to establish a brotherhood and to teach men the power of organized labor. Railroad trainmen had no more ardent and unselfish friend. Let a monument bear testimony that death did not sever the tie that bound him to the living.

WM. D. ROBINSON.

If ever a man deserved the grateful homage of his fellows that man was Wm. D. Robinson. He devoted the best years of his life to the great work of organizing railroad men for their moral and material advancement. He toiled without recompense, he endured privations and made sacrifices, the half of which will never be told. He lived and died in pov-

erty that others might fare better than was his lot. Every man, woman and child who has been, is now, or ever will be the beneficiary of any of the brotherhoods of railway employes owes Wm. D. Robinson a debt of gratitude that never can be paid. Such a man deserves a monument to bear testimony of the love and gratitude of those for whom he accepted poverty, persecution and all their attendant ills, and every member of every organization of railroad employes should cheerfully contribute his mite, small as it may be, to such a noble purpose. Contributions may be directed to the *Locomotive Firemen's Magazine, Terre Haute, Indiana*, all of which will be acknowledged in its columns.

THE SWITCHMEN'S JOURNAL.

We have on our table the *Switchmen's Journal* for May, enlarged to eighty pages, and brim full of good reading.

Most heartily do we congratulate Brother John A. Hall, editor and manager, on the splendid success attending his management of the *Journal*. The editorial articles are written with unusual vigor, and have the right ring from start to finish.

In an article captioned "Corporations and Law," the *Journal* remarks that "It is the policy of corporations to oppose any and all legislation not originating with themselves which has any bearing on corporation interests." This is true, notoriously true. In every state and territory, and in Congress, when an effort is made to enact a righteous law touching any corporation interest in a way to enthrone justice, the corporation is on hand to defeat the measure.

"There is not a law," says the *Journal*, "on the statute books of the state that has not been flagrantly violated. The Interstate Commerce law has been violated time and again by every railroad corporation in the Union." Having made this arraignment the *Journal* says:

The president of the New York Central Railroad is even now under indictment for the violation of a plain law which caused the horrible death of six persons. For him it is a misdemeanor, for an employé it would be manslaughter, possibly murder. How does he bear himself under the terrible responsibility of having caused the death of six human beings, burned alive? Chauncey M. Depew continues to treat his connection with the Fourth avenue tragedy as a matter for after dinner pleasantry. On the night when he gave bail for \$25,000 Mr. Depew hurried to a Tom Reed banquet, where he turned his arrest into a theme for merriment, and treated it so irresistibly that his auditors shook their fat sides with laughter. Again at the Fifth Avenue Hotel, at a banquet of express men, in company with Tom Platt, Austin Corbin, Chas. Fargo, John Hovey and a number of other congenial spirits, Mr. Depew dragged in the tragedy and made it do buffoon's service for the amusement of his friends. "His warnings drawn from his present predicament as an indicted offender against the law kept them in a continuous roar of laughter." They were convulsed with laughter at the efforts of the great State of New York to punish the willful violation of a law which caused the death of six of her citizens. The bare idea that a state should venture to lay its hands upon a railroad president and millionaire appeals directly and irresistibly to their risibles. It is a solemn truth, that the laws of their country are to these ghouls a proper subject of ridicule and contempt.

We have not quite reached that point in this western country. The corporations prefer to kill a bill rather than violate a law, but if the bill should become a law they would doubtless attempt to violate its provisions as far as the court of last resort would permit. The court is the people.

The *Magazine* wishes the *Switchmen's Journal* the continued prosperity which its ability, independence and progressive spirit deserves.

At the Club.—First Reveller—It's twelve o'clock. Ain't you going home?

Second Reveller—Not yet. You see, the old lady don't sleep real sound before two.

ROBINSON MONUMENT FUND.

The Following subscriptions to the *Robinson Monument Fund* have been received since our last report:

Patrick Fennell (Shandy Maguire), Oswego, N.Y. \$1 00
F. W. Balesky, Los Angeles, Cal. 1 00
Previously acknowledged 6 50

Total \$8 50

Remittances should be addressed to *Locomotive Firemen's Magazine*, Terre Haute, Ind.

Literary Notes.

In many respects *The Arena* is unique. Unlike the majority of magazines which devote the major part of their space to fashionable topics and superficial aspects of affairs, this review is given largely to the discussion of the great root problems that intimately affect civilization. Its contributors number many of the boldest and most brilliant thinkers of the day in the fields of social and economic science, education, ethics, and religion. The May number is a remarkably brilliant issue, containing notable papers by C. Wood Davis, who discusses the wheat supply of Europe and America; Prof. Emil Blum, Ph. D., a native of Vienna, who after graduating at the University of Odessa, from which he was driven by the Russian government on account of his having served in the Austrian army. Prof. Blum writes on "Russia of To-day" in a cool and dispassionate manner. Julian Hawthorne and the Rev. Minot J. Savage discuss Modern Spiritualism. Paul Blouet, the brilliant French author and lecturer, better known throughout this country as Max O'Rell, writes on the "parvenu in religion." Other notable papers are from the pen of Prof. Abram S. Isaacs, of the University of New York; Prof. J. W. McGarvey, of the Kentucky University; Dr. Henry D. Chapin, of New York; Rev. John W. Chadwick, Frank L. King, Will Allen Dromgoole, and the editor. It will be readily seen that no thoughtful magazine reader can afford to overlook this issue of *The Arena*.

TO TEACH THE LADIES.

NEW YORK, April 18.—Among the cabin passengers who arrived from Europe to-day by the steamship "La Bourgogne," were fourteen Parisian designers of ladies' fashionable gowns. These artists have been engaged by the enterprising managers of *The New York and Paris Young Ladies' Fashion Bazar*, to contribute exclusively to the columns of that popular magazine. All of them are well known in New York, for their reputations have preceded them. Mrs. Astor, the Vanderbilts, Mrs. Cleveland and Mrs. Marshall O. Roberts are among the society leaders who have worn gowns designed by these artists. During an interview with a reporter one of these designers said:

"Paris still leads the world of fashion although Eugénie no longer sits on the throne. Parisian gowns have a style about them that can not be equalled. That, I suppose, is the reason why we have been engaged to come to America to teach the ladies of your beautiful country, through the columns of *The New York and Paris Young Ladies' Fashion Bazar*, how these wonderful creations of the dress-makers' art are constructed. It is our business to design the handsomest and most fashionable gowns for the different seasons of the year. These designs will be printed in colors and will be accompanied by such clear instructions as to the selection of materials and the cutting and fitting of the garments that no woman of sense will have the least difficulty in making perfect fitting gowns herself. It is a knack, a science, to fashion a gown that will make a very small and very fleshy lady appear slim. Not one designer out of a thousand can hit upon the true lines unless he makes it a study of a life time. You ought to see the May number of our *Magazine*. We have designs in it that will take the hearts of the ladies by storm. They do not get a new dress made up every day, and I can tell you it is an important item to get the best magazine, and the very latest and most exquisite Paris styles, and have it fashioned like the one that is best suited to their figure.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month.

Federation and the B. of L. E.

This subject or rather question seems to be settled in the minds of many of its advocates. However I do not consider it finally settled though I regard myself as one of its most enthusiastic supporters. It has been regarded as settled since the institution of the Supreme Council, but I do not consider it so until the last man that labors in the railway service has joined hands in this march of progress, and all stand together in a solid and unbroken phalanx to fortify and defend their interests. Then, and not till then, will it be possible for us to realize and to utilize the power of federation for the good of all. While we are hungering for this bread which we know to be nutritious to weak and oppressed labor, we accept the half loaf which we believe will strengthen and give us power to obtain the other half.

Separate organizations have benefited labor in the past, but the tide of time and progress has drifted us to the dawn of an era where our strength and where our capabilities must assume larger proportions or we must yield to the power of concentrated capital to do its bidding whether we will or not.

There was a time when our present organizations served all the reasonable demands of labor, but those days are past and gone forever, and labor must now erect a fortification strong enough to withstand the bombardments of its enemy or yield to disastrous defeat.

There was a time when the old musket and cannon were regarded as very destructive implements of warfare, but what would those muskets be to those of Italy, France, Germany, England and America? And what would those cannons be in a bombardment of the iron-clad vessels that line the ports of this and foreign nations? Ah! they would be like the fragments of a feather laid in the tornado's path to obstruct its force, and just so, separate organizations. They are not strong enough to contend with the power of the concentrated capital that vindicates its rights.

It has been long since we have had a united front.

overwhelming defeats. But FEDERATION, its only friend, comes to its rescue and places a sword within the hand of labor—a shield upon her breast, a helmet upon her brow; puts life and vigor into its sinews. Federation in one sense is the basis of strength of every government upon the face of this earth. The strongest state government in our Union would be too weak to resist the armies of the smallest foreign power, but in the federation of all our states, into one grand union, we have a power sufficient to conquer the world in arms.

What is federation? It is aggregation of power for the purpose of protection. And if federation does not give us strength there is no strength in union and no efficacy in power. We observed in a recent issue of the *Locomotive Engineers' Journal* an article upon this subject. The writer was referring to and commenting upon an article on the same subject from the gifted pen of T. H. Haines, of Division 99. And the former party (name not known) was opposed to federation while the latter favored it in a general sense.

The former claimed that it contained too much of the "force element" and it "was a knock down and drag out principle." God pity this poor benighted soul and open his eyes to the blessed light of benevolence that shines for all.

It is not the policy, my dear stranger, of those who favor or understand federation to declare war against capital. It is to add to our strength and to our judgment, that we may be able to throw off the yoke of oppression when it is laid upon us by the merciless hand of injustice.

The millions that are spent by this and other nations for the equipment of a standing army and a navy is no evidence that we are expecting war, but it is to prepared for it if it must come.

Federation, or the Supreme Council, has not sounded its war tramp to marshal its hosts to battle. It is wise, considerate, kind and watchful, and is a greater friend to capital than capital is to itself. Its true, honest principle is to give a fair and honest day's work for a fair and honest day's pay. While it possesses all these noble attributes, it is like the serpent that lies coiled in its ability to defend itself; harmless and inoffensive if undisturbed but terrible if aroused and trampled upon.

Ah! "too much of the force element" says some one. What was the B. of L. E. organized for? Was it not for protection? Then, if for protection, there is much of the "force element" in it. The very term "protection," is suggestive of "force." If there was no "force" or power in "protection" it would fail to protect. What is protection? Is it not to guard, to shield from harm and to fortify against danger? Does

kindness and persuasion always protect? I certainly think not. Then, if it does not, and we *must* be protected, is it not the only alternative to use the "force element?" How do we protect ourselves from the blows of an enraged enemy? Why, certainly by force, when kindness fails.

"Too much of the knock-down-and-drag-out principle." The poor deluded fellow that wrote these words must have measured the advocates of federation by that of his own standard—which I assume must be exceedingly low.

The Brotherhood of Locomotive Engineers is a brotherhood composed of brave, wise and noble men. They have gone before and prepared us a place. The beds upon which they lie are softer than ours, and when they make their last hard pull up the hill of life, they will yield them to us. They have always been in sympathy with us. (I mean the true and noblest of their fraternity.) I speak of this as the rule, not the exception. Therefore, we wish to have them in the Supreme Council, not so much to strengthen it, for we feel that it has strength sufficient to serve all our purposes, but we want them in it for their own good and because we love them, and want to grasp their hands in brotherly love and pledge eternal friendship with them. While I am voicing my own sentiment I believe it to be the sentiment of every true hearted and intelligent fireman in this country. May God speed the day when all of us even down to the poor fellows that trampies will be united in bonds of eternal friendship, and that the man who scorns an honest laborer because he receives a smaller salary than his less favored brother, may be branded as a traitor to all the principles of true manhood.

J. G. Cary.

Free Discussion and Honest Criticism.

The nineteenth century has wrought greater changes in the condition of man than any of the preceding ages. The mechanical world has been revolutionized, science has made gigantic strides and the social condition of the human race is but little less than a grand emancipation. Among the great and varied changes that this century has seen, none are more apparent than the improved condition of the laboring class. That which was once their normal condition would now be deemed serfdom or slavery. Where we once saw a *menial*, in abject submission to the dictates of an imperious master, we now see an *employé* exchanging his labor for wages, in a manner which begets mutual respect between himself and his employer.

What has brought about this state of affairs? Has it been the evolution of nature? Probably no better reason can be given than

that man has at last been enabled to gratify his natural innate desire to better his own condition. He has taken advantage of opportunities that never before existed. The new departure in the government of nations has given this great impetus to the emancipation of labor. Republican ideas are fast absorbing the time honored monarchies. The people are at last becoming their own rulers. While this evolution is in progress throughout the civilized world, no nation has as yet reached the stage of advancement that has been developed in the United States. In no other country has labor reached the same degree of independence. The reasons for this will be found in the liberal attitude of the government and in the inclination among Americans to unite their forces for mutual protection. Americans have been taught by the very principles upon which their government was erected that "in union there is strength." Prominent among the principles of this great democracy is the right to criticize; the right to suggest changes in the laws and offer arguments against that which we deem disadvantageous to our interests *without being accused of treason*. To this sentiment, which prevails to a great extent in labor organizations, is due the improved condition of labor. In our brotherhoods, as in our country, the humblest in the ranks have a right to be heard. It has been honest criticism, freely expressed, and mutual concessions by all concerned, that has advanced the Brotherhood of Locomotive Firemen, from its incipency to its present standing in the front ranks of labor organizations.

The success of the pioneer organizations has encouraged others of nearly every trade or calling to organize, and now we have, in its infancy, a young "*giant*" of labor, known as "Federation." Previous to the great strike on the C., B. & Q. the railway labor orders firmly believed that each organization within itself possessed sufficient strength to protect its own members from injustice. This strike was the test, and resulted disastrously to labor. Free discussion and honest criticism followed, and federation was adopted by four organizations. Now, it is a known fact that each of our orders were not as perfect in the beginning as at present; and we also know that our federation is yet in the experimental stage, and as time elapses weak places in the structure will be discovered and should be pointed out. Free discussion and honest criticism will do more to perfect the present plan of federation than any other means we have at hand. Those who oppose this unwittingly injure the cause they seek to assist by concealing the defects until the critical moment arrives when it is too late to make amends. Many who, previous to the Q strike, violently opposed federation in any form, are now num-

bered among the strongest federationists, but their conversion came too late to win that strike. Those of our brothers who honestly criticize the details of our present plan, and discover its defects, are the true friends of federation, and will prevail in the end. Those who seek to suppress debate and free discussion are its worst enemies, although their intentions may be honest and sincere.

The subject of federation has been a leading topic for the past three years, and I am sorry to say, that instead of free discussion and honest criticism prevailing, we have seen articles reeking with personalities. As long as the discussion was characterized by personal recrimination it was best that all should cease debating the subject; but now that reason is again enthroned, each and every brother who has the success of federation in view should endeavor to strengthen the cause by giving thought to the subject and freely discuss the merits and demerits of the various details of our present plan.

Inasmuch as I have explicitly stated my honest convictions in this matter, I hope and trust that no one will assign to me any but the purest motives when I point out a few changes that I truly believe would strengthen and perpetuate federation.

Section 2, of the Constitution adopted by the Supreme Council, says that "each organization under the jurisdiction of the Supreme Council shall be represented by its Chief Executive and two associate Grand Officers selected for that purpose." Now, I believe that this will be found impracticable if ever we become involved in a serious strike or series of strikes. Sections 12 to 20, inclusive, are mandatory that three Grand Officers of each organization, that is, the entire Supreme Council, give their *personal* attention and time to a strike. This will result in a partial or total neglect of the business of the several grand offices. From information that I have obtained, I am led to believe that our Grand Officers and their clerks are taxed to their utmost to transact their regular official business, and we could not spare *all* of our Grand Officers without serious detriment to the order. Another reason for a change is, the probabilities are, from the present and growing popularity of federation, that we will continue to gain accessions until, at no distant day, the Supreme Council would find it difficult to procure a general manager's office sufficiently large to accommodate them, especially in cases where the manager was ably assisted by a corps of superintendents, master mechanics, etc.

I also believe that those who enact the laws should not execute them. No government, except an absolute monarchy, combines the legislative with the executive. If our President was permitted to dictate the laws he would become a Czar. Laws, when

made by rulers without consulting the people, are nothing more nor less than imperial edicts. If ever such men as C. S. Wheaton or P. M. Arthur have control of the Supreme Council, they can legislate to suit themselves, and no organization can object, because we have invested this right in them. According to Section 223 of our own (B. of L. F.) Constitution, they could legislate our order out of existence as a labor organization. Section 223, is as follows:

"The protective department of this order shall be subject to the laws, rules and regulations of the Supreme Council of the United Order of Railway Employees, which shall at all times have precedence."

By this section the B. of L. F. has yielded all right to conduct its protective department. Although each and every member of the B. of L. F., including our Grand Officers, may demand that our own laws remain as they are, the Supreme Council can, by virtue of the above article, revoke and annul every act of our past conventions concerning the protective department. As I do not believe that one should criticize without offering a suggestion of something that the critic believes to be better, I will state what I consider would be a profitable change from the present plan, viz:

The Supreme Council should be composed of the chief executive and two delegates (not Grand Officers) from each organization under its jurisdiction; said delegates to be elected at their respective conventions. The Supreme Council should hold regular biennial meetings for the purpose of enacting and amending the laws by which it is governed and for the purpose of transacting other business that may come before it. The officers of the Supreme Council should consist of a Chairman and Secretary and Treasurer and an *Executive Board*. The Chairman and Secretary and Treasurer to be elected by the Council, and whose duty would be nominal. The Executive Board to consist of the chief executive of each organization, and its duty would be to adjust grievances and conduct strikes in accordance with the laws enacted by the Supreme Council. A two-third majority should rule, both in the Council and in the Executive Board, and a record should be kept of all votes in regard to strikes.

I believe that in the adjustment of grievances and in the conduction of strikes this Executive Board of Grand Masters would fill every requirement, and at the same time leave the Vice Grand Master and Secretary and Treasurer of each organization to conduct the routine business of the several orders. According to the Constitution of the Supreme Council, all votes and acts of that body to be legal, must be by the personal presence of all the Grand Officers of all the organizations. If a strike should be

prolonged, as in the C., B. & Q. trouble, our business at the Grand office must necessarily be neglected. The expense of this Executive Board would be just one-third as much as of the entire Council, and in cases where "headquarters" were at a first-class hotel for six or eight months, the saving in hotel bills would probably avoid a few of those unpopular assessments that are so numerous during a strike.

Section 16, of the Constitution, confers the right upon any two Grand Officers of any one organization to dictate our actions in regard to a strike. Two men control the actions of fifty thousand without their identity being known. While this despotic privilege may not be abused by the present members of the Supreme Council, the day will come when we will see a change in its personnel. It is only a matter of time until the B. of L. E. and the O. R. C. will be "admitted into the fold" which will make "supreme" beings of our dearly beloved friends of old, Messrs. Arthur and Daniels. Then we will fare badly if Mr. Arthur is not ungrateful to his friend Mr. Depew, or Mr. Daniels becomes "loyal," as he was during the unpleasantness on the C., B. & Q. Railway; our fate will not depend upon the judgment of a majority of the Supreme Council *but upon the honesty of two men.*

When the B. of L. E., at their Richmond convention, refused to accept our plan of federation but wanted to "coöperate" with us instead we were indignant, because we believed that they had a scheme in which they would use the B. of L. E. when it was for their own convenience and then refuse to return the favor. The distinction between the engineers' "coöperation" and our federation we believed was that in their plan mutual assistance was *optional*, while in ours it was *compulsory*. Now, let us see which of these "plans" would be the most binding on the B. of L. E. should we become associated with them for an offensive and defensive purpose. If we had entered into a "coöperation" with the engineers they would be compelled to aid us or violate their obligations; they would have to assist us or go upon record as men whose word could not be trusted. If they should break their promise we would then be left in our original position, *i. e.*, we would be free to attempt to force an adjustment of a grievance single handed, or could possibly procure the assistance of one or more of the other Brotherhoods. In "coöperation" the engineers could refuse to assist, but could not dictate any procedure to us. We could not compel them to enter into a strike on our account, but they could not prevent our striking if we believed that was the proper course to pursue. So much for "coöperation." Suppose the B. of L. E. does accept the invitation to federate with the Su-

preme Council of the United Orders of Railway Employés and sometime thereafter the firemen should have a grievance on some railway system. If I do not misinterpret the meaning of Section 16, of the Constitution of the Supreme Council, there would be nothing binding on the engineers to inconvenience themselves with our trouble; though we should have the hearty support of one of their Grand Officers. As long as P. M. Arthur and one of his lieutenants thought that the firemen "were asking too much from the company," we would be far more helpless than without federation, because we would not have the right to help ourselves. We would be bound "hand and foot," subject to the whims of the Grand Chief and one of his assistants. If the Grand Officers of the B. of L. E. did not wish to incur the expense of a strike for the benefit of firemen, they would not be compelled to "violate an obligation" or to "break a promise" as in "coöperation," they would simply exercise a prerogative especially stipulated in the constitution of the Supreme Council and vote "no," which would settle the matter for all time to come. Not only would they refuse to assist but would forbid us helping ourselves. The Grand Chief and one of his colleagues can not only dictate to the B. of L. E., but to every Brotherhood man in the federation. As long as Mr. Depew could offer convincing arguments to these two men, all brotherhoods would be paralyzed. If these two men said "yes" and it was agreeable to the others, we could strike; but if they should say "no," it would make no difference that eighty thousand members of five great organizations were unanimously in favor of a strike we could not "withdraw from the service of the company" without violating a written agreement, and according to section 14 of the constitution being liable to *punishment*. If every man on an entire system believed a strike necessary they dare not act if two Grand Officers said "no." With the engineers' coöperation" they would be compelled to aid or break a pledge; with our federation we give them the right to not assist, the power to prevent any other order assisting and the authority to prevent us defending ourselves. In "coöperation" the members of the several orders on a system would have the privilege of deciding the necessity of a strike; in our federation the members of all except one organization would have nothing to say, they would not be consulted in the matter, but the will of any two Grand Officers of any one organization would be supreme. The members on the system of the organization having the grievance, are consulted by allowing them to vote for or against a strike; but the members of the other organizations on the system are ignored; the Supreme Council can compel them to quit

work without ever advising them of the cause of the trouble. According to the constitution, the Supreme Council cannot order an organization to strike in their own defense except that two-thirds of the members on the system are in favor of it, but they can force everyone else on the system to quit work without even consulting them. Only the organization which has the grievance has the privilege to vote on the subject.

If the firemen, brakemen, switchmen or conductors had a grievance, it would be less difficult to gain the support of the engineers on the system through the personal acquaintance of the individual members than to depend upon the personal feelings that exist between the Supreme Council and Mr. Arthur.

A two-third majority should decide all questions relating to a strike. If the Grand Officers of any one organization should refuse to abide by the will of a two-thirds majority, it would only prove that they were not to be depended upon "in the days that tried men's souls."

DENVER, COLO.

W. S. Carter.

An Engineer's Revenge.

There is a well known engineer, of dark, swarthy complexion, of tall and willowy form, of tragical voice and oratorical gestures, who is doing ten days penance for a little act in which there was more devilishness displayed than there was of peaceful benignant consideration. A spirit such as is taught by the Golden Rule, "Do unto others as you would have others do unto you," was foreign to his nature. On a recent morning he was aroused from a peaceful slumber and happy dreams to be told that he was wanted to take out the way-freight, a train on which there is an excellent opportunity for the development of muscle and to test the patience and serenity of one's disposition. It was a beautiful April morning; a warm and cheerful sun was ascending the eastern horizon; a balmy air kissed the feet of mother earth and fanned the brow of transparent skies. The early songsters that herald the approach of a new season, and with their silvery notes tell of the revivification of vegetable life, were flitting joyously from branch to branch or basking in the sunshine upon the atmospheric wave. It would seem that one who was blessed with the opportunity to behold the magnificent panoramic view which the flower city of Rochester presented on this beautiful morning, would be inspired by the natural elements to a frame of mind which would appreciate and testify to the goodness and glory of God. But not so with the knight of the throttle, who was called to take the way-freight on this beautiful morning over the elegantly equipped road

which wends its way through the far famed Wyoming Valley. The intrusion upon his peaceful slumber, the interruption of his happy dreams cast a gloom over his mind, which nothing but revenge could dispel. With a dark, stern visage, with unlubricated joints, he reluctantly made his way to the engine house, apparently oblivious to the usual four fingered salutation which he loves so well. It was with a dissatisfied air that he scanned the bulletin board; it was with an oath that he pronounced the numerals 17 which corresponded with the engine number that was marked for the way-freight. It was with great deliberation and much caution that he ran the iron monster upon the turn-table, and in most audible tones cried out "head her towards the city of brine," viz., Warsaw. The engine being headed in the right direction, the gallant knight fingers the throttle with a gentle, child-like touch; slowly, carefully the wheels begin to revolve and the machine to move. Quietly, softly, under the careful usage of her skilled master she moves out of the shadow of the round house, into the warm and cheering rays of the sun. Still on she moves, on by that modest little building with the ever sacred and patriotic name of "Lincoln Park Station." As she passes the station the dark visage of her gallant driver is lit up with a smile. The flush upon his swarthy cheeks reveals excitement; the tension of his muscles indicates the execution of some great feat. But why this sudden transformation in the knight of the throttle? Ah! it is because his eagle eye has detected the opportunity, the moment for revenge, sweet revenge. The remembrance of the rude disturbance of his peaceful slumber and happy dreams nerves him to the commission of some diabolical act. The modest little station is a familiar scene; the long line of cars loaded with brilliant diamonds, though of a dusky hue, is an every day occurrence; but it is not every day that the manly form, the graceful poise, the keen, intellectual physiognomy of the "good Samaritan"—whose very name is the synonym for justice—the trainmaster, is seen upon the spacious veranda of the little station. But there he stands statue-like. He is robed in rich garments; his fine linen is of an alabaster hue; his cleanly shaven face, and his brilliant polished boots bespeak the gentility of his finely polished nature. It is with a calm serenity that he, with his magnetic eye, sweeps the horizon. The song of birds, the stealthy tread of the iron monster, is music to his finely attuned ear. The earth, the air, the birds, the engine, all conspire to play upon the tender chords of his angelic nature, and awaken in him that condition of mind which finds expression in the noblest of noble sentiments, "peace on earth and good

will to men." But the thought has no sooner crossed the wonderful expanse of brilliant intellect, before another transformation is seen. The iron monster has a backward movement, her position is directly in front of the little station, which serves as a throne for the trainmaster. Suddenly and without a moment's warning that gallant and heroic engineer has pointed the throttle lever towards the man-hole in the water tank; the slow revolutions of the wheels are accelerated to a meteoric speed; the heavens are darkened with a great column of black spray. Notwithstanding it had been projected into space with a force equal to 120 lbs. to the square inch, the inevitable workings of the law of gravitation counteracted that force, and that column of greasy, black spray settled down upon that modest little station, dressing it in the emblem of mourning, and deluging the trainmaster. But look! Behold! Oh! what a change. See you that man gasping for breath; struggling to tear those great drops from his eyes? That is the trainmaster, but he is unrecognizable. His rich garments are as limp as a bathing suit; his fine linen has a coal miner's complexion; his cleanly shaven face with its great globules of greasy soot resemble a plain dotted with foot hills, while the former calm serenity of this angelic trainmaster has turned to pranks, which remind one of the age of witchcraft; and though he has the features of the Caucasian race, one could swear by his complexion that he was of African origin. The engineer had had revenge and he went on his way rejoicing, unmindful of the law of compensation. The trainmaster, with all his wit and wisdom, was ignorant of the law of condensation, but in the plenitude of his power, in the paucity of his reason, he issued an order for a ten days suspension, and the engineer, instead of contributing a bar of soap, a ruffled shirt and assisting to hold a hose on the trainmaster, is walking around the streets endeavoring to persuade his friends it was all an accident. According to Mosaic tradition, the serpent, at one time, was superior in power and influence to man; but the exercise of illegitimate functions brought upon it the wrath and condemnation of Divine authority, and from that time henceforth it was "cursed above all cattle of the field, and above every beast of the field; upon thy belly shalt thou go, and dust shalt thou eat all the days of thy life." I commend to the trainmaster in question, who, clothed with a little brief authority, violates every sense of reason, and prostitutes positions of trust, the story of the serpent and its awful doom.

J. B. Ward.

ROCHESTER, N. Y.

Fraudulent Schemes.

Our members have often been cautioned against the alluring circulars issued by a number of concerns located at different points, which promise to give from three to ten dollars for every dollar paid them by their faithful adherents. Still the circulars come in at the rate of at least one a week, and their name seems to be legion, but their dupes must number still more or they would have to "shut up shop" for lack of trade. In a number of instances they have been brought into court; once, as I remember, in Pittsburg, and more recently in Paterson, N. J., as shown by the following article from the *Recorder*, of New York:

The affairs of Branch No. 77, of the Universal Order of Coöperation, at Paterson, N. J., one of those societies which agree to pay their members \$100 for \$35 in one year are being settled.

The branch had 181 members, and the order is now in the hands of a receiver, having been placed there by the courts of Pennsylvania as being an illegal concern.

The requirement for membership in the order was that each new member must not only pay the initiation fee and dues, but must agree to bring two new members into the order, and these two, in turn, must bring four more in, and these four, eight more, and so on. The charter members in Paterson are out \$9 each in assessments paid in, while the members of the second series are out \$7. The members of the third series are the luckiest of all, having had their money returned to them by the local secretary, it not having been forwarded to Philadelphia, where the main office of the company is located.

About two thousand dollars paid by the people of Paterson is a rather high price for the experience, but still, if that were enough to guard others from the same fate, it would not be entirely wasted. "A word to the wise is sufficient." In addition to this let us see what the *American Machinist* has to say on this subject:

This country is full, so to speak, of "fraternal" benevolent associations which appear to have taken their cue in attaching some kind of an insurance feature to their organizations from the practice of associations that have good reason for continued existence. That is, to put it plainly, designing men in all parts of the country, seeing that the insurance feature of some of the really meritorious associations was popular, have brought out the most flimsy apologies for associations upon which they could engraft some remarkable insurance scheme, or some wonderful giving something-for-nothing feature.

The money that fosters these humbug associations comes, for the most part, from working people—men and women—who do not stop to think that insurance, like everything else, if good for anything, must be bought and paid for at its full value, or that it is impossible for an association to go on paying out ten dollars for every five dollars received.

It is a satisfaction to know that some of these undesirable associations are being brought to grief by the authorities of the states in which they do business. The harm they have done cannot be undone; the next best thing is to prevent the further harm they may do. In the meantime, no working man or woman should give any heed to an association or company that promises insurance for, practically, nothing, or that agrees to return the money they may invest in two or three years, with interest at twenty or thirty per cent. Insurance companies, both life and accident, have got the business of insurance figured down fine. They know the probabilities so closely as to make no mistakes in fixing rates. And as for interest, any one who has proper

security can get all the money he wants at a low rate. A moderately high rate of interest generally means danger of losing both interest and principal; an abnormally high rate means just about the certainty of so doing.

We have nothing to say against the benevolent features of organizations that have legitimate reasons for existence. In many instances much good is done through these features of such organizations. It is only, as before intimated, those organizations or companies that propose to sell money for less than its value that we warn those who work for their living against. No attention should be paid to the plausible stories told by their circulars, or otherwise. They should be shunned.

Thousands of fraudulent concerns thrive at the expense of the incredulous public. They advertise in a manner to readily catch the eye; promise gold watches for half a dollar, bicycles for a song, shotguns for less than the express charges amount to, and so on to the end of the chapter. It may be accepted as a safe rule to be governed by—never to have anything to do with a firm or company that requires you to send your money in advance.

Wm. Weiler.

Talking Cents.

Will you permit an humble member of the brotherhood to occupy some of your valuable space to talk cents a little, or little cents?

I read the *Magazine* and see once in a while an article which deals in dollars, mighty piles of dollars, mountains of dollars, I turn to my old arithmetic and find the table of Federal money, as follows:

Ten mills make a cent.
Ten cents make a dime.
Ten dimes make a dollar.
Ten dollars make an eagle.

I have somewhere read about the "mills of the gods," but I am not going to write a criticism on poetry. I do not suppose the author of the "mills of the gods" idea, had any reference to the "ten mills" that make a cent, or to the 1,000,000,000 that make the billionaire that Mr. Shearman, the single tax advocate, says is coming.

I want you to excuse the pun I have perpetrated on cents, and not hastily set me down as a penny-a-liner.

I am in dead earnest and am going to talk cents, which I think is the A in the alphabet of a fireman's financial philosophy.

You have doubtless read the old aphorism "Take care of the cents and the dollars will take care of themselves." It is as true as preaching, for if a fireman don't take care of his cents, he will have no dollars to take care of themselves, an axiomatic, self-evident truth. On the other hand, if a fireman does take care of his cents he will have some dollars, and his dollars will be trained to take care of themselves. Is that what a political economist calls logic? If not, why not?

Now, the other day, I had a brotherhood occasion to be present in a home of sorrow and gloom. It is the same old story. Two

little children clinging to the skirts of a weeping mother, too young to grasp the cause or the meaning of the tears.

The home was comfortably furnished—the floors were carpeted—everything looked tidy. There were a few pictures on the wall, and I noticed a sewing machine in the corner. There was a small book case in the room, and I noticed several bound volumes of the *Locomotive Firemen's Magazine*.

I didn't know the brother personally, I had come from some distance to attend the funeral of the dead brother—dead—that tells it all. It was a funeral occasion. I was a little in advance of the members of the dead brother's lodge. The brothers were there on time. I need not describe the scene. You have often been there yourself, Mr. Editor, and so have thousands of your readers. But as I looked on, I said to myself this is a sight which angels must enjoy. The exhibition of the brotherhood spirit was simply heavenly and I thought sent a ray of light into the soul of the weeping mother.

A clergyman had been invited to make some remarks; I was very anxious to hear what he said. I thought I should hear something about the life of the dead fireman. I did not have to wait long. I omit the solemn, dirge like music, and come directly to the talk of the minister in substance as follows:

"I knew the dead man well. He was my friend—a member of my church. He was a good man. He loved his home, his wife and children. He loved books. His leisure hours were spent in study. He was well informed. It was a pleasure to converse with him and often have I enjoyed the hospitalities of his home. He is dead but there is no blemish upon his character.

"Only a short time ago in a confidential conversation he said: 'My wages are only \$1.90 a day, and yet I have managed to lay by something—not much—a little. I have been frugal, my ambition has been to own a home, a place for my wife and children, and for four years I have been able to save fifty cents a day, and my savings are safe, and if I live, I will soon have a home of my own.'

I need not quote further. I said to myself, the widow and the children are not destitute, the husband and father was thoughtful. There is gloom, there is sorrow, bereavement, heart desolation, but not hunger.

We laid the dead brother away in his grave. I then had a conversation with the Master of his lodge and a number of his brothers. Every word bore high testimony to the untarnished character of their dead brother. Said the Collector of the lodge, "Brother L— was generally the first to pay his dues. He never was delinquent in anything."

Now, Mr. Editor, I will leave the sorrowful phases of my subject. For four years this brotherhood fireman had been a man of cents. His wages were \$1.90 a day. He had saved out of it 62,600 cents. For four years he had paid about 2,000 cents a year, or in all 8,000 cents to keep his insurance policy fee, 150,000 cents in proper shape. As a result, his wife and children have 232,000 cents to help them along in this dreary world.

Now, I'm not going to upbraid any of the boys who visit saloons, play pool and poker, drink beer and whisky. They too are men of cents, but they place little value on cents. These cents go, go glimmering, and like wasted minutes and hours, they come back no more forever. So much for cents.

F. J. L.

CHICAGO, ILL.

Employment of Firemen.

MR. EDITOR:—I have a short address to make to the Brotherhood of Firemen, and consider the *Magazine* the best medium for that purpose. It has occurred to me that too many old firemen are traveling over the country looking for work, and most of them look in vain. Now, there are reasons why such is the case. I have heard several men of experience apply to our foreman for work, and the answer is invariably, "We make all our men." Now, is not this an imposition on our brotherhood? How can a company consider the services of a wiper, or a man of no experience whatever, as valuable as that of a man who has lived on the foot-board for years? You will say, they do not, and I agree with you, but they must have an object in view, and that object must be to create a supply which will be greater than the demand. Now, we are aware that our brotherhood can always, or nearly always, obtain a hearing from a company; so, in justice to our traveling brothers, why not agitate this question in our several divisions, and if possible, avert this drifting about so much? I am firing a passenger run out of Pueblo, and have a good opportunity for making observations. I have met brothers who have traveled from St. Louis to California and back again without being able to obtain employment, and such things should not be. Make a part, and promote a part, is my motto.

My fears may be without foundation, and I hope they are; I am only speaking of our road, the Missouri Pacific, and if all roads are doing the same, I think it necessary to make an effort at least in our own behalf. I am a fireman of two years' experience, a short time, but long enough to learn that a railroad man of long service has little love for other kind of labor.

Corrinth.

LOUISVILLE, Ky., May 5, 1891.

Editor Firemen's Magazine:

In looking through the *Magazine* for February, I notice on page 134 a letter from Bro. Ferrill, purporting to represent the opinion of Elm City Lodge, No. 284, and condemning you for your editorials on such tyrants as Depew, Webb, Corbin, and others of the same type, and I notice that Bro. Ferrill is pleased to call such grand editorials "scurrilous," but the way I look at it is, that you aim at every enemy of workingmen who rob them of fair pay for honest work, and in doing this strike deadly blows at the workman's home, his wife and children. Elm City Lodge seems to approve of such tyranny and applauds such tyrants.

Now, when I joined the brotherhood my belief was that it would help to make me independent of such tyrants, and I think that men who are afraid of losing their jobs on account of your fearless editorials, denouncing such scoundrels as you have exposed, ought not to belong to the B. of L. F. If the B. of L. F. is not organized to defend its members, what use is there for it in the world? If the *Firemen's Magazine* will not expose tyrants and their infernal methods to degrade labor, where is the brotherhood to look for defense? If the members of Elm City Lodge like degradation, why don't they go to Pennsylvania, and get a job on the P. & R.?

Fraternally yours, T. D.

Look Out for Him!

James Law, late Master of Star of the East Lodge, No. 118, was expelled April 26th for grossly violating the laws of the order. He departed for parts unknown, leaving his creditors unpaid and took with him several traveling cards with the seal of the Lodge attached which we doubt not he will undertake to use to impose upon members of the order. He also has a key to the secret work, and several blank orders for the secret work. Keep an eye open for this person and if you should meet him, promptly notify the Secretary of Star of the East Lodge and the Secretary of the Grand Lodge.

Acknowledgments.

ALDEN CENTER, N. Y., April 25, 1891.

I. H. Croswan, Esq., Receiver of Lodge No. 241, B. of L. F.:

DEAR SIR:—Please allow me to extend to your association through you an acknowledgment of thankfulness for the kindness shown us. Your resolutions of sympathy were duly received and were helpful in lightening the burden of sorrow which came to us by the sudden death of our son, and your associate, Albert Engelhardt. We can only wish that all who have so freely tendered their sympathy, both by word and act, may be spared such a sudden and painful death as was the lot of our son. We herewith also acknowledge the receipt of \$1,500.00 from your association for the prompt remittance of which please accept the thanks of the sorrowing father and mother.

Yours truly,

WM. ENGELHARDT.

AUGUSTA ENGELHARDT.

SHICKSHINNY, PA., April 20, 1891.

To the Brotherhood of Locomotive Firemen, Lodge 250:

GENTLEMEN:—Accept my sincere thanks for your kindness shown to my friend, Amos Reed, during his sickness, and for the honor and sympathy shown by accompanying his remains to place of burial. The floral pillow was a beautiful and touching tribute, for which I heartily thank you. For the prompt payment of policy my thanks are certainly due you, and are hereby tendered.

ANNIE M. MCAFEE.

CHICAGO, ILL., April 16, 1891.

Mr. M. C. Donnelly, Pueblo, Colorado:

DEAR SIR:—I have received draft for full amount of Frank's claim for which I extend my heartiest thanks to the order of the B. of L. F., which is indeed a brotherhood to be highly commended for the promptness and dispatch with which they conduct business and for the tender feeling which must exist where such pains are taken and such attention is given to a departed brother. Again accept thanks, and believe me

Yours sincerely,

MRS. D. O'CONNOR.

NEW ORLEANS, LA., May 1, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I received through Mr. J. Pratt, of Toronto, a draft for full amount of insurance of my husband, Sidney Vaughan, for which I desire to return many thanks. And I fully appreciate the respect shown him after death, by the members of Dominion Lodge, No. 67. With best wishes for each member and the prosperity of your benevolent order, I remain

Your sincere friend,

CARRIE M. VAUGHAN.

EASTON, PA., May 5, 1891.

To the Members of Lehigh Lodge, No. 251:

GENTLEMEN:—I desire to return my sincere thanks for the prompt payment of fifteen hundred dollars, the insurance due on the policy held by my late husband, Frank S. Staser, who was killed by accident on April 10th. I also wish to express my appreciation of the kindness and attention shown him at his burial. I have not words to express the gratitude I feel towards your noble order. May the blessings of God rest upon you one and all is my earnest prayer.

MRS. BRIDGET T. STASER.

WINDSOR, March 12, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to return my sincere thanks for the receipt of a draft for (\$1,500) fifteen hundred dollars due me on the policy of my late dear husband, Frank Thorpe, also for your kind sympathy shown me during my trouble and bereavement. May God bless and prosper you one and all is the prayer of my heart.

MRS. ADA M. THORPE.

GREENLEAF, April 30, 1891.

W. A. Moffatt, Esq., Eagle Pass, Texas:

DEAR SIR:—The draft for \$1,500, the amount of insurance held by my son in the B. of L. F., was duly received. I do not know how I can ever repay you for the favors shown me. I expect to visit your city soon and will see you. Until then please accept an old man's heartfelt thanks for the kind treatment of his son. May God be with you all.

Yours very respectfully,

GEO. KENNINGTON.

MARQUETTE, MICH., April 28, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to express my sincere thanks to the B. of L. F. for the prompt payment of \$1,500, due me on the policy of my late husband, Hugh Monford, through Mr. Robt. Ripplin, Receiver of Lodge No. 311, of which my husband was a member. I also desire to express my sincere thanks to the lodges and brothers who sustained me in my affliction. Hoping that heaven's choicest blessings

may ever rest upon your organization is the prayer of

MRS. LIZZIE HUGH MONFORD.

BUFFALO, N. Y., May 11, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—In my grief in common with that of father, brothers and sisters, I offer our heartfelt gratitude to the members of Lodge No. 241, for their many acts of kindness at the loss of our beloved son and brother Edward F. Albrecht. I also tender my thanks for the draft of \$1,500 as the insurance on my late brother. Hoping your noble order will ever prosper and remain of aid and assistance to the widows and orphans.

I am very truly yours,

KATIE E. ALBRECHT.

Addresses Wanted.

PETER MURPHY—When last heard from was at Marquette, Mich. Nothing has been heard from him for over two years. About seven years ago he was employed as engineer and fireman on the G. T. Ry. of Canada. His father and mother are very anxious to hear from him and it is earnestly requested that any information concerning him be promptly communicated to the Secretary of his lodge, Jas. Burke, Box 318, Stratford, Ontario.

W. T. HAND—Of Pilot Lodge, No. 124, was last seen May 1st. He is below medium height, weight about 150 pounds, age 45, complexion dark and when last seen wore a suit of blue clothes. Please address Jas. Donahoe, Perry, Iowa.

WM. WEIDMAN.—A member of St. Clair Lodge, No. 116. When last heard from was at Port Huron. Anyone knowing his whereabouts will please communicate with Wm. J. Kelly, Fort Gratiot, Mich.

TH. F. BURNS.—At one time a fireman on the Colorado Midland R. R. Any one knowing his whereabouts will please communicate with James Doyle, City Hall, Colorado Springs, Col.

GEO. SUTTON.—Formerly a switchman in the yards at St. Joseph. Anyone knowing his whereabouts will please communicate with W. E. Sullivan, 2219 S. Sixth st., St. Joseph, Mo.

ACCIDENT INSURANCE.

The following letter recently received by the Secretary of the Railway Officials and Employees Accident Association, of Indianapolis, Ind., will be of interest to those who desire accident insurance:

PINE GROVE, April 18, 1891.

MR. W. K. BELLIS,
Sect'y Railway Officials, & E. A. A.,
INDIANAPOLIS, IND.

DEAR SIR:—I am to-day in receipt of draft for \$1,750 00, balance of my claim against your Association, account of beneficiary of my son, Frank A. Bones, who was killed April 7th, by elevator, in Peoples Bank Building, Denver, Colo. A message was sent from Denver to Wm. K. Bellis, at 1:40 P. M., April 8th, notifying your association of his death, and at 4:40 P. M., "same day," the funeral benefit of \$250 00 was received. I filed out my final proof of death, April 11th, and mailed it to Indianapolis, and on April 18th, (this date), I received the balance of my claim in full (\$1,750.00). I am a member of Division 186, B. of L. E., and have run an engine for the last 14 years, am also a policy holder in your Association and shall be as long as I carry insurance, and would advise any railway employe to insure in your association, as this kind of treatment is not to be had in any other company or association, so far as I have been able to learn, and I have been a close observer of the manner in which accident companies have treated their patrons, and you can always count on my being one of your patrons. With best wishes for the prosperity of yourself and your association, I am,

Yours Truly,

David S. Bones,
Engineer So. Park Div., U. P. Ry.
Pine, P. O., Jefferson Co., Colo.

Rulers of Europe.

The present Emperor of Germany is William II. He is 29 years of age.

The Emperor of Austria, Francis Joseph, is 58 years of age and has worn the imperial crown for forty years.

The reigning prince of Montenegro is Nicholas I., who is 47 years old, and has reigned for twenty-eight years.

The King of Portugal, Louis I., is 50 years old, and is a man of enterprise and progress. He has been for twenty years a king.

The Emperor of Russia, Alexander III., is 43 years of age, and ascended the throne after the death of his father some years ago.

The President of the French Republic, M. Carnot, is 51 years of age, and was elected to office in December last as successor to M. Grevy.

The sovereign or Sultan of Turkey, Abdul Hamid II., is 46 years old, and succeeded to the throne twelve years ago, when the Sultan who preceded him was deposed.

The King of Serbia, Milan I., is 44, and was crowned only six years ago, but before that he had held the throne for fourteen years by election as Prince Milan Obrenovich IV.

The King of Sweden and Norway, Oscar II., is in his 60th year, and has reigned for sixteen years. He is a fairly liberal monarch and has favored some reforms during his reign.

The King of Roumania, Carol I., is 49 years of age, and was proclaimed King only seven years ago, but for fourteen years before that time he had been chief of the Roumanians.

The King of Denmark, Christian IX., is 70 years of age, a year older than Queen Victoria, and is the second oldest monarch in Europe. He has wielded the sceptre for a quarter of a century, or just half as long as the British Queen.

In Germany there are three Kings and a grand duke besides the emperor of Germany and the King of Prussia, who are one. There are the King of Bavaria, and the King of Wurtemberg, and the King of Saxony, and the reigning grand duke of Baden.

In the Republic of Switzerland the highest official of the government is the President of the Federal council, who is elected by the Federal assembly, which meets at Berne; he holds the office for the term of one year, and enjoys the salary of \$3,000 per year.

On the 20th of June last, Queen Victoria had reigned over the United Kingdom for fifty-one years, a period which has been exceeded by two only of the monarchs of England, viz: Henry III., who reigned for fifty-six years, and George III., whose reign lasted for nearly sixty years.

The power and authority of the King of Spain, Alphonso XIII., who is now 2 years old, is limited by the regency of his mother and government of his nurse. He never saw his royal sire.

The King of Greece, or King of the Hellenes, Georgios I., is 43 years of age, and has been king for a quarter of a century, or since he was 18, at which age he was elected to the Hellenic throne.

The King of the Netherlands, William III., a scion of the royal house of Orange, is the oldest monarch in Europe, being 71 years of age, and entered upon the fortieth year of his reign on the 17th of March last.

The King of the Belgians, Leopold II., is 53 years old and if he should reign until he reaches the age at which his father died, he will be king up to the year 1910. He has been on the throne twenty-three years.

The King of Italy, Humbert I., is 44 years of age, and has worn the crown since the death of his father, ten years since. He is but the second of the Kings of United Italy, and his throne is in the eternal city of Rome.

The Pinkertons.

[Laster.]

The Pinkertons are not detectives for the glory of putting down crime, they are in it for the money, the living to be got on it. The have become hirelings and like all hirelings, they have sunk in the character of its men, for the Pinkertons are notorious for recruiting their ranks from the burly thugs and scum of the city.

In every strike where they have been employed they have attempted to overawe, browbeat and even provoke strikers. They are ostensibly put to guard corporative property but knowing that the longer resistance or a show of it, is kept up by the strikers they indeed try to fret the strikers into an attitude of hostility, thereby lengthening their own job.

In dealing with law-breakers only authorized representatives of the law should act and any other Ku-Klux lynching society or Pinkertons who try to execute the laws, only make matters worse. The experience of strikers also show that these Pinkertons are only Hessians gathered together from the slums of our big cities.

The Hessians and thugs must go.

All About Gould.

The stock of the Northern Pacific will doubtless be oiled instead of watered in the future.—*Minneapolis Journal*.

Jay Gould may be "out of Wall street," but there doesn't seem to be much doubt that he is in Pacific Mail.—*New York Press*.

Mr. Gould declares he is comfortable and contented. The condition of the temperature in the vicinity of the Adams mansion, however, is a matter of intense speculation.—*Omaha Bee*.

"I am personally in a very comfortable position," remarked Jay Gould to a reporter the other day. This is a statement in which the public will have entire confidence.—*Birmingham Age-Herald*.

On general principles when Jay Gould advises the public to buy stocks it is a good time to sell. If there is anything in the market worth buying it is not likely to get away from the Gould family.—*Boston Traveller*.

If Jay Gould has bought half the railroads they say he has he will own more legislators this winter than any man who lives or ever lived. He will form a trust for limiting production.—*Kansas City Times*.

The genial Jay Gould fairly revels in any financial condition that excites other people. He always stands around in the coolest mood with any amount of spot cash in his pocket and buys anything desirable that is unloaded.—*Detroit Free Press*.

The reports of enormous purchases of railroad stocks by Jay Gould are to be taken with a good deal of allowance. He is a wealthy man, and likes now and then to make big deals; but at the same time he is not in the habit of buying for the mere sake of buying, and is certainly not to be suspected of a purpose to absorb all the securities in the country. If we were to credit all that has been told of him in the last two weeks it would be necessary to believe that he has increased his holdings to the extent of several hundred millions of dollars; but no intelligent person requires proof of the improbability of such an exploit on his part.—*St. Louis Globe-Democrat*.

If Jay Gould has really got control of the Union Pacific it may be safely predicted that Congress will think twice before it grants an extension of the Union Pacific's debt to the government. This debt, including principal and interest, now amounts to about \$50,000,000, and is secured by second mortgage upon 1,038 miles of road belonging to the Union Pacific system, being the

main line between Omaha and Ogden. With Mr. Adams at the head of the company, his integrity being undoubted, Congress has been inclined to be lenient in the collection of the government's dues, but with Jay Gould in control Congress will have but little sympathy.—*Spokane Spokesman*.

The ability to make millions is not usually one associated with the sense of humor. Making millions is by no means conducive to boisterous mirth, either on the part of the money maker or his inevitable victim, the money loser. Nevertheless we find in some recent utterances of him whom they call the wizard of Wall street, Jay Gould, a touch of humor, unconscious, perhaps, akin to the sentiment as expounded by the late lamented Theodore Hook. With stocks tumbling around him like so many nine-pins, with old-established firms going to the wall day after day, Mr. Gould looks benignly down on the consumption he has prayed for, and remarks jocosely that "this is a good time to get bargains."—*St. Joseph News*.

Impecunious Passengers.

[Detroit Free Press.]

On a Michigan Central train going west the other day, the conductor came to a passenger who had no ticket, and who owned to also being dead broke.

"How did you pass the gates at Detroit?" was asked.

"Bought a ticket to the last station back here."

"Well, you'll have to get off."

"Before you make up your mind let me show you some figures. Here they are: This train is now on time. You must stop dead still to put me off. To stop, start and get under the same headway will consume four minutes. See? It is also figured out here by a statistician."

"Ticket or money?"

"The extra fuel consumed is placed at 94 cents, and you must report to the train dispatcher at a cost of 35 cents. The delay to 75 passengers is put at \$25. The stopping and starting and extra strain to make up four minutes damages the train \$2.20 worth. Now, then, I only want to go thirty miles farther."

"Can't do it, sir!" replied the conductor, and he pulled to bell-rope, halted the train, and escorted the impecunious passenger to the steps.

"All right, old chappie!" said the latter, as he dropped into the ditch. "The railroads of this country don't pay 2 per cent, and it's no wonder. When you'll spend \$30 to save 90 cents, it's a wonder a stockholder ever smells a dividend at all. Go ahead with your old caravan—the poor house isn't over six miles down the track."

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

JUNE, 1891.

Assessment Notice for June.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., June 1, 1891. }
ASSESSMENT No. 21, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz:

CLAIM No. 426. Southey B. Tunnell, of Old Fort Lodge, No. 347, was declared totally disabled by Loss of Foot, January 12, 1891.

CLAIM No. 427. Jasper F. Libby, of Mt. Tacoma Lodge, No. 192, was declared totally disabled by Loss of Hand, February 16, 1891.

CLAIM No. 428. Jno. R. Cobb, of French Broad Lodge, No. 447, died of injuries received by being run over by engine, March 22, 1891.

CLAIM No. 429. Chas. W. Nevill, of Kennesaw Lodge, No. 247, died from the effects of an overdose of Morphine, April 7, 1891.

CLAIM No. 430. Charles Ostman, of A. G. Porter Lodge, No. 141, was crushed to death between engine and stock shute, April 8, 1891.

CLAIM No. 431. Bartholomew Gray, of Jno. Hickey Lodge, No. 206, died of Peritonitis, April 12, 1891.

CLAIM No. 432. Leander Gordon, of Safety Lodge, No. 142, died of Progressive Paresis, April 13, 1891.

CLAIM No. 433. Albert F. Riddle, of Willow Grove Lodge, No. 434, died of injuries received by Railway accident, April 14, 1891.

CLAIM No. 434. Paul Fain, of Neches Lodge, No. 156, died of Smallpox, April 16, 1891.

CLAIM No. 435. Chas. E. Stewart, of Elkhorn Lodge, No. 28, died of Consumption, April 20, 1891.

CLAIM No. 436. Thomas Lynch, of Bonanza Lodge, No. 194, died of Meningitis, April 24, 1891.

CLAIM No. 437. John A. Harris, of Black Hills Lodge, No. 86, died of Gun Shot Wound, May 4, 1891.

CLAIM No. 438. Jno. T. Raysinger, of Taylor Lodge, No. 175, died of injuries received by Railway Accident, May 5, 1891.

CLAIM No. 439. James F. Crowley, of Central Park Lodge, No. 237, died of Typhoid La Grippe, May 5, 1891.

CLAIM No. 440. Patrick W. McGuire, of Morning Star Lodge, No. 88, was declared totally disabled by injury to Spinal Cord, May 10, 1891.

CLAIM No. 441. George C. Deyo, of Trinity Lodge, No. 83, was declared totally disabled by Phthisis Pulmonalis, May 14, 1891.

CLAIM No. 442. Wm. Michie, of Pike's Peak Lodge, No. 218, was declared totally disabled by Osteo Myalitis, May 15, 1891.

An assessment of Two DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for *each member* whose name appears on the rolls of membership JUNE 1st, 1891, said remittance to reach the Grand Lodge not later than JUNE 20th, 1891, as provided in Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all the benefits of the order, as per Section 52, of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. and T.

Magazine Agents ATTENTION!

PRIZES FOR 1891.

\$350.00

— IN CASH PRIZES —

The following prizes will be awarded by the Grand Lodge for the year 1891, viz:

FIRST PRIZE.

To the Magazine Agent having the largest number of *paid* subscribers to his credit on the Grand Lodge books December 1st, 1891, **Two Hundred (\$200.00) Dollars in Cash.**

SECOND PRIZE.

To the Magazine Agent having the second largest number of paid subscriptions to his credit, **One Hundred (\$100.00) Dollars in Cash.**

THIRD PRIZE.

To the Magazine Agent having the third largest number of paid subscriptions to his credit, **Fifty (\$50.00) Dollars in Cash.**

The foregoing *cash prizes* should prove an incentive to every Magazine Agent in the order to roll up his sleeves and enter the competition.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., May 1, 1891.

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement
of the Beneficiary Fund for the month of April, 1891:

For Engineers and Firemen. Broke Down.
 What I Should Do.

This book contains all of the items that were in all previous editions, some of which have been greatly improved. Two pages have been added to the time and speed tables, also forty-five pages of new items have been added. Two very fine and costly engravings of the Westinghouse Automatic and Air Brake Gear have been substituted for the old ones, of which is 9 by 34 inches, showing on one sheet the whole brake arrangement from the pump on the engine to the rear end of a passenger car. The new QUICK ACTING TRIPLE VALVE, and the NEW ENGINEER'S BRAKE VALVE is shown also, and very clear explanations of the operations of all its parts as well as the manner of handling them are given. A diagram of SLIDE VALVE MOVEMENT, 16½ by 18½ inches, accompanies each book, the explanation of which is made so clear that any person can understand it. It shows EVERY PART OF VALVE WORKING from the eccentric to the steam chest, as well as the manner in which steam is admitted to and discharged from the ports in the cylinder. It shows the piston also and everything connected with it. There are also three large engravings of engines, making five in all, in a pocket in each book. The whole work without doubt contains MORE VALUABLE INFORMATION IN FEWER WORDS, and is easier understood by railroad men, than any other book now in print, because it is written in the same manner that railroad men talk to each other, and by one who has already had FORTY-TWO YEARS PRACTICAL EXPERIENCE. REMEDIES FOR BREAK DOWNS AND FAILURES OF EVERY KIND that are likely to occur on the road are given in language familiar to every engineer or old fireman, also the BEST PRACTICES FOR RUNNING. A careful study of the principle (items of the old editions has qualified very many good FIREMEN FOR EXAMINATION AND PROMOTION. Their letters to me say in substance, "I would not have been promoted without it," or, "it put me on the right side." The book is very valuable to MEN WORKING ON BREAKS OF ENGINES, and is a gold mine to LOCOMOTIVE FIREMEN AIMING AT PROMOTION. EVERY CONDUCTOR AND ENGINEER, as well as Engineers and Firemen, should become acquainted with the workings of the Air Brakes now in use. One hour careful study of this description of the operations of the Westinghouse Automatic and Air Brake will qualify any interested person for examination on that subject. This item has been recently added to the edition. No books sent C. O. D. Price of Ready Reference, postage prepaid, \$1.50 per copy.

Address,

THEO. DEBS, Terre Haute, Ind.

TERRE HAUTE, IND., June 1, 1891.
To Members Brotherhood of Locomotive Firemen and Subscribers to Locomotive Firemen's Magazine.

GENTLEMEN:—You frequently remit money by mail in payment of Lodge dues and assessments or for other purposes. You may also have occasion to send money to friends or relatives in Europe. If you are not already using *American Express Money Orders* for this purpose, it will be to your interest to know that these Money Orders afford an absolutely safe way to send money in letters by mail at less cost than by other safe mediums. They can be purchased at all regular and special agencies of the Company during any hour of the day and generally during the evening, without the inconvenience of having to fill out an application in writing or waiting in line. Believing you will find our Money Orders superior to other methods for purposes mentioned above, we respectfully ask a trial.

Yours truly,

AMERICAN EXPRESS COMPANY.

Health is Wealth!

DR. E. C. WEST'S NERVE AND BRAIN TREATMENT, a guaranteed specific for Hysteria, Dizziness, Convulsions, Fits, Nervous Neuralgia, Headache, Nervous Prostration caused by the use of alcohol or tobacco, Wakefulness, Mental Depression, Softening of the Brain, resulting in insanity and leading to misery, decay and death.

Each box contains one month's treatment. \$1.00 a box, or six boxes for \$5.00, sent by mail prepaid on receipt of price.

WE GUARANTEE SIX BOXES

To cure any case. With each order received by us for six boxes, accompanied with \$5.00, we will send the purchaser our written guarantee to refund the money if the treatment does not effect a cure. Guarantees issued only by

YEARS
OF AGE.

If any boy or girl under 18 years of age wants a strictly first-class Safety Bicycle without paying one cent of money for it, they can obtain it by sending us their name and address, as we shall give away 1000 or more on very easy conditions for advertising purposes. We have both boys' and girls' styles. Address, with stamp, Western Pearl Co., 308 Dearborn St., Chicago, Ill. Mention the name of this paper when you write.

AGENTS WANTED AMONG FIREMEN.

Money to Loan

At 6 per cent. on policies by this first class Fraternal Order. Anybody can act as an agent. Active farmers do well, ladies also. \$200 to \$4,900 in from 8 to 7 years during life, and \$7 to \$49 weekly in sickness. Mention this paper and write at once to (Big Pay)

S. GLENSOR,
8 Union Square, New York.

Lady agents do well also. Address MRS. K. F. MILLER, General Agent Ladies Dept., 8 Union Square, New York, for particulars.

Send for list of 500 claims paid in '91.

Why Shouldn't a Brotherhood Man

Supply Brotherhood men with something they all use? Nearly all Brotherhood men wear overalls, and I am making overalls that can't be beat. It won't cost you a cent and will help me a great deal if you'll ask your dealer for the "Brotherhood Overalls" and insist upon getting them. He will handle them if you insist, and when you get them you will be getting overalls as good as can be built. Every garment warranted not to rip. Look for "Brotherhood" on the buttons.

Manufactured by H. S. PETERS, Member Lodge, No. 3, and F. A. E. Division, No. 419, B. L. E. Office and Factory,
Hinsdale Street,
BROOKLYN, N. Y.

THE NEW WEBSTER.

CUSHMAN'S MENTHOL :- INHALER,

—FOR—

Catarrh, Cold in the Head, Hay Fever, Sore Throat, Asthma, Bronchitis, Headache and Neuralgia.

Menthol is antiseptic and analgesic (pain-killing) and being applied directly to the diseased parts by inhalation, has an immediate action and gives almost instant relief. It opens up the "stuffed" and clogged nasal passages in catarrh, allowing the breath to pass through its natural channels; it cures the aching head, destroys the foul breath and leaves a cool, exhilarating sensation. It is endorsed by leading physicians all over the world.

Cushman's Menthol Inhaler has a polished nickel case and can be carried in the pocket, always ready for use. It is neat, clean, convenient; it costs 50 cents and lasts a year—1000 treatments for 50 cents and every one a pleasure to take. It is sold under the following positive guarantee: If not as represented or if not entirely satisfactory after a week's honest trial, it may be returned and I will refund the money. At druggists or sent direct by registered mail, prepaid.

H. D. CUSHMAN,

THREE RIVERS, MICH.

A New and Valuable Book on the Locomotive Engine. Incomparably the best book on this branch of Steam Engineering ever published.

**THE
New Catechism of the Locomotive,**

BY M. N. FORNEY.

Doubled in
Size.

JUST READY.

Fully Up to Present Practice.

**PRICE \$3.50 MORE THAN 500
ENGRAVINGS.**

Discount to Clubs. Agents Wanted.

For the past sixteen years the Catechism of the Locomotive has been the best authority and almost a necessity to every Locomotive Engineer and Fireman, and on many railroads it is the standard for examination of Firemen for promotion. So many changes and improvements have been made in the construction of locomotives that the author has revised and re-written the book, adding much new matter and making new illustrations selected from the latest practice in this country. The new edition is about twice the size of the original book, has correct drawings of every part of the locomotive and of the different classes of locomotives in use in this country. It is written in such language as an Engineer or Fireman can easily understand, and it is believed that a study of this book will enable him to thoroughly know his business. There is no popular treatise in the English language which gives so clear, simple and complete a description of the construction and working of the locomotive engine.

The above or any of our books sent free of postage, at the publication prices, to any address in the world. Catalogue sent FREE.

\$1,000 FOR AN OLD COIN

**IF YOU HAVE
ANY COINS**

dated, before 1871, with plain date, send us a list. We pay high prices for hundreds of dates and kinds. Among coins that we want are: silver dollars dated between 1794 and 1863; dates of half dollars before 1864; quarters of all dates before 1868; all dates twenty-cent pieces; all dates dimes before 1860; silver five-cent pieces before 1867; five-cent nickels of 1877 and 1883; all dates of silver three-cent pieces; nickel three-cent pieces before 1870; two-cent pieces between 1864 and 1873; all large copper cents, also small cents with eagles on, also cents of 1873 and 1877; all half cents; foreign coins, fractional and Confederate currency, etc. For above we pay big amounts over face value, if in required condition. This is a comparatively new business, and by merely keeping your eyes open when handling money, you may find many coins that we want. A short time since (Jan. 23), a Scotchman in an Illinois town found one coin worth \$700. Others have done even better. The New York World says: "Many people have become rich by looking after coins wanted by collectors." The Home Journal says: "Collecting coins is a very profitable business nowadays, as there are but few in it. One Boston broker, Mr. W. E. Skinner, buys from agents all over the country, and pays them big sums for rare coins." Coins that are very hard to find in one section of the country are often easily found in others. Largest business, highest prices, prompt payments, best references. Write at once for further particulars, enclosing stamp for reply, which may be worth hundreds of dollars, perhaps a fortune, to you.

W. E. SKINNER, Largest Coin Dealer in the U.S., 335 Washington Street, Boston, Mass.

**RAILWAY
OFFICIALS AND EMPLOYEES'
ACCIDENT ASSOCIATION**

THE WHEEL

Of progress too often becomes the Wheel of Destruction, and at such times the possession of a staunch, true friend to whom the

RAILROADER'S FAMILY

Can appeal in their sorrow is the greatest boon on earth. Such a friend is the **RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION**, of Indianapolis, whose unparalleled growth during the past year, showing an increase of

\$21,000,000.00

Over the previous season, unanswerably demonstrates its overwhelming popularity with the Rail-
roaders of America.

THINK OF IT!

If you should get caught in that fatal accident which visits so many noble men, and leave nothing to your dear ones, what would become of them? A Certificate of Membership in the **RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION** is as safe and certain as a landed estate, and the relief it secures to the bereaved family is flashed over the wires the very moment the news of a stroke of misfortune reaches the Home Office. No sensible Railroader longer doubts it his duty to carry first-class Accident Insurance. Do not postpone until it is too late, but take a membership with us

VARIABLE EXHAUST DAMPER, FOR LOCOMOTIVES.

Patented Nov. 10, 1885.

The use of the Damper, placed under control of the Fireman, assists him in the performance of his duties, so that, according to his testimony, the difference is as day and night, as compared with an engine without the Stack Damper.

RESULTS :

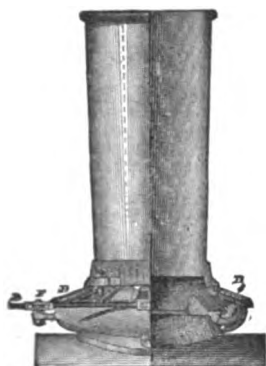

TO THE FIREMAN.—Less labor, no coal gas in the cab, no blowing of cinders and sparks into the front of the cab when open, and easy control of the fire and steam pressure.

TO THE R. R. CO.—In most cases large saving of fuel, also preservation of the flue joints and firebox, and safety against fire from sparks.

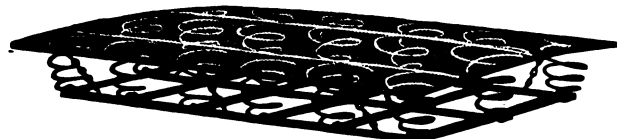

TO THE PUBLIC.—Cleanliness and noiselessness.

Send postal for "Some of the Functions of a Locomotive," written in the interest of Locomotive Firemen.

H. A. LUTTGENS,
Box 131 PATTERSON, N. J.

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

HEALTH AND PURITY.

Before the healing influences of GLENN'S SULPHUR SOAP, Abrasions of the Skin, Pimples, Sores, and all Unsightly Eruptions vanish, and in their stead appears a skin as

CLEAR AS ALABASTER.

For Sale By Druggists Everywhere.

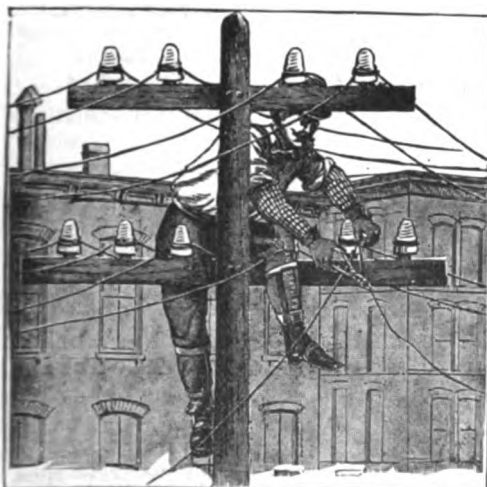

ARTIFICIAL HUMAN LEGS AND ARMS,

(MARKS' PATENTS.)

WITH RUBBER HANDS AND FEET.
DURABLE IN THEIR CONSTRUCTION,

NATURAL IN THEIR ACTION,

NOISELESS IN THEIR MOVEMENTS,

and the MOST COMFORTABLE for the wearer. It is not unusual to see a farmer working in the fields with an artificial leg, or a brakeman plying his brake on a fast running train, or an engineer with hand on the throttle, or a fireman, carpenter, mason, miner, in fact, men of every vocation at labor in the full capacity of their employment, wearing one or two artificial legs with rubber feet, performing as much as men in possession of all their natural members, earning the same wages, in fact, experiencing little or no inconvenience in the use of their rubber extremities.

ALVAH YOUNG is a living example of the remarkable degree to which rubber feet restore lost members. He is a lineman employed by an electric light company. He lost one of his legs some years ago in a railroad accident. He had a Marks' rubber foot artificial leg applied and since then has engaged in active manual labor earning his livelihood. He will climb a pole as dexterously as any of his associates, hold himself on the cross bar with his artificial limb and place the wires in a thoroughly workmanlike way.

Artificial legs and arms with rubber feet and hands can be constructed from measurements and sent to the wearer in any part of the world. A Treatise of 400 pages with a thousand testimonials and full instructions for home measurements will be sent without charge. Established over 37 years. Over 11,000 artificial limbs with rubber hands and feet in use. U. S. Government manufacturers.

A. A. MARKS,

701 Broadway, NEW YORK CITY.

Good morning Have you used **PEARS' SOAP?**

"I have never come across another Toilet Soap which so closely Realizes my ideal of perfection;

Its purity is such that it may be used with perfect confidence upon the tenderest and most sensitive skin—EVEN THAT OF A NEW BORN BABE."

Dr. REDWOOD, Ph. D., F. C. S., F. I. C.

Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain.

Insist on having Pears' Soap. Substitutes are sometimes recommended by druggists and storekeepers for the sole purpose of making more profit out of you.

**Taking a Pill
is often a
happy thought.**

**Beecham's
Pills**

are the most wonderful antidote yet discovered for ALL BILIOUS AND NERVOUS DISORDERS.

THE ACCUMULATION AND THE DISTRIBUTION OF WEALTH.

A valued friend, who takes a profound interest in the welfare of workingmen, sends us two numbers, April 6 and 13, of the *Argonaut*, published at San Francisco, Cal., containing an article without caption, but which discusses the accumulation and the distribution of wealth in the United States.

A tabulated statement of the wealth of the country is furnished, credited to the *Annual Statistician*, giving a sum total of \$66,000,000,000, said to have been the wealth of the country January 1, 1890. The items going to make up the grand aggregate are sixteen in number, as follows: Real estate in cities and towns, \$14,000,000,000; real estate other than in cities and towns, \$13,000,000,000; personal property (not hereinafter specified), \$7,300,000,000; railroads and their equipments, \$7,000,000,000; products of manufactories, \$5,000,000,000; capital invested in manufactories, \$3,000,000,000; productions (including wool), \$3,500,000,000;

property owned and money invested in foreign countries, \$3,100,000,000; domestic animals on farms, \$2,480,000,000; domestic animals in cities and towns, \$1,700,000,000; public buildings, arsenals, war vessels, etc., \$2,200,000,000; money, gold and silver coin, \$1,100,000,000; money, United States currency and bank notes, \$992,000,000; money, foreign coin in the United States, \$38,000,000; public domain, at \$1.25 per acre, \$1,000,000,000; mineral products, all descriptions, \$590,000,000.

We assume that such statements are largely conjectural. Only approximations can be expected, and as a basis of argument the *Argonaut's* figures answer every purpose.

The *Argonaut* writer doubts the propriety of including in the inventory of the nation's wealth bank notes, since they simply represent property, but we notice that he does not object to the *water* in railroads and their equipment, which should be about \$2,500,000,000.

In such discussion, it is well, we think, to separate the nation—the government, from the individual. In a certain sense, the entire wealth is *national*, but in another—a business interpretation, the individual becomes vastly more prominent than the nation, and this distinction is all the more important, since it is a fact, that while the nation engages in no wealth-producing enterprises, it takes more of the surplus than an economical administration of the government requires, and to the extent this is done, the government becomes an oppressor of labor—of the poor, instead of a help, allies itself with the plutocratic class, and while

the one robs by the reduction of wages, the other robs by imposing unrighteous taxation.

According to the *Argonaut's* table, the nation's wealth is summed up in two items—public buildings, arsenals, war vessels, etc., \$2,200,000,000, and the public domain, \$1,000,000,000, total \$3,200,000,000. We suppose the "etc." includes anything and everything else belonging to the government, or the nation, except, perhaps, its gold and silver coin and bullion, and these items can be omitted, as they do not equal the nation's liabilities. Deducting this amount from \$66,000,000,000 and it will be seen that the wealth in the hands of individuals amounts to \$62,800,000,000, or, deducting the nation's share in the \$1,100,000,000 of "money, gold and silver coin," say \$800,000,000, and the remainder, \$62,000,000,000 in round numbers, belongs to individuals, corporations, trusts, syndicates, monopolies, etc., to the end of the list.

The *Argonaut* states that during the decade, between 1880 and 1890, the wealth of the country increased \$22,000,000,000, which, allowing the wealth of individuals to have been \$50,000,000,000 in 1880, would show a gain of 44 per cent., or 4.4 per cent. per annum.

In making such statements, it should be borne in mind that the \$22,000,000,000 represents the surplus after every conceivable expense required for carrying forward enterprises has been paid. Interests, dividends, labor, insurance, superintendence, wear and tear and incidentals of every description, all have been deducted, leaving a surplus of \$22,000,000,000. Nor is this all. The surplus is estimated when every form of taxation, municipal, county, state and national, has been collected. After this what remains is surplus, which, as we have shown, and as the *Argonaut* states it, is approximately \$22,000,000,000, or 4.4 per cent. net on \$50,000,000,000.

Taking this as a basis of calculation, individuals started out January 1, 1890, with \$72,000,000,000 of wealth, and if, during the current decade, it earns 4.4 per cent. over and above all expenses, as was the case for the ten years between 1880 and 1890, it would add to the wealth of individuals \$31,-

800,000,000, and make the sum total of their wealth \$103,800,000,000, an increase of \$53,-800,000,000 in twenty years.

The *Argonaut*, in common with all political economists, asserts, that "*all wealth is the product of labor.*" This being true, it forms the basis of the universal complaint that the wealth, which is the product of labor, never has been equitably distributed, and to correct this wrong—as infamous and as cancerous now as at any time since Cain built a city, is the supreme problem which now confronts the people of the United States.

The *Argonaut* is fully of the opinion that the present high rates of interest borrowers are required to pay is the one thing more than all other things which enables capitalists to appropriate all and more than all the surplus wealth that labor creates, and declares that the reduction of interest to 2 per cent. a year would remedy the ills of which the producing classes complain.

The *Argonaut* assumes that the \$22,000,000,000 surplus, created by labor during the decade from 1880 to 1890, should be equally divided between capital and labor—each receiving \$11,000,000,000, and illustrates the proposition as follows:

The question we have now to discuss is what should be done with the surplus of 4 per cent. Should the surplus go to capital or to labor? We think it should be divided equally between them; that is, that 2 per cent. should go to capital and 2 per cent. to labor. We shall strive to show the justice of our view of the case by an illustration. Let us suppose that a seamstress can earn one dollar a day working without a sewing machine, and that some person lets her have the use of a sewing machine, thus enabling her to do twice as much work and earn two dollars a day. The owner of the sewing machine represents capital, while the seamstress represents labor. If the owner of the sewing machine were to take the additional dollar, the seamstress would be in no better position than she would be if the sewing machine had never been invented.

It is always unpleasant to expose fallacies, particularly so when the authors of the delusions seek to state propositions in the interest of labor, having a total misconception of the questions they discuss, such for instance as the illustration given by the *Argonaut*—the sewing machine and the seamstress, and we confess we have seldom, if ever, seen an error more glaring.

Putting it large, a sewing machine, of the

best make, can be purchased for \$50. This, the owner, the capitalist, loans to the woman at 50 cents a day, and for 300 working days would receive \$150, or 300 per cent., and that is what the *Argonaut* writer thinks would be a fair divide. The machine and the seamstress are placed upon an absolute equality. The *Argonaut* contends that 2 per cent. interest on money is ample, but intimates that 300 per cent. on the loan of a sewing machine is equitable—that it is an equal division of the *surplus*.

If the sewing machine could have been bought for \$50, the annual cost to the seamstress at 2 per cent. interest would have been \$1.00 instead of \$150; or, if the interest had been 10 per cent., she would have been the gainer \$145; indeed, she could have paid 50 per cent. and gained \$125 by the operation.

But, pursuing its theory, the *Argonaut* says:

Justice demands that the surplus of 4 per cent. (\$22,000,000,000) be divided between labor and capital in a more equitable manner. The toilers of this country will never have their rights till the rate of interest be reduced to 2 per cent. We believe that the immediate reduction of the rate of interest to 2 per cent. is the only course that can be followed which will preserve this country from revolution and ruin. The reduction of the standard to 2 per cent. will still allow capital to obtain 3 or 4 per cent.

It is easy to understand how a reduction of interest to 2 per cent. would benefit borrowers, but workingmen and women are not borrowers, and hence the question is pertinent, in what way would the reduction of interest help them? Is it to be assumed that if the farmers could borrow money at 2 per cent. they would sell wheat, corn and pork for less than the market price? Is it assumed that farm laborers would have their wages advanced? In a word, is it to be presumed that the sewing machine Shylock, whom the *Argonaut* introduces, would loan his machine to the seamstress upon rates less piratic? Does the *Argonaut*, in its generous estimate of men, under the sublimating influences of our Christian civilization, hold, if railroad corporations could borrow money at 2 per cent. they would at once proceed to squeeze the water out of their stock and seek to declare dividends on honest cash investments? Does it cherish the illusion that landlords, who own the tene-

ment houses in our great cities, would reduce their rents? or, that the monsters of depravity who manage the "sweating industries" of cities, would relent under the 2 per cent. regime? Nay, verily. Constructed like the horse leech, they would never let go of their victims, but would cry for more blood.

We do not oppose the reduction of the rate of interest to 2 per cent., or to any other prudent figure, but we fail to see in what way it would, specifically or generally, benefit the working classes, except, possibly, it might make work more abundant, a proposition that does not rise above conjecture.

The *Argonaut* writer, while asserting that the "standard rate of interest" should be 2 per cent., and that the Federal Government "can" reduce it to that figure, also says:

The rate of profit with which capitalists will be content depends upon the rate of interest on money loaned, and the rate of interest on money loaned depends upon the security. In all the civilized countries of the world, mortgages on farming lands furnish the best security. Whole cities may be destroyed by fire; railway stock may decline in value on account of the building of rival lines; real estate in towns may decrease in value on account of changes in the channels of trade; mines may cease to be productive. An investor can, however, always depend on a mortgage as a perfectly safe security when it is on farming land, providing he has sufficient judgment to leave a good margin between the amount loaned and the estimated value of the land. For this reason, the rate of interest on such mortgages is invariably the standard rate of a country and the guiding star to which all capitalists look in making investments. The average rate of interest paid in the United States, when money is loaned on such mortgages, is 7 per cent. This rate of interest is the average legal rate for the whole country, and is, in consequence, the guide in all investments.

It is scarcely required to say that the *Argonaut* writer is brilliantly incongruent; as for instance, he would have 2 per cent. fixed by the Federal Government as the standard of interest, while at the same time he proclaims the axiomatic fact that "the rate of interest on money loaned depends upon the security," hence, a Federal law or a state law fixing the rate of interest, except in certain cases, has been a dead letter. Necessarily so, because however urgent the requirements of the borrower, the lender may exact more than the legal rate. It may be true that farms furnish lenders with the

best known security, but it is not true, nor will it ever be true, that the rate of interest paid by those who mortgage farms is "the standard rate of interest of a country and the guiding star to which all capitalists look in making investments," for the simple fact that "security regulates the rate of interest." Even now, millions are loaned on 3 and 4 per cent. The conclusion is, therefore, inevitable, that tinkering with the rate of interest by the Federal Government will not prevent the plutocratic sharks from absorbing the \$22,000,000,000 surplus, or any other amount of surplus wealth labor may create.

Retaining the figures \$22,000,000,000, as the basis of argument, accumulated in ten years, at the rate of \$2,200,000,000 a year, what is required is a feasible and equitable method of distribution. The surplus belongs to labor, and exists because labor was not justly paid. Capital—stocks and bonds, received their interest and dividends, the wear and tear, insurance, superintendence, incidental expenses of every description is paid before a surplus is declared, and the surplus represents the amount capitalists have exacted from labor by refusing to pay fair wages. This being true, if wages could be righteously advanced and maintained, the enormous surplus would go where it belongs—to labor.

Manifestly, in all such discussions, a principle of justice must be sought and adhered to, for at best, only approximations can be outlined.

We assert what is true, however trite it may appear, that labor is scandalously underpaid, and that capitalists, by methods that fill the land with alarm, deliberately rob labor of its equitable share of the wealth it creates.

To make the matter as clear as practicable, we state that the population of the country is, in round numbers, 62,000,000. Of this number, we will assume that 20 per cent., 12,400,000, are under 21 years of age; that 10 per cent., or 6,200,000, are old and unable to labor; that 10 per cent., or 6,200,000, are non-producers, and that 5 per cent., 3,100,000, for various causes, are also non-producers. This would leave 34,100,000 wealth producers. But it should be said of the 20 per cent. of those under 21 years of age, that

at least 30 per cent., 3,740,000, are workers, swelling the grand total of wealth-producers to 37,840,000, or in round numbers, 38,000,000.

If, therefore, the \$22,000,000,000 had been distributed between the 38,000,000 workers it would have been equivalent to an increase of each one's wages of \$57.89 a year or about 19 cents a day.

To the foregoing, the objection may be urged, that there are a vast number of wealth-producers who are, under the present regime, fairly paid; that is to say, that in the distribution of the surplus they ought not to be considered. Such persons include professional men, merchants, superintendents—indeed, all that class not included in the term wage-workers. Suppose the claim be admitted, and the number who ought to share in the \$22,000,000,000 surplus is reduced to 11,000,000. In that case the amount would be \$200 each.

But it may be urged that all ought not to share alike, since the work of all is not equally valuable.

Such a proposition is not specially embarrassing, though it involves the problem of *profit-sharing*, which has been in vogue in France and England to some extent for the past fifty years, and is exciting thought in the United States as a means of modifying the unrest now existing in labor circles.

The point made is, that labor, in any industrial enterprise, is an investment. The term "profit-sharing" necessarily involves the idea of investment, because profit must bear some *per cent.* relation to money, or something equivalent to money, the use of which produces profit.

We have shown, as things are now managed, that in ten years labor produced \$22,000,000,000 surplus wealth; that is to say, after capital had been amply compensated for its use, after every conceivable expense had been paid out of the earnings of labor, there remained a surplus of \$22,000,000,000. If, as we have shown, honest wages had been paid to the producers of wealth, the surplus would have been absorbed as it was produced, and instead of going to enrich capitalists would have gone to brighten and bless the homes of workingmen and women.

We have referred to the fact that profit-sharing exists to some extent in France and in England. The facts relating to the subject were regarded of sufficient importance by the British Government to officially investigate the subject, and the American Consul General at London has forwarded the results of the investigation to the Government at Washington. That our readers may have an idea of how profit sharing works in Europe, we introduce the following:

In England the term profit sharing is used in preference to industrial coöperation. It takes various forms. In some establishments a gift or bonus is presented to the employes at the end of a given period. In others, a certain percentage of the profits is paid into a provident fund for workmen in sickness or old age. Another and more popular form is to set apart from the profits a percentage to be used in giving the workmen an interest in the business. A fourth method is to pay a fixed percentage of the profits to the workmen as extra wages.

In France experiments in profit-sharing began as early as 1848. English concerns commenced to experiment in this direction about twenty years ago. Eighty-one French firms, representing a variety of commercial enterprises, now practice profit sharing. Some of them have thousands of employes. Those who have had the longest experience claim the greatest results. Several go so far as to assert that the profit-sharing more than pays for itself. That is to say, there is less waste of material, superior excellence in the work done, diminished expense for superintendence, great stability in the force of employes, increased practical information among employes—and the result is that from these five sources the profits are increased more than the amount which is allowed the workmen.

Leclaire is looked upon as the founder of the profit-sharing system in France. He began to apply the principle to his house painting and decorating business in Paris fifty-three years ago. He felt his way slowly. The first step was to pay extra wages to good workmen. Then he gave bonuses for the best work. The next thing was a provident society for his workmen. In 1842 he had got so far as to pledge himself to divide a certain portion of the profits of the coming year among the workmen belonging to the society he had organized. The following February Leclaire redeemed his promise by dividing \$2,450 among forty-four workmen. Five years later the number of workmen with whom Leclaire was sharing his profits had doubled, and the amount distributed among them was over \$1,000. The Leclaire business has grown to enormous proportions. At present the plan is to set aside from the gross profits 5 per cent. on the capital. This leaves the net profits, of which 50 per cent. is distributed in cash to the workmen, 25 per cent. goes to the management and 25 per cent. is paid into a great provident society, which has, by the gradual accumulation, become the half owner of the capital of the firm. The idea of

cash distribution of profits Leclaire at length carried so far that if a man only worked a day for the firm he was entitled to something when the profits were distributed at the end of the year. In 1870 the number who participated in the distribution of \$12,000, was 758, and the amount paid them was 14 per cent., or about one-seventh of the wages they had received for the whole year. In 1884 the profits distributed were \$40,000, and 824 workmen received 24 per cent., or about one-fourth of the wages paid them for the year. Besides this cash distribution at the end of the year, the workmen had the satisfaction of seeing the great provident society grow in wealth. Leclaire's experiment is considered the greatest in the history of profit-sharing. The pioneer worked first to gain the confidence of his employes and then developed his system slowly and carefully. While all of the employes share in the yearly cash distribution, it takes years of work under the firm to entitle an employé to membership in the great provident society, with all of its benefits.

It will be noticed that in the foregoing the bed-rock facts are recognized: first, that labor has not been fairly paid, and second, that it is an investment, as certainly as money, and entitled to share in the profits of an industrial enterprise, two commanding and eternal truths that capitalists have denied, and that ninety-nine per cent. of them still deny, a denial of truths which in the past has filled all lands with gloom, and which, even now, is fruitful of more degradation and crime than any other cause which employs the pen of the recording angel.

But the recognition of the fact, however imperfect and still unjust may be the methods for the distribution of the profits of industrial enterprises, is a splendid victory for the principle for which labor has fought and is still fighting.

The fact, that in the United States, for the ten years from 1880 to 1890, the surplus profits of labor accumulated at the rate of \$2,200,000,000 a year, demonstrates the truth of the declaration that labor was systematically robbed, and that every effort made by organized labor to advance and maintain wages was in consonance with right, justice and the well-being of society, and the fact that profit-sharing has been established anywhere proclaims the glad tidings that a new departure has been inaugurated to deal justly by labor. It is an endorsement of every charge against capitalists that labor has ever formulated or uttered. It is a Bethlehem star, blazing in the sky of labor,

which proclaims that a new redeeming force has come to cheer the army of toilers, and that presages ultimate victory.

In the mean time let labor organize for fair wages—for its just share of the surplus wealth which it creates. Truth, long crushed, is rising. Justice is on the side of labor, and the Eternal Years are pledged to see the right triumph.

THE SOCIAL CHASM.

Senator Colquitt, of Georgia, some time since made a speech in the United States Senate, when he took occasion to refer to American nationality by saying that the "national patrimony of the American people is on so large a scale that a sober and truthful statement of it bears the air of extravagance. Certainly no exaggeration is needed, for the facts, transcending our unaided faculties, can only be grasped by the aid of symbols. With an area of 3,500,000 square miles, a population of 62,000,000 souls, a wealth of \$64,000,000,000, mistress of a continent, remote from foreign complications, one might well say, 'Here at last we have found Utopia!' When Washington was inaugurated, one hundred years ago, the thirteen states composing this Republic had an area of 350,000 square miles, a population of 4,000,000, and a wealth, not enumerated, of perhaps two billions. The increase has been to forty-four states and four territories, with an area about tenfold, a population sixteen-fold, and a wealth thirty-fold. If such is our present what shall be said of our future? A hundred years hence, on the present area Mr. Fiske estimates our population at between 600,000,000 and 700,000,000 of souls. If the rate of increase be one-half that of the present century we shall number over 500,000,000. Almost certainly it will largely exceed the present population of all Europe, if not of all Christendom, outside America. Our area then may be coextensive with North America, with no balance of power to maintain and no external threats, and our population and wealth have a tendency to a corresponding increase. How vast are the interests involved in the good government of such a continent and such a people." The picture

expands the national idea to immensity—so enormous in its vastness, as to bewilder the mind and tire the imagination. But the estimates are not vagaries. The mind capable of grasping the march of events, labors under no hallucination, when in the year 2000 it sees the population of the United States showing a grand total of "between 600,000,000 and 700,000,000 of souls."

Senator Colquitt having invited the Senate to contemplate our magnificent picture of possible and probable progress, presents another, which he calls the "social chasm," which he paints as follows:

From the sectional chasm I turn to the social chasm, ever widening by the false distribution of wealth. The disparity is enormous. Consider the cost of a dollar to the poor in hard labor, day in and day out. Consider the ease and luxury of the rich.

The basial maxim of political economy is: To the laborer belongs the fruits of his toil.

I see the driven masses of the world's workers, the deliver in the coal mine, on his side crawling to his dark task, lamp in his hat, lying down, no room to stand; the plodding farmer, with his hoe at noon-day, in the burning sun; the grimy smith, wielding wearily his ponderous hammer; the brawny engineer, in his midnight vigils, with his strong hand upon the throttle of his pulsing monster; and the other multitudinous toilers.

Trace the earning of the dollar that pays these pressed laborers. See the sewing woman's mite and the beast of prey that absorb it.

Think of the care of saving a dollar. Then see its investment neutralized. The bank fails. The millionaires get together and a great trust swells the cost of human life necessities. And myriads of other planned exactions and distresses follow the toilers. The Government stands by helping?

Helping whom? The victims? No; the oppressors, the extortioners. Estimate human wants, food, clothing, shelter, fuel, teacher, rent; the bill of lawyer, doctor, preacher, and professional man; of tradesman, merchant, grocer; cost of hardware, crockery, furniture, shoes, blankets, and the hundreds of things for common use. There is no end, including the inevitable taxes, city, county, state and federal.

To the laborer belongs the fruit of his toil, but does he get it? Is there no predatory class standing by ready to seize upon it? See the poor overworked wight, so abject and pitiful. Has any one the heart to plunder him? The ever-widening social chasm answers the question too well.

But it is said no matter so the money stays in the country, no matter whether the owner and producer gets it or the man who seizes the fruit of another's labor. It does matter. The true object of government is to keep it in the right hands, to check those who try to clutch it. Take it from the industrious, give premiums to force and fraud. Take away even justice from labor. Is it all the same whether the

maker or the thief has it—the producer or the robber? What a state of society when the law itself plunders.

I have seen the estimate of the aggregate wealth of sixteen men. These sixteen men exceed the tax returns of the State of Georgia. Of \$62,000,000,000 of property, 200,000 men own over \$43,000,000,000, over two-thirds of it, while 10,000,000 own \$7,500,000,000, less than one-eighth of it.

These figures have been disputed. Suppose them half true. Suppose them one-fourth true. The showing is stupendous, if 200,000 men own one-sixth of the wealth. The people of the South are among the poorer classes.

But the climax is reached in the negro. One single property holder owns more than the 8,000,000 of negroes in the states, with all the labors of twenty-five years of freedom and with all the savings over a hard living.

All this is dissocial. It breeds luxury on the one side, discontent on the other. It engenders luxury, extravagance, waste, ostentation, high-priced dress, equipage, show of wealth, heartlessness, dishonesty, flashocracy. It creates wrong social tests and pernicious habits of exclusiveness. Small whims are gratified at a cost exceeding the income of a family, perhaps of a community. Social caste, inconsistent with Republican simplicity, is fostered. We have no titles of nobility, but a poor substitute in the millionocracy, so prevalent and growing. We erect a throne to Mammon and set the false and unworthy god on it and worship him. All this severs classes who ought to be kindly related. The privilege of doing good should rise above even the luxury of costly and refined living; much more of cheap and vulgar display. A potential plutocracy!

On the part of the poor the evil condition produces envy, emulation, living beyond means.

Not better is the influence of these ill gotten and excessive riches on the Government. This masterful and bloated plutocracy has bought administrative regimes and policies—high offices, executive, legislative, and judicial. Strong, partial, grasping power is its aim. The Federal Government is its object and hope. The Presidency, power, patronage, it labors for. It cares little for the state triumph during the off year in politics. It is rich and bold to buy and bribe. Federal authority can do anything. The only hope is in the virtue of the people. Think of plunder as a form of rule, and of a government of the few, by the few, and for the few.

All this overdone accumulation of individual fortune and colossal establishment of an active, ambitious millionocracy, with its vast energies, unscrupulousness, and opportunities, is an appalling stride to consolidation, and full of dangerous uses. It is the prepared and potential tool of centralism. To the States North the caution should be given, watch for your own liberties. They will stand or fall with ours. Consider the temper of the producing classes. They will not always bear submissively what seem to be useless and arbitrary oppressions. History is full of their desperate uprising for relief. And the wise theory of our Republic calls for protection of their interest and rights, and equality of aspiration and privilege under the law.

Such is the graphic picture of the social chasm painted by a United States Senator, in the Senate of the United States in the closing days of A. D. 1890.

Let it be understood that Senator Colquitt is a level-headed man, a statesman who weighs his words with conscientious accuracy—who is never spectacular—and as free from whims as a problem in algebra. And yet, this man, grave and thoughtful, a man of meditation and investigation, paints a "social chasm," so frightful in its width and depth, that its contemplation is fruitful only of mental oppression and despair.

"The driven masses of the world's workers?" Driven where? Into the social chasm. By whom? By the "millionaires," who "get together" and organize great trusts, which "swell the cost of human life necessities." Not only trusts, says Senator Colquitt, but "myriads of other planned exertions and distresses fall on the toilers." This language, be it remembered, is no harlequinade of a mountebank, not rabble-rousing declamation to excite passions and promote disorder, but the language of a grave Senator, spoken in the most august deliberative body in the world—who, after depicting the condition of "workers," made haggard by their millionaire masters and "drivers," the "delvers in mines," the farmer with his "hoe," the "grimy smith," the "brawny engineer," the "sewing woman," and all the "multitudinous toilers," the millions in the industries of progress, toiling, sweating, dying, oppressed and degraded, exclaims, "The Government stands by helping. Helping whom? The victims? No! the oppressors, the extortioners."

Is that true? Note the laws under which the millionaire plunderers rob the "workers," and an affirmative answer comes that jars the world like the tramp of an earthquake. And this state of things exists in the closing years of the nineteenth century, exists in a land where the "workers have the ballot," and could, if they would, change conditions.

We invite the most careful perusal of Senator Colquitt's "social chasm" words of warning. They ought to arouse workingmen to a sense of the peril that threatens them—like alarm bells at midnight. The

labor press of the country should reproduce them. Anarchists and socialists, in their wildest moods, never made a more terrible arraignment. It burns like fire. It crushes like a landslide. It is a combination of terror and horror, and withal is as true as any maxim in mathematics.

Another dismal reflection is, that the brave words of Senator Colquitt were spoken to Senators, many of whom are the identical millionaires who are parties in trusts and schemes designed to rob the men whom they were elected to represent, and who use their position and prerogatives to crush and degrade. Men who owe their positions to their wealth rather than to their worth, and this, because "workers," the "driven masses," have not massed their strength and energy, their intelligence and their patriotism, to correct the evils which the fearless Senator points out.

The question arises in view of such facts as Senator Colquitt so vividly recites, what will be the action of "workers," of the "driven masses?" Will they continue to be *driven* to their tasks like galley-slaves? Will they continue to be the victims of millionaire schemes of robbery and degradation? Will they continue to "throw up their hands" and be manacled? We verily believe they will not. We believe that the organizing and federating purposes of workingmen is declarative of a purpose to be freemen, and we believe that Patrick Henry's immortal words, "Give me liberty or give me death," are yet to be the redeeming shibboleth of workingmen.

Workingmen are not Indians to be placed on reservations, or to be restricted in any of their rights. The food they produce, they will have in ample sufficiency; of the clothes they make, they will not accept rags—nor as Jay Gould says, be content with "one suit a year." Of the houses they build, they will claim something better than a hovel for their homes in which to rear American children. Of the books and papers they print, they will have their share. They will demonstrate, to the extent of justice, that "To the laborer belongs the fruits of his toil," and they will not always be *driven* into the "social chasm," which millionaires have constructed for their

graves. The outlook portends such results, and it is one of the cheering signs of the times, that in the United States Senate there are some men who dare tell that august body of the perils which the "Government" instead of seeking to escape, "stand by helping," helping the oppressors and "the extortioners" to perpetuate.

AN AMERICAN ARISTOCRACY.

The President of Harvard University is very much concerned about the establishment of an American aristocracy. In this there is nothing peculiar. We doubt if there is an institution of learning in the country the president of which does not share the anxiety of President Eliot, of Harvard, nor need we exclude the smaller institutions, the colleges, academies, high schools, etc., in all of which the seeds of aristocracy are diligently cultivated.

The Harvard president professes that he does not want an aristocracy of titles and privileges, such as is rotting and festering in Europe, but an aristocracy of education, intellect, refinement, and, necessarily, money, because the learned advocate of an American aristocracy sees no chance for its establishment unless there are founded ancestral homes, to be held from generation to generation, involving the idea of entailment; the ancestral estate, with its castle, to be taken by the oldest male heir, etc., all of which involves fundamental changes in the laws and institutions of the country.

Such an aristocracy, President Eliot believes, would develop an honorable pride in name and home and become an incentive to meritorious conduct, and eventually become the glory of the nation.

All of Mr. Eliot's ideas of an American aristocracy converge on an "ancestral home"—some spot to be made sacred by inheritance, by associations, by family traditions, etc., and the idea is to educate American children so that in due time we shall have an American aristocracy—an exclusive set, known and recognized as "The aristocracy!"

It will occur to numerous readers that President Eliot is seeking to dwarf the fundamental ideas of American institutions

—the created equality of man, and, it possible, the more explicit declaration of St. Peter, that "God is no respecter of persons." The Harvard president, with all his book lore, fails to perceive the trend of human thought. He makes no note of the fact that the term "aristocracy" is everywhere becoming odious; that "Democracy is the shibboleth of the people in all lands where there is any desire to distinguish between right and wrong, truth and error. Learned though he be, his learning, if it has not made him "mad," has reduced him to a crank, filled his mind with vagaries and made him the exponent not only of folly but of an impossibility.

Here, in the United States, it is possible for certain people to imagine themselves aristocrats. The work began long ago, and has been kept up to the present. Boston has its codfish, mackerel and herring aristocracy, dating back to the early days of fish-hooks, bait and seines, colored somewhat with rum, beads and slave ships—traffic in human flesh. It has its factory aristocracy, built up to colossal proportions upon woman and child labor, in establishments often more loathsome than prisons; an aristocracy which is giving back to the wilderness thousands of "ancestral homes," homes where bats and owls hold high carnival, farms abandoned to wild beasts and reptiles, facts which President Eliot might contemplate with profit. In all of the great cities we have the "American aristocracy" for which the Harvard president pants and sighs, meditates and writes. New York has its "400," with Ward McAllister its historian, made of Wall street shearers of lambs and those distinguished fakirs who, with magic art, change water into wealth, so that experts are incapable of telling "which from t'other," and all is set down as equally entitled to dividends. In all of the great cities, in fact in all the cities of the country, there is to be found an American aristocracy, minus the "ancestral home," and minus pedigree, the ancestral name, the castle, etc.

President Eliot, manifestly, has not given the subject he discusses the study its importance demands, and which it should command. Everywhere the American aristocracy, in some stage of development, can

be seen. In Michigan, a skunkery promises such profits that within a generation an aristocratic family will be founded as notable as that of the Astors or the Vanderbilts. Why not? Skinning skunks for their fur is quite as reputable as skinning coons and muskrats, and the indications are that in the near future the skunk rampant or passant will proclaim the proprietor of the Michigan skunkery equal to the most exacting demands of President Eliot for an American aristocracy. Mr. Freeland can have his "ancestral home" near or remote from his skunkery, and in his palatial banqueting hall may entertain the aristocracy in a style equal to anything recorded under the old regime.

If President Eliot were as well-informed as he ought to be, he would know that there is a budding aristocracy to be found in every mercantile establishment, from a corner grocery to the "house" which "controls the market." He has only to read the papers to learn how rapidly aristocratic families are striding to the front, giving "teas," "chocolates," "coffees," etc., always careful to have full descriptions of costumes, together with "diamond and pearl ornaments" appear in the press. The trust barons, the bonanza kings, the bucket shop lords and the lamb-shearing sir knights constitute a still higher grade of American aristocracy, while the railroad czars, sultans and shahs are on top, and have the largest army of retainers to supply them with the *needful* to maintain their establishments.

To help on matters, we have an aristocratic religion, aristocratic churches and aristocratic cemeteries, and we think President Eliot need not vex his learned soul further. Like Rip Van Winkle, should he go to sleep for twenty years, upon waking he would find the American aristocracy shining like a dead mackerel at full moon, and sufficiently offensive to make a brass dog hold its nose.

THE B. & O. has begun the work of "distributing the surplus" by giving its \$40 per month men \$42.50, and its \$1.10 men \$1.15 per day. It's a small "fill," but the boys say it is better than a "cut."

RAILROADING BY THE PEOPLE.

Mr. F. Q. Stewart, in a recent issue of *Living Issues*, discusses "The transportation question," to show that the time has come for the people to supercede the corporation in operating the railroads of the country. In other words, the idea is to *nationalize* the railroads of the country. Mr. Stewart sees no insuperable difficulties in the way. True, he does not discuss the financial aspects of the case. He does not refer to the fact that the owners of the 160,000 miles of railroad of the country claim that they have cost about \$8,500,000,000, and that the people, should they conclude to go into the railroad business, would have to purchase the roads now in operation, or build parallel lines. Should the people conclude either to buy or build, where would the money come from with which to pay? The government has only one source of revenue, that of taxation, and as all revenues are derived from labor, labor would be required to purchase the roads now in operation or build new roads. Nationalists and Bellamyists steer clear of such vexatious questions.

We do not doubt that the government could squeeze the water out of railroad stocks and bonds and establish their cash value at about \$4,000,000,000 less than their owners now value them at. If that should be done at least \$4,500,000,000 would have to be raised. Raised, how? "Oh," says some one, "issue bonds drawing, say, 4 per cent., and thereby create an annual interest debt ranging from \$160,000,000 to \$340,000,000."

Suppose the bonds were to mature in fifty years, then a sinking fund ranging from \$80,000,000 to \$170,000,000, annually, would have to be provided to pay the bonds at maturity, in which case the roads would have to earn from \$240,000,000 to \$510,000,000 to pay principal and interest which, to say the least, would be regarded as a serious proposition. We refer to such things *en passant* because those who want to nationalize railroads do not seem to have thought of them. Having said this much, we want the readers of the *Magazine* to study Mr. Stewart's essay, just to show them how *easy* (?) it is to solve a knotty problem.

It will be remembered before the govern-

ment, some years back, resumed specie payments, it was said, "The way to resume was to resume," and we presume that the nationalists would be equally laconic and say "The way for the people to run the railroads is to run them." Mr. Stewart says:

A railway is an improved highway, a locomotive is an improved horse, a car is an improved wagon—simply this and nothing more. Just why any principle should control in the maintenance and operation of a railway, different from that which controls in the maintenance and operation of a common highway, it is difficult to discern. The common highway is properly maintained, and its use regulated, by the people collectively, acting through their authorized agents, the county or city road commissioners, road supervisors and street commissioners. Why should not the railway be so maintained and its use so regulated? The objection that this would necessitate a vast army of "administration officials" is not at all well founded. There is no insurmountable objection to the present common highway officials, or better qualified persons to be hereafter elected, assuming charge of the railways. And what control does "the administration" at Washington now exercise over the common highway officials chosen by the people throughout the country? The road-bed of a railway, the highway itself, should, undoubtedly, be maintained, and its use regulated, by the people acting through their accredited agents, and these agents should be, in the main, *elected* by the people, and not *appointed* by a scheming administration. No good reason can be urged why a railway superintendent, roadmaster, section foreman, train dispatcher, station agent, telegraph operator, cannot be chosen by and act for the people the same as a postmaster, a postal clerk, a supervisor of highways, a street commissioner, sewer inspector, fire chief, and hundreds of other public officials are now selected and act. The people can name just as good men for these positions as the railway company selects, and the men so named may render just as good, and perhaps better, service to the people as they now render to the company. The people may, for that matter, elect to such offices the very men that now act for the companies. All such objections to state and municipal control of improved highways are far-fetched and trivial indeed, and those urging them are frequently found to be interested, directly or indirectly, in these or similar private monopolies of public property. The railway question is not, after all, such a colossal question, when viewed in a common sense way, in the light of the law of equal freedom.

Those who read the foregoing may conclude that it is an exceedingly simple affair for the government to run railroads, quite as simple as to manage an ordinary turnpike or country dirt road, and may at once adopt Mr. Stewart's views throughout. But we are inclined to the opinion that the more reflective portion of the population will hesi-

tate some time before they adopt Mr. Stewart's views.

This thing of electing general managers, master mechanics, ticket agents, etc., could be done, and all the power could be placed in the hands of one man by the voice of the people, and laws could be enacted whereby employes could be enlisted, as soldiers in the regular army are obtained. Then there could be stringent laws regulating the army, fixing penalties for insubordination, desertion, etc. The soldiers of the rail could be uniformed, badged or branded or numbered, and they would constitute the government railroad army. They would be tied to the road as its live stock, and this is what certain railroad magnates now advocate.

It is not an easy matter to discuss a chimera, an idle fancy, as if it were a rational proposition, but it may be well to puncture fallacies, as they appear, and to the extent practicable prevent the increase of the army of visionaries.

AN EIGHT-HOUR LAW CASE IN INDIANA.

In the issue of the *Railway Age* of April 13, we find an editorial article, captioned, "Hours of Labor," from which we take the following:

A novel question in the railway service has been opened by the commencement of a suit against the Cleveland, Columbus & St. Louis Railway Company by one of its employes at Indianapolis. He asserts that he has for a long time worked for the company twelve hours every day, and he sues under the eight-hour statute of Indiana to recover wages for the extra half day for 662 days, at the rate of \$1.45 per day. Excessive hours of labor by railway men are not to be advocated, and the tendency in this country is steadily toward a decrease in the length of the working day as well as in a lightening of labor by the employment of machinery and of a sufficient number of workers; but no man is legally compelled to work an excessive number of hours, and the fact that the complainant in this case has been voluntarily holding his position with the company and accepting the pay offered and giving the hours required, and that he now attempts to raise his own wages for a period of over two years past does not look creditable. On the other hand, it looks very much like the effort of some lawyer to start a litigation out of which he can obtain profit. We imagine that if the case ever comes to trial, the courts will hold that after voluntarily occupying his position under the terms of the company, the plain-

tiff cannot now obtain damages as the result of his own acts.

In the foregoing we have, as we always find in the *Railway Age*, a plea for the corporation, and a conclusion that the employe is in the wrong.

True, the *Railway Age* concedes that "excessive hours of labor by railroad men are not to be advocated, but," says the *Railway Age*, "no man is legally compelled to work an excessive number of hours," and then assumes "the fact that the complainant in this case has been voluntarily holding his position," etc., and that it "does not look creditable" for him to ask for pay for "excessive hours of labor," all of which is mere pettifoggery.

The law of Indiana is, that eight hours shall constitute a day's work for a railroad employe, section 1 of the law being as follows:

That on and after the passage of this act, eight hours shall constitute a legal day's work. * * But overwork for an extra compensation, by agreement between employer and employe, is hereby permitted.

The *Railway Age* does not assert that an agreement for overwork was made, but assumes that overwork in the absence of an agreement constitutes an agreement for overwork without extra compensation, which is special pleading in favor of the corporation.

If the corporation desired the employe to perform "overwork" it should have so stated, and an agreement relating to "extra compensation" should have been made. The law of Indiana further provides, that "Any person, firm, company, corporation or association who shall violate or otherwise evade the provisions of this act shall be deemed guilty of a misdemeanor, and upon conviction thereof, shall be fined in any sum not greater than five hundred dollars."

The man, in the case referred to by the *Railway Age*, worked over eight hours a day. There was no agreement with the corporation that this should be done. May it not be assumed that the corporation violated the law, that it sought to evade its requirements? Does it not look that way? Does it not appear on the face of the case that the employe has an honest claim? Why should the *Railway Age* enter judgment in advance against the employe, and say that

in seeking to obtain his rights, the act "does not look creditable?" Why not say that refusing "extra compensation" for "overwork" on the part of the corporation "does not look creditable?"

The *Railway Age* seeks to make a point against the employé and in favor of the corporation by asserting that "no man is legally compelled to work an excessive number of hours," and therefore, if he does perform this "overwork," it is "voluntary."

The terms "legally compelled" and "voluntary," in the connection which the *Railway Age* places them, are misleading.

No man, outside of a penitentiary, is "legally compelled" to work by any constitution or statute. The compulsion comes from a higher law—a more exacting law. Millions of men must work or starve. The law can neither be revoked nor modified, and it is because of this law that employers, in thousands of instances, require excessive hours of labor without extra compensation, and it is this law of necessity that renders inapplicable the term "voluntary," when, in fact, conditions coerce the employé to work over hours without extra compensation, and it was this compulsion of environment that led to the enactment of the eight-hour law in Indiana.

The case, therefore, stands about as follows: If the employer, as the law permits, had made an agreement with the employé for extra compensation for overwork (and only such an agreement could have been made), there would have been compliance with the provision of the statute. Such an agreement was not made, hence, eight hours was the day's work, and every extra eight hours constitutes a day's work, which the employer should, in all justice, pay. It would be simple justice, nothing more.

News comes from New York, that Austin Corbin's most intimate and substantial friends are deserting him and their names are published, and it is given out that the Vanderbilts have concluded to make the late Czar of the P. & R. shave off his whiskers and button up his coat to the chin. Corbin is finding his level and may yet die in a prison or a poor house.

CHEAP LIVING.

Mr. Edward Atkinson labors in season and out of season to reconcile workingmen and women to low wages by showing them how cheaply they can procure three square meals a day. To do this, they should have one of his cook stoves so that there may be the least per cent. of waste possible. It is held by Mr. Atkinson that his "cooker" saves fully one-half of the expense, so that if a man receiving 75 cents a day would use two of his "cookers," he would save the other half, in which case, employers could still further reduce wages. A report says, that "as an illustration of what he (Mr. Atkinson) believes is easily accomplished, he gave a dinner last week at his house to a party of ten well-known gentlemen, who, with the members of his household, constituted seventeen persons provided for. The dinner was of five or six courses, and the entire cost of the food supplied, including fruit, was \$2.20, making the per capita cost for the dinner thirteen cents, this including all items, even to the oil required to cook the food. Those who partook of the dinner were satisfied, both with its nutritive and gastronomic qualities, as it was shown that the cheapest meats and vegetables, if properly cooked and properly seasoned, possessed all of those merits that it is commonly supposed can only be secured by the use of high-priced delicacies." Here we have it demonstrated, that a delicious meal can be had for 13 cents. Now take a workman with a wife and two children. Count the two children as one—then there would be three persons in the family, three meals a day would be nine meals. Nine meals at thirteen cents each would be \$1.17. If a man received \$1.00 a day he would be in debt 17 cents after supper. If he received \$1.25 a day he would have a surplus of 8 cents, or 48 cents surplus on Sunday morning, provided, eating were the only absolute necessity—48 cents for rent, clothing and all incidentals. If he received \$1.50 a day he would have a surplus of 33 cents a day or \$1.98 for a week for such things as we have named. If his rent were \$2.00 a week he would be in debt 2 cents every week, to say nothing about clothes, etc.

Mr. Atkinson will have to improve his

"cooker" and buy still cheaper food. Something less than 13 cents a meal for workingmen must be reached. It has already been reached. Before Mr. Atkinson invented his "cooker" or experimented on cheap meats, thousands of workingmen and their wives without a patent "cooker" had learned the art of preparing some sort of food for less than 13 cents a meal. How much lower the plutocrats desire to reduce the rations in quality, the Lord only knows. In some countries the poor eat reptiles and vermin, and the rich do not complain. The cheaper working people can live, the lower their wages can be reduced, a fact which Mr. Atkinson is forever seeking to demonstrate, and yet this Boston philanthropist, this baked beans benefactor of the race, would have it understood that he is the friend of the workingman.

CARNEGIE AS A SQUEEZING PHILANTHROPIST.

Andrew Carnegie is obtaining a national reputation as a squeezing philanthropist. The *Western Advocate*, published at Mankato, Kansas, says he "is giving his laborers another squeeze by adopting the Spring Valley plan. Some time ago he shut down his steel-rail mills 'temporarily,' and the men have eaten up what little they had saved from their scanty wages while waiting for the works to re-open. The employes are now notified that the mills will be closed for an 'indefinite period,' and the result will be just what Mr. Carnegie is working for. The men are too poor to move their families elsewhere, and by the time the mills are re-opened they will be humbled sufficiently to accept any reduction in wages and any terms and conditions that the great and good author of *Triumphant Democracy* may propose. There is a growing suspicion among the people that if such enterprises as that owned by Mr. Carnegie were owned and operated by the government, the laborers employed therein would be better clothed, better fed and better educated, while the cost of the product would not be enhanced, if indeed it were not materially lessened. Mr. Carnegie's vast fortune, like that of all our monied kings, has been built

up by robbing his employes with one hand while the other was in the pockets of the people."

Carnegie is one of our modern sublimated pirates, and yet he is a production of our much-vaunted civilization, of laws which are the most infamous travesty upon justice the world ever contemplated.

Andrew Carnegie, the man of millions, adds to his store by practicing usury like that expressed in Shylock's bond. He is forever cutting away the flesh of workingmen nearest their hearts, and is careless of the quantity of life-blood that flows. He adds a million to his fortune annually, as the rattlesnake adds a rattle to its tail annually. Carnegie, like the reptile, rattles and bites. There are fangs in his methods, and the poison they inject into their victims is productive of poverty, degradation and eventually death, or that which is worse than death, and yet this Andrew Carnegie poses before the world as a philanthropist, and his professions of sympathy for the poor are sufficiently fire-proof to pave the streets of the country we read about, where the fires are never extinguished, not even on Sundays.

A WESTERNER visited New York for the purpose of pumping Mr. Jay Gould. He wanted "pointers." Mr. Gould graciously accorded the Westerner an interview. He (Gould) takes his seat in a big leather-upholstered chair, in which he sits when preparing to shear a lamb, skin a bear or gore a bull, then, says the Westerner: "He leans over you and talks softly, in a subdued tone, such as men use who wish to impart secrets to each other, and you get the impression that he is telling you his very soul, but when you get away and think it over, you will find that you have been drawn into telling him everything you know and that he hasn't gone beyond the commonplace in any remark he has made to you. It's an art he possesses which eclipses belief." In a word, Mr. Gould can't be pumped. He is a five-hundred horse-power machine, and even the lambs he shears go again and again to have the operation performed. He is fearfully and wonderfully made.

A GREAT SPEECH.

Mr. C. P. Huntington, of the Southern Pacific, knows how to talk. We should say he is the best railroad orator of the times. At a recent reception, given by Mr. Huntington at the Palace Hotel, to the officials of the various departments of the road, he delivered an address. His words were "fitly spoken," and were "like apples of gold in pictures of silver." The address is worthy of wide publication, and we make room for it, as follows:

Somehow, on this and like occasions, shadows dim the pleasures as I think of our responsibilities. No man is independent of his fellows. The employé of the lowest rank working upon the track is as necessary to keep the wheels in motion as is any gentleman at this table. The organization that controls the Southern Pacific is a wool into which are woven many colors, but the warp is without coloring, and is the same through the length and breadth of the fabric. In that warp is its strength. So each and every one should remember that our organization is so interwoven, one part with each and all the others, that all are essential. Some are much more important than others, hence the greater their responsibilities; for those holding lesser positions than the men I see here to-night look up to you for an example, and will be largely controlled by you. If you manifest toward each other a good will and a cordial unity in your efforts to advance the interest of the vast properties you represent, so you will find those below you emulating your example and pulling together as a single man. If, on the other hand, your daily work is disturbed, and its efficiency weakened by the dissensions that come from lack of fellowship and from secret jealousies, just to that extent will the morale of the entire force be affected, for the "rank and file" is the mirror of the commander.

A good man once said to a father: "Be careful of the path you tread, for your little son is following you." And so let me say to you to-night, look not back, but be careful, for surely some one is following you. Let us not forget our responsibilities nor fail to remember that the degree of happiness or sorrow, of sunshine or of shadow, that lightens or darkens the pathway of this great army, depends largely upon the way they are treated. Let us treat them kindly. Let us sympathize with them. They will do their work better for it. They will be happier, and they will pay us back in kind. Nearly all men will fill the niche you put them in. Place them high, and they will make great efforts to maintain their positions. Put them low—they will not disappoint you. When they do well, praise them. When they make mistakes, tell them in a kind way that it is human to err; that you know that they will do better next time. Do this and you will have better service, and what is better, you will bring more happiness into the lives of an army of fellow-workers.

It will be difficult to find anything in railroad literature superior to Mr. Huntington's address. It sounds a dozen key-notes. It is solid common sense from start to finish, and it will be most interesting to note the influence it exerts in the management of the Southern Pacific.

SAYS the *Journal of the Knights of Labor*: "It was the boast of the wife of Cleveland's Secretary of the Navy that her brother, the Standard Oil Trust pirate, gave her \$300,000 to be spent at her reception, and that she did it well. And toward this social splendor contributed every claimholder who used a gallon of oil to light up his lonely shanty." And that "Standard Oil Trust pirate" can say "Let there be darkness in the lonely shanty," and the decree would be obeyed. Plutocrats wield immense power in this star spangled banner country.

THE item is going the rounds of the press that "there is not a mile of railway in Brown county, Indiana, nor within six miles of it. Nashville, the county seat, has 400 inhabitants and but one brick structure, the court house. The jail is built of logs. The county has not sent any one to the penitentiary for several years, and there is not a saloon within its limits." The question arises, if the good old days of Adam and Eve, which Brown county enjoys, are not the best, after all?

THE *Locomotive Engineer* remarks that "at the Musco Borbonico, Naples, Italy, there are carefully preserved many copper and bronze tools and utensils, exhumed at Pompeii, and among them a small, vertical boiler of copper; this has a fire box and smoke flue through the top, a door on the side, and water grates composed of small tubes of copper crossing the fire box at the bottom. Pompeii was destroyed more than 1,800 years ago." All of which shows that modern inventors have been a long time catching up with the ancients.

THE cost to the Government for transportation of the mails by railroads, is from \$21,000,000 to \$27,650,000 a year, and the expense is steadily increasing.

The Single Tax.

I HAVE read, with not a little interest, Mr. W. P. Borland's paper in the *June Magazine* on "The Single Tax," and his reference, in his opening paragraphs to me, as a "keen critic and an able writer" would be well calculated to flatter, were it not for the fact that Mr. Borland discovers my mental optics to be so sadly out of order that I look "at the single tax question wrong end foremost."

It will be observed, by reference to my rambling remarks in the *March Magazine*, that I was commenting upon the article of Mr. S. D. Guion, which appeared in the *Standard*—high single tax authority—which fully indorsed Mr. Guion's statements, hence Mr. Borland, to have been exactly just, should have stated whether I looked at Mr. Guion's propositions "wrong end foremost," or right end foremost. But he found it far easier to arraign me, not for my criticism on Mr. Guion's positions, but on the "single tax question."

It seems that Mr. Guion assumed to "speak by authority." I infer he is a "single tax" apostle, that he has a "call" to preach the single tax gospel of emancipation from the thralldom of poverty. I modestly criticised some of Mr. Guion's propositions. I attempted nothing more. It would, therefore, have appeared magnanimous on the part of Mr. Borland to have first asserted and demonstrated that Mr. Guion, who assumed to correct Mr. Connolly, United States Consul to New Zealand, was correct in his ideas before proceeding to set me right before the readers of the *Magazine*.

Instead of pursuing such a course, he intimates that Mr. Guion was all wrong by saying, "I have not the least doubt but our cause has been injured in the minds of some by persons who have assumed to speak on matters of detail with a show of authority which they did not possess."

That was my view of Mr. Guion's statements. I thought they muddled single taxism, and I was pretty certain that I looked at them right end first, provided they had any right end, which I gravely doubted, since any attempt to straighten them out only disclosed their inherent crookedness. And now, says Mr. Borland, "for that reason I expressly stated that I did not wish any statement of mine to be considered as emanating from an authoritative source."

From this it appears that the single tax advocates are at sea, drifting without compass or rudder, indeed, without an anchor, waiting for a "practical test" of their theories.

I certainly commend Mr. Borland's modesty. He is feeling his way in the dark, realizing that "no person can be absolutely sure until a "practical test" has been secured.

Such admissions throw all the gates and bars down, and give doubts, conjecture and fancy the entire field. Under such circumstances it is not surprising that Mr. Borland charges that I have been "looking at the single tax question wrong end foremost," when, in fact, the single tax advocates, confessedly, are putting their question "wrong end foremost."

Having proceeded so far, we turn with special delight to Mr. Borland's "basic principle of the single tax" as follows:

"All wealth belongs exclusively to its creator." Nature returns wealth to labor and to labor only. Therefore, the rights of the individual to the exclusive possession of the fruits of his own labor rest on the warrant of nature."

"The value of land is not in any case the creation of the individual who owns the land—it is created solely by the growth of the community. With every increase of population the value of land rises; with every decrease it falls. Therefore, this value which is created by the community should be returned to the community for the support of the community."

The foregoing constitutes the "basic principle of the single tax," as Mr. Borland understands the subject. And he submits that in my arguments I nowhere touch the "basic principle" as he states it.

In what I have written for the *Magazine*, by permission of its editor, I have not said that the single tax on land would be detrimental to the nation. It might prove to be the one thing desired to introduce universal prosperity—the panacea for all our financial ills, the one economic cure all for which the world has been looking since the first face was bathed in the sweat of toil.

My purpose has been to have Mr. Borland, and other students show, with such lucidness and cogency as they could command, that the single tax would be beneficial to the poor—to the workingmen and women.

Speaking of axioms, I would remark just here, that an axiom in government is that there can be no government without revenues—hence, no government without taxation; and further, there can be no revenues without labor; and again, labor pays all revenues.

To lighten taxation is to relieve labor of its burden. To lighten taxation is to reduce revenues.

If such propositions are not axioms, then the term has no meaning, and it were gross folly to repeat it.

I have not observed, so far, in the writings of any of the apostles of the single tax an intimation that revenues were to be reduced by the inauguration of the single tax on land. Nor do I remember to have seen it stated that labor could escape paying all

the revenues, provided the single tax were to become the law of the nation.

I am fond of romance. I do not seriously object to a little Munchausenism occasionally. I admire pyrotechnics. I like highly imaginative writers, those who, giving their fancy free rein, roam

"From star to star,
From world to luminous world as far
As the universe spreads its flaming walls."

But it has always seemed to me that the single tax advocates decked out their theories with a superabundance of tinsel; that they were usually in that rapt frame of mind when they were seeing visions and dreaming dreams; that their logic was largely mixed with Bellamyism; that with a hop, skip and a jump they leaped over all intermediate obstacles and arrived at their goal, to bask in the noontide glory of "Paradise regained," and then, looking backward, wonder why the plodding millions could not keep up with the procession.

Mr. Borland, in his "basic principle," asserts that "the value of land is created solely by the growth of the community;" that is to say, where there is no "community" land has no value at all. That is not the theory of the Government, since it demands \$1.25 an acre for its land where no community exists; as a consequence, when a British syndicate purchases a million acres of the "public domain," inhabited only by wild animals, it pays \$1,250,000 for that which has "no value," the value arising "solely by the growth of the community." What the syndicate wants is to keep the "community," the "people in general," which constitute the "community," away from its land, upon which 500,000 cattle graze and get fat for market. The syndicate does not fence in its land, it does not plow it or put a dollar's worth of improvement on it, still, it affords, possibly, \$500,000 a year profit to the syndicate. It is a case in which Mr. Borland may conclude that land has a value quite independent of the "growth of the community," and possibly, that the *profits* made by the syndicate, do have something to do with the value of the land; otherwise the syndicate, since the single tax does not apply to the cattle, since they go free, the government obtains no revenue at all from the enterprise.

But suppose, just here, Mr. Borland changes his tactics, contending that the cowboys constitute a community, which gives the land a value, and it is taxed accordingly, is it not an axiom that the syndicate will place a higher value upon their marketable steers, and thereby advance the price of beef? And this being true, what difference would it make to the consumer whether the tax was levied upon the cattle or upon the land? or, what benefit is derived by simply taxing the land?

Mr. Borland refers to the worthless lands of Michigan, where a nitro glycerine factory has been established. In this illustration Mr. Borland introduces two factors which alone give value to land—"Competition" and "profits." If one nitro-glycerine factory made \$100,000 a year profits, no value would thereby attach to the barren, worthless land, but if a number of persons desired to set up nitro-glycerine factories, the competition would create a value for the land, and then the single tax would apply.

Now, then, we have the case. The *profits* of the first factory created the competition and the competition created the land value. The assessor goes forth to levy the tax. He cannot levy it upon competition, that is intangible. He must be governed in his estimates by profits. The buildings, the machinery, the material, are not taxed; simply the land based upon profits. Suppose there are ten nitro-glycerine factories, each making \$100,000 a year, a total of \$1,000,000 profits, and these ten factories occupy fifty acres of these good-for-nothing lands of Michigan, what would be Mr. Borland's estimate as just taxation, per acre?

The fifty acres have enabled the ten factories to make \$1,000,000 net profit, or \$20,000 per acre. Would the estimate take that form?

Manifestly, the profits would be the basis of taxation, and therefore it would be exceedingly bold to assert, since the buildings, the machinery and the labor made profits possible, that the single tax, though buried beneath sophistries and subterfuges and all the arts and tricks of diplomatic jugglery, was not a tax upon improvements and labor, just what single tax advocates proclaim is not the case, but which Mr. Borland clearly admits.

Again I refer to the Michigan land. Mr. Borland says: "It is situated far from any habitation and is a marshy prairie covered with water for a large portion of the year. Nobody wants the land; it has no value." This land, or similar land, which nobody wants, and which no one who is familiar with its worthlessness would accept as a gift, is valued at something by the State and by its owners, and is taxed upon an "arbitrary valuation."

I surmise that under the single tax programme all this vast territory would escape taxation because, apparently, it has no value and yields no profits. But if it should be taken up and built upon; if houses were erected and shops opened; if, instead of silence there should be the hum of industry, then instantan the single tax would apply. Does Mr. Borland believe the time will ever come while brains are on top, that such a tax would not be regarded as a tax upon improvements, a tax upon the wealth which labor creates?

I assume that neither Mr. Borland nor Mr. George will assert to the contrary and logically demonstrate the correctness of their denial.

Mr. Borland says the Michigan lands to which he refers are absolutely worthless; that no man knowing their character "would accept 1,000 acres as a gift." I suppose that 10,000,000 acres, if there is so much in the State, could be purchased for five cents an acre, possibly for one cent an acre. Being of no value, yielding no profit, under the single tax regime they would escape taxation. A syndicate might purchase these valueless lands and fence them in, create parks and hunting grounds, and await the process of nature to rebuild the forests. After a few years it might be discovered that pine trees were springing up and that nature herself was really at work creating values without the slightest regard to the "growth of the community," in which case will Mr. Borland state if the lands would be taxed?

Would the single tax assessor clamber over the fence, count and measure the trees, estimate the lumber in them, and then tax the land? Upon what single tax principle could it be done? The land was valueless. Does the land itself, unaided by the community, create value? Is there competition for the land? Possibly. For improvement? Nay, verily; simply to remove the trees—wealth which nature has created—and with which the growth of the community had had no hand. The land has increased in value independent of the increase or decrease of population, the increase being solely dependent upon the growth of trees.

I fail to observe in what way the single tax on land would aid labor to throw off the burdens which now crush it, bow it down to the earth. I do not oppose the single tax theory, I only ask its apostles to show in what way it would benefit the toiling masses. This, so far, they have utterly failed to do.

Labor creates vast sum totals of wealth. It has never enjoyed its equitable share of it. Why? Because wages have from the beginning been regulated upon the robber principle. If labor must pay the revenues of municipalities, states and the nation, I demand for it a larger share in the wealth it creates, and that can be brought about by an increase of wages all along the line. If the single tax can do this I am for the single tax. But so far the single tax advocates steer clear of such propositions except by the entanglements of circumlocution and downright evasion.

Already this article is too long, and with the permission of the editor of the *Magazine* I may desire to be heard again.

Charles Marshall.

Competition of Labor.

JUDGING from the methods practiced by the manufacturers of this country we are led to believe that they recognize competition as being an agent disastrous to their profits. They have recently perfected an old time method which very nearly suppresses all foreign competition. They have, with the assistance of the votes of workingmen, enacted laws which prevent foreign competition interfering with their profits. They have also reduced to a minimum the effects of domestic competition by the organization of trusts. In fact they have things "coming their way."

Now that the benevolent workingman has, by his vote, secured the capitalists against competition, would it not be well for him to allow his benevolence to extend far enough to include his own interests? Would it not be well for American laborers to use their future efforts in procuring "hearth stones" for themselves, inasmuch as they have erected palaces for their intimate friends, the capitalists? It is time that workingmen who have made rich men richer by increasing their profits should devote their attention to the profits of their own labor.

The manufacturer is protected from foreign competition by the protective tariff and from home competition by gigantic trusts, but what "protection" has labor received from competition? A majority of American workmen are firmly of the belief that American labor is protected from the "pauper labor" of Europe by the tariff; they believe that to reduce the tariff would immediately bring about a competition of labor between this and other countries. They believe that with the tariff there is no competition. The tenor of this article will demonstrate the fact that I am not a member of this majority. Their theory is accepted by the masses, as "gospel" truth as is proven by the vote polled at presidential elections.

The nearest semblance to protection to American labor against foreign competition is the federal statute which prohibits the importation of "contract" labor; but this is so ineffectual that the country is deluged with foreign laborers to such an extent that it requires the united efforts of labor organizations to preserve the present rate of wages. In the past a custom prevailed that diminished local competition in the trades that required more or less skill. The rule that a person must serve an apprenticeship of a certain length of time before he could compete with "journeymen" for wages had the effect of lessening the competition of labor in the trades, but increasing the number engaged in common labor. Now that the apprentice is nearly a thing of the past,

we have a radical preventive of competition of labor in the "strike." The odium attached to the term "scab" has protected labor to a great extent from local competition, but if the competition is created by a foreign supply of pauper labor the term "scab" loses its charm.

When a capitalist has invested his wealth in some manufacturing enterprise, his first act is to have foreign competition, in his line, reduced by having the tariff raised on the special article he has for sale. If he is manufacturing shoes he is not content with a duty on hats or clothing, because that would afford him no relief; he must have it upon the particular article he produces. He knows that to increase the price of shoes *the duty must be on shoes*. He is not like the laboring man who thinks that he can increase the price of labor by placing a duty on something else. The process by which he gets his "protection" increased is to go among his employes and inform them that the coming Congress must be composed of high tariff members or he will be compelled to reduce the wages he is paying; but if he can get the duty on shoes raised he will be able to pay better wages. He convinces them that a duty on shoes is a protection to them against the "pauper labor" of Europe, when, at the same time, he may be negotiating with a Castle Garden employment agency for a supply of "pauper" shoemakers. Of course these *deep thinking* American workmen do not take this into consideration. They do not believe that a duty on hats is a benefit to their employer as long as shoes are not on the list; but their "boss" convinces them that a duty on shoes is a protection to workmen although labor is not on the list.

These patriotic American shoemakers give their whole soul to the cause of Protection. They spend sleepless nights marching to music and bearing transparencies inscribed with sentiments in which "American labor" predominates, but any allusion to "American manufacturers" is conspicuously absent. Their voices become hoarse from kerosene smoke and shouts of defiance at the "damnable free-traders." During the campaign the American laborer is in his glory—the American manufacturer has his "inning" after Congress meets. To make a long story short, these patriotic shoemakers elect their candidate and have the satisfaction of seeing the duty increased on shoes. They are supremely happy in the belief that they are "protected" from that muchly dreaded "pauper" labor. The following Spring they begin to look for an increase of wages but singularly enough, their employer posts a notice that owing to "unavoidable causes" wages will be reduced ten per cent. on the first day of the following month. A strike follows, *but the duty on shoes does not*

protect them any longer; it is only during a campaign that the tariff has this effect. They discover to their sorrow, that pauper labor abounds. Their places are eagerly taken by others who do not know much about the business, but are glad to obtain employment at even twenty per cent. reduction. Instead of directing their wrath at the politicians who have deceived them, these unfortunate workmen vent their spleen upon the "pauper" scab, who is elated with his new position and passes happy moments picturing to himself scenes with which he is not at all familiar, viz.: a square meal for himself and family. It is said that history repeats itself; in this case the repetition occurs every four years. The same shoemaker, although a little more haggard and gray, is seen at the "old stand." Brass bands, transparencies, kerosene smoke, etc., are just as natural as ever.

When laboring men conclude that to increase the profits of their labor, *they must use precisely the same methods that their employers use*, they will begin to enter into an era of prosperity. When workingmen are as emphatic in their demands that labor must be placed at the head of the protected list as their employers are that shoes, etc. must be there, then will American labor be protected from pauper labor. American workmen must proclaim that they have an "infant" industry called labor that must be protected.

Ten years of effective restriction placed upon the immigration of "paupers" will do more to prevent competition of labor and thereby increase the profits of labor than all other means combined. Without this restriction competition will increase regardless of the tariff on manufactured goods, and the supply of labor will become so much greater than the demand that wages will gradually sink to the "pauper" standard. Besides the disastrous effects produced upon wages we see our social structure threatened from many sources. The High-binders in the West, the Anarchists in the East, and the Mafia in the South are straws that show which way the wind blows. The slaying of a few members of the Mafia is the cause of an international convulsion; yet, members of an American labor organization can be slaughtered by the tools of corporations with impunity and cause but small comment. The "Pinkertons" employed by Chauncey Depew can slay innocent Americans in the State of New York, yet, the public press idolizes Mr. Depew. If the citizens of New Orleans avenge the murder of their chief of police by lynching a few members of the Mafia the country is aghast. The press reeks with editorials condemning the "butchery." This proves that, in the eyes of the public, it is a far greater crime for a labor organization to tie

up Mr. Depew's railroad by a strike, than for a foreign band of assassins to kill to their hearts' content. It proves that the public considers it much worse for the citizens of New Orleans to lynch a foreigner than for Mr. Depew's hirelings to murder an American.

If the workmen of America will leave the manufacturer and his "McKinley bill" to shift for themselves, and devote their time to a tariff on labor, they will find that their wages will increase in the same ratio that the competition of labor will decrease.

W. S. Carter.

Charity Organizations.

DURING the month of May, 1891, the annual meeting of the National Conference of Charities and Correction was held in the city of Indianapolis.

During the time the conference was in session, about everything relating to poverty in the United States was discussed. The debaters roamed at will over fields "from worlds to luminous worlds as far as the universe spreads its flaming walls." The delegates discussed outdoor and indoor charity, they grouped and classified the worthy and the unworthy poor, the insane, the feeble minded, the criminal classes and the condition of unfortunate children, orphans, and those whose parents, were they dead, would be a blessing to their offspring and to society.

The conference discussed the ways and means to reduce the number of these unfortunate men, women and children, as also the best methods to be adopted by states, municipalities, and societies, for the care and education of children of the better class, and the correction and reformation of the incorrigible and criminally disposed.

In these discussions there was exhibited broad philanthropy. Every method adopted throughout the country for the amelioration of the condition of the poor and unfortunate was made more or less prominent by delegates whose personal experience made their views valuable, and those who listened were forced to the conclusion that in spite of all that had been done, poverty and crime were steadily on the increase. Insanity extends its domain and the dethronement of reason proceeds, suicides multiply, want, equalor and degradation, with their attendant vices create alarm, until the stoutest hearted philanthropists stand amazed in the presence of the frightful facts.

Here we are, in the high noon of Christian civilization. Science comes to the aid of the church to map out new pathways of progress. The free school stands open on

every elevation and in every valley. The press, that mighty lever, designed to enlighten the masses and to level up and level down, until the sublime truth shall find recognition, that "God is no respecter of persons," and that "all men are created equal," here, where the humblest citizen is clothed with sovereignty and given the ballot, here, where we boast of a government by the people—here, where to emancipate the African slave all the streams of the South ran crimson to the sea, we are told that poverty, crime, degradation, threaten the stability of our institutions, and even now, some are asking for a king, as a means of improving conditions.

The National Conference of Charities and Correction, in its deliberations, one would suppose would deal with fundamental causes; that its speech would be bold and that its arraignments would be fearless. In the very nature of things, it has a right to speak, if not with authority, in tones commanding a respectful hearing in assemblies where authority is located.

Stated broadly, national poverty is a national disease. We refer to that phase of poverty which the National Conference of Charities and Correction is organized to treat and remedy—a poverty so extreme as to excite solicitude and require aid.

This kind of poverty is not only a disease, but it is like idleness, the prolific parent of a brood of diseases, which, like microbes poison the national body, social and moral, until it becomes a national calamity.

It would seem eminently prudent for a National Conference of Charities and Correction to refer, in some way, to the underlying causes of such poverty.

During the discussions reference was made to tramps, an army of outcasts, steadily increasing in numbers, and daily becoming more dangerous to communities. The tramp is a modern menace to society. He is a tumor, a cancer on the body social, and the idea of removing him by starvation, is an exhibition of empiricism that will, the more it is tried, demonstrate its folly.

Throughout the country, particularly in all the large centers of population, there are forces ceaselessly in operation producing conditions which the National Conference of Charities and Correction deplore and for which remedies are sought but never found.

In fully fifty per cent. of the industries of the country, employers conduct their enterprises in a way so shamefully at war with justice, humanity and decency, that mendicancy, degradation, shame and crime inevitably follow. The facts have been told and published. There is not a philanthropist, man or woman, worthy of the name, who is not familiar with the story. The infamies are known and read of all men. They burn and bite, mangle and kill. They render

everything which they touch hideous and repulsive. The outrages practiced by certain employers are prolific of mendicancy.

The wages paid women for work by men as much more depraved than Shylock as that historical Jew was below an archangel, it is known subject them to trials which the "song of the shirt" feebly expresses, trials often resulting in crimes so much worse than self murder, that suicide in its worst and most shocking forms, becomes a benediction, and we are forced to say "Blessed is that woman who prefers death to the loss of that jewel, which makes life a living hell, whose fires are quenched only in death."

To one who contemplates the devastations resulting from cold-hearted or no hearted, venal scoundrels, who plot treason against the life and chastity of women and ceaselessly recruit the ranks of poverty, squalor, crime and death, it appears strange, indeed, that a National Conference of Charities and Correction should have no words of condemnation, and that such things should be treated with silence. There must be a cause for such indifference. It is well known that there are rich men who give liberally to charity associations, and in more than one instance it has been shown that when rents, salaries, stationery, postage, etc., had been paid, precious little of the contributions was left for the poor, and it is doubtless true that in many instances the men, Heaven save the mark, whose methods created the squalor, which the National Conference of Charities and Correction seeks to modify, contribute to the funds that support the organizations. If this is true, and to controvert the proposition would be preposterous, there would be nothing strange about the proceeding. History would be simply repeating itself, and demonstrating that Phariseism is as rife now as in the days of the Saviour's incarnation, when speaking for Heaven and for God, he denounced the same class as "whited sepulchers," and as deserving of more abundant damnation.

It is apparent that the National Conference of Charities and Correction in its deliberations was not investigating for fundamental causes of poverty that demanded charity. Its task was more superficial. It did not delve for bed-rock facts. It discussed insanity with reference to scientific treatment, to which no rational objection could be urged, and the same is practically true of whatever else came up for discussion.

Miserable homes were referred to, and what should be done with the miserable children, the product of these homes, and some one suggested that intemperance was doubtless the cause of much of the misery which is a foul blotch upon our civilization. We applaud all that was said or that could be said in that direction. Behind all

the misery that intoxicants produce, and were each pang and groan and crime a brick, mountains could be piled as high as the Alps or the Andes. The foot hills are the saloons, and the distilleries the Chimborazos and Blancs, but above these stand the state and federal governments, each giving the traffic the sanction of law, and each largely relying upon the revenue which flows into their coffers from such polluted fountains.

It is well to anathematize intemperance, and to talk glibly of the woes and horrors which it scatters broadcast over the land. The most gifted writers and speakers need not hesitate to permit the steam of their invective to flow deep and strong, or exhaust all the wealth of hyperbole, since when all is said the half will not have been told. If this is admitted, the question arises, why may not a National Conference of Charities and Correction boldly demand that the general Government shall do something looking toward the annihilation of intemperance? Possibly distillers and liquor trusts, wholesale merchants and even saloon keepers contribute to charity funds, and deplore (?) the wretchedness which their business creates.

Again, the surroundings of great industries are prolific sources of mendicancy, pauperism, conditions that are prolific of the ills which the National Conference of Charities and Correction combats. A glance at conditions in Pennsylvania must impress philanthropists, Christians of every name and order, scientists, philosophers, political economists, millionaires and devils that Pennsylvania, alone, is inoculating the country with a poverty and crime producing virus which, left free to run its course, would be productive of results well calculated to make the Creator again repent that he made man, and, tearing the covenant bow from its place on the breast of the storm cloud, "swear by Himself" to again deluge the earth with water.

Such infernalisms as are practiced in Pennsylvania to rob men of their earnings are productive of more pauperism and crime in a year than a thousand National Conferences of Charities and Correction could correct in a century. In describing them the imagination is paralyzed, and vocabularies blush to own their incompetency. They poison the moral atmosphere and all the fountains of thought and moral decrepitude, cured only by miraculous power, proclaim the damning influences they exert.

The factories, the shops and the great transportation enterprises of the country, controlled by the plutocratic class, where men work and are systematically robbed, are the breeding pens of the ills which the National Conference of Charities and Correction discusses and seeks to mitigate; but where no word is said holding either the

men or methods responsible for the crimes, by virtue of which colossal fortunes are piled up on the one side, while on the other side poverty's prolific progeny is grouped in revolting tableaux indicative of rapid degeneracy, for the correction of which the National Conference of Charities and Correction, if it would inaugurate forces to arrest the downward tendency, will be required to change its tactics and find more efficient remedies than soothing syrup, sage tea, however learnedly such antidotes may be extolled by old men and old maids or ambitious youths, just out of college with their diplomas, and who manage to make learning laughable. Such people may be sympathetic and good nurses, who in their right place could earn fair wages, but when they are confronted by national curses whose march is desolation they are as illy equipped to arrest their devastating strides as a butterfly would be to resist the progress of a cyclone.

The trouble with such organizations is they ignore fundamental causes—they do not go to the roots of the diseases they professedly deplore. They could, had they the courage, make a list of the heartless scoundrels, whose methods are at the bottom of ninety per cent. of the poverty, mendicancy, wretchedness and crime of the country and hold them up for universal scorn and obloquy. They could name the sneaking swindlers of women and men in all of the great cities, paint in colors as vivid as lightning the motley throng forever going to their slaughter pens, where life, health and virtue are sacrificed, that the pirates who murder body and soul may increase their riches. But this is not done. On the contrary, like children making marks on an ocean beach, they get together and sing psalms—they offer up pretty prayers in which Heaven gets a large amount of taffy, and they recite old chestnuts about remedies, and adjourn, forgetful of the fact that a Carnegie, by one word, locking out thousands of workers or cutting wages, could obliterate all their sayings and doings as effectually as a wave could efface the childish hieroglyphics in the sand.

What the world stands in need of to-day, more than anything else, is simple justice to workingmen and women. If an era of fair wages could be ushered in, the morning stars and the sons of God might prudently arrange for another concert.

Labor organizations have sounded the keynote of the grand reform. If they succeed, poverty, mendicancy, sickness, sorrow, pain and death will decline. If they are overwhelmed in defeat by the combined force of the plutocratic class then all will be lost worth living for. White slavery, a thousand times more deplorable than African slavery, will prevail, and how best to

manage the victims of the national curse will supply a theme for succeeding convocations of the National Conference of Charities and Correction.

Charles Danforth.

Discussion of the Single Tax.

NOTHING that has appeared in the *Magazine* during the last year has interested me as much as the essays on the single tax. No article bearing on the subject yet published, shows a greater confusion of thought than that of Mr. Chas. Marshall in the May number.

Mr. Marshall speaks of two men, A and B, owning adjoining city lots, each lot worth \$1,000. A is rich and as soon as buying, improves his lot at an expense of \$5,000, and derives an income of \$1,000 a year from it. B is a poor man, who can save from his earnings only \$500 a year. Many of your readers would no doubt like to be as comfortably situated. This poor man "puts his earnings aside saying, 'when I have \$5,000 I will improve my lot'—necessarily it will require ten years for him to obtain the \$5,000."

Mr. Marshall objects to taxing both the lots alike, because the poor man receives no income from his lot. One of the objects of the single tax, as I understand it, is to increase the opportunities to labor, by compelling men who are holding land idle, to either use their land or to dispose of it to some one who will. If this poor man does not intend to use his lot for ten years, why should he buy a lot until then? By getting it now and holding it idle for ten years, he is standing in the way of others who would give employment to labor and benefit the city by improving it. Mr. Marshall cannot see what "expected profits" have to do with the value of land. Evidently this poor man can see it, for unless he expected that at the end of ten years his lot would greatly increase in value, owing to increase of population and improvements, electric roads, etc., he would probably have put his money at interest, rather than have it lie idle. Generally men do not buy lots ten years before they want to use them, unless they expect that at the end of that time they will be worth more than they paid for them. "This confident expectation of increased prices, always noticeable in a growing community, produces, to a greater or less extent, the effects of a combination among landholders, and tends to the withholding of land from use, in expectation of higher prices," in consequence of which the value of land is forced up. Mr. Marshall says that "throughout New England, farms are being abandoned by thousands. Houses are going to decay and the land has gone

and is going back to a wilderness. Notwithstanding these things, the states where in these lands are situated place a taxable value upon them. There is no competition for these lands, they are not used, their owners derive no profit from them. Still they are said to have a value and are taxed."

Under the single tax system, lands having no value would be exempt. The single tax is a tax on *land values*, not on land. Farmers would be greatly benefited by it. Under the present system they are taxed on all of their improvements and personal property. The taxes imposed on commodities, especially those which, like our protective duties, are imposed with a view of raising the prices of commodities, fall severely on the farmers.

E. Hodkins.

Labor and the Single Tax.

[Concluded.]

TO the unthinking it may seem like an extravagant assertion to say that the solution of the labor problem, and the remedy for the social ills that afflict mankind, hinges upon a simple question of taxation, but such is the case, and after one has examined the facts intelligently the assertion will not appear so extravagant. All taxes must be paid from the produce of land and labor, because there is no other source of wealth than the union of human exertion with the materials and forces of nature, but the manner in which equal amounts of taxation are levied may very differently affect the production of wealth. Any tax which is conditioned upon an act of production, will tend to restrict the production of the thing taxed.

Tax shoes and there will be fewer shoes worn, and in consequence fewer persons employed in making shoes. Tax houses and there will be fewer houses, and fewer persons will be employed in building houses. Tax anything the result of human exertion, and the production of that thing is discouraged just in proportion as the tax is heavy or light; for the more anything useful costs the fewer are there used, and the less anything useful costs the more are there used. It is a characteristic of all taxes upon the products of labor that the tax is always added to the price of the product and its cost is increased to the consumer. Demand is thus restricted and labor is deprived of a market. A very plain illustration of the manner in which such taxes affect industry may be found in the sugar tax but recently removed. We all know how the removal of this tax cheapened sugar and increased the demand for it, and it is easy to infer the truth of the converse: that if instead of removing the tax it had been doubled, the price of sugar would have been increased

and the demand for it lessened. There is however a much more important way in which labor is made to suffer from our present system of taxation. Labor produces all wealth, but in order to produce wealth labor must have access to land. Our present system of taxation makes it more profitable to hold land out of use, than to use it, by returning greater rewards to the speculator in land, than to the user of land. Workingmen are thus compelled to bid against each other for the privilege of using land, the natural reward of the laborer is reduced, the few landholders are enabled to accumulate without producing, and the many laborers are compelled to produce without accumulating. Go to any small village in this country to-day, any place where you have a reasonable assurance that in twenty years it will be a great and growing city, just buy yourself a block of land in the heart of that village, and you may go to Europe, or Australia, or bury yourself in the heart of Africa, do anything you wish, but come back to your block of land in twenty years and you will find your village a city, and yourself a rich man, without having done the slightest thing to advance the interests of the city. The inhabitants of the city will have made a wealthy man of you and you will have been put to no trouble whatever. But better than all else, you will be looked up to, you will be called "one of our substantial citizens," and many of those who helped to create your wealth will be called "scum" and "riff raff," your buying of that block of land twenty years before, will be called wisdom, and foresight, it will be said of you, "He had an abiding faith in the future of our city," you will be held up to the view of the rising generation as an example of business sagacity, and they will be advised to go and do likewise, and if perchance you should dole out any of your wealth in relieving the distress of those who have made your fortune for you, the fact will be enlarged upon by the papers, you will be called "Our Generous, Public-Spirited Citizen," ministers of Christ will fawn upon you, and deplore the *extravagance* and *imprudence* of the poor that make your charity necessary. You will, in short, be a great man.

Such are some of the benefits that come from the present system of taxation. Land being taxed only as it is used it becomes more profitable to acquire title to land and hold it out of use until the necessities of production enable the landholder to command a fancy price for it, than to use it productively, as the natural demands of the community require.

So blunted have the senses of the workingmen become, that they are accustomed to look upon the increase in land values as legitimate evidences of prosperity in which

all members of the community have a share; nothing could be farther from the truth. Increase in land values now means increased tribute for labor to pay, in order to gain access to land, the source of all wealth, and consequent reduction of wages. I saw a statement some time ago to the effect that certain mineral lands in Alabama had increased in value from \$750,000 to \$50,000,000 within six years; this fact was cited as an evidence of the prosperity of that section of country; but is it an evidence of prosperity? What does this increased value mean to labor? It means that when labor and capital shall desire to utilize these mineral deposits, they must pay into the pockets of the land owners the sum of \$3,000,000 per year, that being the interest at 6 per cent. on \$50,000,000, for the bare privilege of access to these minerals, which a wise Creator has placed in the bowels of the earth for the equal use and benefit of all his children. There lie these coal beds and mineral deposits, fresh from the hands of the Creator, and our law says that labor and capital must pay to a few foresters the sum of \$3,000,000 a year, for the bare privilege of applying the hand of industry to these natural elements. After this has been paid how much will there be left for the wages of labor? Just as little as labor can subsist upon.

For this monopolization of the gifts of nature is going on not only in Alabama, but everywhere else as well, and it enables capital to make a hard bargain with labor. For this reason and this alone, they cannot deal with each other on equal terms. Suppose labor says to capital, "I'll not accept the wages you offer," capital replies, "all right, go elsewhere," what can labor do? If he starts out to get work for himself he will find the same conditions confronting him in all parts of the country. He will find that he is living in a country capable of supporting ten times its present population, and that nine-tenths of the land is untilled or only partly cultivated. He will find nine-tenths of the coal beds and mineral deposits unused. He will find vacant land and unused lots on every hand. He will go to New York City, and even there he will find one-half the corporate area of that city vacant and unoccupied, and yet he will find in New York the most densely populated territory in the world, not even excepting China; the east side of New York contains 333,000 persons to the square mile; and this is what a century of so called freedom has done for this country. Is it any wonder then that labor goes back to Alabama, takes off his hat to capital, bows very low, and says, "please sir, give me a job at your own terms." Right here it may be asked, how is the Single Tax going to remedy this state of affairs? As has been shown, a tax upon the products of labor decreases the demand for those pro-

ducts, and increases their price, thus decreasing the product. A tax on land values can have no such result. The demand for land will continue as long as the human race continues to exist.

For man is a land animal; land is just as necessary to his existence as is air, water, or sun-light. A tax on land values, therefore, cannot reduce the demand for land. Again, a tax on land values cannot reduce the amount of land in the world by a single inch; it is here and it will remain here, when all the people are swept into oblivion, and unlike a tax on products which increases their cost, a tax on land values would have the very opposite effect.

The more land values are taxed the cheaper will be land, and the easier to get.

You may tax land values up to the point of taking every cent of economic rent, and the only effect will be to stimulate industry, and bring land now idle into use. Here is the key to the solution of the labor problem. To use land requires labor. Labor is something which every human being has to sell, and the more it is in demand the greater price it will bring, but to labor one must have access to land. Now under the Single Tax the owners of valuable land will either have to use it themselves or leave others to use it. For no one will hold land out of use for an increase in value, when he is assured that all the benefits of that increased value will be demanded of him in the form of taxation as fast as they arise.

Thus the present condition of the labor market would be reversed. The demand for labor would exceed the supply of labor. The owners of vacant lots would either build on them themselves or sell to others able to build. They must do this unless they are willing to pay the tax without the opportunity of shifting it. For the land value tax is the one tax they cannot shift. A tax on shoes is added by the manufacturer to the price of the shoes; he thus shifts it upon the dealer in shoes, who in turn collects it from his customers.

The tax is thus paid by the consumer. Tax houses and the tax is collected from the tenant in the shape of increased rent; but a tax on land values is paid by the owner of the land and that is the end of it. Now some one will probably say, what is to hinder the land owner from collecting the amount of his tax from his tenants? Let us see how it would work if he should try it. Say a piece of property rents for \$1,500 per year; interest at the prevailing rate on the value of the building, added to the annual cost of the insurance and repairs, and a sum sufficient to provide a sinking fund for renewals, amounts to \$1,200, the landlord is then collecting \$300 a year for the use of the naked earth.

This is the sum which under the Single

Tax system would be turned over to the government. Now suppose the landlord attempts to collect this \$300 from his tenant by raising his rent to \$1,800, what happens? why the Board of Equalization say to him, "You have got \$1,800 a year for the use of improvements only worth \$1,200, you are collecting \$600 a year, instead of \$300, for the use of the ground. You will therefore pay to the government \$600 a year for the exclusive use of your lot, instead of \$300, as heretofore." Now what has the landlord made by putting up his rent? Nothing. Would he be liable to try to collect for his land more than its real value, when he knew that if he did so, it could be collected from him with unerring certainty? Suppose now, you had \$20,000 to invest; under our present system the best and safest thing you can do, is to invest it in town lots in some growing city; in ten years from now your lots will be worth \$40,000, and you will have drawn to yourself \$20,000 of wealth, for which you have given no equivalent. You will simply have robbed the labor of the country of \$20,000.

But now suppose the Single Tax is in force, what are you going to do with your \$20,000? You cannot buy vacant lots with it. There is no speculation in them. The tax which you would have to pay for the privilege of excluding labor and capital from the opportunities for employment which vacant lots afford, would be too heavy for you. You cannot even loan on land alone, because land alone has no value in the market. The result is, that unless you let your money lie idle, and so lose interest on it, you must invest it so as to give employment to labor. You must put it into some channel where it will be active. Not only must you do this, but every other capitalist must do the same. Capitalist must thus bid against capitalist, since capital can only increase by calling labor to its aid and giving it employment.

To recapitulate: Tax land in proportion to its value, and it will be immediately brought into use. Bring land into use, and labor will find employment. Employ labor, and wages will rise to a sum equal to the value of the product created. Let the demand for labor equal the supply of labor, and the laborer will be on an equality with his employer in making a bargain; but this will be no detriment to the employer, as the demand for his goods will always be constant, and he will be able to get what they cost. Given the Single Tax and the freedom of trade and the wages of labor will immediately rise to their natural level (the full earnings of labor). Can laboring men demand anything more? There is no more for them to get.

W. P. Borland.

Tariff Taxation.

THE tariff was originally introduced into this country upon the plea that it was an easy and sure method of securing a revenue to support the central government, inasmuch as the common people would never suspect, when paying an exorbitant price for an article of foreign make, that they were in fact paying taxes. That is to say, if a man owes an honest debt, the easiest way to induce him to pay the debt is to trick him into it, to juggle him out of his money, to hoodwink him into supposing that his money is not going to pay the debt, and to make him think that he will never be called upon to pay it.

How does this tariff tax scheme work? For every \$3 of tariff tax that the workingman pays upon foreign goods that he buys, the government gets not more than \$1 of revenue. The remaining \$2 is profit that is taken in by the importers and dealers—not profit on the goods, but profit on the tax. This may be an easy way for the government to get its revenue, but it is tough on the workingman.

This tariff, however, is claimed to be a benefit to the workingman, and the more exorbitant the price he pays for a foreign article, the more prosperous will he be.

A mere handful, not exceeding 7 per cent. of this country's population, of men, together with a few score of employers, are engaged in producing in this country certain goods of the same kind as some of the imported goods. This handful of workingmen, it is claimed, is benefited by our paying high taxes upon foreign articles. The theory seems to be that free competition would compel American goods to be sold at a low price. If low prices are a disadvantage to the workingman, why does he always take the trouble to buy where he can buy cheapest? So foreign competition is duly throttled by the tariff. Then what? Why, a very small and quite insignificant number of capitalists become enabled to collect from the large body of American workingmen exorbitant prices for their goods. How this benefits the workingmen, who have to pay these high prices, is not quite clear. We, however, are repeatedly assured that it does benefit us, and, moreover, it is occasionally intimated to us that we need not trouble ourselves about these matters; they are too difficult for us to understand; we should keep our proper place, which is to do all the work and ask no questions.

It is very clear that the government's tariff tax policy is a great help to the capitalists (and, by the way, these same capitalists in turn are a great help to certain politicians). But, when these capitalists make double and triple profits, what law is there to com-

pel them to share those profits with the handful of workmen who make the goods? And if there should be such a law passed, would it not be a dead letter? Can Congress regulate wages? Can Congress make a law that will force water to run uphill?

Moreover, does anybody claim that Congress can create any wealth? If it can, why not have Congress create all the wealth that we shall ever need, so that we need not work any more? It is of course admitted that Congress can increase the wealth of certain private individuals; but how can it do so except at the expense of the remainder of the people?

When Congress passes a law for the benefit of private individuals, who, does any sensible man suppose, will receive the full benefit of that law? Will the great body of our citizens be benefited? Or on the other hand, is it not only a few men that will be benefited—a small, select circle? When did ever a government take from the few and distribute to the many? Is it not always the select circle that gets the pudding, and is it not always the multitude that suffers?

Again, does the government always act in the interest of the right one? What good reason can there be, so long as the government is going to interfere at all, why it should not protect the great American consumer instead of the insignificant American manufacturer? Why should not the government present a bounty to every workman that buys a foreign article, instead of fining him for doing so? Has not the government all along been making a mistake about this matter, and been meddling with the private affairs of the wrong people?

Tom is a farmer, and Dick works in an implement factory. Dick wants Tom to go on paying double price for his implements, and Dick expects to get some of the swag that is taken from Tom, (albeit he never gets it). Now what is Tom to think of Dick's motives?

At the big tariff tax banquet in New York the other day, it is boasted that \$500,000,000 was represented by the men who sat at the tables. A very good object lesson is this. It shows who are the ones that are benefited by government interference in private business affairs, and who are interested in keeping the tariff scheme alive. All the wealth that these men have, was earned by the workmen of this country. The workmen produced the wealth; the capitalists have it now. And the idea of such workmen who commit themselves to the support of the tariff tax scheme is, that if they all chip in and pile up the profits of a few wealthy manufacturers, those manufacturers will use their great wealth as a trust fund to distribute back among the working-

men again in the shape of high wages. Any comment upon this point would be a waste of breath.

B. C. Stickney.

BROOKLYN, N. Y.

The Liquor Traffic as a Cause of Poverty.

THE *Railway Service Gazette* has a well considered article on "One Cause of Poverty," which is the amount of money annually paid to liquor dealers, there being, as the *Gazette* says, one liquor dealer to every 250 inhabitants in the United States, or, one liquor dealer to every fifty families; but, after deducting the families which do not patronize liquor dealers, and those whose patronage amounts to but little, the *Gazette* is of the opinion that sixteen families to a liquor dealer is a fair estimate. These sixteen families, therefore, support one liquor dealer and his family, pay for his liquor and all of his taxes, national and municipal, amounting to an average of \$5,000.00 or \$313.13 to each of the sixteen families. The *Gazette* adds, as follows:

Now we know that this amount properly invested each year, will in fifteen years accumulate a very respectable fortune, large enough at all events to give to a family as sure a guarantee against want as one can have in this world. We hold that with a just and equitable distribution of wealth in this country, no one should suffer, but that on the other hand, all who are willing to labor, even with a small degree of intelligence, should be able to live in comfort; but however unjustly present conditions operate against the poor, we are forced to admit that a cause exists, sufficiently powerful to account for the poverty and suffering of one-third of our population, and that it is within the power of the people to remove this cause if they so will.

Take the *Gazette's* figures and it would appear perfectly rational that the two thirds of the families who do not patronize the liquor dealers, or, who purchase very little of their "goods," could remove the "one cause of poverty," to say nothing of the wretchedness and crime associated with it. Why don't they do it? Every word uttered by the *Gazette* is supported by cold, cruel, crushing facts. Why don't the two thirds, or, say three-fifths change constitutions and laws and thereby arrest and roll back the tidal wave of poverty, degradation and crime?

Ours is the highest known Christian civilization; our civilization is in its noontide glory. We have the great civilizing forces, the press, the school and the church. Here, where we boast of institutions superior to any other nation, how does it happen that the oceans, lakes, rivers, bays and inlets of liquor, are deeper than in any other country under the bending heavens? Who answers the questions? Who attempts to solve the knotty problems? Two or three states have said, we want no revenues from liquor; they

have said liquor dealers force upon the state poverty, degradation, crime and all the legion of ills which transforms earth into a miniature hell. And such states are held up to ceaseless ridicule, and those who labor and lecture and write and vote for prohibition are pronounced fanatics, and all their theories visionary. "Liquor dealers pay revenues," say the astute financiers, not only to states and cities but they also replenish the national treasury. "True," say they, "liquor dealers create poverty, degradation and crime; there is a ceaseless procession on the road to penitentiaries; but we are making penitentiaries pay a profit, and revenues are derived from crime." The plea is set up, that the cash received for licenses and fines, goes to increase the school fund, and hence, liquor dealing is not an unmixed evil; it has its bright side—besides, in the land of the free and home of the brave, there is an inalienable right to sell liquor, to drink liquor, to be poor, to be degraded, to be idiotic and insane, such things being in the line of "life, liberty and the pursuit of happiness."

The church, nominally, is opposed to the retail liquor dealer, while the wholesale merchant is not tabooed; and a church member is not "labored with," provided, he does not exceed his carrying capacity and is able to say "truly rural" without mushy articulation.

It is "within the power of the people to remove the cause of poverty" as indicated by the *Gazette*. Why don't they do it? Is it a question of education? If so, one saloon, one liquor dealer, can issue more diplomas and show more graduates, in the line of consumers, than any half dozen churches can show of total abstainers, for most of the latter will take a little "for the stomach's sake."

The people could, if they would, inaugurate many needed reforms, and it is to be hoped that this will be done eventually. It is to be hoped that workingmen in the not distant future, will break party fetters, and defying the party lash, will vote solidly against the world, the flesh and the devil, and for men, who representing honor, right, justice, equity and things of "good report," will inaugurate needed reforms. Till then, let "the line upon line and precept upon precept" business go forward; let liquor dealers, plutocrats, trusts, syndicates, the whole brood of labor oppressors and impoverishers receive merited maledictions. Let every lodge room become a school room, and every member of a labor organization become a student of questions bearing upon the welfare of labor, and the time will come when the jubile song of emancipation will be heard from the centre to the circumference of a land redeemed by the fiat of the people.

F. R. Dana.

THE SPIDERS AND THE FLIES.

No doubt, my dearest readers,
A story you have read,
How a wily spider asked a fly
To sleep upon his bed,
And view his fine collections,
And dine off golden plate,
But the fly had "recollections"
Of this millionaire magnate.

The spiders are not all dead yet,
Nor are the silly (?) flies.
But spiders now do federate:
So should the worthless (?) flies.
Speechifying and conventions,
Are all well in their line,
But the genuine sort of acting,
Will beat it every time.

And now comes Austin Corbin,
The biggest spider of all—
A regular tarantula,
Who ain't afraid of brawls.
He don't use "idle, flattering words,"
But just lays down his law:
"I want your coats kept buttoned up,
And smooth, clean-shaven jaw."

The flies, of course, objected,
But it was no earthly use,
Corbin don't propose to "chaw terbacker
And expectorate the juice."
But in consideration
Of their children's "daily bread,"
They must submit to "seridom,"
And by the nose be led.

What's this?—'tis an order
From the N. Y. C. and H. I.:
"All who belong to Knights of Labor,
(an' their walking-tickets take,
For we propose to run this ranch.
Although you federate
You are not quite strong enough
To force our golden gate."

Depew talked with Walter Webb,
In a little corner sly,
And they fixed their plans up nicely
To dine upon the flies.
And did you never notice,
That spiders sup on bugs?
If they can't catch enough themselves
They hire Pinkerton thugs.

Like any other spiders,
They have their little Webbs,
But the flies will pit against them
Their own E. V. Debs.
I often, often wonder
What became of those men
That Corbin told: "We've got you
Where Kelsev had the hen."

And now, one of the Vanderbilts,
Did wish to make a speech;
He would not work so much himself,
And Depew was over-reached.
What with "railroad federation,"
And managing all and every one,
For once he wished, like "Daddy Gould,"
He had a grown-up son.

So he stepped into the office,
And telegraphed to-wit:
"The year of eighteen-ninety-one,
To Abram S. Hewitt:
Come hither, hither, dear old pard,
And bring those 'charts' along,
For you must make a 'labor speech,'
And give it to 'em strong."

I've heard he did his very best—
That's all an ox could do;
And that his speech pleased all the rest,
And satisfied Depew.
But I haven't the opinion
Of "the struggling mass below,"
And if you chance to find it out,
Will you please to let me know?

GOODLAND, KAS.

Phillips.

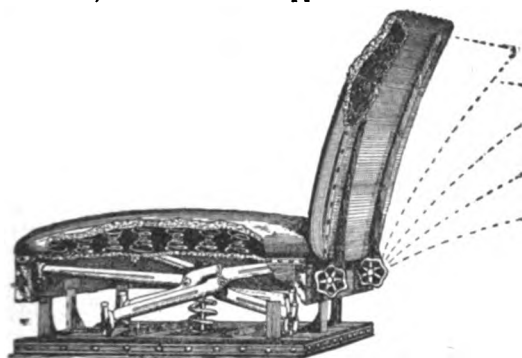

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the *tenth day* of each month.

A New Cab Seat.

The spring cab seat of Messrs. Stannard & White, a cut of which appears below, is

in the nature of a boon to locomotive engineers and firemen, and promises to supplant all other seats hitherto used. Those who have used the Stannard & White seat claim that it is free from the defects generally complained of, and that for comfort, convenience and durability it cannot be excelled. The *Locomotive Engineer* bears testimony to the advantages of this seat as follows:

The contrivances that men rig up for themselves to take some of the jar off their backs on hard riding engines are a little better than the solid boxes and petrified cushions usually furnished with the engines. The constant jar and jolt is what tires men out, weakens their backs, and encourages kidney trouble. In all spring seats we have ever had the opportunity to try or inspect, this trouble was, we firmly believe, aggravated instead of remedied. The reason for this was that every move made by the runner threw his weight upon one side, the front or the back of the seat; this put the seat on an angle, his weight being borne by one or two springs, and to maintain the position the muscles of the back were severely strained. Great care had to be taken to get "balanced," and more care to keep so. They were ungainly, especially in a drop seat form, and were made very uncomfortable by the breaking of one spring.

The seat here illustrated is the invention of a practical engineer, and has advantages over anything of the kind we have yet seen.

There is but one main spring; the cushion is full of small springs to make the seat soft, but the weight of the seat and the occupant is taken by the large central spring; the equalizing levers are hung from the seat corners to the base, being hung at the centers to the top of spring as shown, making a perfect platform spring seat. The entire weight can be placed on one corner or out of the center, yet the seat goes down level and level only.

There is no forward and backward jerk that is so tiring. The platform system of springs takes up all the side thrusts as well as the jumping motion.

The back is adjustable to any angle or can be instantly let down level with the seat where used on a "drop" seat. This back being fast to the seat, moves with it, and does not come and go like the old-fashioned back cushion that is fast to the cab with a spring seat under it.

The makers of this seat, Stannard & White, Appleton, Wis., are both engineers. They have named it the "Brotherhood" seat, and have been selling them for some time; they are extra well made and upholstered in leather, this is durable, and does not burn or hold moisture or dust, as plush does.

One of these seats has been placed in the Grand Lodge office so that visiting members and others interested in that line of devices may have an opportunity of examining its merits. The seat needs only to be seen to demonstrate its superiority over all others. The inventors, both of whom are members of the Brotherhood of Locomotive Firemen, have devoted considerable time to perfecting the device, and we speak within the bounds when we say that they have achieved success. Circulars and testimonials will be forwarded on application to Stannard & White, Appleton, Wis. The *Magazine* bespeaks for this useful device a large demand and ready sale.

Current Notes and Comments.

The debt-repudiating teachings of the leaders of the Farmers' Alliance are beginning to bring their natural results. In Jewell county, Kansas, on Sunday night last a mob of 30 or 40 masked men drove off from a farm in Washington township a tenant representing the owner of the property who had purchased it under foreclosure of a mortgage. The original owner borrowed money which a young woman had earned in teaching school and gave security on his farm. He failed to pay the notes and his place was sold by the sheriff and a tenant put in possession. The mob commanded the latter to leave, under penalty of having his dead body carted away, and having thus ejected him they placed the former owner in possession. This outrageous proceeding illustrates the utterly unreasonable feeling which the radical Farmers' Alliance men hold against what they term "capital," that is, money belonging to anybody else but themselves. In their view capital represented in the form of railways, although it is engaged in the beneficial work of furnishing transportation and building up the country, or represented in the form of money loaned to farmers for their own purposes, is not entitled to protection by the laws, and the persons who represent capital in this form are looked upon as public enemies and criminals. Even a poor school ma'am who has saved up a few hundred dollars from her scanty wages becomes a "capitalist" and a "monopolist," the moment that she loans it at current rates of interest, and the "honest" farmers of the alliance gather a mob to take away her capital and turn it over to another. It is madness such as this, represented not only by farmers' organizations but by legislators, and even by some congressmen and United States senators, against which railway companies are now obliged to struggle in order to escape the confiscation or destruction of the properties which they represent.—*Railway Age*.

Is there any good reason why the farmer should enjoy any greater protection from the government under which he lives than any other citizen? Should not all be equal-

ly entitled to protection of their savings which in order to benefit the country must become investments? What lesson does the Blessed Lord teach in the parable of the talents which he entrusted to his servants, and what a rebuke he gives to the unfaithful one, because he had not loaned out his talent and got interest on it. Interest and usury are distinct words in the gospel and should not be confounded. Interest is a fair return for the use of money, and without it there would be no progress in the world. Usury is an unfair advantage taken of the necessities of the borrower and usually brings disaster to all parties. It is a promising sign of improvement in this respect that nearly all States impose penalties more or less severe on usury and that public opinion is strongly set against the practice, but if the farmers are to resort to open robbery as in the above instance, they will start a "boomerang" to their own injury.

Not Happy Yet. Your answer to Question No. 32, in April issue, does not suit me. An engine is pulling twenty-five loads. She breaks off live and runs ahead with them. The throttle or lever not being touched, yet the exhaust is easier and lighter. You say the exhausts take place closer together. Why should they take place closer together when valve has same travel as it did before train broke? You say that after the engine has gained speed there is not the time for the cylinders to fill with steam that there is when moving slowly and cutting off so late in the stroke.

Remember that the steam is being cut off at the same point of stroke: it is not earlier or later. Cylinders getting half of the boiler pressure, and ports having the same opening, I thought that steam was quick enough to fill the cylinders.

PINE BLUFF, ARK.

Walter Hamblin.

[The point of cut-off has nothing to do with the exhausts taking place closer together—it is the speed that fixes that. There are four exhausts to every revolution, and the engine may make one or one hundred revolutions in a minute. In this case she commences to increase speed the moment she breaks away from her train. Steam is quick enough to enter the ports at almost any speed, but at higher speed cannot fill them with so much pressure, because it does not have time.]—*Locomotive Engineer.*

Points on valve motion, which ought to make the thing a good deal easier to understand, if the least trouble is taken to get the sense of the matter.

Machine Writing. Writing by machinery has now come to be almost the universal practice in the business world, and the click of the typewriter is heard in nearly every business office. A different class of work, however, is that of authors and others who themselves operate the machine to put their thoughts upon paper, and it has been thought by many that it would not be adapted to this work, for the reason that the attention necessary to be given to the machine would interfere with the uninterrupted thinking necessary to do such work. Experience is proving, however, that this difficulty exists only in the imagination, and some of the best writers of the day, including Mr. Howells, Frank Stockton, Robert J. Burdette and Margaret Deland, are said to regularly write their copy on the machine, some of them declaring that the click of the keys seems to make their thoughts flow more freely. And after all there should be little surprise at this. The key-board of a typewriter soon becomes as familiar to the op-

erator as the keys of a piano to the musician, and after that the making of letters by striking the keys is really a more simple matter than by making them with the pen, for with the machine precisely the same motion is required for each letter, and they are made without the necessity for thinking of the means by which they are made. A number of our correspondents send in typewritten manuscripts and a constantly increasing proportion of the matter appearing in this paper is written by machinery.—*American Machinist.*

No doubt the type setters in the printing office are rejoicing over this fact, for it must be very difficult for them to follow the crooked ideas of many writers, as they are often expressed in very crooked letters, besides.

The unanimous reflection of all the directors of the Chicago, Burlington & Quincy railroad at the stockholders' meeting this week indicates that the proprietors are well satisfied with the management and do not hold it responsible for the large falling off in earnings which this road, in common with many others, has of late recorded. The decrease was plainly due to the partial failure of the crops last year throughout a large region west of the Missouri river, but the crop prospects are now very encouraging, and if legislation and competition do not cut down the rates still further there is reason to hope that the losses of recent years will be in part made good.—*Railway Age.*

Did all western roads suffer to an equal extent? Let the following paragraph from the same paper answer and fix the time when the road began to depreciate:

The directors of the Chicago, Burlington & Quincy company have declared a 1 per cent. quarterly dividend, which seems to have become the established rate for the present year. Four percent. per annum, however, shows a sad decline from the rates of 10, 9 or 8 per cent., which were the regular divisions for many years until 1888, when the dividend was suddenly dropped to 5, descending in the following year to 4 per cent.

A Headlight Would Have Told Them.

In his report to the English Board of Trade on the collision which occurred on January 3d, at 12:49 P. M., at St. John's Wood road station, Metropolitan Railway, Major General Hutchinson says: "This very extraordinary collision was caused by an engine and brake van running backwards for at least 600 yards, down a steep incline of 1 in 60, in the tunnel between St. John's Wood road and Marlborough road stations, the driver, fireman, and guard being all under the impression that they were running forwards until they had again reached the mouth of the tunnel—which they had entered about four minutes previously—too late to prevent the van from coming into collision, at a speed of five or six miles an hour, with the engine of a passenger train which was pulling up at St. John's Wood road station rather short of its regular stopping-place, the driver having noticed through the fog the brake van running back towards his engine. Charlton and the fireman were then both intently looking out for the home signal 231 yards beyond the distant signal; Charlton giving the engine sufficient steam to keep it, as he thought, in forward motion, the reversing lever being in the second forward notch from mid-gear. Instead, however, of seeing the home signal, the engine must have first stopped and then gone backwards without either of them being in the least aware of it, and they were quite unconscious of what had taken place until the daylight at the St. John's Wood road end of the tunnel made them realize what had really happened. Charlton gave his evidence in a very truthful manner, and, extraordinary as it seems, that he should not have noticed the stoppage of his engine before it began to go back, there is no good

reason to disbelieve his statement or that of his fireman, which is much to the same effect as his own. The brakeman in the van had felt the engine stop, but had then thought that they had again gone forward, and was only aware of the retrograde motion when his brake van came to the St. John's road end of the tunnel, too late for him to apply his brake. That the train should have run back down an incline for 400 yards, and that the driver, fireman and guard, all careful men, should have all been under the impression that it was running forward seems almost incredible; but there is every reason to believe the truthfulness of their evidence. Some means will have to be adopted to prevent similar accidents in future: a powerful lamp, throwing a strong light on the near wall of the tunnel, would, we think, answer the purpose, and would have the recommendation of not being expensive.—*Railway Herald* (London).

Perhaps these men who honestly thought that they were going ahead when they were going backward, furnishes a clue to the reason some men think that their engine is slipping ahead when she is really slipping back or holding her wheels still.—*Locomotive Engineer*.

At the risk of adding another guess, let us say that the story they told seemed to be the best one they could get up to suit the case. It only too often happens in railroad life that one set of men will get up a story to suit their side of the case, and make the other side out as liars, when if the truth were known it would prove the first party as the "boss" prevaricators. Thus in an instance of a tail-end collision of which we have heard, all on the rear train saw that the head train was backing up, yet those on the head train, in order to cover the fact that they had crossed the frog to enter a piece of single track, in the face of a first-class train, told the story that they were moving ahead, and having got a chance to tell it first they stuck to it with a persistency worthy of a better cause, and threw the blame on the rear crew. But such seems to be the weakness of human nature: "Only let me get out of the hole; I don't care who stays in."

The Latest in Composite Photography.

Angus Sinclair recently took a brand new Kodak camera on a trip through the South. He religiously "took a shot" at almost everything he saw. Angus knew enough to take off the cap, but he read the legend, "You press the button, we do the rest," and translated it literally. He "pressed the button" some seventy-five times, but did not turn the key that moves the film along. The result is that the photo is of a combination order—sort of scrambled view—with a frog-pond from behind Knoxville lying on the side of one of the seven hills of Richmond, an East Tennessee compound going up a Chattanooga church spire, a magnolia tree growing out of the back of an Atlanta razor-backed hog, and a four-year-old pickaninny calmly holding Lookout Mountain in his hand.—*Locomotive Engineer*.

It does seem as if friend Hill had some sort of malicious pleasure in letting the world know of all the misfortunes which come to our friend Sinclair. If it is not about firing, it is about a watch, or a "Kodak camera" or something else. Wonder if Hill had a camera with him on his late trip and whether he even "pressed the button?"

Wm. Weiler.

Eccentric vs. Vulcan.

MR. EDITOR:—In deference to the request of "Eccentric" I again take up the three unsettled "problems" about which "Eccentric" and "Vulcan" differ (see *Magazine*, "Vulcan," February, 1891, page 123; "Eccentric," May, 1891, page 416); they are:

First. The question of the movement of the piston-rod and piston-head through the cylinder in one movement, and on the reverse movement the cylinder moves over the piston-head and rod.

Second. The question of what part of a driver, if any, when in contact with the rail, moves faster than any other part, and if so, what part, and how much faster?

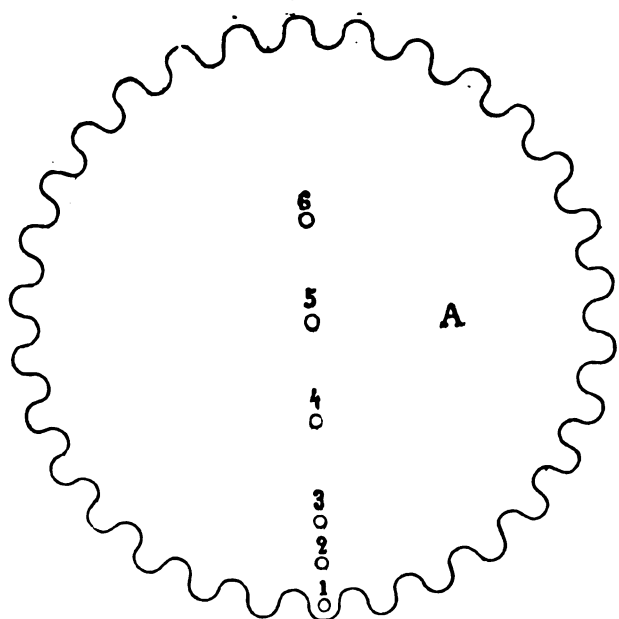

Third. Can or does a single valve operate two cylinders?

In reply to the above, I prefer to answer the third inquiry first, then the second, and then the first, as in the better order, and as in the second, because that must be settled before it is possible to determine the third. I shall answer the third and second in this article and the first in another.

"Vulcan" is referred to *Magazine*, October and November, 1887, for valve information and illustrations, a single valve operates two cylinders.

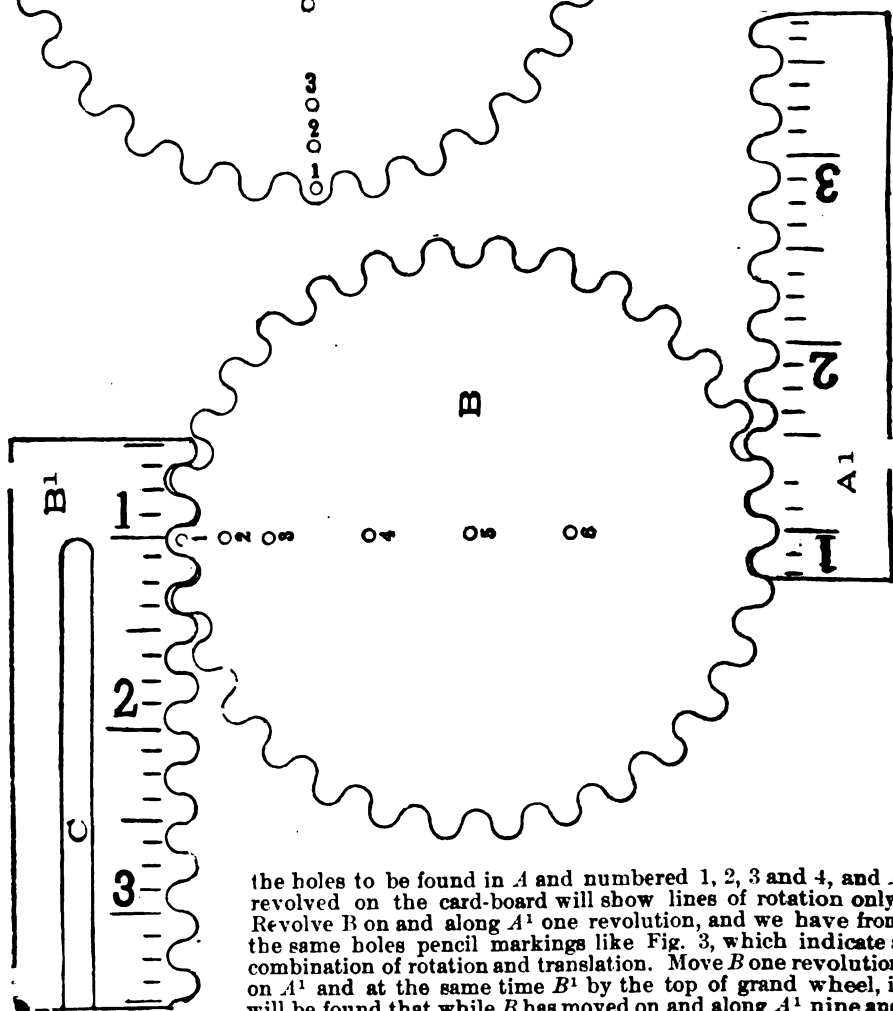

"Eccentric" desires the second of these problems answered for two reasons, "because he is an inquirer after mechanical truths," and also because "before we apply power to a locomotive driver we certainly ought to know how that wheel moves and works." I certainly thought this question had been answered and definitely settled in my article with illustrations, *Magazine*, December 1888, pages 893 and 896 inclusive, entitled "Not Two Times Nothing, but Four Times Something." In that article I made full confession of an error of statement, and substantially established that it was what the title of the article called for. "Eccentric" makes mention of "Vulcan's" "publication in a comic paper" for "Lots of fun." Let him laugh last who wins.

By mail this day I send you for "Vulcan's" use, a table with attachments thereto, which are illustrated in this article. A is the grand wheel of the locomotive puzzle of March, 1886. Also B A ' grand rack-rail. Is A in a plane with rule on which B rotates and is translated along instead of being rotated around and on A ? One-half of this rack-rail A B A ' with rule has been separated from A by a gig-saw, along the teeth of the gear the slot C in B is for the purpose of inserting round-headed screws as guides to B . A may be tacked to the table; screws are better, as they enable one to insert the paper under the rack-rail to make lines thereon corresponding with the various points brought out in this discussion. Holes 1, 2, 3, in B are the maximum, medium and minimum lines of the

counter-balance in a single revolution of the grand wheel *B* on rack-rail *A*¹; 4 is the lower limit of the crank-pin, and 6 its upper, while 5 is the wheel center. These last make lines similar to 1, 2, 3, indicating their movement as in practice on the locomotive on the rail.

"Vulcan" will find the sheet of paper under the teeth of *A*¹ rack-rail, as above described. *A*, the grand wheel, is fastened to the table by a screw in the center, a pencil inserted in each of

the holes to be found in *A* and numbered 1, 2, 3 and 4, and *A* revolved on the card-board will show lines of rotation only. Revolve *B* on and along *A*¹ one revolution, and we have from the same holes pencil markings like Fig. 3, which indicate a combination of rotation and translation. Move *B* one revolution on *A*¹ and at the same time *B*¹ by the top of grand wheel, it will be found that while *B* has moved on and along *A*¹ nine and

one-half ($9\frac{1}{2}$) inches, B' has moved nineteen (19) inches. If "Vulcan" finds this statement true, and proves it so by doing it, then will he not tell how this can be, unless the point of the driver in contact with the rail is at rest, and the top moves at four times the speed of something just above nothing, the point of rest, which point of something cannot be seen or measured? "Vulcan," if this does not answer your doubts, call again, and believe me in truth,

Very Truly yours,

William E. Lockwood.

LOCH AERIE, June 3, 1891.

P. S.—This subject with the same illustrations, differently treated, in answer to the inquiries of "Cross-Head," will be found in the Technical Department of the *Locomotive Engineers' Journal* for July, 1891.

Surprising Admissions Concerning American Engines.

We do not know what is done in England to people who blurt out facts—as they call them—upon subjects which should be either ignored wholly, or else so stated as to convey a double meaning, one of which meanings could be selected, according to the reader's whim or fancy. If anything at all out of the ordinary is done to persons who tell tales out of school, the Duke of Marlborough is going to have an unpleasant time, for he has just asserted in the *Fortnightly Review* that

English railways are toy systems, and our rolling stock are toy freight carriers, compared with the trains that run all over America. We may take it as a rough statement of general average that railway freights and fares for goods and passengers in the United States, notwithstanding that wages are more than double in America, is one-third of what it is in Great Britain.

It is useless to apply for a patent on this statement, because it has been in public use in this country for more than two years. More than ten years we might say, but for casual reading and as voluntary evidence from the other side, it is interesting. That is to say, it is interesting to American readers but exasperating to English. We have of late been of several minds regarding American railway practice, for, whereas aforesaid we had reasons for believing that it was in all respects up to good modern practice, so much has been dinned into us by foreign papers concerning the inferiority of American engines that we did not know what to think. To be sure, the Duke of Marlborough is not a professional engineer,

and his opinions on such matters may be in a certain way superficial, but he is nearer right in his assertions as to our superiority than English professional engineers are concerning our inferiority. We do not know what Englishmen are coming to. A new generation seems to have arisen, which sees things in a different light from that in which their grandfathers viewed American engineering. What with Lieut. Col. Hope of the British Army saying that we make the best guns in the world, Mr. Biles, Naval Architect, of Great Britain, alleging that our new navy is ahead of all other nations, and now the Duke of Marlborough giving it to us straight, as one may say, on American railways, we feel as though we could hold up our heads after all, and be proud to say that we are Americans.—*Engineer*.

A RAILWAY across the ocean will be the next enterprise for modern genius to undertake. A French engineer some years ago wrote a paper in which he assumed that at a depth of say 600 feet the water in the ocean is of such density that it will sustain any object which can possibly be placed upon it, and then proceeded to propose the construction of a railway across the Atlantic by sinking a continuous line of iron tubes in which a double track could be laid for the running of trains from continent to continent. The only objection that the inventor saw was the danger of suffocation from the smoke of the engines, but as the electric motor has now taken away that difficulty it would seem to be in order for some modern inventor to carry out this brave idea to a practical conclusion.

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, room 26, Atlantic building, Washington, D. C., expired during the month of June, 1891, and are now free to be used by anyone; viz:

Railway switch, C. H. White.
Gate for crossings, E. Ridge.
Car spring, A. Middleton, Jr.
Car ventilating apparatus, H. A. Gouge.
Railroad track, H. A. Corbin.
Detonating signal, O. F. Winchester.
Car spring, R. S. Manning.
Coupling for vacuum pipes, E. W. King.
Car brake, J. A. Collins.
Railroad spike, C. Fisher.
Car seat arm, W. J. Calais.
Grain car door, G. F. Cluff.
Car axle lubricator, J. Whitaker.
Excluding cinders and light from cars, W. H. Fletcher.
Car wheel, G. W. Nuttmore.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents, by applying to Mr. Brock, whose address is as given above.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, INDIANA.

A PURELY DOMESTIC CHAPTER.

With the heat of summer upon us, the leading question is how to keep comfortable. For men who must go each day to the endless round of toil the question is not easily answered, and yet it may be practically demonstrated that we do not suffer as much from the heat to keep quietly about our regular business without a moment's time to think about it, as we do to sit around and watch the thermometer and speculate on the weather and try to keep cool. In this season, as in all others, most of the comfort of the household depends upon the wife, provided of course that the husband is able to furnish the necessary means. In hot weather the housekeeper should rise early, even though the temptation for sleep be strong. Take the nap in the middle of the day but get the work out of the way in "the cool of the morning." Where by any kind of economy it can be afforded, the mother of a family of children should have some one to assist her with the work. For one woman to do the washing, ironing, cooking, sewing and nursing is too great a tax and it should not be required except in cases of extreme poverty. Husband and wife will find upon consultation that by self-denial in certain directions, they can save the few dollars necessary for hired help and it will be a good investment. Where it is impossible to keep a "girl" all the time, secure some one to come in several times a week and give a lift to the washing, ironing, scrubbing and heavy work. Men do not try to do a dozen different kinds of work at the same time. If they were compelled to keep house, with all its numerous demands, they would very soon systemize it and have a "helper" for certain of the duties. If they would insist upon their wives following this plan, they would find domestic affairs would move much more smoothly, and the wives, having less care and weariness, would be much pleasanter and more companionable.

The man who provides well for his family and does not distress them by bad habits, deserves a comfortable and cheerful home.

He has a right to expect the house to be in order, things in their proper place and his meals well-cooked and on time. It is the greatest mistake that can be made in a household to have irregular meals. It interferes with the arrangements of the entire family and is one of the most irritating things a man has to contend with. It should be the inflexible rule to have the meals on time though the heavens fall. When the man comes home let there be some quiet spot in the house where he can take his rest. The wife may be hot and tired from preparing the meal, but it does not make it any easier for her to have the husband uncomfortable also. If he has provided the home to the best of his ability, he is entitled to as much comfort as it can possibly afford. Have a change of clothes ready for him, clean and mended. There are, of course, exceptions to all rules. Sickness, a number of children, insufficient help, make it impossible for a wife to fulfill every duty, but unless other demands are too heavy, a husband has a right to expect that his clothes shall be kept mended, and it must be admitted that missing buttons and socks full of holes are a proof of the wife's inefficiency. No amount of skill at fancy work or of literary ability or of social graces can atone for neglect of this important feature. The only sure plan is never to put away a garment that needs mending. Have a capacious basket or box and keep it well supplied with thread, buttons, darning cotton, etc. Into this put every article that needs a stitch, and then, when a spare moment offers, you have everything at hand. When a neighbor comes in for a call or you sit down for a chat with your husband, you can sew while you talk and in this way keep the mending up and hardly know when you do it; but if an article is put away unmended, it is sure to be forgotten until it is taken out to be worn.

Every girl should be taught to cook before marriage but sometimes this is not practicable. She may not have a mother or any one to teach her, she may be married right out of the school room, or she may have had to earn her living in some employment which made it impossible for her to give any time to house-work. This is unfortunate as she will have to spoil some good material and will make many absurd blunders, but they will be made at a time when love excuses all things and even poor food is palatable because sweetened by affection. Some of the best cooks and housekeepers that we know, had never prepared a meal and knew nothing of domestic life before marriage. The ignorant young wife must at once set herself diligently to work to master the household arts, by means of cook books, by experimenting and by consulting her married friends. She must not

for a moment imagine that she will be a satisfactory helpmate or make her husband happy and comfortable in all the years to come if she cannot serve a well-cooked meal. This is not romantic but it is true. Our capacity for good work, our disposition and our enjoyment of life depend upon the condition of our stomach, and this rule applies to women as well as men. A woman cannot have an accomplishment in the world that gives as much pride and pleasure to her husband as that of being a skilled cook. Her capacity as a housekeeper is of as much value in their little world of domestic economy as his ability to make a good living. In this age of woman's progress, of her advancement in all departments of the world's great work, the homely arts of the household are apt to be under-rated. They are just as important now as they were ages ago and will be ages hence, and the woman who assumes the responsibilities of a wife must not ignore them or give them indifferent attention. It is not necessary that she should bestow upon them her whole time and powers, but other things should be considered secondary and housekeeping her chosen profession.

And now, coming back to our starting point, make the summer as pleasant as possible by admitting only the morning and evening air into the house, shutting out the heat and dust of the midday, and screening the windows from flies and insects. Get a little nap after dinner if possible. Prepare one cold meal during the day. Make a fresh toilet for the evening, no matter how simple. Keep the children as clean and quiet as you are able. Preserve your equilibrium of temper, no matter how great the effort. Have the home comfortable for the husband whether he does his part or not. "Two wrongs do not make one right." Do not get discouraged if your efforts are not appreciated. Perhaps after awhile husbands may realize how happy they might make the home circle by a little effort and self sacrifice. Some of them do, and there is no grander man on earth than a thoroughly kind, conscientious and devoted husband. It was the original design that every home should be a paradise, and let us hope that eventually all shall return to their first and best estate.

WE receive letters every month from impatient writers asking why their communications have not appeared, sometimes only a few weeks after they were written. We have frequently stated that the matter for the *Magazine* is prepared two months ahead of its publication. You will notice that the letters in this July number are dated May. Very few contributions are rejected and a point is often strained to accommodate the

writer. Other things have to be considered besides literary merit. One object of the *Magazine* is to create a fraternal feeling and bring the members of the order and their families into closer communication. This is largely accomplished by means of these letters and, for that reason, we use all which can possibly be made available. Only those are rejected which are (1) utterly illegible, (2) personal or abusive, (3) of an extremely trifling and worthless character. Our correspondents owe it to the *Magazine* and to one another to take pains with their letters and make them of interest and value. That there has been a remarkable improvement in this respect we believe will be attested by all who have been constant readers for a number of years.

WE shall be glad of any suggestions from our correspondents pertinent to the summer season, in regard to the arrangement of houses, management of children, preparation of special dishes or methods of recreation. Send us ideas that will be available for late summer and early fall, before the frosts come or the leaves begin to turn.

WE will have to repeat once more that the views expressed by our correspondents are their own individual opinions and of course must be expected to present every shade and variety of religion, politics and ideas upon general topics. As all have the same rights in this respect, there is no occasion for any one to be offended.

THE *Railway Service Gazette*, in a highly eulogistic editorial, nominates our Eugene V. Debs for the next President of the United States. The Woman's Department seconds the nomination and casts its vote as a unit in the affirmative.

M. B. S., of Fayetteville, Tenn., writes enthusiastically of a fireman who sends her the *Magazine*. She says he "comes every night with a sweet smile on his face and looks like an angel when he steps in at the door."

WE regret very much that the request of T. A. O., Chicago, was received too late to be complied with. The *Magazine* was almost ready for mailing. Send us another letter on some seasonable topic.

"BEULAH," from Colmesneil, Texas, writes very kindly of Red River Lodge, at Denison, in which she has a friend who sends her the *Magazine*.

THE editor-in-chief will open his eyes when over fifty letters for the Woman's Department come in upon him this month, and he will say, "Well, if this keeps up we will have to enlarge the *Magazine*." But the hot weather will make our correspondents disinclined to write and we shall have a chance to "catch up" with all of our unpublished letters.

MONTPELIER, IDAHO, May 7, 1891.

Editor Woman's Department:

Noticing a letter in the May number from a "Fireman's Schoolmarm", I cannot withhold the opportunity of a few words in reply. First she says she sometimes feels like breaking some of the laws made by man. She cannot show a single passage in the sacred book from the first of Genesis to the last of Revelations that women should not obey the laws of man. I do not think there is a sound minded man between the Atlantic and Pacific coasts but would command his wife to vote as he did even if she had the opportunity, and the Bible plainly says: Wives obey your husbands. Again she says she would be more capable of understanding the Mills and McKinley bills than some of our politicians. She would better be trying to understand how to diminish a meat and grocery bill if she contemplates marrying a fireman.

The idea of a woman returning from an election in a reasonable time when a man cannot. That is an absurdity and an outrage on the male sex.

I admit that women are abused a great deal by men which ought not to be tolerated, for this world would be dull enough without their pretty dresses and fair faces. Women at all times ought to dress prettily. How they brighten up every place they come into! What a sunny commotion they make in our dingy bachelor departments; and what a delightful sensation their ribbons and laces, gloves and hats create! They seem as if a wandering rainbow had dropped in to pay us a visit. It is one of the chief charms of the summer, the way our pretty maids come out in their colors. I like to see the pink and blue and white gliding along the street and flashing back the sunlight (you can see the bright colors such a long ways off). It is so nice to see the darlings a long ways off (especially if it happens to be your wife and mother-in-law). Nearly all the correspondents say for the men to try to please their wives but never tell how to please them. I presume the best way to please them is to have a row with them every now and then. It must be heart breaking after a woman has worked herself up into a fury and then just as she is expecting a vigorous set to all her plans are spoiled by the humility of her husband. Fancy a married woman having to live from day to day without a single quarrel with her husband! A man ought to humor his wife in these things (which no doubt a great many of them do). Their lives are dull enough poor things! They have none of the enjoyments we have. They go to no political meetings, as you can see by "Schoolmarm's" letter they would like to do. Surely with such a dreary blank as this for them, you can provide a little row for their amusement, even if you do not feel inclined for it yourselves. A really sensible man does so and is loved accordingly for his kindness. Such things as these go straight to a woman's heart. It is such love as this that causes her to tell her friends what a good husband you are—after you are dead. A sensible woman wants a husband that can do an errand without using his own judgment about it, or who can hold a child right way up and not be objectionable when there is cold soup for dinner. So all you young men that want to get married govern yourselves accordingly.

Many thanks to the editor for the prescription of liver pads and soothing syrup, but I would have preferred arnica to soothing syrup the morning the *Magazine* reached the Cottage Hotel, and I have

almost come to the conclusion a dose of rough on rats would be a balm to my soul.
Success to the B. of L. F. and the *Magazine*.

W. B. R.

[If Mr. Richmond insists upon bringing his prize ring methods into the peaceful circle of the Woman's Department, he must take his punishment. Women cannot fight with their fists but they are keen with the tongue and pen. "Kicker" was annihilated from the face of the earth, and Shandy Maguire has learned to take off his hat and come in with his best bow and most engaging smile.—Ed.]

ELMIRA, NEW YORK, May 20, 1891.

Editor Woman's Department:

It has been now almost a year since I first thought I would like to have a chat with the editor and every time I would get ready to write my courage would be gone.

We are having very strange weather for this time of year, very cold with heavy frosts. Last week it was said to have frozen ice an inch thick. Our garden don't make much progress. First it is not very much to call a garden, only about $1\frac{1}{2}$ rods square. Our neighbors all laughed when we spoke of making garden but we went right ahead, my husband dug it and got it ready, then I got the seeds and we planted it together. Now we have lettuce, onions, radishes, potatoes, beets, peas and beans and a space for tomato plants all in that small spot, not very much of any one kind but plenty for us, as there are just hubby and myself. How much better it will taste than the old trash you get from the grocery, besides all it will cost is a little labor. Some people would rather be out visiting their neighbors or reading a novel than be helping hubby get something to eat, but I don't belong to that class. I was raised on a farm near Altoona, Pa., and the oldest of a family of twelve, consequently I know what work is and how to do it. I am a great lover of flowers, have over sixty plants. I think there is nothing helps to make a home so cheerful as nice flowers. I have cleaned house and put them out on my back porch, but the fun is to carry them in and out every night and morning to keep them from freezing. My husband belongs to the B. of L. F., but that is about all I can say, as I never was much in love with, or knew anything about railroading until since I am married, and I still think it is a very hard, besides so dangerous a way to make a living. I worry from the time my husband leaves home until I hear his whistle next night. He fires on the western end of the D. L. & W. road, from Elmira to Buffalo and return. He has a regular run, so I can always have his supper ready for him, but if I don't there are never any black looks or cross words. The days he is out I do most of my work, such as washing, ironing, sweeping and baking, and when he is home we work together, as I have a husband that can sew, cook, wash dishes, sweep and do most any kind of work, especially to help me. He never goes out without asking me to go along, unless it is to the roundhouse. He earns the money and we spend it together. We never keep secrets from each other and I think that helps to account for our happiness. We don't put all he makes on our back but have a nice little house furnished as nicely as any one would want to see, besides we are trying to get a home for ourselves. I don't believe in paying out all you have for rent. If we are young yet I want my own home. We started in very narrow circumstances when we went to housekeeping. We just furnished three rooms down stairs, now the whole house is in order.

Some of the ladies would like some recipes for cooking, also for yeast bread. For my part that never bothers me just so I have plenty on hands to cook.

This is the way I make my yeast bread and it is lovely. I take one good size potato, boil in about

one quart water, put through a sieve, adding a little cold water, so as not to scald the flour, then stir into a sponge with flour, stirring until it bubbles before putting in the yeast. You can use any kind of yeast but I prefer soft, which I make myself or get from a neighbor, who makes it for sale. If your yeast is good after rising six hours or over night it will be ready to knead hard. Don't be afraid of kneading it too much or too long and not less than one hour. Let rise a second time, when it will be ready for the pans. Knead into pans and let rise, then it will be ready for the oven, when light the third time. Don't have your oven too hot and bake to a light or dark brown, just as you prefer, one hour. You may think it is a good deal of work but good bread pays for itself after all. Here is a nice way to cook potatoes: Wash clean and pare $\frac{1}{2}$ dozen potatoes, grease a pudding dish or sauce pan well and slice thinly one layer of potatoes, sprinkle a layer of flour and a little pepper and salt, then put little bits of butter over the layer, then another layer of potatoes, so on until your basin is full, then pour over sweet milk enough to cover all and set in a moderate oven and bake one hour. Tomatoes and onions can be served the same way, only using bread crumbs instead of flour for tomatoes. You will find them all very nice dishes for tea. I wonder how many of our correspondents are going to prayer meeting this evening? Oh! that we all endeavored to live nearer to God each day of our lives. I have said more than I intended to and as this is my first I will close.

With best wishes and earnest prayers for all the brave railroad boys and success to the *Magazine*.

Mrs. W. W. Weaver.

[It is a great pleasure to receive so helpful a letter as this. Let us hear from you again.—Ed.]

POCAHONTAS, May, 16, 1891.

Editor Woman's Department:

As I am a faithful reader of your valuable *Magazine* and have a dear brother who is a fire boy and belongs to Bluestone Lodge, No. 416, I thought I would call a little while. I see so much said about managing husbands I almost afraid to say anything about that. But true marriage is the result of years of mutual endeavor to please and comes of patient efforts to learn each other's disposition and taste. This can be done by all who cherish right views of the duties and pleasures of the marriage relation. I exhort you who are a husband to love your wife, even as you love yourself, continue through life the same manly tenderness that in youth gained her affections. Reflect that though her bodily charms may not now be so great as then, yet that habit and a thousand acts of kindness have strengthened your mutual friendship. Devote yourself to her, and after the hours of business let the pleasures which you most highly prize be found in her society. The true wife wishes to feel sure that she is precious in her husband's eyes. Let her be the recipient of his polite and hearty attentions; her approval be sought and her judgement respected; in short, let her only be loved, honored and cherished in fulfillment of the marriage law and she will be to her husband a well-spring of pleasure. I also think the wife should be gentle and considerate. Let the influence which you possess over him arise from the mildness of your manner and the discretion of your conduct, whilst you are careful in adorning your person with nice and clean apparel; for no woman can long preserve affection if she is negligent on this point. Be still more attentive in ornamenting your mind with meekness and peace. With cheerfulness and good humor lighten the cares and chase away the vexations to which he is inevitably exposed in his commerce with the world by rendering all in your power his home pleasant. Keep at home, let your employment and pleasure be domestic. I think what a man desires in a wife is her companionship, sympathy and love. The way of life has many dreary places in it and man needs some one to stand by and sympathize, all through life, through storms and sunshine, let him think upon his duty in return for

this love. You who have taken a wife from a happy home of kindred hearts and kind companionship, have you done what you could to make amends for the loss of these friends and companions? Remember what your wife was when took her, not from compulsion but from your own choice; a choice based on what you then considered her superiority to all others. She was young, perhaps the idol of her happy home; she was gay and blithe as the lark, and the brothers and sisters at her father's cherished her as an object of endearment; yet she left all to join her destiny with yours; to make your home happy and to do all that womanly ingenuity could do to meet your wishes; and to lighten the burdens which might press upon you.

Wives, consult the tastes and disposition of your husbands, and endeavor to give them high and noble thoughts, lofty aims and temporal comforts. Let the husband see that you really have a strong desire to make him happy, and to retain the warmest place in his respect, and to receive the same from him. Sweeten all his troubles with your sympathy. Make him feel that there is one ear always open to the revelation of his experiences; that there is one heart that never misconstrues him; that there is one refuge for him in all circumstances; and that in all weariness of body and soul there is one warm pillow for his head, through all gladness and sadness as the faithful chronometer suffers no perturbation of its rhythm whether in storm or shine.

Mary.

[The correspondence on managing husbands is closed but there is so much good in this letter we have made an exception.—Ed.]

CLINTON, IOWA, May 6, 1891.

Editor Woman's Department:

Two months since, your *Magazine* came to our home for the first time, giving us a glimpse of the departing form of "Managing Business," whose death-warrant appeared in No. 5. I have a very nice receipt for making baker's bread, which I will give through the *Magazine* if any one wishes it. If it will be interesting, or rather, helpful to one or more of our circle, I will tell you also of my way of foot-ing cotton hose. The pattern is a simple one consisting of one piece besides the top. I can take them to the sewing machine and in five minutes have a neatly fitting pair of hose which will not hurt the foot as darned hose sometimes do.

I am in love with "Mary." I endorse what "May Day" says in regard to card playing. There are those who consider their ideas of child-training superior to the wisdom of the Creator on that subject, for they would have the Scripture read, "Train up a child in the way he wishes to go (card playing, etc.) and when he is old he will depart from it" (that which is evil).

Well, Frank Forrester, God's ways are not always like our ideas. He says: "As the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts." Does the little ant solve problems in Trigonometry? "Canst thou, by searching, find out God?" I hope I shall be content in the future to work as God's word directs, although I at one time was determined to preach. The pulpit is not the only place in which women may be instrumental in saving souls or making money, but I will admit that it is rapidly becoming a capital position for the latter.

"Clover Leaf," I am glad that your husband has good habits. My husband is a fireman who neither drinks, smokes, chews, nor uses profane language, and best of all for him, he knows that his sins are washed away by the "blood of the Lamb." He knows this because God's word says so. That is the way God says we may know. 1 John V. 11. St. John V. 24. To go back to my subject—my husband is not careless in personal appearance, although we have been married four years. I often wear a five cent calico, but endeavor to keep myself and our five months old baby as neat and sweet as possible. We sometimes are a little worried in household

small affairs, but never quarrel. In fact we are happy in each other's company in our own little world of four rooms. If young people of both sexes would spend one half the time that they now waste in trying to attract each other by seeming exceedingly, fascinatingly, what they are not—if they would spend this time in honest, respectable employment as well as this can be made practicable while gaining an education, there would be a less number of wives sitting with folded hands and empty heads, or "gadding," saying (as I heard a lady say) "my husband has long since ceased to love me." There would also be a few less men in gambling and fire water dens. Girls, don't imagine that men are so angelic that because your life before marriage is devoted to the theme of captivating and capturing a husband at the expense of knowing how to bake and sew—don't think that they will be willing after marriage to devote themselves to carrying worthless wives around on their shoulder. "Alzetta," do you belong to the girls I have just mentioned? Are you worthy of help, attention, caresses? Think more about pleasing others for their highest good and less about being pleased.

One letter mentioned trusting in God. Friends, one and all, if you are resting your soul's eternal welfare on the widely differing ideas of man, stop! If you don't know whether or not your sins are forgiven, find out! People say "I do the best I can." What does God say our best is? "There is no difference, all have sinned," and "all our righteousness (no sins) is filthy rags." "The soul that sinneth, it shall die." We are all dead to God as far as our good works are concerned and there is only one way to obtain life. "It is the blood that maketh an atonement for the soul." "He that heareth my word and believeth hath everlasting life and shall not come into condemnation, but is passed from death unto life." That is God's way of salvation; not a straw more is needful. Not what we think or Mrs. So-and-So says, but what God says is of vast importance to one who must soon appear before God.

Abbie Burch.

CHARTERS, PA., May 4, 1891.

Editor Woman's Department:

For some time past I have been thinking about writing a short letter to the Woman's Department, but the knowledge of my inability to express my thoughts in such a manner as to be presentable to the public has kept me from it. But what does it matter if there is one piece of paper more or less in the waste basket? This is my consoling thought while I write these few lines.

It is a wet, rainy, disagreeable day, just the kind of weather that shows the blessings of a nice, warm room in its best light. Sitting in a comfortable arm chair in front of the window, the dreary landscape sets my mind in melancholic mood, and in silent meditation my thoughts wander from one subject to another until at last they rest on the most important question of to-day, Woman's Independence. Reviewing the great advancement women have made, aided by their able societies, such as Woman's Christian Temperance Union, National Woman's Suffrage Association, Red Cross Society, Farmer's Alliance, and others, I cannot help but come to the conclusion that the present state of affairs will not exist much longer, and that we are rapidly nearing the time when men's vanity will not be hurt by admitting that women are their equals in intelligence and education. It seems to me that the average intelligent woman has a more extended knowledge of transpiring events, a better opinion and a more sound individual judgment than most men equally well educated and having the same chances of information. Certainly, there is a big part of the feminine population of this country who, either through improper education or misinformation as to the right position woman shall occupy, look at silent resignation as a virtue, and therefore avoid interfering in public questions. The education of these ignorant sisters shall be the first duty of the more enlightened class. Show them the justice of your demands and the good you would be able to do if you would be in the position where you belong,

that is if you would have equal rights with men. It is indeed a pleasure for me to see that the Woman's Department is taking an active part in this struggle for right and freedom, and I hope that it will be fully appreciated by its readers. Keep on working faithfully for your cause, and the day will not be far distant when every individual will taste the delights of liberty and independence, and no man will be called master. Woman once advanced to where she belongs, properly educated, intelligent and cultured, able to take care of herself, will not have to look forward to marriage as her destiny. Marriage will then be what it should, not a condition in which husbands are rulers and wives their subjects, but a union of equals in which no one plays second part. The result will be fewer but happier marriages, better educated children and promotion of the welfare of humanity in general. I wish some of your able correspondents would take up this subject and treat it fairly, I feel that I cannot do it justice.

I will only say a few words more. I am a firm believer in women's unions. I would advise every woman to belong to some union or society. This will give them the necessary social intercourse and re-establish the self confidence which they have lost through being too much alone. I am pleased to see the Woman's Department in the *Magazine*, and wish it best success. J. S.

[While perhaps it may be said that the entire editorial force of the *Magazine* are believers in equal rights, it is not considered proper to make such advocacy a feature, as it would arouse opposition in some quarters. The editor of this department often experiences a feeling of disappointment to see how little apparent interest our correspondents take in this subject. We trust "J. S." will call again.—ED.]

HOW TO MANAGE "HIM."

I.

At early morn thou shalt aspire
To get up first and light the fire.

II.

Not any morn shalt thou e'er miss
Bestowing on thy wife a kiss.

III.

If in the night the baby cries,
Thou shalt the infant tranquilize.

IV.

Thou shalt take care thy wife can find
Her pocketbook with bills well lined.

V.

Thou shalt not criticize her cakes,
Nor ridicule the bread she makes.

VI.

Thou shalt not fail at Easter tide,
To keep her with new hats supplied.

VII.

A sacred duty thou shalt deem,
To treat her often to ice cream.

VIII.

Thou shalt not speak in temper rash,
If she desires some extra cash.

IX.

Thou shalt not come home "full" at night,
With lame excuses for thy plight.

X.

This is the tenth—thou shalt not chide,
But shall by all her laws abide,
If to these ten she adds ten thousand more beside.

An Engineer's Niece, E. T. M.

ST. ALBANS, VT., May 6, 1891.

POCATELLO, IDAHO, May 5, 1891.

Editor Woman's Department:

In the March number the Editor said to come again, so here I am. I hope the ladies will pay no attention to W. B. Richmond's letter in the May number, as he is not accountable for what he says. I never hear a man running down women but I wonder what kind of bringing up he had, and the idea of comparing a round house foreman and his men with a man and wife. That shows his ignorance, as if a wife was hired for wages. And he also spoke of men going to ruin on account of women. I say, any man or woman that goes to the bad because the other does not do just to suit, has no principle, no foundation of character. They are like the man who built his house upon the sand. We ought to do all the better, where others fail, and help them see their errors. No good woman will drag a man down, and his mother should have taught him how to discriminate. We all know that sin and sorrow do exist, but if we keep our places we will not be led into them. If he were a true Brotherhood man he would not send such publications to the pages of our dear old *Magazine*.

A woman should not give up all pleasure for a man, but each should endeavor to promote the happiness of the other. Like a prince, once obliged to leave home without his wife, in writing to her said, "The scenery is grand, everything is beautiful, but I feel guilty, enjoying it all without you."

About going to balls alone, that rule applies to both. Neither should go if it causes displeasure. What are a few hours' dancing compared to the peace of home, where the people are properly brought up, and observe the rules of etiquette? Dancing is a great pleasure, and so are all amusements. I am acquainted with a number of firemen and engineer's wives, and if I am any judge, there are no better wives, no nobler women than some in Pocatello. Many a time we have to stay alone night after night, when other women have their husbands home all the time. The wives of railroad men need lots of praise for their courage. I think the average is the same everywhere, judging from the many letters telling how nicely they manage. Now, if W. B. R. wants to know how to get a wife, just be a man in every sense of the word. Save your money, keep out of saloons, choose good company, and good books, you will find plenty at the Y. M. C. A. rooms, and then you will have sense enough to choose a good wife. I am inclined to feel sorry for one so young, to have such bitter thoughts.

If the Editor will permit, I would suggest that we all read the heading of Woman's Department and Mrs. Harper's letters before writing. And we all know that there is not one of us women in a thousand who knows whether the lodges are in flourishing condition or not. I am too selfish to want to give any of our space to lodges and praises.

Does any lady contemplate making a rag carpet? If so, cut your rags fine, it looks better and wears better. Cut them all and put in bags till you have the required pounds, then, some day invite your lady friends to come promptly at one o'clock to sew rags until about five o'clock. One of them will help you pass around some sandwiches, cake, pickles and coffee, and the one who sews the most rags will get a little prize, a tea cup and saucer or some other article. You will all have a pleasant time at small expense.

To any one wishing to know who will write to me, I will tell her how I bind my own magazines in cloth, with gilt letters, as it would take too much space here. It is very little trouble to one who loves books. There are so many of us living where we cannot get them bound.

"Phillipa," you are a genius, with plenty of resources, after my own heart. How happy you must be, with all of your children. All I can suggest is, to hire the washing and ironing done out and buy the bread, and say to the children when they come in, the one that has the cleanest feet will get something nice Christmas.

"Marguerite" is right. There is no difference in people on account of position. It is intellectually the difference comes in, and we ought always to remember that every action, every word, even our

dress, denotes the thoughtful mind. There are many ways to improve ourselves now-a-days. So many journals on housekeeping and neat dressing, and refined reading. There is the *Ladies Home Journal*. For every purpose it is just the thing, when you are tired and cannot go to church, to read DeWitt Talmage's sermons. It is \$1.00 a year, and the Housekeeper is invaluable to those who take it. I answered the *Ladies World* advertisement in the last April number and received my seed and planted them. I will tell you some time if they were nice flowers. I will say, thanks to Minnesota.

I am going to write something about going to house-keeping. I know that will interest the young folks to know just how it is done; so, boys, begin to save your money now, and when you have found out the secret you will have the password. To those who cannot afford many books I would say, do buy a large volume of collected poems. They are so nice, you will never tire of them. Perfect jewels, they are. Why not cut out all the nice pieces of poetry you can find, and paste in a scrap book? Why not exchange original poetry or autographs with each other for scrap books? Sincerely yours for the Woman's Department.

From an Engineer's Wife.

Mrs. J. H. Shannon.

[There are ideas in this letter.—Ed.]

DICKSON, TENN., May 7, 1891.

Editor Woman's Department:

As we read your *Magazine*, we deem it a pleasure to write something which we hope may interest the many readers. As this is a small place, and never seeing anything from this part through your columns, we feel a little timid in approaching so large a field of worthy writers. But as we have a brother, who is a fireman, we feel somewhat interested since reading the *Magazines*. We read them all and I see many communications are made up of how to manage your wives and husbands. Now I think to let each manage themselves would be best, though I know very little about either. But it would be advisable for that to be dropped and more said about how to manage the household. I am with T. E. D. in that.

Our brother has been a member of the B. of L. F. for one year. The lodge, No. 159, at Nashville, Tenn., to which he belongs, is in a flourishing condition. He is a fireman on engine No. 24, on the N. C. & St. L. Ry. running from Nashville to Union City. We are always glad when we hear the whistle of No. 24, for we live near the railroad and can go and hand him a "bouquet" or "bucket of milk," and as a matter of course, the latter is appreciated as much as the former. Should it be in the midnight hour, we always know his coming by five shrill whistles as the signal for "howdy" and "good-bye."

As we are new to you all I guess we will wait and not continue this further.

Best wishes for the *Magazine* and its many readers, we are a fireman's

"Twin Sisters."

[A fortunate brother to have two such good sisters.—Ed.]

HANFORD, CAL., May 7, 1891.

Editor Woman's Department:

As I was looking through the May number of the *Magazine*, I thought I would write a few lines.

Papa was a fireman on the railroad over three years, but is teaching school now; is President of the County Board of Education, and also a member of Mt. Whitney Lodge, No. 139.

I am sixteen years of age, am very fond of music. I can play any piece on the piano that is set before me. I have been taking lessons ever since I was six years of age.

As this is my first attempt, I will have to close. With best wishes to the Woman's Department and B. of L. F., I remain

A School-teacher's Daughter.

Maude E. Keran.

[And certainly a credit to your papa.—Ed.]

TO MRS. IDA A. HARPER.

Dear Madam, I really am grieved I offended
 Yourself and your readers by singing that song;
 I frankly assure you I never intended
 To sing in a manner which countenanced wrong.
 So I now make amends by a public confession,
 What more can I do your hot fire to allay?
 I sincerely regret Ireland's leader's transgression
 And hope he will marry sweet Kitty O'Shea.

'Tis a serious crime when we come to review it,
 And note all the ills which it brought in its train;
 I'm really surprised that he ever could do it,
 Unless all her graces had added his brain.
 But he loved and was human like many another,
 And beauty the heart of a hermit can sway;
 And woman, the weaker, yet somehow or other
 She'll conquer the wisest, like Kitty O'Shea.

There is only one way in which some reparation
 Can ever be made to that woman by him,
 He must wed her, 'tho, Lord knows, a down-trodden
 nation
 Must suffer along, crushed by tyranny grim.
 'Twas a terrible sin, and no man should condone it;
 'Twill ne'er be forgotten for many a day;
 Kind hearts o'er the world will always bemoan it,
 And not be severe on poor Kitty O'Shea.

God pity us all. We need strength to sustain us
 When prone to temptation, as often we are;
 In His wisdom I pray He will kindly restrain us
 From evil, which leaves in each bosom a scar;
 And I hope that Parnell not a moment will falter,
 When the court sweeps all legal obstructions away,
 Until like a man he will stand at the altar,
 And wed—if she'll have him—sweet Kitty O'Shea.

Shandy Maguire.

[An apology so beautifully rendered could not fail of acceptance. We all know that Mr. Maguire's principles are correct but he occasionally lets his "muse" get away with him. The poem to Mrs. Bloom will appear in the next number of the *Magazine*.—Ed.]

LONGVIEW, TEXAS, May 8, 1891.

Editor Woman's Department:

The *Magazine* has been a very welcome visitor in our home for nearly seven years. I enjoy reading nearly everything in it, but the Mechanical Department. I think the Woman's Department just splendid. "An Engineer's Wife" wants a good receipt for chocolate cake. As I have a nice one, I will take pleasure in sending it.

One cup sugar, one-half cup butter, two eggs, one-half cup of milk, one and one-half teaspoonfuls baking powder, two cups of flour. Flavor with vanilla, if you like it. For the frosting, take one large cup of sugar, just a little water, one egg, beat together and cook until thick, grate one square or more of chocolate, stir until cool and spread on layers.

I make this cake often, as it is a favorite cake with several firemen who board with us. Perhaps some one would like a receipt for lemon jelly cake. Will send one which I think you will like.

One-half cup butter, one and one-half cup sugar, beat well together, two-thirds cup milk, three eggs, whites beaten separately, three and one-half cups flour, two teaspoonfuls baking powder. Bake in layers. For the jelly, one cup sugar, one egg, two tablespoonfuls water, one teaspoonful flour, juice of one lemon and rind grated. Cook in a pan set in boiling water. Stir while cooking. Sponge cake makes good layers for this cake.

I am going to try making a rug out of old carpet, as described by "A Fireman's Wife." I hope some one of experience will advise "Alzetta" what to do. Such letters as the one written by W. B. Richmond, I think, should be treated with silent contempt, as persons with such views as he expresses are too few to be noticed.

Judging from outside appearances Lodge No. 70 is flourishing. With best wishes for the noble work of the *Magazine*, I will close.

M. L. R.

LETTER FROM ELLEN M. STATA.

BOSTON, Mass., May 11, 1891.

Editor Woman's Department:

The past month having been passed among strangers, the *Magazine's* arrival was a real treat. I wish I might shake hands with Mrs. Harper over her true, courageous editorial in regard to the Parnellite "poem." The Ten Commandments were not given to one sex alone, and we cannot hope for great and lasting amelioration of the evils of social life till the responsibility for sin is equally divided between guilty parties.

I notice Mr. Geo. W. Hall has written a vivid picture story in rhyme that certainly will impress a lesson. To my taste lessons of that sort are more pleasing than the essay we are too apt to write.

Hannah Brown, of Arizona, is in a measure responsible for my pen starting. She gave, I think, an exceedingly valuable bit of information about the public schools in Arizona, and I will try to give her a "glimpse of an Eastern village" or two.

The "Old Bay State" is full of charming villages. In the past month I have for the first time visited many of the places of interest in various parts of this State, and wish I could give you all a real glimpse of the beauties one discovers while riding over hills and through valleys as the wonderful change from winter to summer is going on.

Take a trip with me from Springfield north along the Connecticut valley. You see, just as you leave the city, the church of gray stone Dr. J. G. Holland assisted to found and attended during his residence near Springfield. About a mile north is "Brightwood," the country home of the poet and novelist. Here he wrote "Kathrina." It is a picturesque cottage almost hidden in a clump of pines which surmounts a pleasant knoll.

On to the northward you pass between Mt. Holyoke and Mt. Tom. To those unaccustomed to the sight of mountains they seem of vast proportions, though to any one living in sight of the Rockies they would be but little hills.

There is a little, tiny strip of land here that affords just space enough for one small farm. It has been owned for generations by a family named Smith, and the station here is called Smith's Ferry. On to the north we come to Hampshire county. This is the proud county which claims the honor of having been the native home of Dr. Holland, Wm. Cullen Bryant, Fighting Joe Hooker, and several other celebrities. Now take the Boston & Albany express (to ride in a Boston express is enough to make one bless the inventor of railroads) and climb up the Berkshire hills to Pittsfield. Here you may see the very same old house in which Longfellow lived when he wrote "The Old Clock on the Stair." It stands "somewhat back from the village street," and is indeed an "old-fashioned country seat."

If you visit Worcester you should spend a Sunday there and listen to the chimes.

Perhaps the most bewitching city I ever saw was Salem. The houses, many of them, are built in the style of the last century. They seem to have been in a sort of witch dance and to have settled down wherever they chanced to stand when the music stopped. The streets wind in and out in the most fantastic fashion, and the greatest strife in the erection of most of the houses seems to have been to get all the gables possible on the roofs. Gallow's Hill is pointed out to the traveler as the spot on which the witches were hung after having been convicted of witchcraft. The house in which they were tried and sentenced is still standing. It is known as the "old witch house." It was built by Roger Williams in 1631. A druggist now uses the house as his headquarters. Over the old fireplace several old horse shoes are still hanging.

I am having a rest (?) from newspaper work by trying to make myself over into a "commercial traveler." I wish the members of the Woman's Department who get tired of the home cares could know—not feel—for a moment the homesick feeling that comes to us "strong minded sisters" sometimes when through the open door of some little, low house by the track we see, as the train sweeps us by, the light of the fire or the candle shine out.

"Phillipa" is an artist. Her letter made me love

her for the truth there was in it. She is a poet and a philosopher and that greatest of all architects, a home-maker, in one.

One letter, "Home," is sweet and tender in the right way. Let one whose only home is "where mother is" in the "house not made with hands" urge those who are in the home circle not to omit the "little, nameless, unremembered things" of everyday life that go to make up the sunlight or shade of a mother's existence. They will be pleasant to remember when the opportunity to do them is gone forever.

Not long since while dining at the house of a friend I ate for the first time of a "veal loaf." It is capital, and just the thing for the lunch pail. I secured directions for making it, and will write them down: Three pounds of chopped veal cut from the leg, a dry, lean piece; three eggs, three Boston crackers, rolled; one tablespoonful of salt, two-thirds tablespoonful of pepper. Mix very thoroughly, kneading through and through till thoroughly stirred. Mould in a roll and bake three hours with a slow, steady fire. Keep water enough in the pan to keep from burning and baste thoroughly with butter. The eggs are beaten up raw, of course, and mixed with the minced veal.

I cannot see the "card question" in the same light as that in which Mrs. Jones views it. I fancy it is not the cards, but the association, that brings harm. She has strong reasons for her opinion, which are certainly worthy the respect of all others.

I wish I had space to tell you of a Sunday in Boston. The services, the quiet streets—no open saloons or stores—the preaching on the Common, the chimneys and the gardens with the sights and scents of May. But I must let someone else have a chance to say something.

Very sincerely,

Ellen M. Stata (Max Martin)

[We are rejoiced to hear again from this entertaining correspondent and hope for frequent letters.—Ed.]

ARBOTSFORD, WIS., May 16, 1891.

Editor Woman's Democrat:

It is astonishing to notice the misconstruction that some people can put on a few words. I did not say to make a gambler of your boy to prevent his being a gambler, nor to make an incendiary of him to prevent incendiarism. Yet, such is the conclusion arrived at by "May Day," for she says, "One might as well advise seduction of the fair young maid whose virtue soars upon eagle's wings to prove or make her virtuous in after life." Make them strong with knowledge, not weak with ignorance, was the sum and substance of my ideas. The same reasoning can be applied to the "fair maid" or youth, regarding their virtue, the afterlife will take care of itself. If there are those who could sacrifice virtue, without straining their conscience any more than allowing an innocent game of cards played in their home, they deserve the pity of the community, possibly the insane asylum; whose yields to anger in an argument cares more for personal victory than for the success of the truth. An article in the March number of the *Engineers' Journal*, "What of the Children," expresses my sentiments to a dot. Bring your children so close to you by your confidence in them that they cannot but render back to you the full measure of their own confidence, for in this way only can you counteract injurious influences. No feeling of delicacy should stand in the way; it is a false delicacy, at best. Depravity has come through ignorance, through lack of proper instructions at a proper age. Parents have sent their children into the street to learn the most important of all lessons, which should be taught at home so reverently as to awaken only veneration in the mind. Custom is a tyrant that leads one astray as often as aright. A very instructive article on the subject I read in June number *Modern Thought*, a journal devoted to the "Spiritualization of Humanity," Kansas City, Mo. The article or paper entitled "At what age" was read, so says the editor, before the *Mothers' Meeting*,

of Kansas City. Oh, that all mothers could read it. I have just finished reading "Perfect Motherhood," or Mabel Raymond's *Resolve*, by Lois Waisbrooker, very instructive and entertaining, as well.

Yes, "Alzetta," the gospel of Jesus Christ teaches love, kindness, and charity, but it also teaches their opposite. This so-called perfect being has been accused of two hundred errors, so he could hardly put out a perfect gospel, nor could others do so from his teachings, unless they reject fully as much as they accept.

Will write a few things that to me seem objectionable. "A man that is a heretic after the first and second admonitions, reject." But how much better to keep on trying to lead, guide, and save. "If any man love not the Lord Jesus Christ let him be anathema marantha," that is to curse him. "If thy right hand or foot offend thee cut it off." Many have mutilated themselves in following this bad advice. "He that is unjust let him be unjust; filthy, let him be filthy; ignorant, let him be ignorant." How just, clean and wise would people be if this advice were heeded? "All that come before me are thieves and robbers." What a charitable opinion he had of his forefathers. He called people serpents, vipers, Satan, and other bad names, and said, "Depart from me, ye cursed, into everlasting fire." Was this kind, loving, and charitable? Can you find a good man now who would put his worst enemy into a fire ten minutes? "He that believeth not shall be damned." Can we help belief? Is it charity to damn for not believing? He commands others to love their enemies, but damns his to everlasting fire. "But those mine enemies who would not that I should reign over them, bring hither and slay them before me." Not content with having them slain, he wants to see their death agonies, and then have them sent to hell!! Kind, isn't it. But he probably inherited his revengeful vindictiveness from his ancestor King David, who put his enemies under saws, barrows of iron, axes of iron, made them pass through the brick kiln and beat them small as the dust of the earth, stamped them in the mire of the street, and spread them abroad. "If any man preach any other gospel let him be accursed." People do not create themselves. If born in Greece, they preach Pythagoras; in Burmah, Buddha, which is embraced by more than one-third of the human race; in Arabia and Persia, Mohammed; in Stenna, Socinus, etc., etc. They can't help it, yet all are "accursed."

"Whosoever will deny me before men, him will I also deny before my father which is in Heaven." Here he shows malice, unforgiveness and cruelty. "I come not to send peace but a sword." "I come to set a man against his father, daughter against her mother, daughter-in-law against her mother-in-law; a man's foes shall be they of his own household," etc. It seems anything but kindness, love and charity. But I have already taken up too much space, so will stop short.

Engineer's wife,

H. C. P.

LOVE AND HATE.

Love and Hate are rival Goddesses,
One sunny and sweet, one sour and cross.
To serve the first is ever to gain.
The other served brings eternal loss.

I would at Love's shrine lowly bow,
And pay her all my tributes,
For blessings rich and rare
'Mong her subjects she distributes.

But Hate is a bloody tyrant
Ruling with mighty power.
And those who choose to serve her
Low at her feet must cower.

On through life we go
Serving whichever we choose.
Rich blessings from Love we gain
But in serving cruel Hate we lose.

PERU, IND.

Georgia Denning Ellis.

LOVE'S LESSON.

You taught me the task of loving,
In words you now regret,
You won my heart's devotion,
Now teach me how to forget;
You say the task is easy—
That the victory will soon be won,
But a woman's heart with its wealth of love,
Will break o'er the wrong you've done.

You taught me the task of loving,
But, ah! how little you knew
Of the pain and weary heartache,
When I found your love was untrue;
Did you think when you won the treasure
Of a woman's love so deep
That you could cast it aside at pleasure
And her trust repay with deceit?

Will not conscience awake and tell thee
Of the ruin thy treachery hath wrought?
Will a dream of the past rise before thee
Bringing with it one remorseful thought?
But my lips shall no longer reproach thee,
For in memory thou art dear to me yet.
You have taught me the task of loving,
Will you teach me how to forget?

Mrs. Nellie Bloom.

WEST OAKLAND, CAL.

HORTON, KAN., May 6, 1891.

Editor Woman's Department:

I know these columns are mostly dedicated to the use of married women but I wonder if there aren't some girl-readers that would be interested in a girl's efforts at writing for the *Magazine*? I am only sixteen but live with my sister whose young husband is a "fire boy," and as he takes the *Magazine*, I often read and am greatly interested in the Woman's Department. I enjoy housekeeping ever so much although I am only a novice in the art, for an art it surely is.

We have a house of five rooms and always keep each one in order besides doing our own laundry work and sewing, and still have ample time to go calling, receive company, etc. On Monday we always clean up over Sunday and do numerous "odd jobs" preparatory to our week's work. Tuesday is wash day and we usually do some scrubbing on that day also. The clothes being folded that evening, I get at the ironing early Wednesday morning and usually get through by 11 or 11:30 A. M. The remaining days of the week are occupied by different kinds of work such as baking, sewing, writing, etc.

I do not do much fancy work, but like to do hemstitching very much and can get along quite fast at it. I hemstitch sheets, pillow-cases, napkins, etc. for my sister, and underwear, aprons and handkerchiefs for myself. I generally take one evening in the week to answer letters and write in my diary. I take great pleasure in the latter and think everybody should keep one. And now about letters. I don't think any one ought to allow her housework or society matters to make her neglect her friends, as it is only a habit, and one can just as easily get accustomed to answering letters promptly as to neglect them for a week or so and sometimes longer. And another important duty of every woman is to read, not only the newspapers but books, instructive, entertaining ones, I mean, not "yellow backed novels." I read some novels myself but not the trashy ones.

Your religious duties should certainly not be neglected for anything. You ought to manage to attend at least two services each Sunday and prayer meeting once during the week. Well, I didn't intend to preach a sermon when I began and as it is near supper time and my sister's "hubby" will soon arrive I will close with best wishes to all interests of the dear *Magazine*.

Merl.

[Such a nice girl as this should not long be allowed to remain merely a "sister" to a fireman.—Ed.]

GLADSTONE, MICH., May 12, 1891.

Editor Woman's Department:

I have been reading the *Firemen's Magazine* and so many of the sisters say that a man's heart lies so near his stomach that in order to have him good natured you must keep his stomach full of goodies, such as pie and cake. Well, now, not one of you have said "Suppose he does not furnish the necessities, how am I to make pie and cake and keep the cupboard full, as some of you suggest?" I know some men would like to furnish plenty for their wives to cook but their circumstances would not allow, many times through no fault of theirs, perhaps through sickness or accidents or something like that. Pray tell me, then, is he to be a bear around the house on account thereof? I say no, emphatically. And the wife is not to blame for not cooking if things are not furnished. Then again, others could not cook if they had plenty, all owing to their mother not teaching them. For such was my case, as I had never cooked a whole meal when I was married, and yet I was of age. I had a lovely, Christian mother who was kind to every one and was too indulgent to her baby girl to teach her to cook, and as I preferred almost every other kind of work to cooking it was very natural that I did not ask to do much of that. Well, my parents were not wealthy, and my husband was a workman, so of course, I had to cook. You just ought to have seen my first batch of bread. I did like the city girl at her first housekeeping, sat down and cried. I don't think we fed the bread to the dog, for I think it would have hurt him. But as I am a fireman's mother it is so long ago I can't quite remember; only one thing I do know and that is I have been called a good cook and good housekeeper many times since, for I was handy, could do any kind of work and soon learned to cook with the rest. I have no girl to teach to work or I certainly would have her do all kinds of work as far as I know myself. So I would say to mothers, teach your girls to work, for it is no disgrace. Friends that would shun you for working are not worthy to be called such. As for myself, I despise such friends.

Yes, I agree with some of the sisters that quite enough has been said on how to manage a husband or wife, as what would remedy some would ruin others, as no two are "dispositioned" alike. I close with a good wish for all.

Fireman's Mother.

STANBERRY, MO., May 18, 1891.

Editor Woman's Department:

I read the *Magazine* and think it very interesting. "Fireman's Schoolmarm" says: "I don't believe any woman would really not vote if she had the opportunity to do so." Now, I might vote, but not for a woman. I don't think it a woman's place to hold a public office. I think if men would vote for principle instead of party we would have better laws. I think women ought to be interested in politics and use their influence to direct the men in the right direction. I don't believe the majority of women believe in "Woman Suffrage." I would like to hear from some of them on the subject. As for prohibition, I don't think the law will ever be passed that stops the manufacture of whisky. Deliver me from "women's crusades." I think they do more harm than good. As I understand it, the temperance question is divided into three classes: prohibitionists, moderate drinkers and drunkards. And, as I understand it, moderate drinkers are those who take a dram once in a while and never drink to excess. Now, I think the majority of the people of the United States come under the class of moderate drinkers, and they believe in people being temperate in all things, and I think they can do more to promote the temperance cause than those who go to extremes. I think the way to reform drunkards is through the religion of Jesus Christ. If all the money that is spent in the cause of prohibition was used to educate and enlighten the poorest classes in large cities, more souls would be saved and better voting done. Also, if those grand men and women who spend so much time and money working for prohibition, would turn their attention to the oppression of laboring people and use their influence for

them, more good would be accomplished. For instance, just think of the many thousands of railroad men that never get any Sundays, and the thousands of people in large cities who do not attend church and cannot enjoy any pleasure on account of receiving such low wages, while their employers make fifty cents or more on every dollar, and have all the pleasures of life. I can't any wonder some of them get discouraged and get drunk. Frank Forrester in his article on the woman question, says, "As a profession, 'divinity' suits women better than law or medicine." That may be so, but more women ought to study medicine. I think law, as a profession, is for men only. I believe there is an opening in every town or city for one or more women physicians. I don't mean that we ought to discard men physicians, we need them too; but women ought to make a specialty of women's and children's diseases, and above everything else, midwifery.

Of all the letters in the May number of the Woman's Department, I like the one from Trenton, N. J., the best. Yes, wives of railroaders, always kiss your husbands good-bye, and above all, pray for them when they are on the road. By leading a true Christian life yourself, you may save your husband's soul if he is not a Christian.

I will say a few words in behalf of the boys of 56, and then bring my letter to a close. Times are dull for them here now, regular firemen being put on the extra list, and so forth; besides, they have a dangerous road to run on, but they are brave and will face many dangers in order to support their families. I think more of the writers would sign their own names but they do not like to have their letters criticised by friends and acquaintances. Therefore, with best wishes for the B. of L. E. and writers for the *Magazine*, I will sign myself

Se'la.

[It is refreshing to find a woman with opinions even if they do not altogether coincide with one's own. There will probably be quite a difference of sentiment regarding those expressed in this letter and we would like to hear from our readers.—Ed.]

VANCEBORO, May 11, 1891.

Editor Woman's Department:

While parading Railroad Avenue on the evening of the 9th of May, I fell in company with Bro. Whit Noble, and after a few comments on various subjects our conversation would have been brought to an abrupt end had I not hinted that I would like to see their Lodge hall, when he very kindly invited my lady friend and me in. Of course I expected to see the hall well swept, and tables set in order for the officers and a row of settees for the members, but I stopped at the door in surprise when I beheld a nice all wool carpet in bright cheerful colors on the floor, and the walls decorated with pictures in deep gilt frames, and charts of the three orders that meet in that hall, namely: B. of L. E., B. of L. E., and A. O. U. W. (You see, boys, I put the B. of L. E. first, for it is nearest my heart, as I know it would be first in thought in time of trouble.) The tables were draped very prettily, and they had nice chairs for all and a good cylinder stove, that could heat up the hall in a very short time. The three brothers that were in the room looked rather surprised at our entrance but did all in their power to entertain, and the call was one not to be forgotten very soon. If, at any time, you do not have as good attendance as you think you ought, you will know the fault is not in not having pleasant surroundings and good company.

If we had enough ladies to form an auxiliary in Vanceboro I know we would soon organize so we could help, cheer and encourage you in the good work in which you have enlisted. Because we do so little, don't get disgusted with us, and think your Western brothers have a more intelligent and ambitious class of women than you find in the East, for if we would only get started I know we could and would accomplish as much as they, according to our

number. Well, boys, are you just merely existing? Of course you all know, and attend the Lodge as regularly as possible, but for all the readers of the *Magazine* know, or the members that have belonged to 37 and have gone west, unless you keep up a personal correspondence, they will think you have been a long time dead.

You know we are not wanted to say anything about the boys and their lodge in the Woman's Department, and that is why I dare question you. I think you wouldn't attack a lone woman among so many men, but for all, in fancy, I see some one turn up his nose and say "a regular old Aunti-poke-your-nose," but you all need a scolding for keeping silent so long, and I won't care if it provokes some one enough to write something. I know you are deeply interested and earnest workers, at least, I know Bros. Noble, Shea, Robinson, and another that would seem foolish for me to mention, are, and have no doubt but there are many more that I know nothing of. By the way, I know the above mentioned to be engineers of long enough standing to be members of the B. of L. E., but I am glad to see you stand by the old banner of the "Tried and True."

Now, for fear the Editor will think I ask too much space, and will not allow me any, I will close my letter with best wishes for the Brotherhood.

A. E. K.

[You see you got into the Woman's Department, boys and all.—Ed.]

MATTOON, ILLINOIS, May 5, 1891.

Editor Woman's Department:

As this is a lovely May morning I will make the Woman's Department a call.

I think W. B. Richmond's letter in May number is an insult to all true wives. He says, "How often do men come in and find their wives out riding or walking or at balls with other men?" Because one woman does wrong must all women be condemned? Nine times out of ten the man sets the example. What is this woman's husband doing at the other end of the road? Still, if he spends his time around the saloons and gambling houses his wife is to blame for it. He says they take to drink to drown trouble. I would think water a more suitable thing to drown trouble. There is always some stream close by. Because one man does wrong I don't say they all do, for I have one I know does right when he is away from home and nothing could induce me to forget him for a single moment. If he can't go with me to places of amusement I stay at home. I think if Mr. Richmond will do right himself when he gets a wife, if he hasn't one already, that his wife will be willing to follow his example. How many young, innocent girls are caught by the bewitching smiles and evil snares of vile men and dragged down to shame and disgrace. Weigh in the balance and see which is lacking.

"Alzetta," of Missoula, Mont., says her husband is not affectionate and wants to know what remedy there is for his coolness. If he is good in other ways probably it is due to his age, for when some men gets along in years they think hugging and kissing are all foolishness. I don't think there is any remedy for this fault. I would advise her to bear it the best she can, for she is not alone. There are hundreds of others pining their lives away for a few loving words or a caress, which they never get. Still, no one that has never experienced such has any idea what heart aches she endures. I hope there will a time come when those unaffectionate husbands will see their mistake. They little dream how their wife feels, how a loving word would brighten her life for many a day, how a wife remembers the loving words her husband speaks to her when he is away. But if they are harsh words they go to her heart like a knife. She can see no object in life for her, for her husband is all she has to look to for happiness. As Rose Temple says, "Always look on the bright side." That is hard to do. Some times it seems as if all was darkness, so heavy no light could enter. It would be much better for every one if she always could look on the bright side but it seems as if it is nature to see the dark

side first, but I hope there will be a time when all will be brightness.

Annie, of Gleichen, N. W. T., gives the young men good advice. I see Mother Jones has not forgotten us. No, I am not the Mrs. Taylor you think I am, for I never have had the pleasure of meeting you, but nevertheless I am your sincere friend, as I am well acquainted with the Editors of the *Federationist*. I knew you edited the Woman's Department in that paper, but we still want you to continue letting us hear from you occasionally. I am afraid I am wearing the patience of the Editor, so I will say no more this time. Good luck to all.

As ever,

Mrs. J. W. Taylor.

MARQUETTE, MICH., May 26, 1891.

Editor Woman's Department:

I wrote a letter last January, then my courage failed me and I never sent it, and my husband has asked me so many times, I'll again make another attempt—so here goes, not trains three nor fifty-five, but my letter.

This is a pretty place of about 11,000 inhabitants, beautifully situated on Lake Superior. It has many good schools and churches. There is a great amount of building being done this year. A large opera house has just been put up in the last year, and now the work has begun on the Marquette County Savings Bank. It is to be six stories to one street and seven to the other; also many very nice residences, etc.

I've been reading the *Magazine* and am glad the Woman's Department has so much more room. There are so many good letters. How many times I have felt like "Vernie" wrote, when I see my husband leave the door with lunch pail in one hand and overclothes in the other.

I have never blackened my husband's shoes yet, but on the other hand he has mine. If I should, in his presence, I'm sure he would say "let me do that." When he proposes going somewhere we usually go.

Poor "May," who wrote so long ago, I do wonder if there are many such homes? And doesn't she have the "pie and cake" a Fireman's Mother writes of?

Here is a cheap cream cake that I think is good. One egg, one cup sugar, one tablespoonful butter, one cup milk, two cups flour and two heaping teaspoonfuls Royal Baking Powder. Flavor with lemon or any other preferred, and bake in three layers. Cream for above: One-half cup sugar and one egg beat together, one fourth cup flour, wet with a little milk, stir this mixture into one-half pint boiling milk, flavor with same as cake when thick, let cool and spread between layers.

Now I wonder if my husband will guess who wrote from the Queen City of the Upper Peninsula?

Wishing the boys of the B. of L. F. and the sisters every success, I remain

It is I.

[Come again.—Ed.]

PRAIRIE DUCHEN, April 28, 1891.

Editor Woman's Department:

"Olive," in the February *Magazine*, wishes some one to lecture the young ladies and gentlemen, and give the married folk a rest, so I'm going to lecture the girls, but if any one else wishes to listen they may.

anything
? Is that
you leave
the latest
ian" and
"I said"
garnished
u wound
answered
"I'm not

ld to talk

about, and lots of nice things to say about them, and there is no need of talking like a philosopher to be interesting, either. Sensible small talk on every day affairs is as necessary as the higher and loftier subjects, for it is the small coin of conversation. It gives ease and grace to what you say. Stiff, exact phrases and philosophical talk deaden the flow of soul, and something else is needed to fill in the crevices, round off the corners, and give to conversation a touch of color here and there. Nothing does this so well as chit-chat. Nothing lets you enter into the life and soul of the talker so well as this chit-chat either, so let it be true and natural. Let your small talk be about the happenings of olden times, and of the present times, the people about you (but not your neighbors,) your trip to the country, the latest political event, summer hats, article in last *Magazine*, your latest party, a new book, anything. Don't be afraid to express an opinion or sentiment, and here are some more don'ts for you: Don't talk "temperance" to a person whose father is known to like liquor too well; don't be personal; don't find fault, for that ruffles your temper and spoils the shape of your mouth; don't "back-bite;" don't flatter, and don't contradict, even if you know you are right; don't be inquisitive, don't leer at any one's religion, and don't make "I" the subject of every sentence. Don't leave a word of appreciation or love unspoken till it is too late; don't wound another's feelings with your wit, and last but not least, don't talk too much.

Talk not to hear yourself talk or to kill time, but to interest, enlighten, and to teach yourself, for we gain ideas by imparting them. Let your conversation be light, airy and filled with wit, humor and pathos; then, again, let it be solid and filled with meaning. Have variety. "Variety is the very spice of life," and too, it is the very spice of conversation. Know when to drop a subject before it becomes distasteful. Know when and what to take up next. Speak good English, speak with interest, and learn to pay attention; then will you be sought and listened to with pleasure, interest and profit.

Nora Bull.

ODE TO THE SCISSORS GRINDER.

Hist! what's that awful sound I hear?
That sound so dreadful to the ear:
Ah, plainer now—'tis coming near—
'Tis the terrible scissors grinder!

Ting-a-ling-a-ling-a-ling,
From day to day the same old ring;
Oh, a most formidable thing
Is that merciless scissors-grinder.

Oh, one's life, indeed, is woe,
As one sits and tries to sew.
While such agony one must undergo,
As is caused by the scissors grinder.

Ting-a-ling-a-ling-a-ling,
Hour by hour the same old thing—
The same old melancholy ring.
The ring of the scissors-grinder.

Whether muddy or dusty, 'tis ever the same,
Yet, after all, why should we blame?
No higher ambition has he for fame,
This patient scissors grinder.

Yet, think not that I, by writing this rhyme,
Seek to make my life sublime;
Nor to immortalize, in time,
The name of "scissors-grinder."

I wonder in the sweet bye-and-bye,
When this dreaded object comes to die,
If there can be, in the realms on high,
A home for the scissors-grinder.

Vernie Coffenbarger.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

UNION MEETING AT SCRANTON.

Opening Exercises, Sunday, May 31, at the Academy of Music, which was Overflowingly Packed—A Right Royal Welcome Extended to the Delegates by the Mayor of the City—A Number of Ringing Speeches, Including a Masterly Address by T. V. Powderly.

On Sunday, May 31, a grand union meeting was held in the beautiful and enterprising city of Scranton, Pa., the home of T. V. Powderly, General Master Workman of the Knights of Labor.

The *Scranton Times*, in its report of the proceedings, says:

Sunday the city was given over to the railway men. They had full sway all day, and sacredly guarded the fame of a proud city. A nobler body of men never assembled here. The visitors were loyally entertained, and when they left the city they no doubt carried away with them most exalted ideas of this pushing, progressive, and hospitable city. The reception at the Academy of Music in the afternoon was one of the most enthusiastic and successful gatherings ever congregated within those walls. The Academy was crowded almost to suffocation. The stage was tastefully decorated with the choicest plants and evergreens. The auditorium was elaborately decorated with flags and bunting. The speeches were stirring and instructive, and were interspersed with delightful music.

At 3 P. M., when Hon T. V. Powderly, accompanied by Grand Master Railroad Fireman S. W. Wood, made their appearance on the stage, they were greeted with a storm of applause. These two distinguished labor leaders were followed by Judge Connolly, whose appearance brought forth another outburst of applause. The Judge took a seat behind Grand Master Workman Powderly. The other gentlemen on the stage were: Lieutenant Governor Waters, Judges Archibald and Gunster, William F. Halstead, District Attorney Edwards, Mayor Fellows, F. J. Fitzsimmons, Austin H. Duffy, D. J. Campbell, John Spence, Reuben Gillingham, Dave Thomas, M. Elettra, City Lodge, 123. Switchmen: H. J. Larkin, P. F. Roche, James Burnett, secretary of the committee; James H. McAnn, Master Trainmen's Brotherhood, 123, and G. M. Wallace.

The meeting was called to order by Mr. Geo. M. Wallace, who referred to it as being "a reception to the three different orders of railway employes—Brotherhood of Locomotive Firemen, the Brotherhood of Railroad Trainmen and the Switchmen's Mutual Aid Association of North America."

The Mayor, in his remarks, made some pleasant allusions to the character of the

work performed by brakemen, and to the general good character of railroad employes, having had few of them in the lockup in Scranton, probably a less number than the distinguished millionaires of the N. Y. C. & H. R. R., who were recently indicted for a misdemeanor, by which a number of persons were killed. Continuing, the Mayor said:

It affords me great pleasure to welcome you to-day. We have a city that we can well feel proud of, and we feel we could welcome the world here. It is yours to-day and while you are here, I know you will not abuse it, and I cheerfully turn it over to you, feeling perfectly satisfied that in your keeping it will be safe, and no act of yours will injure its proud name. You are workmen. Everyone ought to work. But still the laborer should receive a fair day's pay for a fair day's work. You should respect and do all you can to help your employer. Still you are entitled to as much respect as he is. All men were created equal, and in this land of freedom, the man who earns \$1 a day should be entitled to the respect given the millionaire, so long as no act he commits deprives him of the honor. So long as the workman honors himself, so long is he entitled to the same respect as his employer. I trust your stay here will afford you much happiness. We will do all we can to make your stay here as agreeable as possible.

Following the Mayor, Lieutenant Governor Waters addressed the meeting. After some playful allusions to the Mayor's liberality in giving away the city, he said:

Here are three organizations with one aim and common purpose, understanding full well that what is the interest of one is the interest of all. It has taken the world some time to find this out, but, thank God, it has found it out. There has been too much individualism, too much looking out for one's self, and the more we have of individualism the worse our society must be. God himself surely provided and surely intended that the whole human race should be one great brotherhood, and until the world has learned this, it is short of very important truth. This is pre-eminently an age of societies. We never before had so many. The creation of these societies will lead us to a common platform—a platform that is built on the Rock of Ages, that is founded on the Sermon on the Mount and that is covered all over by the Golden Rule. If these organizations can act as one, why cannot all?

The speaker, after deploring the friction between railroad officials and employes, said:

Here you have three societies. As I understand you have all a benefit or relief association. Let me say just one word to that; in all events permit me give my views upon it. You have them attached to each society; I often wonder why you do not get together in one organization. I wish to refer to the action of one company which has paid within the last five years \$304,000 of its own money for the benefit of those on its roll, and the association paid \$1,500,000 to the families of men who had met with accidents. Now in that association it did not cost the employes a dollar. It was borne by the company, and this was a volunteer association. There should be a greater communion between the men and those who employ them. I trust that the same spirit that moves all the associations, that of helping one another and assisting those who are weak, may be kept in the hearts of men till all can understand the great teaching of the Master himself, which was the Fatherhood of God and the Brotherhood of man.

Following Gov. Waters, S. E. Wilkinson, Grand Master of the B. of R. T., addressed the meeting, the largest he had ever addressed, so large, indeed, that he felt that

he was "waking from a dream." Bro. Wilkinson then proceeded as follows:

We didn't come here to-day for the purpose of satisfying any particular organization, but to grasp the right hand of friendship of other organizations in existence to day, and I believe that there are a great many things that you and I ought to be thankful for to-day if we never were before in our lives. The first thing we ought to be thankful for is for this book, the Bible; the second is for this flag, the American flag, that every American loves and reveres. That book is yours. It contains within its covers the fundamental principles that govern us. It is our guiding star; our destiny is written in its pages.

Brother Wilkinson paid a fine tribute to the ladies in saying:

I was present at a union meeting called by the Brotherhood of Engineers at Indianapolis when there were 2,000 men in attendance, but there was not a woman gracing that audience; they were excluded. A great many have said on different occasions that we made the mistake of our lives when we closed out the best companion that God ever gave to man. [Cheers.] I venture to say that there are many men to-day enrolled on the register that would not have had the courage to join the Brotherhood if it were not for the little women behind them, and we are thankful to-day for the encouragement they have given us in the past, and we only hope they will continue to do so in the future. Only for them to-day you and I would not occupy the position we do at the present time.

Bro. Wilkinson then proceeded to tell the audience that Lieutenant Governor Waters did not voice his sentiments nor the sentiments of a great body of railroad employes of the country, and continuing, said:

It is generally conceded in this country that all men have certain rights, and while I have no desire to enter into any lengthened controversy, we would like to call the attention of His Majesty, the Assistant Chief Executive of the great State of Pennsylvania, to the fact that there are a great many railroad men who are not in harmony with the train of thought that he is. He stated that he is in favor of mutual organization. So are we—if the composition is right, [cheers] but we, as a class of people, are not in favor of organizations that are controlled or owned by railroad corporations. The gentleman said that every individual member identified with them had become so from choice, and we want to say to him to-day that that is a mistake. There was a power behind that that was invincible. The corporations would say, "you will either do our will and our bidding or else you will walk out of the services of this company." There are the records of the Baltimore & Ohio Railroad with thirty millions of dollars that belongs to the brakemen, switchmen and engineers, and it is only a gilt edged way of putting it; they don't begin to give the benefits they claim to. We have paid in the last seven years over a million and a half dollars to those that were disabled and at their death to the relatives that survived. Was that all? Not by any means. We stood by their bedside in sickness, we alleviated their suffering and distress, and we laid them in the quiet of the grave. These things should not be credited to the Mutual Associations that belong to railroad corporations. The gentleman presented the fact to you that in the composition of these mutual institutions the company saw fit to elect five, a majority if you notice, while the employes were allowed to elect four. They might as well have died before being elected. We have been told for the last nineteen centuries, and especially during these later years, that the greatest evil that we have to combat is money. A great many of us who have had experience have made up our minds that there is a great deal of truth in that. But there are a great many people who misunderstand us, who do not appreciate the fact that it is not money alone, but it is what money hires, in the duplicity of those who are recognized as men, but who take advantage of you.

It is not the monopolist himself that does this, because he has not the courage, but it is the mean, petty hirelings that have made life a burden for you. It is this hireling who is bought for money, and it has been his ambition by running over you to exalt himself in the division or department entrusted to his care so that he might advance one more step. But there is protection to-day. There was a time when many good men with splendid records were removed for no other cause than personal malice. The organization has appeared on the scene, thank God, to stop that. You can look around and take up the records of various organizations and see how many good men there are that have faithfully served the companies for a number of years, who, without a word of warning, were dropped and sent out into the world without being given a chance to say a word for themselves. They asked why they had been discharged and they were told it was because they were not wanted, but they have now an organization that goes to the general manager and demands to know the reason why these men were discharged, and if it is only the personal malice of some of their officers, we demand that they be reinstated at once. The injury to one is the concern of all.

You are the servants of the world, and when you are dead and forgotten, only want the world to protect you and your loved ones whom you have left behind. [Cheers.]

Following Bro. Wilkinson, T. V. Powderly was introduced, and addressed the meeting as follows:

MY FRIENDS—I shall confine myself to a few brief remarks in the discussion of the question that we have before us to-day, and I hope that in what I have to say I will offend nobody. I don't expect that I will be able to please all, but I do hope that in the remarks that I will make some few seeds will drop on fertile soil and be carried away from here where they will take root and grow in other places, so that in the days to come that Brotherhood that was spoken of here may be a reality among the toilers of America. [Applaus.] We have, as Brother Wilkinson told you, been for seven years in this organization in the endeavors to alleviate the condition of railroad men. I congratulate him for the work of seven years; he has a record to be proud of, and wherever he goes from here, to the West or to the Southland, there will he find the railroad men in their councils, such as this meeting, together communing with each other—men that handle the brake wheel, lever and punch, and everything else that goes to make up railroad management, all taking notes and studying to strengthen railroad organizations.

The idea is springing up, it is in the air, that that which is an injury to one is the concern of all, and the day will come when the poor man who stands aside when the train sweeps by, with his pick and shovel in his hand, to allow that train to go on to its destination, that he, too, will be able to go on to his destination, when he who digs the earth beneath the ties will be taken care of by the Council that will make up the future railroad organization of America.

A few moments ago our honored Mayor extended the freedom of the city to you, and in his remarks he said that he found that very few railroad men got into the jail. I congratulate the railroad men of Scranton. You were not always as good as that. [Cheers and laughter.] For six years as Mayor I had quite an intimate acquaintance with these railroad men and I know I had some pretty hard jobs getting the boys on the train so that Mr. Hallstead would not find it out. But you are getting over that, and why? Because you had no organization to be proud of. [Cheers.]

In the old days you might go wherever you might find an agreeable companion, but now you can find not only agreeable companions in your organizations, but spend your evenings in lodge and committee meeting in endeavoring to improve yourself and your friends, and that is one of the reasons why our Mayor can give such a good record of the railroad men of Scranton.

Now let me say a few words about relief associa-

tions. Lieutenant-Governor Waters spoke of the magnificent sum of money that was paid to the relief of widows and orphans by the company. He knows this from a published report; that part of the report I take exception to. I desire to say here that the money was paid to the company by the railroad men who always received it as a charity. Your neighbor earned it, and before you had a chance to do with it as you wished to it was held from you to be turned over to the managers of the relief association, and they doled out the money to you for your broken head, arms and legs.

In our organization we believe in that spirit of independence that will prompt a man to save his own money and spend it to such advantage as he deems proper. Until the organization shall have traveled that far, till you have learned that lesson, the organization will not be on the footing that it should be. A few weeks ago in New York, I attended a meeting at the Cooper Institute at which one of the speakers unmercifully scored one of the policemen doing duty in the hall. He said they were useless. Any one who has traveled through New York knows that a policeman is of some use, but in that discussion I learned that the policemen of New York were pensioned, but the speaker found fault with pensioning men for clubbing other men's heads. Yesterday all through this land long lines of men marched with solemn tread to the cemeteries, and each one carried in his hand flowers as beautiful as those which surround us upon this platform, and these men with shoulder to shoulder, marched to the various cemeteries or homes of the dead of those who once walked side by side with them. We saw other men with tattered garments, unless they wore a uniform of the Grand Army, which they put on once or twice a year at the most, with their knees almost shining through their pantaloons, with their elbows sticking out through their shirt sleeves, with tattered hats, some without collars, there they were; and these veterans walked to lay the last tribute of respect upon the grave of a comrade beside whom next year some of them may rest.

These men, some of them, have pensions. What for? Is there any one here who will tell what the pension is for? In principle it was for serving the country; in reality it was for shedding human blood. If there is any old soldier here let him not be offended. I mean no offense. The war has made us better citizens. I was in the South a few weeks ago and stood on the soil where the colored man was lashed until his life blood wet the earth. It is no wonder his cries were heard in heaven. It was better that thousands should die than to have this brutality continued. The soldier was fashioned to taking the lives of men, and to-day we find the civilian soldier, those who built the nation without destroying anything. We find them in cities and towns just as many, with empty sleeves caused by the twisting of the brake perhaps at the wrong time in their anxiety to save life. We find them in all places and they watch the trains as they go by and they take their march to the next town to stand on highways that their labor once benefitted—the railroad men that lost their arms. Pensions for soldiers who killed men and rats for men who have made the nation the greatest and grandest on earth. [loud and long continued applause.] It may be a dream, they may call us dreamers, but in the Knights of Labor we are reaching out for that day when the government of this nation will have some sort of control over the railroads of this country; that the government may manage the railroads for the people and not for those who hold watered stock. How are these things to be accomplished? How are we going to make it possible for all who turn the brake, who mount the platform, who hold the throttle in their hands, to buy some of the stock of the railroad that he operates on? If you asked him to buy that stock to-day he would say no, because ninety per cent. of it is watered. But we are endeavoring to squeeze the water out of it so that it may be possible for the one who operates it to buy some of the stock. [Cheers.]

When each railroad man will be holding stock, you will have to tempt him with a very nice bait before he will strike against his own railroad. Once it was the custom to sit beside the bedside of him who was

sick, then after he was dead throw a few handfuls of earth over his grave and leave his widow to do the best she could. To-day the organization means more than that. It means that men shall understand the principles of government. It means that they shall know the land in which they live. It means, in a word, just what Brother Wilkinson told you, that you should understand the political history of your country, its aims and motives and do your voting as men, and not as any boss dictates to you. In this federation that we have before us to-day it was my good fortune to meet with those who made out that council and if ever a force were in safe hands, that force was in the possession that Brother Wilkinson has spoken of. You have heard of the unhappy division on the Northwestern road, and many of you have made up your minds to take sides. My friends, who belong to the Mutual Aid Association, take no sides. Stand just where you are. Work with the other organizations as you have done. Rather than cast out for more branches stick to the tree. These little divisions will vanish and this council will stand stronger than before. In union there is that strength that makes it possible for us to accomplish our legitimate ends. While we have such men as Wilkinson I can only say that the organization is ten times stronger. Keep to your fraternity. Allow no man to cast aside any parts of it, but weld them more closely together. There are others whom I would ask you to comfort with the true religion of labor. The man who stands shoveling the coal into the fiery furnace of the passenger or freight train as it goes over the road is as good as the man who sits on the other side of the engine. [loud and continued applause] and the day will come when the knights of the lever may not be too proud to say "we are brothers and we want your aid."

There are many in that organization who are willing to federate and use their influence where it will do the most good. So that you may have brakemen, engineer, fireman, and conductor managing the whole train. And when that day comes you can stand before your employer asking for what is right, and taking nothing less.

The occasion was one of pronounced interest to all who were present, and some important questions were discussed.

THE *Railway Age* says "the employes' saving fund on the Pennsylvania railroad system now amounts to \$674,066, the deposits last year aggregating \$344,152. The number of depositors is 2,590, but it ought to be ten times that. If all railway men would learn the lesson of economy and business foresight which the practice of putting savings at small interest teaches, the amount of their accumulations would be enormous, and the independence and self-respect of the men would be vastly increased." The Pennsylvania railroad system chuckles over its success. Its employes place their money in its clutches and they go with their money. It is the old story of Joseph and the Egyptians, "This day I have bought you and your lands for Pharaoh." The Pennsylvania railroad is raking them in, and after awhile, when its arrangements are perfected, the order will be "No contributions, no work."

WHERE W. D. Robinson sleeps is sacred soil, and there should be erected to his memory a monument to tell to future generations the story of his heroic struggle for the emancipation of his fellow men.

THE PEOPLE'S PARTY.

The convention which assembled in the city of Cincinnati, during the month of May, to organize a "new party," the "people's party," or a "third party," succeeded in so far as preliminaries were concerned. About 1,500 delegates responded to roll call. Committees were appointed, discussion took a wide range, and enthusiasm marked every step of the proceedings, from start to finish.

The great work of the convention was to formulate a platform. This was accomplished, as follows:

PLATFORM OF THE PEOPLE'S PARTY.

Your Committee on Resolutions beg leave to submit the following:

That in view of the great social, industrial and economical revolution now dawning upon our civilized world, and the new and living issues confronting the American people, we believe the time has arrived for the crystallization of the political reform forces of our country, and formation of what should be known as the People's party of the United States of America.

1. That we most heartily endorse the demands of the platform as adopted at St. Louis in 1880; Ocala, Florida, in 1890, and Omaha, Neb., in 1891, by the industrial organizations there represented; summarized as follows: The right to make and issue money is a sovereign power to be maintained by the people for common benefit, hence we demand the abolition of National banks as banks of issue, and as a substitute for National bank notes, we demand that legal tender treasury notes be issued in sufficient volume to transact the business of the country on a cash basis without damage or especial advantage to any class, or cause such notes to be legal tender in payment of all debts, public and private, and such notes when demanded by the people shall be loaned to them at not more than 2 per cent. per annum upon non-perishable products, as indicated in the sub-treasury plan, and also upon real estate, with proper limitation upon the quantity of land and amount of money.

2. We demand free and unlimited quantity (coinage) of silver.

3. We demand the passage of a law prohibiting alien ownership of land and that Congress take prompt action to devise some plan to obtain all lands now owned by alien and foreign syndicates, and that all lands held by railroads and other corporations in excess of such as is actually used and needed by them, be reclaimed by the government and held for actual settlers only.

4. Believing the doctrine of equal rights to all and special privileges to none, we demand that taxation, national, state or municipal, shall not be used to build up one interest or class at the expense of another.

5. We demand that all revenues, national, state or county, shall be limited to the necessary expenses of the government, economically and honestly administered.

6. We demand a just and equitable system of tax on income.

7. We demand a most rigid, honest and just national control and supervision of means of public communication and transportation, and if this control and supervision does not remove the abuse now existing, we demand government ownership of such communication and transportation.

8. We demand the election of president, vice president and United States senators by a direct vote of the people.

9. That we urge united action of all progressive organizations in attending the conference called for February 22, 1892, by six of the leading reform organizations.

10. That a national central committee be appointed by this conference to be composed of a chairman to be elected by this body, and of three members, i. e., from each state represented to be named by each state delegation.

11. That this central committee shall represent this body, attend the national conference on February 22, 1892, and if possible unite with that and all other reform organizations there assembled. If no satisfactory arrangements can be affected, this committee shall call a national convention not later than June 1, 1892, for the purpose of nominating a candidate for president and vice president.

12. That the members of the central committee for each state where there is no independent political organization conduct an active system of political agitation in their representative states.

Those who will critically scan the foregoing document, the platform upon which the "People's Party" proposes to do battle, and at the same time, provide themselves with the latest platform declarations of the Democratic and Republican parties, will be able to discover what new departures are proposed by the "third party."

The issue of "greenbacks" to take the place of national bank notes, is not a new idea. It has often been suggested, and it would seem to be an easy matter, but practically, it would require a great deal of legislation to avoid serious financial embarrassments.

The new departure in finance proposed in the platform of the "People's Party," is for the government to put afloat all the paper money required, make it receivable for all debts both public and private, and then loan it out to anybody and everybody at 2 per cent. per annum upon "imperishable products, and also upon real estate, with proper limitations upon the quantity of land and amount of money." The scheme, should it be put into practice, would at once develop into startling proportions.

The demand for free and unlimited coinage of silver is a question that is now before Congress, and exhaustive arguments have been made for and against the proposition; more are to follow. It is thought by some who have examined the subject, that it ought to be sufficient to coin the American product of the mines, others would limit the amount, while others would have our mints coin all that offers from the outside world.

The prohibition of the alien ownership of land in the United States is eminently a correct idea; and it is unquestionably just to require railroad corporations to dispose of their lands, reserving only so much as will enable them to transact their business.

In plank 7 we have the proposition of government control of "public communication and transportation," that is to say, if those in charge do not make rates reasonable, the government shall become the owner of all railroads and telegraph lines.

It is easy enough to formulate such a proposition, but since government ownership would require an expenditure of about ten billions, (\$10,000,000,000), and since labor would have to pay every dollar of the vast sum, we do not apprehend that the

government will immediately take the contract.

We think it likely that the new party or People's party will give the country a "shaking up." The indications are that party lines will undergo some radical changes and that under changed political conditions, laws will be enacted that will modify in numerous instances, situations which now are fruitful of complaints and wide-spread unrest.

We should like to see laws passed that would either squeeze the water out of corporation stocks and bonds, upon which the people pay dividends, or compel those who control the water to pay taxes on every dollar it represents.

We should like to see laws enacted that would permit a poor man to have his case tried in the courts of the country, the same as a rich man, and when it could be shown that a bribed and debauched judge ruled against the rights of the poor man, he should have his filth-bedrabbled robes torn from him and be sent to a felon's cell by the shortest and most expeditious route.

The indications are that a party is coming which will discard and anathematize class legislation and inaugurate a reign of justice. As we view matters such is the sign of the times.

THE CORPORATION VS. THE EMPLOYEE.

The New South Wales *Railway and Tramway Review*, in its English notes, publishes the following incident of English tyranny:

The case of Armstrong, the South London Tramway conductor, who had his wages arbitrarily confiscated on dismissal for an alleged breach of rules, has been decided in his favour by the High Court. But if Sir Charles Russell, touched by the abominable injustice and tyranny to which the company subjected this poor man, had not generously volunteered to plead his cause gratuitously, where would he have been? He would simply have been compelled to put up with being cheated and robbed by his powerful employers. The point at issue was whether the company's manager had the right to refuse the man a hearing when he was accused, the company contending, with cool impudence, that when he signed his agreement he must be taken to have consented to accept any award the company's manager gave as if given in arbitration. This is now ruled to be nonsense. The man had earned his wages, and, as the company could show nothing to the contrary, the court ordered that he should be paid. But Armstrong, in this simple matter, has been dragged through three courts by the company, who have their shareholders' dividends to waste in persecuting their servants by ridiculous litigation, and but for the generosity of Sir Charles Russell he would have been swindled in the end from sheer lack of funds to fee counsel.

The foregoing brings into prominence a fact well worthy of consideration by organized workmen. It will be noticed that Sir Charles Russell gratuitously took up the case of the wronged and robbed conductor and won a righteous verdict for him, and the conclusion is inevitable, that but for such generous help, the corporation would have triumphed.

In the United States we are ceaselessly told that "all men are equal before the law." The declaration is a shocking travesty of truth. The courts, nominally, may be open to the poor, but in fact, for the lack of money, they are virtually closed to thousands, as was the case of the London Tramway conductor.

It is this poverty of workmen which gives the corporation its relentless grasp upon their lives. Wronged, robbed, degraded, starved, evicted from their habitations, they must suffer in silence. To point to the courts as a means of redress, is a cruelty which, pointing to a remedy, leaves the victim of poverty and wrong to the aggravating reflection, that after all, it is money that throws wide open the portals of justice, without which he is doomed to suffer.

Some relief may be found in organization, but not enough. To meet the requirement, every labor organization should have a fund, created and maintained for the purpose of providing legal talent when the rights of a member are assailed, and the wisdom of such a policy is fully demonstrated by the London incident, in which a large hearted man determined that right should prevail.

THE STATE VS. \$275,000,000.

In the city of New York, where the directors of the New York, New Haven & Hartford Railroad have been indicted as being responsible for the loss of a number of lives in a tunnel, great interest is manifested. The New York *Herald* of May 7th, says:

One of the most important questions of the day is in Judge Van Brunt's hands for decision, on the demurrer to the indictment in the case of the directors of the New Haven Railroad. The question is whether the fiction known as a corporate body is or is not a shield for acts alleged to be crimes committed by directors or officials directing the acts of a corporation; whether there is any law to which a corporation or its directors can be made amenable other than that of their own sweet will. District Attorney Nicoll considers this question of the most far-reaching importance, and is directing his strongest efforts towards establishing it in favor of the people, so that in future corporations shall not be a law unto themselves and be unchecked in the immense power that they wield by any fear of the criminal law.

That the defendants recognize the importance of the question at issue was shown by the array of counsel present in their behalf when the case was called for argument before Judge Van Brunt in the General Term of the Supreme Court yesterday. They were represented by James C. Carter, John M. Bowers, Henry W. Taft, of Page & Taft; Mr. Thatcher and James M. Townsend. The people were represented by District Attorney Nicoll and Assistant District Attorney Semple.

When it is remembered that \$275,000,000 is on the side of the directors the people may well entertain doubts as to the outcome of the trial, but if the judge is above price then the people may entertain the belief that laws were not made to punish the poor and let the rich escape.

CHICAGO CHRISTIANITY.

The Chicago *Rights of Labor* of recent date contains the following:

An editorial in the Chicago *Inter Ocean* last Sunday, evidently written by a Christian minister, on the subject of "The Church and Labor Issues," commences:

"There lie before us three papers in which the attitude of the church toward the labor question is discussed, and all of them are severely critical of the supposed indifference of the Church to the wants and woes of labor. We should have been better pleased had any one of them acknowledged two plain truths: first, that the wants and woes of labor are not numerous; second, that they are not numerous is the direct, almost the sole, outcome of the operation of the Christian religion on the human mind."

The minister of the gospel who wrote this stuff, for it is evidently the language of a minister of the gospel, belongs to a class of men who are profoundly ignorant of everything connected with labor, because, in their Pharisaic goodness, they refuse to use their eyes to observe the woes and wants of labor. Let this writer, if he is honest in his belief that the woes and wants of labor are not numerous, take a trip through the coal and coke fields of Pennsylvania, where men, women and children are even now being shot down like savages because they refuse to work for wages that would not permit them to live at a standard equal to the Hottentot. Let him go there when these human beings are at work. He will see women working at the coke ovens, from the waist up as bare as the naked truth, their babes lying in a wheelbarrow beside them, and the mothers only able to give them the nourishment required to sustain life between heats at the furnace. He will see little children, girls and boys, indiscriminately mixed up from the tender age of five years up, working in and around the mines for ten, twelve and fifteen hours a day to earn sufficient to support life.

Let this Christian minister, for he evidently is a Christian minister, go into the New England factories; let him push his investigations personally in any of the large industrial centers of the country; let him even close at home go into the packing houses in the city of Chicago, or in any of our great retail mercantile stores where children are employed; let him visit the homes of the working classes; let him go to-day to Jackson Park where men are housed, according to the same issue of his own paper in which his editorial appears, "in quarters not fit for swine," and then if he can make the statement as above there is only one way to account for it—he belongs to that class of Christian ministers whose veins are filled with ice water instead of pure, warm, impulsive blood.

Possibly a Chicago minister did not write what the *Rights of Labor* credits to some one of the Christian clergy. In these times there are a number of plutocrat pillars of the church like Andrew Carnegie, who can talk "cloth" with the most renowned graduates of theological schools—men who as soon as they receive their diplomas are ready for a "call." These gold-plated plutocrats can quote Scripture as rapidly as the devil himself, whom they serve, and can always find a paper to print their mouthings and send them forth over the land. But be this as it may, the comments of the *Rights of Labor* ought pretty effectually to satisfy the writer in the *Inter-Ocean*, as well as the *Inter-Ocean* itself, that the "wants and woes of labor" are numerous and cry to heaven, and that "the operation of the Christian religion on the human mind" has not so far been sufficiently ameliorating to create the belief that the millennial era is about to dawn.

BROTHERHOOD OF RAILWAY EMPLOYEES HOME.

We have on our table the first annual report of the Brotherhood of Railway Employees Home, at Chicago, by Jay B. Spencer, Secretary and Treasurer.

It appears that the Home was incorporated May 28th, 1890, and on January 1st, 1891, was opened for the reception of inmates. Since that date four disabled railroad employes have been admitted to the Home, as follows: E. C. Learman, B. of R. T.; L. E. DeLanty, B. of R. T.; T. H. Nace, B. of L. F. and Jno. H. Fowler, B. of L. E.

W. L. Gleason, B. of R. T., was also admitted to the Home, to afford him more agreeable surroundings, but paid for medical attendance and his board. It is thus shown that four disabled railroad employes have within the year covered by the report, but really since January 1st, 1891, been the recipients of the benefits, which the Home, in the spirit of charity was established to confer.

The report shows that the total receipts of the Home have amounted to \$1,862.50, of which \$967.89 is credited to "donations." The disbursements have amounted to \$1,582.19, leaving a cash balance of \$280.31, the Home having no liabilities. The report, referring to other matters, gives the following interesting items:

Finding it necessary to reach the lodges frequently in order to maintain interest in the "Home" among the brothers, it was decided to issue a monthly paper, to be known as *The "Brotherhood Home" Journal*, and the first issue was mailed in January. Since then the *Journal* has been enlarged and improved in many ways, and to-day is more than paying its own expenses. It is our firm belief that this *Journal* can be made to nearly or quite pay all expenses of the Home, and to this end we solicit the earnest support of its agents throughout the country.

We also made arrangements with a publisher of this city, whereby he was to publish our "Prospectus and *Journal*" doing all work, advancing all money necessary, and, if the project was a failure, stand all losses. This has netted us \$823.55 thus far, and will pay us still more.

On May 1, 1891, we took possession of our permanent quarters, a plat of nearly four acres, beautifully located for our purposes, and well timbered, on a ninety-nine year lease, with the privilege of renewal on the same terms and without re-valuation, at the expiration of the first lease, and the buildings now on the property to become the sole and exclusive property of the Home so soon as it shall erect upon the property buildings to the value of \$10,000.00 or over, the consideration being a yearly rental of \$1,500.00. This is based upon a six per cent. interest on a valuation of \$25,000.00.

This lease is considered by real estate dealers who are competent judges, to be a very advantageous one for the Home, and should it wish to dispose of the lease in the future, it would receive a handsome sum for it.

The buildings now upon the property can be made, by the expenditure of a few hundred dollars, to accommodate from fifty to seventy inmates, and other buildings can be erected as our needs demand and finances permit.

In closing this report, I would call attention to the fact that the general public is becoming deeply interested in our work, as is testified by the handsome donations from well known business men and firms of this city, who have investigated the Home, its work and objects, as follows:

The Westinghouse Air Brake Co., \$100.00; T. B. Blackstone, President C. & A. Railway, \$50.00; The National Tube Works, \$50.00. The M. A. Richardson Co., Jobbers in Hardware, Cutlery, etc., a complete kitchen outfit of cooking utensils, tinware, etc.; Moore Bros. & Co., Furniture Dealers, lot of furniture, carpets, etc.; and I could carry the list still further, but this will suffice to show that we may with confidence count upon the support of the general public where the Home and its work is properly presented.

We most heartily congratulate the officers and managers of the Home upon the success achieved, in all regards encouraging, and do not hesitate to express the belief, that when the next annual report of the Secretary and Treasurer is made, still more gratifying results will demonstrate that the Home has a mission which it is fulfilling in a way worthy of high commendation.

THE SUPREME COUNCIL.

The Supreme Council met at Chicago in annual session June 15th, and continued in session until noon June 17th, when adjournment was had to meet at Terre Haute, Ind., in adjourned session on Thursday, September 25th. The principal subject before the Council was the matter of the trouble on the Northwestern Railway, a full report of which was given in our June issue. The notification of the S. M. A. A. that they had withdrawn from the Council was ruled out of order on the ground that no petition or request for withdrawal had been filed, and that no organization could withdraw from the Council except by consent of that body.

Charges were preferred against the B. of R. T. by the representatives of the S. M. A. A. for conspiring with the officials of the Chicago & Northwestern Railway to discharge all the switchmen in their employ. These charges were referred to a committee consisting of John J. Hannahan, of the B. of L. F., and D. J. Carr and J. W. Martin, of the B. of R. C., who were directed to secure all available testimony and report the same together with their finding at the adjourned meeting of the Council. As we go to press the Council is in session. What the outcome will be is purely a matter of conjecture, but it is hoped that the Council will in all regards be equal to itself, that prudent counsels may prevail, that the wrong may be rebuked and the right may be enthroned.

A BABY, six months old, and a resident of St. Louis, by the name of Richard Jones, has sued a railroad, demanding \$5,000 damages for killing his father. Richard is young, but we hope he will get there all the same.

NOTE how the Robinson Monument Fund is growing. Have you contributed to erect a shaft to the *Grand Old Man*?

CHEAP CORPORATION SURGEONS.

The Toledo *Medical Compend* discusses at some length the subject of compensation which corporation medical men receive. The *Compend* remarks that "when a church society obtains the services of a good clergyman they know it, and retain him by the payment of a large salary and by every effort to make his stay in the place pleasant and agreeable. When a corporation, or even an individual, has occasion to employ an attorney, they do not hesitate to pay an enormous price for the service of competent men, and in many instances pay large retaining fees to prevent the opposing side from securing their services."

That is true of churches, corporations, and individuals having the command of ample funds, but as a general proposition, workmen have to be content with quacks in law and religion, and often are required to paddle their religious and legal canoe unaided.

The *Compend* remarks that "when a corporation engages a surgeon or physician to attend to their medical business, the first effort made is to find the man who will do this for the least compensation, or possibly fix the compensation and offer it to first one and then another, until a person is found who will accept their proposition. Railroads pay their legal advisors thousands of dollars each year, while in many instances their surgeon must perform even more onerous work for an annual pass over the road. If more is paid, it always consists of even less than the surgeon would consider his minimum fee for private cases. The argument that because he gets many cases at the low price, he can afford to perform the service, is like that of the grocer buying sugar at seven cents a pound (not including freight charges) and selling it again at seven cents; when asked how he could afford to sell sugar at that answered, that he would sell more of it. The fact is, the more he sold the more money he lost. So it is with the corporation physician, the more he does at these ruinous prices the more money he deprives himself of. The argument would apply to the attorney as well, but he is too astute to be caught with such chaff. He knows full well that having the ability to protect the corporation's interests, his services are in demand, and if not employed by it for a fair or large remuneration he may obtain from the opposition in even a single case in court more than that corporation would otherwise be willing to pay him. The lawyer moulds himself to the wants of his clients. If employed to contest a case against a corporation, he becomes the sympathizer of the people, and when defending the corporation he vehemently maintains corporate rights against popular demands."

We doubt if the *Compend*, in what it says,

has touched the right key. The corporation idea is, that cheap medical men will answer for employées. Why not? If a railroad employé is either disabled or killed, are there not a dozen or more standing ready to take his place? Is it not understood that human life is cheap? Never in the history of the country was the article of such little value as at present. Such a drug is it on the "market" that it is being rated with the "raw material," human labor and skill is required to "work up." Labor is now, even in Congress, where statesmen, (?) heaven save the mark, deliberate, regarded as a "commodity," like hides, or hair, guano, or pig iron—anything to be "worked up," and therefore must take its chances in the "market." In Pennsylvania, and in all of the sweating hells of the great cities, human life is regarded as of little more value than a dog or cat life, and as compared with horse or mule life, the quotations on 'Change, where our plutocratic civilization reaches such a degraded level, and it is going down to it with fearful speed, will demonstrate that a yearling mule or an imported pup would command more "spot cash" than a woman who plies her needle in a sarret, and while dying by inches "sings the Song of the Shirt."

Corporations understand all this, and employ cheap medical men, and these quacks, these shysters of one of the "learned professions" manage, in the coal and coke regions of Pennsylvania and on great railroad systems, to make money. They give prescriptions as the old farmer sows his oats—at random. They are employed to doctor the "herd," assigned, say five hundred families in as many hovels, one prescription will answer for a dozen, besides, the *pay*, though in small sums, aggregates satisfactorily, and is certain.

But, says the *Compend*, the "corporation physician is likewise expected to defend his employers in all cases. He must and does frequently distort facts so as to shield the corporation that pays him. All this is done in many instances for what is vulgarly called a "song." It is a worthy ambition on the part of the physician to be retained by a corporation as their physician, but the fact that competent men in other avocations demand and obtain sufficient pay for their service should always be remembered when accepting such positions."

What an arraignment is this. Even the "corporation physician" must accept degradation. He too must eat dirt. He too must crawl in the dust, must "defend the corporation in all cases," "distort facts," which is to become a common liar, and thereby become a despicable creature in his own eyes and in the eyes of all honorable men.

Such articles as that of the *Medical Com-*

pend naturally lead to important reflections, and are worthy of the consideration of railroad employées. Cheap doctors are able to do far more harm to employées than cheap clergymen or cheap lawyers.

THE *Journal of the Knights of Labor* refers to a Philadelphia wedding for which \$10,000 was expended in purchasing flowers. It was a high life wedding, and "special trains were run between New York and Philadelphia for the convenience of the royalty of the two cities" and in this connection the *Journal* remarks: "Think of this as a product of 'trusts,' and then think of the sad fact that last year more than one person in every six who died in New York died in a hospital, insane asylum or workhouse, and that about four thousand of those who died were thrown into Potter's field, too poor for decent burial—impoverished and degraded by a system which made such magnificence possible. As the choicest specimens of our own 'blue blood' were driven from the depot to the palace of the bride's father, the streets were lined with bewildered humanity; poverty and vice, human wretchedness in rags and filth being the most conspicuous, profanely glaring at a sight that would have made the lecherous gods of Babylon dance with joy." The incident was, we should say, well calculated to excite reflection in the minds of the students of social problems. But just outside of Philadelphia, in the mining and coke regions, something far worse was transpiring. So much worse that we doubt if any human being, unless specially inspired, could describe them; only a special reporter selected for the task by God Himself, could do the subject justice. Pennsylvania is the most degenerate of all the states of the American Union, and a black spot should take the place of the star that represents her on the American flag, or the likeness of some venomous thing like a scorpion or a tarantula. The entire press of the Union should advertise the infamies of Pennsylvania. Her railroads, her coal pits and her coke ovens, separately or combined, one and all, are foul blotches upon any sort of civilization from the dim conception of right by savage tribes to the full-orbed noon of enlightenment of which Americans so loudly boast. The present is the day which the prophets overlooked, when plutocracy met and kissed and pooled their issues, and should Gabriel now blow his trumpet the cell-houses in the devil's prisons would have to be indefinitely increased.

In India, railroad trains are frequently stopped by large swarms of locusts. They settle down in immense heaps and their removal causes vexatious delays.

BONANZA NUGGETS.

Said the wise man, "Words fitly spoken are like apples of gold in pictures of silver," and here are a few "apples" from the *Farmers' Voice*:

By reason of well nigh boundless natural resources, that under the toll of millions of intelligent workers have become inexhaustible mines of wealth, the United States is the richest nation on the face of the globe.

Out of this condition an aristocracy of Plutocrats has been irresistibly evolved.

Patrician castes always work and fight together against the common people whenever their class interests or special privileges are in danger.

This is true of all aristocracies whether of blood or gold, and the commercial nobility of Carthage, Venice and Holland gave as memorable examples of this unity of feeling and action as can be found in the chronicles of the hereditary nobility of France, England or Spain.

The humiliating fact is brought into vivid prominence, that the "millions of intelligent workers"—freemen, voters, sovereigns, etc., do the bidding of the "patrician castes," in which case liberty, independence, education, and "a'that," don't count in the fight. The "common people" do not assert their rights, they do not pull together, they obey the "patricians" and go without resistance, or with feeble resistance, down to degradation.

Again says the *Voice*:

Our aristocratic legal system with its deification of property, made the way easy for plutocratic dominion in the republic of Washington.

The plutocracy by grace of gold, marched into our judicial and legislative halls and became regnant and triumphant almost without a battle.

They dictated court decisions and statute laws which placed the producing masses of America at their absolute mercy, and this abject situation of the toiling millions must endure and become increasingly oppressive so long as Triumphant Plutocrats own the railway system of the Nation, which enables them to tax commerce all it can bear, while through the criminal partiality of the government they are also given the exclusive monopoly of handling the money that belongs to the whole people which is made the effective means of robbing the wealth creators for the enrichment of their oppressors.

The workingmen of the nation are in the majority. They could change conditions by the almighty fiat of the ballot, in spite of the "almighty dollar," if they would unify for the welfare of the nation—for their own good. It is the supineness of workingmen that makes the "deification of property" and the degradation of man possible in the United States. The ballot could be made to reach fundamental wrongs; uproot them, blast them and exile them, but one plutocrat, one aristocrat, can and does make thousands of workingmen do his bidding. Workingmen could, if they would, have honest men in congress and in legislatures and in courts. They could, if they would, *squeeze* the water out of stocks and bonds and compel millionaires to collect dividends on *cash* investments, but they don't do it. The corporation aims its blows at the dinner bucket; aims it at the poor man's shanty; at his wife and children, and there is no remedy

this side of the grave but the unification of the votes of the toilers—in federation.

The way out of all the troubles is plain. It has been *blazed* out a thousand times but workingmen, though they see it, will not take it and march through the wilderness of starvation to the promised land of plenty. They will not federate. "All for each and each for all," is not their Shibboleth, not their battle cry, and the plutocrats are happy. Says the *Voice*:

Free America was settled by the peasants and untitled commoners of Europe, who erected a system of government that was broadly democratic, because its foundation rested on a principle of universal equity, which gave "equal rights to all and special privileges to none."

How comes it then—that with the splendor of this grand republican idea shining full in our faces, we nevertheless hold a governmental practice which shamefully nullifies it.

We see the wealth creators of the country slowly but surely sinking into that condition of poverty and dependence, which has been the lot of the producing masses in all nations and eras.

And yet the Declaration of Independence reads just as it did when Jefferson penned it—and our Constitution makes its claims to righteous validity on the ground that it declares and assures "a government of the people, by the people and for the people."

It is easy, and it is doubtless an imperative duty to state such facts. They are good seed. The demand is: keep on sowing, plowing, hoeing, harrowing, and hoping for a harvest of righteousness. Nothing else can be done. Unfortunately, "free America" never had a system of government whose foundations "rested on a principle of universal equity," or "which gave equal rights to all and special privileges to none." On the contrary, we started out, notwithstanding the Declaration of Independence, with chattel slavery and robbing the Indians. We glorify the national conscience which emancipated the negro, and now we are treated to quotations of the "labor market," where labor as a "commodity is bought and sold," and white slaves, as in Pennsylvania, can be counted by the thousands. No wonder that the old "Independence bell" is cracked, and its voice is silent.

What is the remedy for such curses? Simply to get workingmen federated, and to vote and work and stand solidly against the encroachments of plutocrats. If this cannot be done workingmen may prepare their necks for yokes.

ROBINSON MONUMENT FUND.

The following subscriptions to the *Robinson Monument Fund* have been received since our last report:

James Considine, Little Rock, Ark.	\$1 00
H. C. Chapman, Williams, Ariz.	1 00
J. H. Cunningham and others, Panhandle, Tex.	10 20
Wm. P. Daniels, Cedar Rapids, Iowa	5 00
Previously acknowledged	8 50

Total \$25 70

Remittances should be directed to *Locomotive Firemen's Magazine*, Terre Haute, Ind.

WM. D. ROBINSON MONUMENT FUND.

Wm. D. Robinson, who died at Washington, Ind., on November 7th, 1890, was the founder of the Brotherhood of Locomotive Engineers, and in doing this great work, he as certainly laid the foundation of the Brotherhood of Locomotive Firemen and all other organizations of railway employes.

In closing our obituary notice in the December issue of the *Magazine* we said :

In this hour, when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame, the memory of a man who gave the best years of his life for their benefit? Is not the answer, We will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response.

If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

"What hallows ground
where heroes sleep?"

'Tis not the sculptured
piles you heap!

In dews that heavens far
distant weep

Their turf may bloom,
Or genii twine beneath the
deep

Their coral tomb.

"What's hallow'd ground?"

'Tis what gives birth
To sacred thoughts in souls
of worth!

Peace! Independence!
Truth go forth.

Earth's compass round
and your high priesthood
shall make earth

All hallowed ground."

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep, is hallowed ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallowed ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the Brotherhood he founded will be his imperishable monument, and that his name in connection with that great order is to increase in lustre as the years flow on. But that does not cancel the debt of gratitude the two great brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unaided, our order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two orders, but would invite all the brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

In discussing the propriety of erecting a monument to perpetuate the memory of the dead philanthropist we said in the April issue:

The idea of building a monument to perpetuate the name and fame of Wm. D. Robinson, originated with the *Firemen's Magazine*. The time has come for action. Contributions should be made. We have said that 25 cents each from members of the B. of L. F. would build the monument. But we surmise that other orders would want a place in the splendid work proposed, and we have opened in the Grand Lodge office of the B. of L. F.,

A ROBINSON MONUMENT FUND.

Every contribution, however small or large, will be acknowledged in the columns of the *Magazine* under an appropriate head, and when the contributions approximate a sum which gives assurance of success to the enterprise, a commission made up of the members of the various brotherhoods will be constituted to take charge of the fund and prepare for work.

Members of the various orders subscribing should designate their calling, and if they will give their address it will be regarded as a favor.

Now, let the good work proceed. Wm. D. Robinson, when alive, was the friend of the workingman. He wrote and spoke and toiled to establish a brotherhood and to teach men the power of organized labor. Railroad trainmen had no more ardent and unselfish friend. Let a monument bear testimony that death did not sever the tie that bound him to the living.

WM. D. ROBINSON.

If ever a man deserved the grateful homage of his fellows that man was Wm. D. Robinson. He devoted the best years of his life to the great work of organizing railroad men for their moral and material advancement. He toiled without recompense, he endured privations and made sacrifices, the half of which will never be told. He lived and died in pov-

erty that others might fare better than was his lot. Every man, woman and child who has been, is now, or ever will be the beneficiary of any of the brotherhoods of railway employes owes Wm. D. Robinson a debt of gratitude that never can be paid. Such a man deserves a monument to bear testimony of the love and gratitude of those for whom he accepted poverty, persecution and all their attendant ills, and every member of every organization of railroad employes should cheerfully contribute his mite, small as it may be, to such a noble purpose. Contributions may be directed to the *Locomotive Firemen's Magazine*, *Terre Haute, Indiana*, all of which will be acknowledged in its columns.

"ACT OF GOD."

We notice that the "common pleas court at Philadelphia has decided that the Pennsylvania railroad company is not liable for baggage lost in the destruction of the train in the great Johnstown flood of 1889, holding that the disaster was unforeseen and came under the heading of an act of God, for which the company could not be held responsible. The decision was rendered in the suit of Thomas J. Long to recover \$500 for the loss of two trunks." The history of the catastrophe does not sustain the decision of the court. A weak and unsafe dam was erected and supported by a set of millionaires for their pleasure. It broke and spread death and desolation in its pathway. To charge it upon God may be convenient, but it is a million miles from the truth.

Our acknowledgments are due to Messrs. John Wiley & Sons, Publishers, 53 East Tenth street, New York City, for a copy of the revised (eighteenth) edition of Angus Sinclair's "Locomotive Running and Management," an invaluable treatise on locomotive engines. The introduction to the new edition is quite elaborate, and contains some valuable features which have not hitherto appeared, among others a number of plates illustrating in detail the various parts of the locomotive. This book, as indicated by the number of editions already published, is commanding an ever increasing sale. The author, himself a practical locomotive engineer, fully masters the subject of which he writes, and his book on "Locomotive Running and Management" is doing a great work in educating both engineers and firemen in the full comprehension and proper performance of all the duties their calling imposes.

Master and Servant—Liability for Negligence—Release by Servant Void.—An instrument executed by a railway employé after he has entered the service, releasing the company from all liability for any damage or injury to him by reason of the company's negligence, is void for want of consideration, there being no promise on the part of the company to give him other or new employment or to continue him in its service.—(Ct. Appls. N. Y. Purdy v. Rome W. & O. Rd. Co., 9 Ky. & Corp. L. Jour. 231.)

We are getting on bravely. We have reached the "master and servant" station, just ahead is the *slave pen*; that reached, it will be "master and slave." We are getting back to old plantation times and terms.

CHEAP money is the national nickel coin. It is worth just about a half a cent, and fifteen cents will purchase the required copper to make \$2 worth of cents. We doubt if there is a counterfeiter in the land who can beat the government making cheap money.

A CASE is reported in which a Belgian woman who had received 10,000 francs from a railroad company as compensation for the loss of a husband in a railway accident, learning that a traveler who had lost a leg by the same accident had been paid 20,000 francs, went to the company's office and said: "Gentlemen, how is this? Here you give 20,000 francs for a leg, and you have only allowed me 10,000 francs for the loss of my husband!" "Madam," replied one of the clerks, "the reason is quite plain; 20,000 francs won't provide the poor man with a new leg whereas for the 10,000 francs you can any day get another husband, perhaps a little better one." The lady, who is still young, walked away apparently satisfied.

Literary Notes.

"WHICH WINS?"

We have received from the publishing house of Lee & Shepard, 10 Milk street, Boston, a copy of Mrs. Mary H. Ford's "Which Wins," a remarkably interesting and attractive story which should be read by all students of the social and economic questions of the times. The book contains 312 pages and is divided into 34 chapters, and so interesting is the narrative that the reader does not lay it aside until the conclusion is reached. Mrs. Ford dedicates her book to the Farmer's Alliance and refers to the members "as having become, although busy toilers, what the greatest men have always been, both toilers and thinkers." The author has had special opportunities for studying questions relating to our economic and industrial systems, the defects and weaknesses of which she exposes, pointing out with unerring certainty the reforms that are necessary to emancipate the producing classes from the thralldom of oppression and degradation. In reviewing the story the St. Joseph Herald says:

"Which Wins" is the attractive title of a story of social conditions just issued by Lee & Shepard of Boston, and should be peculiarly interesting to the readers of the *Herald*, for the reason that the author is a Missouri woman by choice of residence, and the subject treated western throughout. Indeed, the scene of the story, while partially laid in Nebraska, concludes in Kansas City, and shows up, in a masterly way, the hideous rottenness of real estate booms and iniquitous mortgage rates. As the personnel of any writer, particularly a woman, is always of interest to the public, we will undertake to introduce Mrs. Mary H. Ford as a woman of unusual attainments. In the past she has been known principally as the writer of essays on scholarly subjects, as a contributor to local newspapers and a poet of rare sweetness and sympathy. In later years Mrs. Ford has shown a strong leaning toward socialism. She was, after the Hielamy boom started, one of the most ardent Nationalists in the west and during the existence of the Nationalist club at Kansas City, its president. It is not surprising then to find her advocating in the present book, what will appear to most of us exceedingly Utopian views. The *Herald*, in calling the attention of its readers to the little volume under review, does so from a purely literary standpoint, without undertaking to argue points with the author. Much, no doubt, which she says is true—practically and economically—but the question is, does she suggest the remedy? The *Herald* does not agree with her in believing that the ills of humanity are to be solved by coöperation, or that a third or People's party will untangle what everybody concedes to be a miserable muddle; but it urges the book on its readers, first because it is a beautifully told story of western life, and last because the ideas are so high and pure that no one can watch the pathetic struggles of the hero, without wishing, somehow or other, things were different. The *Magazine* is persuaded that "Which Wins" is to have a wide reading and that the author is to reap a harvest of well deserved fame from it.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month.

A FIREMAN'S TRIALS.

COMPOSED AFTER THE WRITER'S FIRST DAY'S EXPERIENCE AS A FIREMAN.

There are many learned in science and art,
Who know every rule in rhetoric by heart,
But with all their wisdom, there's few who can tell
What a fireman must do besides ringing the bell.
In day time or night, he must know every grade;
He must study and learn how an engine is made;
He must keep the glass of his windows all clean,
So things on the track may be readily seen.
He must fill up lamps and keep them aglow,
And watch else they burn too high or too low.
He must shovel the coal through a door so small
That, while running, he scarcely can hit it at all;
And the coal must be scattered over the front and back
Or the smoke will be dim that comes from the stack;
'Tis useless to tell you, for I presume that you know,
If the smoke is not black the steam will run low.

There are glands to help pack, ash-pan to rake,
Oil-cans to fill and water to take;
There is brass to rub till it glitters or shine
Like the glare of a diamond just from the mine.
And should you be wearied with hunger or heat,
So weak you scarcely can stand on your feet,
And the hand falls back on your side of the gauge
The man on the right, like a saint or a sage,
Will give you a look which, I guess you all know,
Means down on the deck with scoop in the door.
If there was ever a time you wished you were dead,
It will be when he drops the lever ahead,
Giving the valves full play on their seat,
With the ports wide open; Oh, do you think it is sweet?

No excuse will be made for the things you forget,
Nor the tools that you break or the things you upset;
You must hear every sound, see every thing,
Learn every rule down to "whistle and ring."
You must study the eccentrics, the motion of valves,
You must learn things correctly and never by halves,
And if you wish to attain the height of perfection
Be studious in thought and quick in perception.

J. G. Cary.

The Next Grand Secretary and Treasurer.

At a regular meeting of St. Joseph Lodge, No. 43, B. of L. F., held Thursday, May 14, 1891, a spirited discussion, relating to the proposed resignation of Bro. Eugene V. Debs, Grand Secretary and Treasurer of the Brotherhood, and Editor and Manager of the Magazine, was the principal feature of the business transacted. The meeting was largely attended and the discussion resulted in the appointment of a committee of three to write a communication to the *Locomotive Firemen's Magazine*, embodying the sentiments of St. Joseph Lodge, and appealing to all lodges of the order to use their utmost influence to retain Bro. Debs in the office of Grand Secretary and Treasurer of the order and as Editor and Manager of our Magazine.

We, the committee, therefore take this

opportunity of presenting to all the members of the B. of L. F., as also to the subscribers and readers of the *Magazine*, some of the reasons for our high appreciation of Bro. Debs, which include his long and faithful services to the order while acting as Secretary and Treasurer of the order, and as Editor and Manager of the *Magazine*.

Should we part with Bro. Debs we should be parting with a tried, true and trusty advocate of the cause of organized labor.

By his untiring energy and careful management the *Firemen's Magazine* has become what it is to-day, one of the most powerful as well as one of the most reliable official organs of organized labor in the world.

The eloquent tongue and willing pen of Bro. Debs are always ready to help on the work of organization, for which he has always evinced the most earnest solicitude.

We believe there are just as good men in the order as Bro. Debs, but we know Bro. Debs. He is honest; from youth up—every penny being accounted for, year by year.

We wonder if the "Q" folks would not like to have some of their old, trained, trusted and moral enginemen back on their road, and if they would not rest with more ease, knowing that their property was in good hands?

We believe in sticking to the old love—new men always have to be tried.

Knowing Bro. Debs wishes to better his condition, which is commendable, we say, considering all the sacrifices he has made for our Brotherhood, we should be willing to make sacrifices for him, and give him more than he can realize out of his contemplated enterprize.

We tremble to think of giving up our 17 x 24, which has never failed us on the steepest grade or coldest night, for an engine of smaller cylinder or even the same size that we never tried.

Brothers, let us give this question earnest thought and handle it at our meetings. Let us better Bro. Debs' condition so much that he will remain with us.

If there ever was a body of men that needed just such a man as Bro. Debs it is the Brotherhood of Locomotive Firemen. Therefore, let every lodge file in and do its duty.

In conclusion, we will ask, did you ever meet a man, in or out of the order, who meets you with such a smile as Bro. Debs, or whose double shake of the hand means so much more than words can tell?

THEODORE BURKE,
D. S. SPEER,
W. E. SULLIVAN,
Committee.

[Such expressions of kindness and confidence, while valued above price, place the present Grand Secretary and Treasurer of

the B. of L. F. and Editor and Manager of the *Magazine* in a position which the term embarrassment scarcely defines.

I would not have my brothers of the order over-estimate my services, such as they have been, nor would I have them under estimate the ability and integrity of hundreds of other members, from whose ranks they may select my successor in the important positions the Brotherhood has assigned me during the past eleven years. To be assured that my official acts meet with approval, that I can retire to the ranks amidst a shower of benedictions, is a compensation for work and trial, the value of which exceeds the powers of arithmetical expression.

In publishing the foregoing report of the committee appointed by St. Joseph Lodge, No. 43, I realize how difficult it is to give expression to feelings of gratitude, and can only wish that my successor after years of labor for the "good of the Order" may realize the thrilling satisfaction of having the plaudit, "Well done, good and faithful servant."—EDITOR MAGAZINE.]

Causes for Idleness.

There are several causes of idleness. At the present time there are a great many men idle on account of dull times, but the greatest number are not at work because of willful neglect or carelessness in the performance of their duties and other troubles that occur very often on most of the railroads of the country. As for instance, an engineer or a conductor receives an order to do some extra work, or a fireman gets an order to clean his fire when he reaches the terminal and put the engine in the round house, or do some other extra work which they are not accustomed to do. Instead of doing this work until they can see the proper authorities and have a remedy applied, they get mad, fly off the handle and swear, and "be d—d if they will do it." The consequence is they are either suspended or discharged.

If a railroad employé has a position, no matter how unsatisfactory it may be, pride should be taken in it, and the purpose should be to make something of it. If the decision is to quit, retire like a gentleman, having faithfully performed every duty. This done, the employer will willingly lend his aid in obtaining another position.

Whenever a vacancy occurs from causes, such as I have referred to, the position is generally filled by an inexperienced man, and thus one more is added to the long list, and if this thing is kept up the country, to the delight of capitalists, and the sorrow of labor, will be flooded with men looking for work, and then the times will be favorable for capital to down labor.

Some companies prefer inexperienced

men, though the destruction of property and death results, simply because they will work for half the wages an experienced man demands, and they call this policy "economy."

On the other hand, take a company that employs experienced men, who take care of property, and are paid liberal wages, and it will be found that that company is by far the most prosperous.

In conclusion, I will say to all laborers, that anything worth doing at all, should be well done. To railroad men, I will say, look in the standard rule-book, and read this rule, "Any man entering the service of this company, does so with a willingness to obey all rules pertaining to them." Always think three times, and speak once.

F. W. Mosby.

BIRMINGHAM, ALA.

ONLY FRIENDS.

I said to my sweetheart, one evening,
As we stood 'neath the motionless moon,
And the summer winds toyed with the tree twig,
Do you know, little one, I shall soon
Learn to love you? my life is so lonely,
My soul to your sweet spirit bends.
"Say not so," she answered, "'tis only
For us to be friends—only friends."

u o o o o o o o o o

Somebody painted her picture,
And it hangs in her home on the wall,
And when heart sick, and pain-worn and weary—
When the lights from the chandeliers fall
On that fair face, I deem it my duty
When the long, loveless summer day dies
To go there and drink in the beauty
Of those sweet, sad and sorrowful eyes.

And a voice seems to say in the silence,
As soft as the song of a dove,
"I have sympathy for you and pity
As pure and as precious as love."
While her face in its beauty is beaming,
On pinions of love toward the skies,
My soul soars away, in its dreaming,
To seek the sweet soul in her eyes.

'Tis not idle praise I am giving,
For hers is a picture divine;
And life would be hardly worth living
Without the sweet rapture that's mine
When my soul seeks the soul in her picture,
So sweet, and so weird, and so wise,
I drink 'till I'm drunk of the mixture
Of pity and love in her eyes.

Cy Warman.

[We feel assured that we are giving the readers of the *Magazine* a treat by publishing Cy Warman's beautiful poem, entitled "Only Friends." It will be seen at once that the poet is by no means satisfied with being only a friend to his "sweetheart." If her heart is as gentle and yielding as the poet's fancies are warm and glowing, it will not surprise us to learn that all preliminaries have been settled, and that away in some sylvan retreat in the mountains the poet and his bride are cooing like doves, and enjoying the felicities of a full-orbed honey-moon.—ED. MAGAZINE.]

MEMORIES OF VACATION.

Some scenes there are we ne'er forget,
 Some favorite haunts of childhood;
 In later years we see them yet,
 For memory's grasp will never let
 The sacred image pass away,
 The scenes of many a happy day
 As wandering through the wildwood,
 Beneath some spreading elm we sat,
 To rest a moment there, and chat
 About the long and glad vacation
 The fun we might expect while at
 The picnic and the celebration;
 For school was out, our studies done,
 What else should we expect but fun?
 We knew the places out of town
 Where grew the red, delicious berries.
 What though we scorned the farmer's frown
 Whose meadows we were tramping down?
 Should we consent to stay away
 Lest we should spoil a little hay?
 For don't the robins steal your cherries?
 But we were seeking treasures there
 That just grew wild and everywhere;
 And when we found a cluster bending
 With berries blushing ripe and rare,
 We kept them by themselves, intending
 That mother's lips alone should test
 The largest samples and the best.
 We can't forget the shady nooks
 Where in the water, deep and quiet,
 We slyly dropped our baited hooks
 To tempt the dwellers of the brooks;
 And who cannot remember still
 The rapture of that magic thrill
 As some old, hungry fish would try it,
 And pull the bobber out of sight?
 And breathless with our wild delight
 We scarce concealed our agitation
 When thus assured we had a bite;
 And joy of all our expectation,
 We proudly drew our chub or bass
 Securely out upon the grass!
 The railroad bridge across the stream
 Was oft a place of wild-at pleasure--
 The rushing train, the whistle's scream,
 The hissing of escaping steam,
 As, half in daring, half in fear,
 We stood beneath it by the pier,
 With wondering eyes to measure
 The dizzy height, where rumbling o'er
 Our heads were fifty cars or more.
 And starting there, we used to follow
 Along the green, inviting shore
 Through flowery glen and shady hollow
 Where trees and rocks seemed ours alone;
 In fact, all nature was our own!
 The spring that gurgled from the hill,
 Its clear, refreshing tide inviting
 Our thirsty lips, we see it still
 As when we stooped and drank our fill
 From waters sparkling cold and rare
 As any king should wish to share;
 And, like that spring, untiring
 With larger streams and higher waves,
 Is lost at last in ocean caves;
 So we, in life's uneven motion,
 Are borne upon the tide that laves
 The shores of an eternal ocean:
 Each wondering where his place shall be
 In God's unfathomed, boundless sea.
 O happy dreams of days gone by,
 O memories sweet and cheering,
 How oft we turn the longing eye,
 And on thy snowy pinions fly
 Away from life's encroaching care
 The pleasures of the past to share;
 And now as we are nearing
 The darker shades of pain and grief
 How fondly do we seek relief
 Within thy ever-tempting bowers,
 And often we would drop the sheaf
 Unbound, again to pluck thy flowers
 Whose fragrant odors still impart
 Their sweetness to the weary heart.

STANBERRY, Mo.

George W. Hall.

A PLEA FOR GRATITUDE.

Shall the mound lie hid where the grasses tall,
 In their rank luxuriance weave,
 In some lonely spot unknown to all
 That look for the master's grave?
 Shall no stone be placed o'er the honored dead,
 And inscribed on its outlines brief,
 To skyward point from the mouldering head
 Of the Brotherhood's first Grand Chief?
 Have the enfranchised so ungrateful grown
 That they can't retrace the years,
 When their breasts were filled with many a moan,
 And their eyes bedimmed with tears,
 As the scourge was plied on their helpless backs,
 During many a tolling day,
 With their bodies screwed on the crushing racks,
 'Till their manhood ebbed away?
 Are we ingrates all to begrudge reward
 To the master mind that planned,
 From the fruits of his brain, with wisdom stored,
 The road to the promised land,
 Where the grievous wrongs of suffering men
 Could be told in determined tones,
 And redress obtained for 'em there and then,
 Oft' denied to their cowardly groans?
 I shall ne'er believe we have selfish grown
 'Till the noxious weeds arise
 From his grave instead of the stately stone
 To point to the glorious skies.
 There's a debt unpaid to the Chief deceased
 From the men he toiled for here,
 'Till his noble heart in its beatings ceased,
 As he lay on his lifeless bier.
 We can well reward every friend we had
 In the helpless days gone by;
 When our backs were lashed and our hearts were
 sad,
 And the teardrops filled each eye;
 For alone we stood and our strength was vain
 To resist the powerful foe,
 'Till in wisdom's school we were taught to train,
 And return him blow for blow.
 Let the shaft arise from the sacred soil
 Where his bones at rest are laid,
 As a slight reward from the sons of toil,
 That in union he arrayed,
 To command respect when they sought for right,
 And to feel they were the peers
 Of the men who ruled by the power of might
 During many previous years.

Shandy Maguire.

"He's only a Fireman."

With what evident scorn we frequently hear this expression. The cultured and refined with their silks and laces and arrogant pride, sweep by in majestic disdain when meeting this class of workers, little dreaming that beneath that blouse beats a heart as brave and chivalrous as ever distinguished knight of old, and yet such is frequently the case.

The pampered pets of society would not deign to associate with these men; their blackened faces and horny, toil worn hands exclude them from the set, and yet as Burns said:

"A man's a man for a' that."

What matters the rough exterior, the soiled overclothes and the grease and coal dust?

"A man's a man for a' that."

My theme at this time is to write of a deed of daring and bravery which should be resounded from shore to shore and held

up wherever man is found; a deed which for pure unselfish bravery and love of humanity should hand the name of the principal down to posterity on an even plane with the great heroes whose names we all cherish. Did he lead an army to victory when defeat seemed inevitable? No. Did he scale the walls and spike the cannon and open the gates to admit the enemy to conquer the fort? No; none of these and yet Charles Bryant Campbell, of Nolan River Lodge, No. 449, committed an equally heroic act and his mission was more noble than these; his aim was to save and not to kill, to lift up and not to tear down.

On May 28th as engine 330 was coming along pulling a freight on the Dallas Branch, between Wolfe City and Celeste, there was enacted a most heroic deed. A little boy of two years had wandered far away from the paternal roof, with a big shaggy dog as a sole companion; getting tired he sat down on the track to rest and play with his dog all unconscious of that grim shadowy form stealing upon him. There he sits, pulling the dog's ears, then hugging him close and anon slapping him "ust for fun;" the stealthy form draws nearer, the long skeleton hand is stretched out, the hot breath is on the little one's neck and death almost has him in his clutches; then as the great monster of the rail comes around the curve we see in what manner death intends to claim his victim. Horrors! The little innocent to be thus mangled and torn—no more to gladden the household with his childish chatter. As he hears the rumbling noise he jumps up and starts down the track toddling along with that grim shadowy form at his heels—nearer and yet nearer it approaches, rapidly bearing down on the little one; see, it is almost on him; the skeleton hand reaches forward to grasp the victim. Shut your eyes to the horrible sight; but stay! what is that? Out of the left cab window leaps a form. It is a man with blackened face and hands, clad in blouse and overalls. Along the running board he runs rapidly while the engine is rolling and surging; now he is on the steam chest—what will he do? Ah, now see, he has gained the pilot and without fear or thought of consequences he is going down the pilot while the engine is rocking to and fro in reverse motion. He is now on the end of the pilot, his strong right arm is stretched out; now his hand and that other are side by side, which will win? oh! if the engine would not rock so! there; he came very near falling under, but see, he has regained his balance, his hand is almost to the child and, hold your breath—it is a mighty struggle; death may not be content with one victim, a false move or a sudden lurch may precipitate him under the pilot; then shut your eyes to the sight—so brave a man

to go down that way. But no, his fingers are on the infant's neck, they close firmly around it, then up he has it; a sudden lurch; see, he is falling. Will he relinquish his hold to save himself? No, tenaciously he clings to the little one, he catches the pilot bar with his left hand and raises the little form from the track. Hurrah! he has saved it, but the weight is more than he can climb the pilot with; he swings the little fellow around alongside of the track, the speed is not more than 7 or 8 miles per hour; now he leans over and drops him on the grass somewhat startled but unhurt, and then goes back to the cab the way he came, an unconscious hero, and the little one is soon restored to the loving arms to which it could never have returned but for the coolness and bravery of Charles B. Campbell.

CLEBURNE, TEX.

A. J. Schmidt.

Traveling Members in the West.

We are advised from Denver and other points in the West that that section is overrun with Brotherhood men, some in search of employment, others in pursuit of pleasure, and still others who are drifting about on general principles. As business is slack at present, members of the order who are looking for employment will do well to keep away from there. And as for the numberless excursionists who are traveling for the benefit of their health we are constrained to suggest the old saying that they had better "not ride a free horse to death." It is well enough to get a reasonable number of men over the road, nor have the officials objected to granting them transportation, but if they continue to come in colonies there will be a stop put to the transportation business, and those who perchance may be looking for a job will have some difficulty in getting over the road. Members who travel for pleasure should secure their transportation through the officials of the road they are working for, and not start out depending on firemen, engineers and conductors to violate their rules and risk their situations in helping them on their dead-head migrations.

Union Meeting at Ft. Wayne.

One of the largest and most successful union meetings of the year was held at Ft. Wayne, Ind., June 9th, 10th and 11th, under the auspices of the several railway employes' fraternities. Several sessions were held which were addressed by Grand Chief Howard, of the B. of R. C.; Grand Master Sweeney, of the S. M. A. A.; Grand Master Wilkinson, of the B. of R. T., and other leaders in the labor movement. The principal questions of the day were discussed in a manner to demonstrate that ability and determination are the distinguishing features of the great labor movements of the times.

Visiting members were cordially received and hospitably entertained. The city authorities gave evidence of their high regard for workmen and their organizations by extending the visitors every courtesy that kindness could suggest.

We regret that our limited space prevents us from giving a full account of the proceedings.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

JULY, 1891.

Notice to Secretaries.

OFFICE OF THE GRAND LODGE, B. of L. F., }
TERRE HAUTE, IND., July 1, 1891. }

To Secretaries of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 130 of the Constitution, you are required to report to the Grand Lodge as expelled all members who fail to make payment of their quarterly dues for the quarter ending October 31, 1891. The names of said members must be reported to you by the Collector of your lodge not later than August 2d, and by you reported to the Grand Lodge, in the prescribed form, immediately thereafter. Failing to report the names of expelled members as herein provided, the Grand Lodge will hold subordinate lodges liable for their assessments, as per Section 53 of the Constitution.

Fraternally yours,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Notice to Secretaries.

OFFICE OF THE GRAND LODGE, B. of L. F., }
TERRE HAUTE, IND., July 1, 1891. }

To Secretaries of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Sections 127 and 128 of the Constitution, you are required to report to the Grand Lodge as expelled all members who fail to make payment of their Grand Dues for the year ending July 31st, 1892. The names of said members must be reported to you by the Collector of your lodge not later than August 2d, and by you reported to the Grand Lodge immediately thereafter. Failing to report the names of expelled members as herein provided, the Grand Lodge will hold subordinate lodges liable for their assessments, as per Section 53 of the Constitution.

Fraternally yours. F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Notice to Receivers.

OFFICE OF THE GRAND LODGE, B. of L. F., }
TERRE HAUTE, IND., July 1, 1891. }

To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified, as provided in Section 54 of the Constitution, that no beneficiary assessment is required for the month of July, 1891, and that therefore none has been levied for said month. Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Grand Dues Notice.

1891-92, \$2.00.

OFFICE OF THE GRAND LODGE, B. of L. F., }
TERRE HAUTE, IND., July 1, 1891. }

To Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified that the amount of *Two Dollars* (\$2.00), for Grand Dues for the year ending July 31, 1892, is now due and must be paid on or before August 1, 1891. Any member failing or refusing to make payment of his Grand Dues as above required, will stand expelled, said expulsion taking effect August 2d. Collectors are required to deliver their returns for Grand Dues, together with the proper statements, to the Receivers of their lodges not later than August 5th, and Receivers are required to forward the same so as to reach the Grand Lodge not later than August 10th, as provided in Section 127, (Page 43), of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Quarterly Dues Notice.

OFFICE OF THE GRAND LODGE, B. of L. F., }
TERRE HAUTE, IND., July 1, 1891. }

To Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 129 of the Constitution, you are hereby notified that the dues for the quarter ending October 31, 1891, (such an amount as may be determined by the several lodges, provided in no case it shall be less than five (\$5.00) dollars, are now payable, and must be paid to the Collector of your lodge on or before August 1, 1891. This amount will be in full payment of all subordinate dues and beneficiary assessments levied by the Grand Lodge for said quarter, as provided in Section 132 of the Constitution. All beneficiary members now enrolled and all those admitted prior to September 1, 1891, are liable for the full amount of quarterly dues for said quarter. All members initiated during the months of September and October, are exempt from payment of quarterly dues for said quarter, as provided in Section 129 of the Constitution. Any member failing to make payment as above provided will be expelled from the order, as per Section 130 of the Constitution, said expulsion taking effect August 2, 1891, and the Secretary is required to make due report thereof to the Grand Lodge.

Very fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Bound Volumes.

We still have on hand a few bound volumes of the *Magazine* for the years 1887, 1888 and 1889, which can be had, postage prepaid, at \$1.00 per volume. Every wide-awake fireman should have these volumes in his library. Address *Locomotive Firemen's Magazine*, Terre Haute, Ind.

Beneficiary Statement.OFFICE OF GRAND SECRETARY AND TREASURER, }
THREE HAUTE, IND., June 1, 1891. }

HAWKINS' HAND BOOK OF CALCULATIONS

—FOR—

Engineers, Firemen and Machinists.

A work of instruction and reference 226 pages, with 150 diagrams and illustrations, 9 inches x 6, printed on heavy paper, sold in 10 monthly parts at 25c each, or in one handsomely bound volume for \$2.50; postpaid.

THEO. AUDEL & CO., Publishers, Room 3.

91 Liberty St., New York City.

NOTE.—This work teaches practical men how to advance themselves to the highest positions. "He who reads (this work) makes himself an expert." "I would not part with the H. & C. for five cents." "Joe J. Jennings. "I have found it to be the best ever put before the public," Chas. Spies, Chief Engineer.

Why Shouldn't a Brotherhood Man

Supply Brotherhood men with something they all use? Nearly all Brotherhood men wear overalls, and I am making overalls that can't be beat. It won't cost you a cent and will help me a great deal if you'll ask your dealer for the "Brotherhood Overalls" and insist upon getting them. He will handle them if you insist, and when you get them you will be getting overalls as good as can be built. Every garment warranted not to rip. Look for "Brotherhood" on the buttons.

Manufactured by **H. S. PETERS**, Member Lodge, No. 3, and **F. A. E. Davidson**, No. 419, B. L. E. Office and Factory, Hinesdale Street, **BROOKLYN, N. Y.**

CUSHMAN'S MENTHOL INHALER CURES CATARRH.

Endorsed by the Highest Authority of England.

DEAR SIR:—The Inhaler came in due course of mail, and I am enthusiastic over it. I am satisfied that it will effect an ultimate cure in my case of catarrh and asthma. I shall recommend it to all my friends. Since ordering the Inhaler I have received a copy of Browne's great work, "Diseases of the Throat and Nose" (3d ed.), and I find on p. 558, that he discusses quite fully different remedies for catarrh, etc., and closes by giving Cushman's Menthol Inhaler his unqualified preference in terms of highest praise. He says that he has used it for several years in the Central London Throat and Ear Hospital, and has achieved better success with it than with all other remedies combined. Such an endorsement is worth more than a deluge of old-lady certificates of cure, etc.

DEL RIO, TEXAS, Dec. 30, 1890.

DR. W. W. GATEWOOD.

From the Hon. Ira Mayhew, Detroit, Mich.

DEAR SIR:—I have been a sufferer from catarrh for twenty years. During this time I have consulted a number of physicians (some of them specialists), and tried various remedies, with only partial relief for a time. About two months ago your Menthol Inhaler was brought to my notice. From the benefit I have received from it I consider it an efficient catarrh remedy. It also improved my hearing which had become dull.

IRA MAYHEW.

Head Colds, Hay Fever, Sore Throat, Asthma, Bronchitis, Headache and Facial Neuralgia, as well as Catarrh, yield like magic to the soothing and antiseptic properties of inhaled Menthol. The Inhaler in a neat pocket case costs 50 cents and lasts a year. 1,000 treatments for 50 cents and every one a pleasure to take. Try an Inhaler a week and if not entirely satisfactory return it to me and I will refund your money. At druggists or sent direct by registered mail—same price.

**THE MATCHLESS METAL POLISH CO.,
88 MARKET STREET, CHICAGO, ILLINOIS.**

\$1,000 FOR AN OLD COIN

**IF YOU HAVE
ANY COINS**

dated before 1871, with plain date, send us a list. We pay high prices for hundreds of dates and kinds. Among coins that we want are: silver dollars dated between 1794 and 1868; dates of half dollars before 1864; quarters of all dates before 1868; all dates twenty-cent pieces; all dates dimes before 1868; silver five-cent pieces before 1867; five-cent nickels of 1877 and 1883; all dates of silver three-cent pieces; nickel three-cent pieces before 1870; two-cent pieces between 1864 and 1873; all large copper cents, also small cents with eagles on, also cents of 1873 and 1877; all half cents; foreign coins, fractional and Confederate currency, etc. For above we pay big amounts over face value, if in required condition. This is a comparatively new business, and by merely keeping your eyes open when handling money, you may find many coins that we want. A short time since (Jan. 25), a Scotchman in an Illinois town found one coin worth \$700. Others have done even better. The New York World says: "Many people have become rich by looking after coins wanted by collectors." The Home Journal says: "Collecting coins is a very profitable business nowadays, as there are but few in it. One Boston broker, Mr. W. E. Skinner, buys from agents all over the country, and pays them big sums for rare coins." Coins that are very hard to find in one section of the country are often easily found in others. Largest business, highest prices, prompt payments, best references. Write at once for further particulars, enclosing stamp for reply, which may be worth hundreds of dollars, perhaps a fortune, to you.

W. E. SKINNER, Largest Coin Dealer in the U.S., 345 Washington Street, Boston, Mass.

**RAILWAY
OFFICIALS AND EMPLOYEES'
ACCIDENT ASSOCIATION**

**THE
WHEEL**

Of progress too often becomes the Wheel of Destruction, and at such times the possessor of a staunch, true friend to whom the

RAILROADER'S FAMILY

Can appeal in their sorrow is the greatest boon on earth. Such a friend is the **RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION**, of Indianapolis, whose unparalleled growth during the past year, showing an increase of

\$21,000,000.00

Over the previous season, unanswerably demonstrates its overwhelming popularity with the Rail-
roaders of America.

THINK OF IT!

If you should get caught in that fatal accident which visits so many noble men, and leave nothing to your dear ones, what would become of them? A Certificate of Membership in the **RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION** is as safe and certain as a landed estate, and the relief it secures to the bereaved family is flashed over the wires the very moment the news of a stroke of misfortune reaches the Home Office. No sensible Railroader longer doubts it his duty to carry first-class Accident Insurance. Do not postpone until it is too late, but take a membership with us

Yours truly,

AMERICAN EXPRESS COMPANY.

VARIABLE EXHAUST DAMPER, FOR LOCOMOTIVES.

Patented Nov. 10, 1885.

The use of the Damper, placed under control of the Fireman, assists him in the performance of his duties, so that, according to his testimony, the difference is as day and night, as compared with an engine without the Stack Damper.

RESULTS :

TO THE FIREMAN.—Less labor, no coal gas in the cab, no blowing of cinders and sparks into the front of the cab when open, and easy control of the fire and steam pressure.

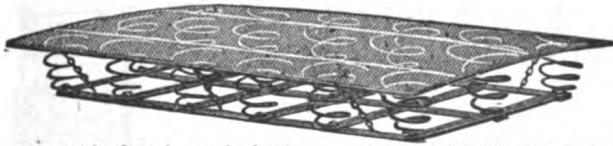

TO THE R. R. CO.—In most cases large saving of fuel, also preservation of the flue joints and firebox, and safety against fire from sparks.

TO THE PUBLIC.—Cleanliness and noiselessness.

Send postal for "Some of the Functions of a Locomotive," written in the interest of Locomotive Firemen.

H. A. LUTTGENS,
Box 131 PATTERSON, N. J.

FIREMEN, ATTENTION!

Why not make your seat in the cab easy by having one of the BUCKEYE CAB SEATS, like above cut? Have been tested and not found wanting. They are cheap and durable, having steel tempered springs and band steel bottom. Save unnecessary jarring. Over 400 in use. Price \$2.00 per seat not over 24 inches long.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

RAILROAD LUBRICANTS

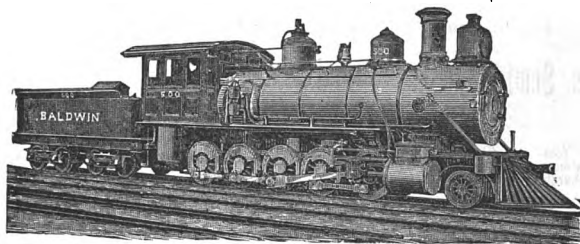

OUR SIGNAL, VALVE,
ENGINE, COACH & CAR OILS

Are in constant use on many
Large Railway Systems. .

References and comparative tests furnished on application.

Baldwin Locomotive Works.

ESTABLISHED 1831.
ANNUAL CAPACITY, 1000.

LOCOMOTIVE :- ENGINES,

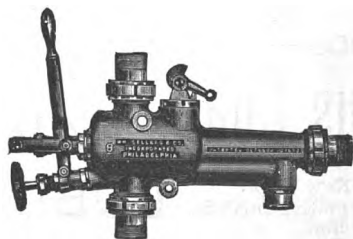

Adapted to every variety of service, and built accurately to standard gauges and templates. Like all parts of different engines of same class perfectly interchangeable. Broad and Narrow Gauge Locomotives; Mine Locomotives by Steam or Compressed Air; Plantation Locomotives; Noiseless Motors for Street Railways. Furnaces, etc. **COMPOUND LOCOMOTIVES.**

BURNHAM, WILLIAMS & CO., Proprietors,
PHILADELPHIA, PA.

WM. SELLERS & COMPANY,
(INCORPORATED.)

SOLE PATENTERS AND MAKERS OF

Self-Acting Injector of '87

Range of Capacity over 60 per cent., and can be regulated, therefore, to work continuously for light or heavy trains. Never fails to promptly lift hot or cold water.

No service on a locomotive sufficiently severe to permanently stop its working.

IT WILL RE-START ITSELF

should the Jet break from interruption of the steam or water supply, as soon as the supply is resumed.

ADJUSTS ITSELF

to varying steam pressures without waste of water. Increases quantity of water with increase of steam, and vice versa.

Very easily operated—Started by pulling out the lever, and stopped by pushing the lever in. Descriptive Circular and Price List sent on application to Office and Works.

PHILADELPHIA, PA.

BRIGHT! CLEAR! BEAUTIFUL!

Can there be any reason assigned why a man whose Business brings him in contact with Oil and Dust should not return to his home at the close of his day's labor With Face and Hands as Clean as Those of His Neighbor, the Merchant? No! is the answer to this question, if he uses

Glenn's Sulphur Soap.

One cake of this Efficacious and Harmless Remedy for removing Dirt and Every Species of Discoloration, will perform its work, leaving Hands and Face the perfection of

HEALTH AND PURITY.

Before the healing influences of GLENN'S SULPHUR SOAP. Abrasions of the Skin, Pimples, Sores, and all Unsightly Eruptions vanish, and in their stead appears a skin as

CLEAR AS ALABASTER.

For Sale By Druggists Everywhere.

ARTIFICIAL HUMAN LEGS AND ARMS,

(MARKS' PATENTS.)

WITH RUBBER - HANDS - AND - FEET.

DURABLE IN THEIR CONSTRUCTION,

NATURAL IN THEIR ACTION,

NOISELESS IN THEIR MOVEMENTS,

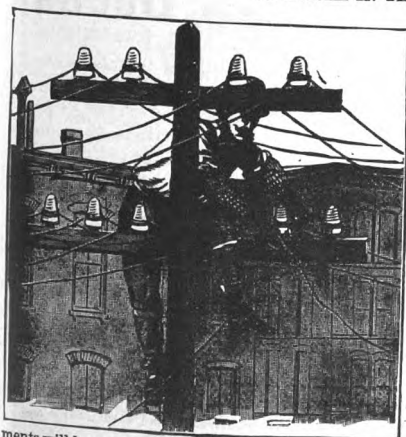

and the MOST COMFORTABLE for the wearer. It is not unusual to see a farmer working in the fields with an artificial leg, or a brakeman plying his brake on a fast running train, or an engineer with hand on the throttle, or a fireman, carpenter, mason, miner, in fact, men of every vocation at labor in the full capacity of their employment, wearing one or two artificial legs with rubber feet, performing as much as men in possession of all their natural members, earning the same wages, in fact, experiencing little or no inconvenience in the use of their rubber extremities.

ALVAH YOUNG is a living example of the remarkable degree to which rubber feet restore lost members. He is a lineman employed by an electric light company. He lost one of his legs some years ago in a railroad accident. He had a Marks' rubber foot artificial leg applied and since then has engaged in active manual labor earning his livelihood. He will climb a pole as dexterously as any of his associates, hold himself on the cross bar with his artificial limb and place the wires in a thoroughly workmanlike way.

Artificial legs and arms with rubber feet and hands can be constructed from measurements and sent to the wearer in any part of the world. A Treatise of 400 pages with a thousand testimonials and full instructions for home measurements.

A. A. MARKS,

701 Broadway, NEW YORK CITY.

ments will be sent without charge. Established over 37 years. Over 11,000 artificial limbs with rubber hands and feet in use. U. S. Government manufacturers.

Good morning

Have you used
PEARS' SOAP?

"I have never come across another
Toilet Soap which so closely
Realizes my ideal of perfection;

Its purity is such that it may be used with perfect
confidence upon the tenderest and most sensitive
skin—EVEN THAT OF A NEW BORN BABE."

Dr. REDWOOD, Ph. D., F. C. S., F. I. C.

*Professor of Chemistry and Pharmacy to the Pharmaceutical
Society of Great Britain.*

Insist on having Pears' Soap. Substi-
tutes are sometimes recommended by drug-
gists and storekeepers for the sole purpose of
making more profit out of you.

**Taking a Pill
is often a
happy thought.**

Beecham's Pills

are the most wonder-
ful antidote yet dis-
covered for ALL
BILIOUS AND NER-
VOUS DISORDERS.

A Box of these pills, costing only twenty-five
cents, constitutes a family medicine-
chest. Wind and Pain in and Weakness of the
Stomach, Giddiness, Fullness, Swelling after
meals, Dizziness, Drowsiness, Cold Chills, Flush-
ings of Heat, Loss of Appetite, Shortness of
Breath, Costiveness, Blistches on the Skin, Dis-
turbed Sleep,

Sick Headache, Derangements of the Liver,
and all nervous and trembling sensations are cured
by using these Pills.

The First dose often relieves in 20 minutes,
and apprehension and sickness can
be avoided by having a box always at hand
wherever you are—in the house, on the train, on
the steamer—ready for immediate use.

Prepared only by **THOS. BEECHAM, St.
Helens, Lancashire, England.** **B. F. ALLEN
CO.,** Sole Agents for United States, 365 Canal
Street, New York, will mail **BEECHAM'S
PILLS** on receipt of price, 25 cents. Cor-
respondents must mention this paper. In-
quire first of your druggist.

Painless.
Effectual.

SCOTT'S EMULSION

**DOES CURE
CONSUMPTION**

In Its First Stages.

Be sure you get the genuine.

VAN HOUTEN'S COCOA

Best & Goes Farthest.

"Samuel, my boy,
They've quarrell'd.
Yer mother-in-
Law says there is
Nothin' like VAN
HOUTEN'S COCOA.
An' the shepherd
Sticks to his rum
And water.
"There's no need
To drop him in the
Water—but after
All, Samuel."

WELLER, SENIOR.

**The Standard Cocoa of the World.
A Substitute for Tea & Coffee.
Better for the Nerves & Stomach.**

Perfectly Pure.

The most eminent European Analysts and
Doctors, certify that

VAN HOUTEN'S PATENT PROCESS

(a secret of the firm) highly develops the
digestibility, strength and natural flavor and
aroma of the cocoa bean.

Sold in 1-lb., 1-4, 1-2 and 1-lb. Cans. If
not obtainable, enclose 25 cts. to either VAN
HOUTEN & ZOON, 106 Reade Street, New York,
or 45 Wabash Ave., Chicago, and a can, con-
taining enough for 35 to 40 cups, will be mailed.
Mention this publication. Prepared only by
VAN HOUTEN & ZOON, Weesp, Holland. al.

LOCOMOTIVE FIREMEN'S MAGAZINE.

TERRE HAUTE, INDIANA.

EUGENE V. DEES, . . . *Editor and Manager.*

PRO AND CON OF OUR CIVILIZATION.

In the *North American Review* for June, Gen. Rush C. Hawkins has a paper, captioned, "Brutality and Avarice Triumphant," followed by Col. Robt. G. Ingersoll, who, inquiring, "Is Avarice Triumphant?" seeks, as best he can, to modify the statements and conclusions of Gen. Hawkins.

The General does not deal in ancient history. He thinks the motto in our national coat of arms should be removed and in its place inserted, "Plundering made easy," remarking that "our contribution to the world's history for the last thirty years, sustains the recommendation for such a change." That is to say, that the distinguishing features of our civilization, for the past thirty years have been brutality, savageness and cruelty, and that species of avarice which, treating laws human and divine with contempt, adopts methods for securing wealth which are scarcely a remove from piracy.

Gen. Hawkins begins with the war of the rebellion and cites instances in which soldiers who went forth to save the Union were defrauded in *shoes*, and the success of the army imperiled by worthless *rifles*—two instances which came under his observation—and he mentions also, a case where certain parties sold old hulks to the Government for \$650,000 which were worth only \$35,000. It is surprising that Gen. Hawkins, since he deemed it advisable to say anything at all about such acts of scoundrelism, if not more properly termed treason, should have been content to close the arraignment with a loss to the Government of about \$1,000,000—a mere drop in the bucket, an amount so small, compared to the sum total of such piracies, as to be utterly contemptible. How does it happen that while he refers to the *shoes*, the *rifles* and *worn-out vessels* as "typical examples of gigantic frauds perpetrated by knaves upon a confiding and patriotic people whose sons were pouring out their life's blood for the preservation of the country," that he omits the patriotic (?) bond buyers who, in league with other patriots (?) in Congress, required the soldiers to take depreciated greenbacks, while they obtained gold—an exhibition of avarice and a disregard for the rights and welfare of the soldiers, who were "pouring out their life's blood," unparalleled in the history of the world.

Gen. Hawkins arraigns the Government for its land-grant acts, which he avers were "bribed through Congress," and which resulted "in the gift to corrupt private corporations of a territory larger than the

whole of France" an area of more than 200,000 square miles. These "corrupt private corporations" were not a millionth part as corrupt as the "bribed" Congressmen who played into the hands of the corporation—who, fresh from the people, betrayed the people, and had the impudence to ask for a re-election, and, in numerous instances, whipped into line by the party lash to which they bend their backs without protest, condone the scoundrelism, and called it statesmanship.

The General pays his respects to another class of scoundrels who engage in railroad wrecking, which he says, "is another favorite American industry which has enriched a set of individuals whose presence would adorn penal institutions." The writer with some detail, points out the methods in vogue to wreck a railroad and pocket fortunes by swindling innocent parties; and yet, these railroad wreckers constitute a part of what is known as our "best society"—often pillars in our fashionable churches, where their piety is made a cloak for their piracies, and where their christianity is measured by their bank accounts.

Reference is made to the "colossal offence against public policy and honest commerce" by "stock watering," which "has assumed gigantic proportions." Continuing, General Hawkins says:

"According to the last *Poor's Manual*, we had in operation on December 31, 1890, 161,396.64 miles of ordinary steam surface railroads, which cost on paper, \$9,931,453,146. These are very startling figures, and it is perfectly safe to assert that two-fifths of that amount, viz.: \$2,972,581,258 represents "water." The street railroads of the country, horse, cable and electric, could not have cost, including equipment, over \$110,000 per mile, but they are stocked and bonded up over \$400,000 per mile; and the elevated roads in New York City, which cost less than \$17,000,000 are stocked and bonded for more than \$60,000,000."

According to the figures from *Poor's Manual*, submitted by Gen. Hawkins, it is seen that the railroads of the United States cost, on an average \$61,534 per mile. There is not an honest man in the country, capable of forming an opinion upon such matters, who places the average cost of railroad building and equipment in the United States at more than \$35,000 per mile, hence

the difference between the actual cost and "watered" estimate—\$26,536 per mile, makes a grand sum total of \$4,281,481,364, a sum total of fraud, of scoundrelism, of piracy, so stupendous—as would make government, law, religion, civilization, truth and justice, could they be animated with life, the most repulsive of all the vermin that afflict the world.

It is not surprising therefore, that Gen. Hawkins would have the motto "in our national coat of arms" read, "Plundering made easy." Legislatures, Congresses and courts, contribute their full share to the achievements of the plutocratic class. True, it may be said that occasionally laws are passed warranting the conclusion that the nation is not quite "dead in trespasses and sins," but the kicks are so feeble that the greatest possible composure is maintained in the ranks of the plunderers.

In view of all the facts so easily at command relating to the degradation of workmen and working women in the great cities of the country, and in its mining and coke regions, we confess that the General's reference to the "unprecedented destruction of moose and deer, coons and gray, red, black and flying squirrels" appears trivial, if not ridiculous. Reference is made to the disappearance of the "bear and elk"—as also the American bison, of which he says: "During the years 1872-73-74 there were killed of the southern herd 3,698,130 and about 1,000,000 of the northern herd, and the sympathetic General also refers to the destruction of the fur seals in the waters of Alaska, the song bird in our forests and the salmon in our rivers. The lobster is going as also the oyster. The General also refers to the "wanton and wicked cruelty in the monstrous destruction of domestic stock west of the Mississippi river," in that no proper protection is afforded the animals in winter. In all of these things, avarice predominates to an extent that defies exaggeration. Not only does the large-souled General refer to beasts and birds and fishes, but he deplores, as is proper, the treatment of American savages. Surveying the panorama of avarice and brutality from his lofty elevation, the General says:

"We may, in my belief, search in vain through all

history for a parallel to match that gigantic scheme of cruelty. It continues from year to year, and has continued in an unbroken stream for more than a quarter of a century, without even a protest from law-makers or the christian clergy."

As we read the General's arraignment of cruelty towards animals and savages, we wonder how it happened that no mention is made of the exhibition of "avarice and brutality" as practiced upon American workmen and working women, by the plutocratic knaves and scoundrels of the period, who "water" stocks, wreck railroads, hunt bear, elk, moose, deer, squirrels, bison, birds, cod and salmon, and cheat savages. In discussing such things the General's indignation rises to scalding heat, but he has no word of denunciation for the damnable devices practiced by those who degrade men and women who toil, whose "avarice and brutality" knows no limit and who contemplate their own infernalism with entire composure.

It is possible that Gen. Hawkins contemplates writing another article, on "Brutality and Avarice Triumphant," in which he proposes to give statistics relating to the destruction of men, women and children by the avarice, cruelty and brutality of employers. Should he do this, should he be industrious in securing facts, should he state them without embellishment, his first paper relating to the destruction of coons and squirrels, salmon and cod, will be doomed to merited oblivion, and should he indulge in word painting—should he tell the story of the "sweating system" as practiced in New York and other large cities, should he refer to the Pennsylvania coke and anthracite coal regions, and ornament his picture with an evicting scene; should he describe child labor in New England factories; should he portray scenes in which lustful scoundrels seek to ruin unprotected girls, as serpents charm birds, then his recitals might arouse such storms of indignation as would lead to reform. It would be showing the world the wounds plutocrats inflict upon toilers, and it would be putting "a tongue in every wound" well calculated to move the great heart of the nation to indignant throbings, for we hold that the "avarice and brutality" inflicted upon any son or daughter of toil is

of more consequence than the destruction of all the coons and cod in the universe.

POPULATION AND RAILROAD BUILDING.

The probability is that many locomotive firemen of an investigating turn of mind will ask, what is to be the future of railroad building in the United States? Possibly, some one may suggest that to know what it has been in the past, will indicate what it is likely to be in the future.

The subject possesses special interest and is worthy of investigation. At the outset of the discussion, what are the chief factors to be considered? Manifestly, area, population and products, agriculture, mining and manufacturing. With such premises, it is seen at once to what breadth the subject expands. Reliable data must soon give place to conjecture, and yet there is much to be said, having the past as a basis of argument and conclusion, which will give deductions and inferences so much the character of facts, as to redeem them from vagary or idle dreaming.

It is stated that railroads were introduced into the United States December 28, 1829—sixty-two years ago—when our population was about 12,500,000, or, as the census figures of 1830 state it, 12,866,020. Practically, railroading was introduced, say January 1, 1830, and at the close of that year, there were in the country 32 miles of railroad, and it will be interesting to show the increase of population and railroad mileage by decades since that time, tabulated as follows:

Year.	Population.	Increase.	Per cent. of Increase.	Railroad Mileage.	Miles of Increase.	Per cent. of Increase.
1830	12,866,020			32		
1840	17,069,453	5,203,433	32.67	2,302	2,270	709.33
1850	23,191,876	6,122,423	35.87	9,021	5,719	248.61
1860	31,443,321	8,251,445	35.58	30,635	21,614	238.81
1870	38,558,351	7,115,030	22.63	52,914	22,279	72.69
1880	50,155,783	11,597,432	30.08	91,944	39,031	77.35
1890	62,623,250	12,466,467	24.85	161,306	69,432	75.94
			Average 30.56	Average		237.32

It will be observed that while the average increase of population during the six decades named has been 30.56 per cent., the average increase of railroad mileage has

-been for the same period 237.32 per cent. and that the number of miles put into operation for the decade between 1880 and 1890 was 29,538 miles in excess of the number for the decade between 1870 and 1880.

With such reliable figures in full view the question forces itself upon the attention of the reader, what is to be the future of railroad building in the United States? It is in replying to such questions that conjecture becomes prominent in calculations, and yet it may be practicable to obtain data upon which conclusions may be based more or less satisfactory to the student of such problems.

It is regarded as a conservative estimate that within the next one hundred years the population of the United States will reach 200,000,000. Would it be prudent to assume that if a population of 62,622,250 require 161,396 miles of railroad, 200,000,000 would require say, 515,000 miles of railroad? The figures are staggering, still, if railroad building for the next ten decades should be equal to that from 1880 to 1890—the total would be 694,456 additional miles, but we could deduct from the estimate, 179,456 miles and still have an increase during the century of 515,000 miles.

Dismissing calculations based upon population alone, what can be said about area, as a factor in railroad building in connection with population?

Great Britain and Ireland contain a population in round numbers of about 38,000,000, with an area of 121,571 square miles—and at the latest data at hand, had 19,578 miles of railroad. The people of Great Britain and Ireland are in all regards similar to the people of the United States. They were the first to have railroads, having begun their building in 1825. The United States has an area of 3,602,990 square miles. If, therefore, Great Britain and Ireland, with an area of 121,571 square miles, requires, say 20,000 miles of railroads, is it prudent to estimate that the United States should have 592,000 miles of railroad? Most certainly, such a proposition could have no standing until the population of the United States, per square mile, bears some approximate relation to that of Great

Britain and Ireland, which is now about 300 to the square mile. But, as that country is dependent upon importations for food, during half of the year, 150 to the square mile may be considered the prudent limit of population. Assuming such a limit, 440,448,500, for the population of the United States, the railroad mileage of the country as compared with the present mileage and population, would be about 755,000 miles.

If we dismiss area and population, and consider products of forest, field, mine and factory, and the demand for transportation from centers to circumferences, from the interior to seaboard—facts of the present, which statisticians are trying to grasp, at once expand to such proportions as to subject conclusions to the suspicion that they are creations of the imagination. But when it is understood that not more than one-third of the arable acres of the United States is under cultivation, and that little of this is subjected to scientific treatment, some idea may be had of products when the land shall be cultivated as in England and Belgium. Our manufacturing enterprises are yet in their infancy, and our stores of iron and coal, the minerals of civilization, defy computation. Nor is our knowledge of other deposits of valuables more accurate. This knowledge is to come as population increases and the years go by, and proclaim, even now, that railroading in the United States is in its infancy.

Possibly, the question arises where is the money to come from to build the railroads which the future may demand? This we regard as the least perplexing of the questions under discussion.

It is held that during the decade from 1880 to 1890, the wealth of the country increased \$22,000,000,000. Should the same speed be maintained for ten decades, the nation's wealth would be \$262,000,000,000 and 500,000 miles of railroad, as at present estimated, including water, would amount to about \$28,000,000,000.

With such facts and conclusions in full view, the members of the Brotherhood of Locomotive Firemen may feel assured that they are to be in demand until electricity shall take the place of steam.

THE UNITY OF LABOR.

The *Farmers' Voice* in a recent issue says:

Philosophic thinkers now recognize the essential unity of "the labor movement" in all civilized nations. Its pleas and manifestations may have divers local peculiarities but all draw their force and receive their impulse from the same deep reservoir of power, which lies far below the surface in the great "substratum of humanity."

All labor is interdependent. If, for the sake of illustration, grades of labor are introduced, it will at once be seen that the highest is absolutely dependent upon the lowest grade—that the vital nerve extends from the foot to the head—from the lowest depths to the most exalted heights, and that this nerve, subjected to injury anywhere throughout its length, will be productive of disaster more or less serious.

Do such propositions require proof? Are they not self-evident? In the very nature of things is there not a law of union, an irrevocable law, a law as eternal as that of gravitation, binding all classes, all grades of labor into one interdependent whole? a brotherhood, which, discarding signs, grips and passwords—voices, trumpet-toned, a truth yet to be recognized, that labor in all of its labyrinthian ramifications, high and low, whether it is bestowed at 25 cents a day or \$10.00 a day—whether rendered by slave or freeman—is united, having the same end in view, to produce, to build, to preserve, to carry forward all enterprises and to bless the world?

There is not, we surmise, in the world of mind, a broader, deeper or a more commanding truth in all the sciences and philosophies than the one we have suggested, that labor, in all of its divisions and subdivisions, in all of its branches and classifications, constitutes a oneness, a unity, which no power in earth or heaven can change. If so, it follows logically that any attempt to change the irrevocable law, must be productive of confusion and injustice.

The aristocracy, not of labor, but in labor, or more properly, in labor circles, is an exhibition of mental deformity and infirmity, explainable only upon the hypothesis that labor has copied the most repulsive characteristics of the men who debase labor—the men who rob workingmen and grow rich by the tribute money they extort.

If labor could see and comprehend the eternal truths of its mission in the world, the \$4.00 or the \$10.00 a day man would take the profoundest interest in the \$1.00 a day man, or his more unfortunate brother who toils for a less sum than \$1.00 a day.

In this highly favored (?) land we talk much of the "sovereignty of the people," we shout in lofty periods about the "power of the majority." Occasionally, to embellish a stump speech, some demagogue injects into his "flapdoodle" the Latin phrases, "vox populi, vox Dei"—"the voice of the people is the voice of God," while at the same time the majority, the working people of the country, because they will not unite, are the victims of the minority, and the few who are united beat down the many, and make them hewers of wood and drawers of water—that is to say, divide them into castes, set them to wrangling, and thus crush and rob them, silence them in courts and in Congress and impose upon them degradations and humiliations not one remove from serfdom.

If workingmen were united in sympathetic bonds; if the skilled laborer was broadened rather than dwarfed as he advanced in knowledge until he, if a bricklayer, could comprehend the fact that he is dependent upon the hod carrier; if the locomotive engineer could grasp the fact that he is dependent upon the locomotive fireman, descending to or ascending from the humblest laborer the aristocratic idea in labor circles would disappear, the interdependence of labor would at once constitute a bond of union, a chain whose links, forged and fashioned to hold workingmen in harmonious alliance, would girt them about as a defense in every time of trouble and resist invasion, though assailed by all the plutocrats that ever cursed the earth.

This desideratum, this one thing needful, has not been secured, and because it has not been obtained, the plutocrats are treating millions of workingmen as "dumb driven cattle."

Will this sort of thing go on forever? Men will answer just as they have confidence in the intelligence of the people, as they have confidence in the intelligence of workingmen.

The plutocrats have confidence in the people, based upon Jay Gould's theory of their integrity. When he wants a judge or a legislature, he ascertains the price and pays it. The plutocrats pursue the same policy, though their may be less directness in their methods of subjugating workingmen, and in every instance money or its equivalent—employment, is made to talk. It can coo like a dove, or utter decrees with the fierceness of a Nero. In either case workingmen cower and tremble. Will it be thus forever?

Divided, estranged, quarreling, forever conducting a guerrilla warfare upon each other, building up little aristocracies based upon wages, discarding fundamental principles, they will be in the future as in the past, animals to be slaughtered. But should the time come when workingmen fraternize and recognizing the inter-dependence of all, rally to the standard of right and justice, determined to be heard, then the millenium of labor will dawn. The plutocratic Satan will be chained for at least a thousand years, and the unity of labor being recognized there will be peace in the earth.

It is a question of faith in man, or faith in money. The world is taking sides. Let the debate go forward.

PRESIDENT CROCKER, of the Southern Pacific, travels in a private car costing \$15,000. It is supurbly finished in mahogany and has two large state rooms, a dining room in the center of the car, an observation room at one end and a sitting and smoking room at the other. The windows are large and at the ends extend down to the floor. We congratulate President Crocker, and we doubt not that he sometimes sings:

"O, bless me, this is pleasant,
Riding on the rail."

A YOUNG blacksmith being a candidate for the office of mayor, of Owego, N. Y., some one thought he could be *downed* by referring to him as the "leather apron" candidate. The workingmen at once responded and Mr. Kehoe's leather apron become the banner of the campaign and "leather apron" won. That's the talk. If workingmen will it, the badge of labor will down the plutocrats.

PARTIES AND PLATFORMS.

Don't be alarmed. The caption of this article does not mean that the *Magazine* is going into partisan politics. We have said on former occasions that "politics is the science of government," and we assume that locomotive firemen have as much interest in good government as any other class of citizens. They have as much interest in wise and just laws, honestly administered, as any other men, and should study politics and be as familiar with governmental methods as any other class of citizens.

This *Magazine* cares little for men, cares little for party shibboleths, but it does care for measures, for laws, for policies and for methods of administering the government.

In the matter of laws and their administration this *Magazine* is opposed to anything and everything that directly or remotely militates against the rights and interests of workingmen, totally regardless of what man or party indorses the iniquity—and the *Magazine* will uphold any man or party that seeks to enact just laws by virtue of which, if honestly administered, workingmen can go into court and have their cases adjudicated, under all the requirements of law, as certainly and as satisfactorily as a millionaire.

In mere party creeds the *Magazine* takes no stock, but as to deeds it will eulogize or anathematize just in proportion as such deeds, or measures, or laws deal justly by men who wear the badge of labor, or disregards their right.

Just now the discussion relates largely to the new party, or "third party," and the platform upon which it stands has been published and which summarized, is as follows:

In its first resolution the platform declares that "in view of the great social, industrial and economic revolution now dawning upon the civilized world, and the new and living issues confronting the American people, the time has arrived for the crystalization of the political reform forces of the country and the formation of what should be known as the People's Party of the United States of America." Premising that the right to make and issue money is a sovereign power, to be maintained by the people for the com-

mon benefit, the platform demands the abolition of national banks as banks of issue, and as a substitute for national bank notes demands that legal-tender Treasury notes be issued in sufficient volume to transact the business of the country on a cash basis, without damage or especial advantage to any class of calling; such notes to be legal tender in payment of all debts, public and private, and such notes, when demanded by the people, to be loaned to them at not more than 2 per cent. per annum upon non-perishable products as indicated in the sub-treasury plan, and also upon real estate, with proper limitation upon the quantity of land and amount of money.

The platform further demands the free and unlimited coinage of silver; the passage of laws prohibiting alien ownership of land; that Congress take prompt action to devise some plan to obtain all lands now owned by alien and foreign syndicates, and that all land held by railroads and other corporations in excess of such as is actually used and needed by them be reclaimed by the government and held for actual settlers only; the taxation, national, state or municipal, shall not be used to build up one interest or class at the expense of another; that all revenue, national, state or county, shall be limited to the necessary expenses of the government, economically and honestly administered; a just and equitable system of graduated tax on income; the most rigid, honest and just national control and supervision of the means of public communication and transportation, and, if this control and supervision does not remove the abuses now existing, government ownership of such means of communication and transportation, and the election of President, Vice-President and United States Senators by a direct vote of the people."

Such reading cannot fail of being interesting to the great body of workingmen, independent of all former party affiliations, and is well calculated to arouse reflection upon the "science of government."

The conclusion will be, we doubt not, that there are many declarations in the platform which, to use a common phrase, are "chestnuts;" that is to say, they have often appeared in platforms of parties, but

have served no other purpose than to secure the votes of the confiding multitude, and when success was achieved, the men who formulated the platform deserted it, treated it as of no consequence, emphasizing the conclusion that the platform was originally designed as a net to catch gudgeons, by which we mean that a good platform is worse than valueless, that it is a sham and a snare unless honest men are elected to crystallize its declaration into laws.

Workingmen, with rare exceptions, have been the victims of scandalous deceptions. Their credulity, their confidence has almost uniformly been betrayed. As a result, having determined upon a policy, workingmen should seek for the men to carry it out; men capable of defending it against all assailants—men who can neither be bought, nor bribed, nor intimidated; men of courage and of capacity—men whose antecedents are known, and who in shine and storm will stand by their pledges.

Such men can be found, and whenever workingmen unite to enforce a righteous policy in legislature and in Congress and in municipal councils the work of reform will begin and go forward, and not till then.

It were supreme folly to inveigh against political parties. They result from free speech, untrammelled expression of thought, and this being true, workingmen, as certainly as plutocrats, have a right to be heard, have a right to formulate platforms, have a right to catechise candidates, put forth their claims for just laws and their honest administration, and having found out what they want, demand it by the fiat of the ballot.

MR. RUSSELL SAGE knows all about Mr. Jay Gould and recently remarked:

There is not a man in America or in the world at large, who absolutely owns and controls and has registered in his own name as many stocks as Mr. Jay Gould. It is no exaggeration to say that he draws more money from his invested capital than does any other living soul. In order that some idea may be had of his wealth, it is simply necessary to take three of his stocks: Manhattan, of which he owns and has registered \$10,000,000; Missouri Pacific, \$12,500,000, and Western Union, \$25,000,000. Of these three he draws for dividends over \$2,000,000 a year. His income from other sources, of course, amounts to four or five times as much.

And yet it is said that the Rothchilds are frequently found shedding tears over the sad financial condition of Mr. Gould.

THE MONEY POWER.

Lycurgus, it will be remembered, had a dread of the money power, and virtually banished money from Sparta. In the remote time, when Lycurgus flourished, the "money power" must have been as corrupting as at any succeeding period, as debasing as now in the United States, where, if it does not contaminate all men who wield it, it confessedly defiles more or less the great enterprises which it creates and vitalizes.

It would be highly instructive for some one who has leisure and aptitude for the work of investigation to engage in the task of designating in what department of human effort requiring money the money power is not exerting a debasing and debauching influence.

There may be such enterprises. We do not doubt that an earnest and industrious investigation could find them, but when found, we think they would not be rated as of national importance, nor of sufficient prominence to serve as illustrations of the depraving influences of the money power.

The term "money power" invariably suggests a train of ideas in conflict with the *power of the people*, the power of all the virtues embodied in constitution and laws; in a word, the money power is plutocracy.

No one in his senses denounces money *per se*. Like fire under control, it is the friend of all, and to none in a greater measure than to the poor. The workingman's dollar means all things desirable. It is food, shelter and clothing. It brightens home and blesses all beneath the humble roof. It is like the sunshine and the rain. It gives life and joy and hope. But the accumulated millions in the hands of Goulds, Vanderbilts, Astors, Corbins, corporations and syndicates constitute a power that sweeps along like a tornado, overwhelming the weak, or it builds impregnable fortresses from behind which plutocrats conduct a ceaseless warfare upon the poor, those whose money must go day by day to procure the necessities of life.

The money power can build a railroad and equip it at a cost of \$100,000,000, and then this money power can inject into the cost (?) of the road \$100,000,000 of water

and collect dividends upon \$200,000,000—compel the people to pay tribute for the use of *water* in stocks and bonds, and having perpetrated the infamy the money power can subsidize the press and make it defend the scoundrelism. The money power can debauch courts and make the ermined judge the most despicable thing that pollutes the atmosphere. The money power can corrupt legislatures and congresses and make such bodies stink in the nostrils of the world. The Hon. Edward J. Phelps, in the *North American* for May, speaking of "Money in Politics," more properly, the money power in politics, says:

There is a much greater iniquity of wealth which attacks the general public and even threatens the national life. It is the employment of vast sums of money for the purchase of high places of political trust and the control of the results of important elections. Places that should be of the highest dignity, as they certainly are of the largest influence, are pretty well known to be obtained by direct bribery of the electors in whose gift they are. Posts of much distinction are more than suspected to be the consideration of enormous contributions to electioneering funds. Great sums are generally believed to be raised to carry elections by those who are accumulating excessive fortunes through a system of revenue which not only casts the burden of taxation upon the industry of the country, instead of its property, but far beyond the legitimate requirements of government, burdens the many for the benefit of the few. And these sums, which could not possibly be requisite for any proper election expenses, are well understood to be employed in the direct purchase of votes in the market to a decisive extent. The political power of the country is thus in danger of passing into the hands of a plutocracy, composed not of the best class of the rich, but of the worst, to be used not for the general welfare, but for the still further aggrandizement of those who have bought it, and for the elevation to high places of men who are not fit to be there. These are plain words. But it is time plain words began to be spoken on this subject. Here is not the place to pursue it. Thoughtful men can consider it for themselves, and can satisfy themselves how far the general understanding is supported by the facts. They who believe that the business of government can be thus demoralized, and the general mass thus oppressed, with fortunate and peaceful results, have read the history of mankind to small purpose. The longer the storm broods before it breaks the more dangerous it becomes. Already clouds much larger than a man's hand have risen above the horizon. How portentous they may prove no man can tell. Forces move rapidly in these days. There is nothing in government or institutions under our system that is not within the ultimate reach of the numerical majority. We are in danger, not of revolution or bloodshed, but of the not less destructive power of

frantic and ruinous legislation, controlled by demagogues, and involving in its consequences the just as well as the unjust.

Such words are fitly spoken, they are opportune. They give the alarm and ought to arouse the nation. They tell us that even now the ship of state is approaching a whirlpool; that a storm is near at hand; that while the sun of our physical prosperity is shining, and we are counting our gains by billions, the liberties of the people are decaying; that lying along the horizon everywhere the "lightning's red glare" is seen, portending social and political convulsions which, if not speedily averted, the Gibbon is born who will write the decline and fall of the great American Republic.

If these be idle words then the best thought of America is at fault, and the day of the billionaire has arrived, and brains and integrity, equity and all things the Father glorified must stand bowed and abashed in the presence of bullion.

Does history repeat itself? Verily, and in spite of winds and tides the mills of the gods grind on.

THE *Chicago Express* remarks that "All hens that do not show some particular merit or evidence of thrift should be fattened and marketed," so says a poultry exchange. Well, we think so, too. And what is true of hens is also applicable, in a measure, to monopolists of this country. They have not one redeeming trait. They ought to be made to 'root, hog, or die!' " That is to be the verdict in the near future. All the labor organizations in the land are teaching the doctrine that the drones must go. Labor is getting tired of supporting them and of being robbed by them. A new era is dawning. We are to have at no distant day a new declaration of independence.

THE undertakers are immensely pleased when told that in every three seconds of time two persons die. True, it is only under the influences of the christian religion that an undertaker can palm off a poplar plank for rosewood, and thus carry fraud into the grave; but the fact shows the sublimating influences of the pulpit on business.

FROM AMERICANS TO SLAVS, AND FROM INDEPENDENCE TO SLAVERY.

The New York *World* is entitled to a vote of thanks from every labor organization in the land, for its exposition of the coke curse of Pennsylvania.

When the representative of the *World* visited the coke region, there were 15,000 men on a strike, "of whom," says the *World*, "it is a fair estimate to say, 12,000 are Slavonians, 1,500 are Germans, and the other 1,500 are composed of Irish, Scotch, negroes and native white Americans. Not over 1,000 of the strikers, including the negroes, were born on American soil, and not over 2,000 of them can speak the English language. The great mass of the strikers, and especially the Slavs, are ignorant of our manners, customs and language, and mean to stay in this country only long enough to save a few hundred dollars, when they hope to return whence they came, there to live in comparative ease on the money they have taken with them. They are the Chinese of the coke region." This condition of the population of the coke region, was brought about by the H. C. Frick Company, a twin monstrosity of the Philadelphia & Reading Railroad Company, the history of which the *World* gives as follows:

Years ago the mines and coke ovens were worked by native Americans, most of whom were born in the vicinity, and many of whom owned their little homes on the hillside and tilled a little plot of ground and kept a cow or two in connection with their work about the mines. As late as 1880 there were only about 3,000 coke ovens in this 400 and more square miles, which make up what is known as "The Connellsville Coke Region." Now there are nearly 16,000 ovens. But with the growth of the industry the native American has almost disappeared, and the work he used to do is now done by the imported "pauper labor of Europe."

In the foregoing, the reader has a word picture pleasing to the American ear. An artist could reproduce it on canvas and it would please the eye. The H. C. Frick Company has transformed this rural, this industrial district, where a few years since the people were contented, thrifty and virtuous, into a hell, "where blood and carnage clothes the ground in crimson"—where Pinkerton thugs stand ready to kill—where men, women and children are

evicted from their hovels and made to take their chances with rats and reptiles, foxes and ground hogs, to live or die, not even Frick nor the devil caring what calamities overtake them.

About 1880, so says the *World's* account, there was a boom in the iron industries of the United States; an era of prosperity had dawned, but not for American workingmen; the men who should have reaped their full share of the prosperity, were, instead, impoverished. From 3,000 coke ovens the number was increased to 8,000, and now to 16,000. With the demand for coke and the increase of ovens, came the absorption of the small concerns by the larger ones, and now of the 16,000 ovens, the Frick monstrosity owns 10,000. With the boom in the iron industry, came the increased demand for coke, and it was then that the christianized H. C. Frick began the importation of European cheap labor. The *World* says:

The Frick Company sent to various employment agencies in Baltimore and Boston for laborers, and through these agencies the first installments of Slav immigrants were secured.

When these Slavs arrived in the coke regions they were set at work at wages which, while far below those which the company was paying to its native employes, were still greatly in excess of the wages which the Slavs had been able to earn in their own country. The agents of the company induced many of them to send for brothers, cousins or friends whom they knew at home to come to this greatly-favored land where so much could be earned in so short a time, and where what was, to them, a fortune could be saved in a few years.

But these Slavonians, almost before the operators were aware of it, had been induced to join the labor organization, and in 1886 there came a strike—a strike which at that time proved the largest and the longest that the coke region had known. The Slavs went out with the rest of the workmen and stayed out till the strike was won. The operators then as now tried every means to fill the places of the strikers. Then as now families were evicted by the scores, in the hope of frightening the others back to work. Then as now this refinement of coercion failed and the operators cast about for new men to fill the vacant places. The employment agencies had helped them before, why not again? And so to the agencies they went, with the result that within a few weeks hundreds of newly-imported Slavs came swarming into the region to take the places of the men who were fighting, as they said, for bread for their wives and babies.

These Slavs, or Slavonians, are, if possible, more degenerate than the Chinese. They are as distinct a class of foreigners as

ever invaded American shores. Trained to work for wages upon which an American would starve, to live in dens that an American dog would bark at, and to live upon scavenger food that would make an average hog turn up its snout, they could not stand Frickism. The degradations and robberies inflicted by Frick under the laws of Pennsylvania were so infamously worse than they had ever known in Slavonia, that the miserable creatures struck for their rights, struck against robbery, against further degradation, and what is the result? Some of them have been shot down like dogs, some of them are writhing in the agonies of their wounds, some are starving and all are mad. There are at least 12,000 of these idle men in a strip of country eight miles wide and fifty miles long, an area of an ordinary sized county in a western State.

The H. C. Frick Company found cheap labor. It exiled American labor. It imported Slavs. It has secured strikes, and first and last has been damaged to the amount of about \$4,000,000—and the miserable Slavs have doubtless lost half that amount. The *World* says that the present price of coke is \$1.90 a ton; that an oven every other day will produce four tons of coke—and that the net profit is \$1.00 a ton. This is equivalent to supplying the H. C. Frick Company with 2 tons of coke from its 10,000 ovens daily or a net profit of \$20,000 a day, for say 315 working days of the year—a yearly profit of \$6,300,000.

From this work Americans were driven to make room for Slavs and now the Slavs are driven out by Italians and negroes—but to enable these creatures to be robbed and still further degraded Pinkerton thugs with shotted guns must constantly stand guard. The policy is Satanic, altogether infernalism. Why talk of a future hell? Here is one right under the nation's nose.

FRANCE has 5,224,856 savings bank depositors, with an aggregate sum to their credit of 5,906,000,000 francs, an average of about 1,130 francs.

SOME one asserts that the average human scalp is adorned with from 90,000 to 120,000 hairs. Some bald headers will wish the assertion were true.

THE WHOLE IS GREATER THAN A PART.

General Master Workman Powderly of the Knights of Labor says: "We hardly have time to pay attention to the wage-question at present; the other three questions—the land, the railroads and the currency—are occupying every officer's time." And yet workmen are more interested in the wage-question than anything else. The Knights of Labor were organized to deal with the wage-question specially. Mr. Powderly is becoming too much of a statesman.—*Memphis Appeal Avalanche*.

And the man who sees in the labor question merely a struggle for wages is either too much of a fool or too much of a demagogue. It would be interesting to know where our Tennessee contemporary obtained the information that the Knights of Labor were "organized to deal with the wage-question specially." The Order was organized because attempts to secure justice for labor by pottering about wages had always failed and must in the very nature of things forever fail, and for the all-sufficient reason that the causes of the injustice lay deeper than the question of wages. The Knights of Labor were organized to attempt a remedy of the evil by attacking it at its cause, not to continue the old futile fight with the effects. There are men still "lingering superfluous on the stage" of the labor movement who think that the evils can be righted by tinkering between employer and employed, rearranging the wages, the hours of labor and the conditions of work, just as there are men who persist in the use of antiquated and clumsy machines and implements. But no one would think of saying of one of these that he was becoming too much of a statesman. There are workmen who are more interested in the question of wages than in anything else, more of them than for the prosperity of the labor movement there should be; more of them than there would be were it not for the talk of men whose minds are too contracted to grasp the truth that, while the robbery of labor by land, money and transportation monopoly continues, no raising of wages or amelioration of conditions can effect a permanent betterment. Knights of Labor will not neglect the wage question, but they will not mistake this incidental part of the labor problem for the problem itself.—*Journal of the Knights of Labor*.

The foregoing, from the organ of the Knights of Labor, is, in some of its expressions, exceptionally novel.

The "labor question" has its auxiliary questions, its collateral issues, but the pivotal, the central issue of the labor question is wages, all else is subordinate, and comparatively inconsequential. A man, therefore, may see "in the labor question merely a struggle for wages, and be neither "a fool" nor "a demagogue."

It may be, as the *Journal* intimates, that the Knights of Labor never engaged in "pottering about wages." It may be true

that they have regarded wages of little concern, as compared with questions relating to "land, money and transportation" but we have met a great many Knights of Labor who accorded the matter of wages unquestioned supremacy.

It may be true that the question of fair wages is ancient—indeed, we admit that it is old, but it is not obsolete—on the contrary it is as vital as when the first wage robber subjected the victim of his greed to hunger, nakedness and death. This being true, it is becoming, in this age of morals and money, knowledge and knavery, plutocracy and poverty to secure such honest wages as would give a workingman a surplus of *two cents* a week with which to pay for the *Journal* of the Knights of Labor and enable him thereby, to study the "land, money and transportation" questions.

Such questions we concede are important, but to understand them a workingman should have the leisure that an "eight hour day" would afford him, and wages that will give him a surplus with which to purchase books.

EX-SENATOR JOHN J. INGALLS, of Kansas, when retired from the United States senate by the Farmers' Alliance cyclone, congratulated himself immensely as follows: "For the first time in eighteen years I now draw the breath of a private citizen. It is a gratefully peculiar feeling. I am free to do as I please and to say what I think. I feel relieved of a great responsibility. I am disenthralled. The chains have fallen off. I am no longer shackled." What a prison pen the United States senate must be. The victim always enthralled and shackled. No wonder when the chains fall off, and the imprisoned citizen breathes an *honest breath*, that he should feel disenthralled. Some more of the plutocrats should be emancipated from their thralldom and turned out to grass as was old Nebuchadnezzar.

THE making of new States and the consequent increase of legislatures and judges is becoming a great annoyance to railroad magnates. Prices, in spite of competition, have advanced and range way up. Passes no longer answer the demand and *spot* cash has to be provided.

Labor in Society and in the Wilderness.

TAKE two nations, A and B, each with 1,000,000 population, 200,000 average family groups. Nation A occupies a belt of country containing 2,000,000 of acres. About half of the population live in towns that vary from 1,000 to 10,000 each. The rest are grouped around those towns on well cultivated, garden-like farms. Nation B spreads itself over 400,000,000 of acres. About one-third of the population live in little villages, the rest on large farms of about 500 or 1,000 acres per each family group. In which of the two nations shall labor be more productive, all other conditions being the same except density of population? In nation A industries shall be extremely diversified; in nation B very little so. In the latter, most workers being pretty far from each other, and every little group very far from all other groups, most workers will have to be jacks of several trades, which means jacks of low efficiency in all trades. It stands to reason that if I have to divide my energy and powers of observation in several trades or occupations I shall not become half as efficient in any of them as if I could pour all my energy and powers of observation in one trade or occupation, as every worker in nation A shall be able to do. Then, if 3,000 miles of road are sufficient in nation A to place all workers in direct contact with each other, nation B will need 200 times as many miles, since nation B spreads itself over 200 times the area of nation A. This means great economy in the transportation and handling of all goods in nation A, and great expense in those of nation B. Hence a very limited commerce in the latter and a very large one in the former, by which increased commerce production is stimulated for general comfort, while limited commerce in nation B implies limited production and limited comforts to all.

B-sides, have we ever taken into consideration the personal magnetism that every one of us can more or less diffuse over those around us in our daily activities, in our conscious or unconscious aspirations? This personal magnetism or emulation accounts for the almost miraculous works that an army in the field can accomplish in a short time in all the emergencies incidental to great campaigns, face to face with an equally enterprising enemy. The success of industrial battles also depends a great deal on that personal magnetism or emulation that men can impart to each other when in sufficiently close contact with each other. The writer had for long years been in favor of sparsely settled social groups, but a somewhat long visit to some of them totally changed his views on the subject. In sparsely settled groups a species of inertia

takes hold of most men because of insufficient natural or spontaneous cooperation with each other, because not enough of them to accomplish much. I call it natural cooperation to distinguish it from that forced one suggested by all socialistic schools, they all resting on industrial militarism, on machine-like combinations.

To be sure, I am not in favor of colossal cities where we pack men like sardines in tin boxes, but we do need a certain degree of compactness in social organization for men to impart to each other what is best in each one.

In forms more or less emphatic or mixed up, the two civilizations, A and B, that we have been contrasting, can be seen in every nation spreading over large areas. We have them yet under our flag. About two-thirds of our farmers live practically in the wilderness. Their average earnings per family group are not much over \$400, while the average net earnings per family group over the whole nation are not less than \$800. We can then assume that if our nation A is capable of an average annual net production of \$1,000 per family of five, nation B will not exceed \$500. This does not mean that the mass of workers in nation A will be much better off than those in nation B. Under monopoly rule most of the advantages of an advancing civilization go into the monopoly fund. The labor fund gets mighty little from the increased production of a compact social group. In a sparsely settled group, disconnected from large centers of population, the power of monopoly is low because of limited competition for land. The power of monopoly increases in proportion as increased population increases competition for land. The power of monopoly is intense in London and New York city because competition for land is intense in such centers of population. This competition for land evolves what we call annual land values or land rents.

In nation A the annual land values will be about \$100 per average family group, as they are in Great Britain. The general density in nation A is approximately that of Great Britain. Only nation A, unlike Great Britain, has not made the mistake of piling up 60 per cent. of the population in large cities, and cultivating but one-fifth of the area susceptible of cultivation.

In nation B, with 200 times the relative area of nation A, land competition shall be, not necessarily 200 times less than in nation A, but certainly not over one-tenth that of nation A, say, \$10 annual land value, land rent, per family of five, against \$100 in nation A. Therefore the average net labor product, less rent, shall be \$490 in nation B and \$900 in nation A. There we have it. Land values are the result of land supply and land demand, the result of quantity of

land, of given conditions, and quantity of population with given aspirations. Let the 200,000 families in nation B decide tomorrow to leave their wilderness of 400,000,000 acres and compress themselves in 2,000,000 of acres, as in nation A, and the annual land values of nation B shall jump from \$10 to \$100 per family of five, although the people shall only occupy one-half of 1 per cent. of the land they occupied before. It is the inexorable law of land supply and land demand that creates land values, not the specific result of individual labor. If anything, the workers in the wilderness of nation B worked harder than in nation A, and yet the latter evolved land values ten times larger than those of nation B.

Now let us suppose that the two nations, A and B, concentrate all taxes on land values. What benefit would labor derive from the change in the two nations, A and B, the latter yet in the wilderness? The benefits in nation B would not be large, because of low average production and low monopoly power as we have seen, owing to large area and scanty population. In nation A the benefits to labor would be large. The total annual production being there \$1,000 per family of five and the annual land value \$100, there would be \$900 total net product left to labor instead of not much over \$500 under monopoly rule, general average per family, with a tax fund for public needs of \$20 per capita of population.

And that is not all. Who can fix a limit to production under conditions of freedom such as we would develop through the suppression of all taxes on production and commerce, through the suppression of monopoly in all forms?

Because land monopoly virtually says to the mass of workers: "You shall live and work on one half, one-third, one-fourth of the land worth having that you could use or develop, therefore you shall produce but one-half, one-third, one-fourth of what you could produce, and out of what you do produce you shall get but what can keep you all with strength enough to go on working for the benefit of monopolists, and you all shall live on the basis of a mere animal existence, so that you may never obtain intelligence enough to redress social wrongs on ethical principles, in permanent forms." Is not that human history so far?

Under the conditions of freedom we have indicated we would leave no earnings to any one attempting to restrict the land supply that labor may need. Who can doubt that in a few years labor would double its net product? We would then have say, \$1,800 per family group, after deducting the \$100 annual land value which could not increase but through increased density of population, as we have seen, land values being simply the expression of competition for

land of given conditions, land supply and land demand, most especially without land monopoly. And year after year the increase in production would go on, not necessarily on principles of equality, but always on principles of justice, through a normal distribution of wealth because of a normal distribution of land, the source of all wealth.

Let me remark in passing that it is childish for some critics to say that men could invest in personal property and thus escape taxation on land values. Who can use, enjoy or handle personal property or any kind of property unless he occupies land worth having? Only the anchorite, living clear into the wilderness. He will not owe anything to the social organism because he has run away from all the increased earnings and higher joys that society can impart when organized according to God's laws, and not on the principles of the gambling house. And let all critics remember that men can only be wealthy in proportion to the land values they control through deeds or mortgages; private, corporate or public. Taxation on land values would not let any of them escape.

The alternative before labor is, has always been and must always be, as follows: Shall labor pay taxes and monopoly earnings, or taxes alone? Shall labor be forever left in the wilderness of poverty because under monopoly rule, or shall labor suppress monopoly and incorporate to itself the advantages of an advancing civilization? If the latter is desirable then labor, the producer of all wealth, must have free access to the source of all wealth, to the land in and around all centers of population not in use or improperly used. How? By applying all land values, land rents to public needs. The taxes that labor shall then pay, those taxes shall not represent robbery of labor as our taxes do now represent. Taxes then shall represent the emancipation of labor from all monopoly, the manhood of labor, labor under absolute freedom of contract, labor assimilating and enjoying all the benefits in the advance of human societies, labor as the only legitimate power in the fabric of civilization, as God means it should be.

Why is it that all despots, conquerors, aristocracies and plutocracies have forever devised and perpetuated taxation on labor products and never on land values? They have seen that with the former they would be rich without labor, and through the latter they would only be rich through honest work.

And just as long as taxation fails to rest on principles of righteousness, just so long shall civilization be what it has always been, for most men, anyhow, a dream of despair!

Jose Gros.

The Single Tax Defended.

THE essay of Mr. Wm. Weiler in the June *Magazine* reminds me of the gentleman who noticed an old silk hat in his path, which he gave a vicious kick, intending to land it somewhere in the middle of next week; but instead, the hat remained where it was. If the gentleman had been more careful to ascertain the contents of the hat before kicking he would not have got hurt half so much.

Mr. Weiler poses as a critic, but without giving evidence to show that he has first given the question of taxation sufficient consideration to become qualified to criticize. As he objects to the single tax he must have some idea of what is the proper way to raise public revenues, and let us examine what his method is, so far as it is brought to light by his essay.

He says that property should pay its share of the burden of taxation in equal proportion. His idea seems to be that if one man industriously builds two houses and his neighbor is so indolent as to build only one, the industrious man should bear twice as much of the burden of government as the lazy man.

This foggy notion that men should pay taxes in proportion to their wealth seems to be based upon the belief that some men get more wealth than they are justly entitled to and should therefore bear the burden of government in proportion to the wealth they have unfairly acquired. But if this theory be sound, then we should at once abolish laws against thieving, and then compel the most prosperous thieves to pay the most taxes. The only sensible course to pursue in the premises is to readjust those laws which put it within the power of some men to get an undue proportion of the wealth produced by others; and if Mr. Weiler had seriously looked into the single tax idea he would have seen that it would have precisely this effect. Since he, however, favors a tax law that will discriminate against the rich, will he tell us if it is any more right for the law to favor the poor man than it is for the law to favor the rich man? If a man starts poor, Mr. Weiler wants the law to favor him until he becomes rich, and then he wants the law to discriminate against him.

But it seems that Mr. Weiler has some misgivings that his theory is not perfect, so he qualifies it. He takes the case of six young men who buy six adjacent lots. One erects a \$3,000 building, another does the same; another puts up a \$2,000 house, another puts up a \$1,000 home; another does not build, but makes a flower garden of his lot, and the last man plants vegetables on his. Mr. Weiler thinks each of these six young men ought to pay taxes in proportion

to the income or enjoyment he receives. So, then, property should not pay taxes in proportion to its market value, but in proportion to the income or enjoyment it affords its owner. If one man has a \$1,000 home which affords him \$10,000 worth of enjoyment he should pay taxes on \$10,000; while if another man has a \$50,000 home which affords him no enjoyment at all, he should pay no taxes. Or if a man owns a valuable vacant lot in the heart of a city, he should pay no taxes so long as he had neither income nor enjoyment from it. If he should become hilariously happy because he owned such a valuable lot, he should pay high taxes; or, supposing he became sad about it, thinking that perhaps it would not sell for as much as he wanted for it, then according to Mr. Weiler's theory the city should pay him something to compensate him for his misery. Or if one man should build a house and use it, while his neighbor built a similar house but not use it, then the owner who uses his house shall pay both his own taxes and the taxes of the man who failed to use his house.

Still another discordant element does Mr. Weiler introduce into his inconsistent ideas by favoring the tariff method of taxation, which he seems to approve. Now, so long as national revenues are raised by a tariff just so long does substantially all the property in the country escape the burden of national government. If Mr. Weiler is to stick to his theory that it is right for all property to bear the burden of government in just proportion, by what rule of logic can he favor the tariff method of raising revenues? Or if he takes the position that the proper method to raise a revenue for the support of government is to levy a tariff tax, what is to become of his proposition that all the property in the country should bear the burden of government in just proportion?

BROOKLYN, N. Y.

B. C. Stickney.

Retribution.

THE word "retribution" has a number of synonyms, as for instance, repayment, requital, recompense, reward, compensation, return. But it is held that the term "retribution" is specially used with respect to divine government, and means, in that connection, reward or punishment to be distributed at the "final judgment," the great "Judgment Day."

Our purpose is not to discuss any theological dogma. It is not in our line. But it may be said that the idea of postponing the distribution of rewards and punishments to the "final judgment" is eminently satisfactory to a very large number of miscreants who regard such delay as equivalent to acquittal, and they continue business at the old stand without change of methods.

In the April *Arena*, George William Winterburn, M. D., has a paper on "The Future of Philosophy," in which he says "All philosophy originates in the human propensity to ask questions."

It is well understood that the asking of a question presupposes that an answer will be given, and when the question is deemed important an answer of some sort is usually forthcoming, and it is just here that the difficulties begin. Simple questions are easily answered, and there is general agreement, but when the question relates to a matter complex or recondite then answers become contradictory, and as the questioning and answering proceeds confusion becomes worse confounded, mysteries multiply, and instead of light deeper darkness prevails. Says the *Arena* writer:

Philosophy is a permanent necessity of the human mind, and its history is the story of an ever-evolving, ever-developing process. The present intellectual and moral ideas of the race are the results of ages of gradual growth, elaboration and rectification: a development from within modified by influences from without. The moral and intellectual ideas now dominant are the heritage which has come down to the present generation from the beginning of humanity with the sanction of the immeasurable past; the prestige of remotest antiquity.

We agree with the writer. The thing we call philosophy has come down to us from the remote past, and the "ever-evolving, ever-developing process" hasn't helped the philosophy to an extent which requires special felicitation. The evolving and developing process has not established a reign of peace on earth; "good will toward man" is still nothing more than a glittering ideal. The age of simple honesty is as remote as ever. With the age of steel we have the age of *steel*. Instead of the nations "learning war no more," there is more war preparation than ever before in the entire realm of fact or fable.

What has the world learned by the ever-evolving, ever-developing philosophy from the "beginning of humanity?" What error has been abandoned that a still more vicious one has not taken its place? Here is the "human propensity" to ask questions, the origin of philosophy.

What were the superstitions of the past ages? What are the superstitions now? If advanced philosophers can find time to catalogue them they will find numerous changes; while some are buried others have been born, and all things considered, the superstitions of the present are the more glaring, and among them, the one postponing retribution maintains its rank and conspicuousness.

Why should it be assumed that rewards and punishments should be postponed to a time so remote that no arithmetical calculation can approximate the day? Are there not moral laws as active and as irrevocable as any other laws of which philosophy has

any conception? And what are the laws, aside from human statutes, the penalties of which do not at once follow their infraction? Is it not written, "Think not that I am come to destroy the law. * * * For verily I say unto you, till heaven and earth pass, one jot or one tittle shall in no wise pass from the law till all be fulfilled."

What law? The law of right, justice, truth, equity, honesty, fair dealing. Moral laws, laws as eternal as the laws of gravitation and attraction. Violate any of them and the penalty follows. It is inevitable. If the laws are obeyed the reward is not postponed to some remote period so far distant that contemplation becomes bewildering, and if the reward is immediate, why should the penalty be remote?

A man meets a beggar and responds to his necessities, gives him food and shelter. He obeys a law. What is the reward? Who sees it? What outward demonstration is there that any reward has been bestowed? No trumpets are blown. No one goes forth to herald to the world that the law was obeyed. The reward is the consciousness of having obeyed the law. A new joy comes to the one who helps his fellow man.

On the other hand, suppose the beggar is turned away. He asked for bread and was given a stone. The man denied the beggar's request, violated the law. Why postpone the penalty till heaven and earth pass? Why not inflict it at once? Echo eternally answers, why? There is no reason why it should not be inflicted at once, nor is it true that there is delay. In the case of giving, the reward was joy; in the case of refusing, the penalty was remorse.

It may be said that the man who gave the stone instead of bread was incapable of remorse; that he had no conscience, that the last vestige of humanity had disappeared and selfishness had taken full possession of him, and that he was as barren of pity as a hungry wolf. Admit it, and what is the conclusion? Is it not that the man had been transformed into a beast? Is he not the victim of penalties, the description of which defies exaggeration? Has he not gone forth with a Cain mark upon his life? In the name of all the maledictions what penalty rivals the curse of being bereft of those faculties of mind, heart and soul which delight in thoughts and deeds that glorify humanity, and which in defiance of centuries of degradation, savagery, ignorance and superstition, have survived, and without reference to revelation proclaim man's divinity.

The idea that retributive justice is delayed annoys many people, while it is a source of comfort to others. It was Shakespeare's philosophy that

"There is a divinity that shapes our ends,
Rough hew them how we will,"

and this has led to the conclusion that a man's destiny is fixed beyond his control. In other words; it is fatalism, and at once and forever dismisses the theory of retribution, of rewards and punishments. At this human nature is eternally in revolt. It will not have it so. Human laws are in conflict with the proposition. The intention is that rewards and punishments shall promptly follow deeds. That is the central idea of statutes in so far as they can be made to reach the subject, but as such laws cannot reach all wrongs the "final judgment" theory is brought into play to overcome what otherwise is supposed to be insuperable.

It is well understood that many and flagrant wrongs are perpetrated upon working men by corporations and by certain employers said to be as soulless as the corporations. To punish these wrongs by human statutes it is admitted is out of the question. The corporation having no soul has no compunction, no remorse. It never repents. There is for it no "final judgment," and the employer, supposed to be soulless, is adjudged equally exempt from all consciousness of guilt.

In all of this there is a total disregard of the principles of all things worthy of being called philosophy. It is in direct antagonism to the teachings of history. Neither nations, communities nor corporations escape just penalties any more than individuals. The process of trial and condemnation is slow, but the penalty is certain to come. The law in such cases is to be fulfilled. Heaven and earth may pass, but no penalty or reward of the law shall pass.

We are disposed to supply illustrations as demonstrations of the proposition. If we consult history it will not be difficult to see retributive justice in the decline and fall of empires traceable to the violation of certain irrevocable laws, conspicuously the Jews, the Assyrians, Medes and Persians, Egyptians, Greeks and Romans, and if the reader cares to descend to particulars and credit the record, the "Cities of the Plains" furnish further corroboration of the theory. The splendid empire erected by Napoleon fell about his head and he was permitted to contemplate the ruins while in person enduring retributive justice in exile.

To those desirous of grouping facts Spain to-day is an object lesson, and Chili, now in the throes of rebellion the most bloody and savage of the century, is paying the penalty of her cruelties inflicted upon Peru. Turn which way we may and the fact looms up in towering majesty that penalties are not postponed to a "final judgment day" to be set apart after the proclamation that "time shall be no more" has been made.

What is true of nations and communities is equally true of corporations and individ-

uals. The reader, familiar with current events, need not be told that retributive penalties are inflicted, certainly and continuously; not only in courts but outside of courts, beyond and independent of human codes. The mills of the gods are forever grinding, and the wrong-doers supply the grists.

Take the condition of Pennsylvania, and as a state its condition bears haggard testimony that the law of retribution is taking effect now. Civilized savagery, however paradoxical the term may appear, is giving to the state a character black with infamy, a reputation of unparalleled disgrace, while certain individuals and firms, corporations and associations are wearing marks of abhorrence compared with which the mark which omnipotence placed upon Cain was a decoration to be coveted.

Retribution comes in the present. It is not postponed. The facts are on every hand. There need be no solicitude about the matter. It is the eternal war between Right and Wrong, Truth and Error. If the individual adheres to the right, if he is a votary of truth and virtue, he wins. This is true of the organization of the Brotherhoods of Labor. Those who are supine, who are wanting in courage, who submit, trusting to a day of judgment when the stars are blown out, will suffer the penalty of degradation, and bequeath their degeneracy to their children. If, on the contrary, they champion the right fearlessly, regardless of consequences, their reward is certain, and their reward means the punishment of their oppressors.

C. L. Parker.

REVERIE.

I am sad and lonely now.

My heart is filled with sorrow;
The circle of our home is broken,
Another sad farewell is spoken,
In darkness deep we bow,
Lest darker be the morrow.

For our father's hands grew weak.
His trembling limbs grew weary,
Till the grim and silent reaper
Led him deeper, deeper, deeper
Neath the shadows cold and bleak,
By the river dark and dreary.

And I'm watching now alone
By the bedside of my mother;
And the low and feeble breathing,
Like some distant waters seething,
With a low and sullen moan,
Seems my fondest hopes to smother.

Oh, the weary, anxious hours,
As I watch the fearful changes!
Now seeming almost taken,
Her trembling figure shaken
By the awful, deathly powers,
As the dread affliction ranges.

Oh, that He were here to heal
Who spake to Peter's mother,
And the fever's throbbing, burning
Passed away! My heart is yearning
And hoping, as I kneel,
For His power to heal another.

STANBERRY, Mo.

Geo. W. Hall.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the *tenth day* of each month.

Current Notes and Comments.

Compound Over two years ago the Pennsylvania railroad imported a compound locomotive, built after the designs of Mr. Webb by Beyer, Peacock & Co., at Manchester, England. The locomotive was tested by Mr. Webb before it was shipped to this country, and in order to insure it fair play an experienced engineer was sent over with it, and staid here some months to give such information about it as might be required. From time to time during these two years statements in regard to its performance have reached the press through unofficial sources, but the management of the Pennsylvania railroad is evidently not conducting these experiments for the benefit of the public, and hence no official accounts of its performance have ever made their appearance. Enough information has, however, been collected from different sources to establish the fact that the locomotive was not imported with the idea that it could do more work, or that it could develop more speed than any other locomotive of its size, but simply to test its claimed superiority in the saving of fuel, which, if proven, would amount to a large item in the expense account of a system such as the Pennsylvania railroad; for if the 2,560 locomotives of the system could be made to do the work with a saving on each of only one ton per day, at \$3 per ton, it would in one year amount to a grand total of over \$2,500,000, an item certainly worth considering.

From the various statements obtained it is evident that the claim of economy in fuel has been well sustained, the percentage of fuel saved ranging from 20 to as high as 33 per cent.; the latter figure would mean that it only required two pounds or two tons of coal in the compound to do the work that required three pounds or three tons in the ordinary engine. While this seems to be a very favorable showing for the compound experiments before alluded to in these columns as made on the Brooklyn elevated Railroad, and some others recently made on the Mexican Central railroad, all indicate that the compounds save at least 25 per cent. of fuel. On the Mexican Central, where coal costs about \$11 per ton, a saving of one ton in every four heretofore used would count up

even more quickly than on other systems having coal of their own or not so expensive. While the subject of economy in coal does not receive any attention on some roads which permit their engines to draw coal from their chutes without any check, or any account being taken of the amount consumed by any engine, the introduction of the English compound has caused considerable attention to be given to the matter, and thus we find that during the last eighteen months more than seventy compounds have been built in different sections of the country, and all have been more or less economical in the use of fuel. As employes of the railroads we are naturally interested in any economy to be introduced, and especially so in this instance where it is proposed to turn what would go up in needless smoke, into money for the benefit of all concerned.

There is another feature in connection with this matter which it seems to me should be regarded as of vital interest to our order, and that is the fact that the handling of a vast amount of coal might be saved to our membership, thus helping to preserve the strength and vigor of each individual. Many a man in the East has burned from fifteen to twenty thousand tons of coal during his apprenticeship as a fireman, and even with the short periods required in some sections the general average of coal shoveled will not fall far from eight thousand tons by one man during his service of fireman, and if we can by any means have this pile reduced by two thousand tons it would mean that much wear and tear saved to the human machine, which like all other things of earth will only stand a certain amount of work before becoming disabled and worn out. Anything like this, tending to preserve the vitality of its members, is certainly of interest to an association which has a monetary interest in the strength, health and life of its members as ours has, and it thus becomes an open question whether we should not try by every fair means to encourage the introduction of means so well calculated to prolong vigor.

Aside from the question of economy in fuel, it seems that the English or Webb compound has several other features which deserve commendation. In recent articles extensively circulated by the mechanical press it is proposed to attain high speed by discarding connecting or side rods and running by one pair of drivers. A great deal of stress is laid in this article upon the strain imposed upon locomotives by the coupling of the wheels together, nor is this without some good reason, for it is a well known fact the wear of drivers is very unequal, and that after a few months' use engines will have wheels of such uneven size that if compelled to make an equal number of

revolutions to the mile one or the other will have to slide part of the time. That much power is wasted in this way and that much unnecessary strain is imposed on the pins and rods cannot be denied, and yet our American practice of heavy trains demands more adhesion than can be obtained by one pair of drivers, and compels locomotive men to couple two or more pair of drivers to pull the loads. The Webb compound has no side rods but has two pairs of drivers, and ought thus to be the very engine required for our heavy trains. The high pressure cylinders are attached to the rear drivers by the usual main rods and pins set at the usual (90 degrees) angle, and the low pressure cylinder is located in the center, right under the smoke arch, its rod being attached to a crank in the center of its front driving axle. This virtually gives a combination of two, or rather of three, engines to produce motion in one locomotive. It will be seen that either axle can turn without regard to the other, and entirely independent of it, hence there is no binding or friction between the two pairs of wheels.

Another feature of the Webb is that it is so arranged that in order to help the small (14 inch) high pressure cylinders start the train, steam can be let into the low pressure cylinder direct from the boiler, until speed is obtained, when the exhaust steam is used in the low pressure cylinder. As this arrangement can be used as long as required engineers will appreciate it, for it would enable them to run their engines even with two cylinders disabled, as either of the three or any two of them could be used without interfering with the disabled one. As breakdowns will happen sometimes, it is surely good policy to have "two strings to your bow," and will, no doubt, be found exceedingly handy in a pinch.

* *

Pulling Her Fire. I see Friend Tucker explains what he calls pulling the fire with soft coal which differs from what we are used to call "hauling her fire" here, which I supposed was what was meant by the inquirer. In firing hard coal at times we get a so-called light coal burning very free (nearly like wood) and if there are any thin places in the fire and the engine is being worked hard, it is apt to pick holes at these thin places and draw the coal to other heavier parts of the fire and pile it up there, thus making bad worse, for the trouble before was that the air was stopped by the thick places and thus forced through the thinner parts of the fire to its detriment, and if it helps to make the fire still more uneven it is certainly getting worse. Some engines by a faulty adjustment of the draft-pipe are very liable to do this and need constant watching and sometimes in spite of the utmost care will get

started at it and when once started it is a hard matter to get it under control, except by knocking out a part of the front end of the fire toward which the coal is being drawn by the exhaust. This is sometimes a very hard job as often the fire is over two feet thick and being only partly burned very solid, but unless it is done there is little hope for steam with such a fire.

* *

Examinations. The annual meeting of the Master Mechanics' Association was held at Cape May, N. J., in June and about the only matter of more than a passing interest to us was the report of the committee on examinations of firemen for promotion. The committee sent out a circular of inquiry among the members and from the answers they drew the following conclusions.

1. That the majority of the roads considered it best to make their own engineers from the firemen in their employ in preference to hiring them as such from other roads, except on new roads or isolated systems where the demand for engineers was greater than the supply of material at hand, and in such cases the engineers have to pass through the same examination as firemen for promotion.

2. That applicants for promotion were examined, but could not give any general form.

3. That the majority favored over 21 and under 28 years.

4. That there appeared to be a nearly even division about firing on a switch engine the first year.

5. That the almost unanimous opinion seemed to be in favor of a three years service as fireman before being eligible to promotion.

The committee showed their appreciation of a good thing by presenting, incorporated with their report, a synopsis of the "Progressive Examination," which John A. Hill has been publishing in the *Locomotive Engineer* for the past three months and of which another installment is to come in the August number. The association also showed their wisdom by adopting the report without debate, as they no doubt felt that it could not very easily be improved. The four numbers of the *Engineer*, containing these chapters, are worth more than a whole year's subscription to the paper, and we hope that all progressive firemen, and even engineers, will obtain and study them for themselves as it is worth their while to do so.

At some other time we may take up some of the other subjects that were discussed at the convention.

Wm. Weiler.

Dr. W. L. Breyfogle, late president of the L. N. A. & C., has purchased the forge rolling mill at New Albany, Ind., for \$100,000.

NEW ALGER, IOWA, June 20th, 1891.

MR. EDITOR:—I wish to know through the medium of this department how to disconnect an intermediate connected engine (ten wheeler) when she has a broken eccentric rod, or when the links have to be taken down for any reason. Would the rod that connects the rocker-arms have to be taken down? The arm that is at the links may not be called rocker-arm; if not, I should like to know by what name it should be called. I had a chance the other day, (while my engineer was away for lunch) and thought I would try Alexander's Ready Reference example for setting eccentrics. I placed the engine on the forward centre, with the reverse lever in the back notch, and marked the valve stem. I then put the lever ahead in the forward notch and found that the mark on the valve stem had not moved a hair. Maybe it did not set me to thinking, but I should like to see the reason put down in black and white, why that valve stem did not move, and how much it would have moved if the eccentric had been slipped one-half inch.

I hope you will not think these questions too simple to publish; I belong to the B. L. F. and am proud of it. I will not tell you how long I have been firing or running, but I have made the black smoke roll until the farmers' chickens went to roost at noon.

Yours truly,

Wm. Peirce.

The Wheel Question Once More.

MR. EDITOR:—In spite of the fact that I have heretofore said that I would not have anything more to say to Mr. Lockwood on this question, the rules of ordinary courtesy demand that I should break this resolve, and to acknowledge the receipt of the table and attachments which he has taken the trouble to send me by your hands, for my enlightenment and instruction, and also the card of invitation to the special train to be pulled by the "Shaw Locomotive" from Harrisburg to Philadelphia on Thursday, May 28th, and to express my regrets that owing to the roundabout way in which the invitation was sent it did not reach me until it was too late to attend; a circumstance which I greatly regret, as my acquaintance with Mr. Lockwood dates back to the convention of our order held in Philadelphia in 1885, at which time Mr. Lockwood insisted on making several of us the proud owners of a number of shares in a Cemetery Association for the sake of our votes. But this is really straying from the subject, for I simply intended to allude to my presence in Philadelphia at the time to assure Mr. Lockwood that I was present at the Institute, listened to his lecture, and carried away and have up to this time preserved

the rack wheels, which were so freely distributed to us at that place. It was therefore hardly worth while to send me another set, as I believe I have referred to my other ones pretty often; it is true, however, that they have never convinced me that "Twice nothing or even four times nothing" can ever be anything.

Since receiving Mr. Lockwood's table and attachments, I have studied it, taking it at the starting points as laid out by Mr. Lockwood and rolling the rack wheel along the rack rail with the other rack rail on the top of the wheel, and noted the result. I find that the bottom of the wheel is at rest. (I never disputed that fact.) In rolling it along one revolution I find that every part of periphery of the wheel in its turn becomes the bottom, and that at the end of the revolution the same point is again in contact with the rail. The center of the wheel is $9\frac{1}{2}$ inches from the starting point; so, indeed, are the top and bottom, because the wheel has remained entire in spite of the various motions it has gone through, each part having been up and down in its turn. "But," says Mr. Lockwood, "what of the upper rail?" It has gone along so much faster." Very true, so it has; because it has only received its motion from the top of the wheel and has never in any manner felt the effect of the slower motion and the stop at the bottom of the wheel.

My reply in regard to the motion of the parts of a wheel would be that the bottom is at rest; that the top moves twice as fast as the center, and Mr. Lockwood will find that this is proven by his own wheels, for when the wheel has made one revolution we find that it has moved $9\frac{1}{2}$ inches and the top rail 19 inches, thus clearly showing that the top moves twice as fast as the center. Now if Mr. Lockwood wishes to know the exact spot whose motion is to the top as four to one, he will find it not at the tread, but just half way between the tread and the center of the axle, and this proposition is capable of demonstration by any of a series of examples, either by arithmetic or by the wheels so freely furnished by Mr. Lockwood. On a four foot wheel the point moving at one-fourth of the speed of the top would be one foot from the bottom and not so close to the bottom as to be beyond our skill of measuring as Mr. Lockwood intimates. This is all I can grant in the controversy, and I do not see that this will materially assist Mr. Lockwood in its application to locomotives, for as all well know, the locomotive does not carry its load on top of the wheel like this rail, but on the axle. In Mr. Lockwood's apparatus friction is entirely eliminated, as no part of the arrangement need nor does slip on the other; the wheel rolling on the rail and the rail on the wheel create no friction. In the locomotive, however, to

keep the upper works in their place it is found necessary to saddle them at some point, and the best place to do this appeared to be the axle; hence we have the boxes riding on the axles, by means of which the load is kept in one place and by which the train behind the engine is also pulled along. This brings me back to my old point of regarding the work to be done by a locomotive, as the pull of the axle against the box to overcome the resistance offered by the train.

I hope that Mr. Lockwood will fully understand me now and that it will not be necessary to go over this ground again.

Vulcan.

Something about Engineers and Firemen.

In the *Locomotive Engineer* for June, we notice two communications which contain such "good reading" that we make a few extracts.

T. B. Purvis, Jr., writes from Albany, N. Y., prudently, we think, complaining because of the frequent allusion in "railroad publications" to the "ignorance of engineers." The writer, who claims to know much about engineers, is of the opinion that they are "superior in intelligence to any class of skilled laborers" he is acquainted with, and adds, "we do not, nor do we expect to find many of them who are scientists, mathematicians, or graduates of the higher institutions of learning, but we do find men of good common sense, sound judgment, quick perception and excellent reasoning faculties—men who are perhaps able to give points to writers who are afraid to be known in print." The writer does not deny that there are in the ranks incompetent engineers, and adds:

No doubt some roads do, even in this advanced age, employ men as firemen who scarcely have the rudiments of an education. They learn intuitively how to perform their various duties, and in time how to start and stop a locomotive, how to regulate the water feed, and how to "tie up" in case of a breakdown. They have never given the matter any special thought or study, because they have not the mental ability to grasp it. They could enlighten themselves on many subjects if they would devote a small portion of their leisure time to reading suitable books; but to these men reading is distasteful and irksome. They have no use for book knowledge; they feel their weakness, but cannot apply the remedy. Invariably, in every case, they can be blamed for their ignorance, but can you blame them for being engineers? I should say not.

There is one very dangerous shoal for the young engineer to pass. To illustrate: A young man is graduated from college as a physician or lawyer, and receives his sheepskin; but if he would succeed in his chosen profession he must not rely wholly upon his college record, he must keep up with the times, and still devote much time to study and research.

A young man is graduated from a technical school and writes three or four letters after his name, but if he stops here he will get left. He must keep abreast with our nineteenth century hustlers or be relegated to the rear of the procession with the drones.

Again: A young man has been firing a number

of years, has an excellent record, is bright, intelligent, and quick to "catch on." He at last reaches the height of his ambition, through merit, and becomes an engineer. As a fireman he was of an investigating turn of mind, would ask to be enlightened on subjects that he did not understand, but now that he is an engineer he is above asking questions, because an engineer should know almost everything. This young man has ceased to be progressive. "Got there," as it were, and now he is going to take things easy.

He has lapsed into a sort of a comatose state, and, if he does not awaken, some one will pass him, and in a few years he will find himself in the rear rank.

Clinton B. Conger writes from Grand Rapids, Mich. His subject is "coal burning." He had a fireman who seemed to take special pride in his ignorance, so he "shook him," and then says:

My regular fireman will keep her hot all day, and she never makes any smoke to hurt—just a little each fire that he puts in. I see to keeping a good arch in her, and he attends to the rest. He puts in one to three scoops at a time, and don't fire any oftener than the fellow that puts in twice as much at a time. When he first came on with me he used to spend about half of his time cracking coal, and would not put a chunk bigger than your fist in to her. I asked him why he did it; he said the engine would not keep hot on coarse feed. She used to burn eight ton on the round trip, and never was what you could call a good steamer; now she takes five and half to six ton, and I have made up more time on the fast run since I got him than anybody else; he ought to have the credit of it. She is always within about five pounds of blowing off, and stays right there, so I can hook her up in six inches, and whale the stuffing out of four cars, or nine inches with the night express, which has nine cars mostly, whenever we are late, which seems to happen every day; some of the fellers on the other division don't seem to care about getting in on time.

"But that boy of mine is a dandy. I begin to believe what you told me last fall—that knowledge always helps out muscle. He ain't got much muscle, but he is away up on knowledge. Our traveling engineer is always asking the boys hard questions. I guess he don't know how hard it is to answer some of them. I told him so a while ago; he laughed, and said it didn't hurt anybody to have to rustle around and learn about his trade. Well, as I was saying, when they run up against a hard question they come over to my boy, and he gets out his books and talks about combustion, leverage, expansion, lap and lead, till you can't rest. I never knew but one other fellow just like him. He is master mechanic of a big road now, and I am a common plug puller. It is curious how some men take an interest in such things, and get good soft jobs out of it."

Such views from practical men ought to be regarded as valuable and exert a good influence. The fireman is the coming engineer. If he is a student of his work he will rank high—otherwise he will either not get there at all, or will rank low if he should become an engineer. Ignorance don't pay now, and as the years go by the penalties it invites will increase in severity. There is no excuse for ignorance on the part of a locomotive engineer or fireman. They can fully master everything required. It is simply a question of *will*—all else is at hand.

The governor of New York has signed the bill giving the railroad commissioners full authority to compel railroad companies to properly ventilate and light railway tunnels.

Queries and Answers from the "Locomotive Engineer."

J. H. R. Huntington, Ind., asks:

Please tell me how to determine when the cylinder packing is blowing and also tell when the valves are blowing, and how to determine which side, without opening the front door of smoke arch: I have often heard my engineer say the valves were blowing. I could not see any difference between the valves blowing than when he said the packing was blowing. A.—When the valves blow, the sound of escaping steam to the exhaust nozzle is more nearly continuous than it is when packing blows, especially when links are hooked up. By moving engine slowly you can tell on which side packing blows, as when one side is using steam the other is not. To be sure a valve blows, place the suspected side on or about the center, put reverse lever in center notch, open cylinder cocks, and give engine a little steam. If steam shows at cylinder cocks, the joint between valve and seat is not tight. If you place and block the engine so that the piston of the suspected side is in the center of the cylinder, put the reverse lever in the corner and open cylinder cocks and give her steam. A strong blow will take place from the cock in the end taking steam. If any steam appears at the other cock, the piston packing is not tight. There are half a dozen ways to hunt for blows; think about them and reason them out. Once you get the difference in sound between these blows in your head, you will be able to tell them by the sound alone.

Is it true that when one side is using steam the other is not?

G. E. R., Westown, Pa., asks:

Does the pressure on the crank-pin of a locomotive have the same leverage to move the engine when the crank is on the upper side of wheel as on the lower? The fulcrum appears to change from the axle to the top of rail, and it appears to have more power when the crank is moving toward the cylinder. A.—There is no difference in the leverage when pin is above or below the axle, and the fulcrum does not change.

The answer is respectfully referred to Mr. Lockwood as to a location for the fulcrum.

J. H. C., Jersey City, writes:

Will you please answer the following questions, to settle a dispute between several locomotive engineers on the New York division. P. R. R., and oblige: 1. At what point in a locomotive boiler can be found the greatest pressure? Some say the steam dome is under the greatest strain; others say not. I claim that if two pressure gauges be placed, one at top of dome, the other at leg of fire-box, the lower one will show the greatest pressure, owing to the height of water. A.—At the bottom, on account of weight of water. 2. Why are check valves placed below the water line? A.—Because it is generally considered best to feed below the water line. Some locomotives are fed above. 3. Will an injector work with compressed air in place of steam? A.—No.

M. C. G., Durham, N. C., writes:

To settle an argument between some brother engineers and myself, please say if a locomotive's drive wheels slip in rounding a curve. And if they do slip, please explain how, and oblige. A.—The outside rail on a curve is longer than the inside one, and in going around it, one of the wheels in a pair must slip on one rail or the other unless the face of the wheels are coned enough to compensate for the difference in length of rail.

Helpless, Charleston, S. C., asks:

1. What is a locomotive? A.—Anything capable of moving from place to place, but now universally considered as a wheeled machine, driven by a boiler and one or more steam engines. Look in your dictionary. 2. What is lead given a locomotive for? A.—To fill the ports early and reduce the shock of the engine in passing the centers. 3. What is the wheel base of a locomotive? A.—The distance from

the front to rear wheel on locomotive is the total wheel base, and that from the forward to rear driving wheel the rigid wheel base. 4. What is the wheel center? A.—As usually spoken of, it means the diameter of driving wheel center—not counting the tire.

We have received from Geo. E. Ferris, of Nashua, N. H., a photograph of a Boston & Maine engine, that is accused of alighting ahead when shut off, and running down hill, the same one of our correspondent, Jas. Nute, wrote about. We will give a beaver overcoat to the man who will give us a ride on an engine that will do this trick in our presence.

Go it, friend Hill! We'll back you.

How About the General Meigs wants the tenders Enginemen? of locomotives pulling postal cars made sloping at the back end, so that in case of collision the postal car will slide up the back of the tender and escape being crushed. In an interview with a reporter General Meigs expatiated at great length on this subject. He held that the end of a tender, as at present constructed, acted like a ram on the car next to it in case of accident. We must differ from the views of this big military man, and humbly express our conviction that the present form of tender is weaker in a concussion than the ends of most postal cars, and that a sloped tender would make a wedged weapon of offense that would be much more effective in crushing through a car than the present shape.—*National Car and Locomotive Builder*.

And it might be added with justice that, even if neither car nor tender would be crushed, as the General apparently believes, that such a proposition shows an entire disregard for the safety of the enginemen. Possibly the General would consider it quite entertaining, when sitting in a locomotive cab, to have a postal or baggage car occasionally slide up on top of him.—*Railway Review*.

That is the question for us.

The Ten-Thousand- The successful completion, without a balk or accident, of the trip of the President of the United States, several

Presidential Trip. members of his cabinet, their wives and friends, and numerous transient guests, including high political dignitaries and prominent railway officials, over a railway route of 10,000 miles, about evenly divided between the northern and southern portion of the country, in thirty days, and in accordance with an announced programme, under the skillful management of Mr. George W. Boyd, assistant general passenger agent of the Pennsylvania Railroad Company, is an event that justly attracted much attention, and it reflects credit upon the railway service of the country.—From a railroad journal.

[And why not? Is the railroad service of America so poor that several people cannot travel for three or four weeks, 333 miles per day and 333 miles on Sunday, without attracting attention to the journey on account of its being completed without accident? If this be the case, it is time that railway service in the United States be improved. How about the engineers and other trainmen who travel 400 miles per day for 350 days each year, and take their chances regarding accidents? These men do not always have the company of an "assistant G. P. A." These men travel 140,000 miles per year, and they are human beings, built on the same plan as the President and his friends who accompanied him.]

Which reflects the most credit upon railroad management, 10,000 miles of safe travel for one party, or 140,000 miles repeated year after year, carrying safely thousands of people?

Truly may the editor of the *American Journal of Railway Appliances* ask: Why not? for certainly the lives and limbs of railroaders are as precious to them as the life and limbs of the President are to him. Vulcan.

The Faith of Inventors.

Unshaken faith in their ideas and a determined perseverance to overcome obstacles are gifts with which inventors have been endowed, or, in common parlance, they have their inventions "on the brain"—mount their hobbies and ride them continually. If they were influenced by rewards, or hopes of reward ultimately, it would seem, in the eyes of the world at large, that there was a "method in their madness," and that the tangibility of wealth was the terminus of the "hobby" race. But we find a large proportion of inventors unbiased and uninfluenced by any hope of wealth, money or reward. They labor and experiment as though their existence depended upon it; they labor with the hope only of ultimate success in accomplishing what they propose to perform, and that labor is with them a labor of life and love. This labor is ever constant to their minds, ever uppermost in their thoughts, ever exerting itself in every movement and every action. They are determined in overcoming every resistance. It is an example of the power of mind over matter—of intelligence over the powers of nature.

And what does the world owe to inventors? Civilization, arts, and commerce are the fruits of the inventors' "hobbies," and the greater part of these fruits have been the product of toil, many years of labor, at a cost of life, privation, and poverty; yet such was the inventor's faith that all obstacles have been overcome, and often after the results are obtained the fruit is left for others to mature and gather. Galileo declared the world "did move," and a prison was the result. Columbus, on the eve of his discovery, was nearly being thrown overboard by his discontented mariners. Harvey, the discoverer of the circulation of the blood, and Jenner, who first practiced vaccination, may be cited as examples of how great discoveries may be treated by the world before their discoveries are appreciated. Among the mechanics of a later day, Fulton, who was declared crazy; Colt, who had to mortgage his little stock of tools to obtain money to make his pistol; Goodyear, patiently toiling to obtain his results in the manufacture of rubber; Howe, bravely meeting all adversity to finish and introduce the sewing machine, may be cited as a few—very few—examples of struggling but afterward successful inventors. The list might be extended almost *ad infinitum*. Yet when success is achieved and the true value of the invention appreciated, the tardy meed of praise is tendered to the persistent faith of the inventor who accomplished the results.

Nor are poverty and adversity all that tries the inventor's faith in his projects. The ridicule of the masses and the sneers of the ignorant are perhaps as great discouragements as the former. Want of appreciation

must be the only excuse for such undeserved and unmerited echoes, which rebound upon the faith of the inventor.

We might say that all workers are inventors, few in the extreme, but all in a degree. He is an inventor who produces a cheaper product or goods of a better quality—who brings about a better result; he who simplifies a process—who modifies proportions of ingredients, or he who excludes an unnecessary portion from a machine, producing like results with fewer parts and motions. Anything of benefit to humanity is invention, and the author or producer is an inventor. A test of invention is the faculty to adapt means to an end without complexity, and an ability to advance human knowledge. Faith in this ability is omnipotent and tantamount to success, and this success is purchased with self sacrificing and energetic action, and a zeal to introduce the blessing of the results of their inventions and labors.

It is well the inventor has faith in the project of his brain, and the prospect of ultimate success is ever before him, and the dream of each night is that the morrow will produce the brilliant results which his dreams have depicted. It is well that it is so; for were it otherwise—were there no inventions—the world would be even now a barbaric chaos.—*The American Engineer.*

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, room 26, Atlantic building, Washington, D. C., expired during the month of July, 1891, and are now free to be used by anyone: viz.:

Car coupling, W. B. Barnes.
Electric signal apparatus, H. W. Spang.
Rail chair, S. Huber.
Heating and ventilating apparatus, T. H. Mott.
Coal car elevator, P. H. Lamey.
Rail joint, J. Bishop.
Railway switch, F. P. Hanchett.
Railway tie, G. R. Richardson.
Railway frog, T. J. and G. M. Clark.
Electric railway signal, H. W. Spang.
Track lifter, G. J. Kinzel.
Ventilator and cinder and dust guard for car windows, O. C. Rife.
Car wheel, A. Atwood.
Dumping car, J. G. Payson.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents, by applying to Mr. Brock, whose address is as given above.

The fourth locomotive belonging to the New York Elevated Railroad to have facets milled on the driving wheels according to the Swinerton prescription has been put in service, and the facets wore off during the first trip. Traveling Engineer Rauch, who is reported to have become the foster father of the invention, is said to spend his nights on the structure looking for the spots lost by the engine.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, INDIANA.

DRESS AND ITS VOTARIES.

The subject of dress seems to be attracting considerable attention from our correspondents. It may be remarked, in passing, that it is an absorbing subject in many other directions. The show windows in our large stores, the crowds of eager shoppers, the many dress-making establishments, the numerous fashion magazines published, the great manufacturing establishments for women's apparel, all prove that the question of dress is one of wide spread interest and importance. It is the life of a very large portion of trade and keeps an immense amount of money in circulation. It is right and proper that every woman should give a reasonable amount of attention to dress. The danger lies in carrying it to extremes, but this is equally true of many other things. Money is a necessity, we could not do without it, and yet we are told that "the love of money is the root of evil," referring to the avarice that takes possession of men and to the attempts to obtain money by unlawful means. Religion is highly desirable, and yet some of the greatest crimes on record have been committed in the name of religion, and it is carried to such extent by many persons as to degenerate into fanaticism. Temperance and all kinds of charitable and reformatory work are necessary for the uplifting of humanity, and yet people become so carried away by their zeal in this direction as to neglect business and home duties. We need to beware of excess. The essential thing is to preserve an evenly-balanced and well-regulated temperament and to be moderate in all things.

The extravagant love of dress is considered to be an exclusively feminine weakness. While there is ample foundation for this charge, yet all of us have known men with an overpowering vanity, whose shirt fronts and ties and collars and cuffs and shoes were the object of life. Unpaid dress-makers are the exception, while unpaid tailors are the rule. Women do not run up bills without a prospect of the money to pay them, and the number of those who get this money by questionable means is

exceedingly small compared to the great masses of women who toil early and late for the bare necessities of life. But it is so common a thing for men to "stand off the tailor" that the latter is obliged to charge his paying customers an exorbitant price to make up his losses from the "dead beats," although men in all kinds of business get proportionately larger wages than women. However, we will admit that a fondness for dress prevails to a greater extent among women than men. What does this prove? Simply that women, as a class, love everything that is beautiful and refining, better than men do, as a class. They are desirous of surrounding themselves with pretty things in the home, curtains and pictures and bric-a-brac and fine linen and china; while men are more interested in being comfortable and having enough to eat. Women are fond of music and poetry and flowers, while the vast body of men care very little for any of these things. Women will make almost any sacrifice to put fine clothes on their children. Men will furnish the money but they do not see any particular reason for them.

There is in woman an inborn love of the aesthetic which does not exist in man. So long as this finds expression in the manner referred to above, it is approved and encouraged. Men would not have it any different. They depend upon woman to preserve and perpetuate all these refining and beautifying elements of life, whose necessities they recognize in a vague sort of way. It is only when she applies these principles to the adornment of her own person that they feel called upon to scoff and censure. This is undoubtedly because women have carried this matter to extremes, going beyond their means, devoting too much time to it, injuring their health and making themselves ridiculous. That this is done we will be obliged to admit, sorrowfully, regretfully but truthfully. In discussing the question from a sensible standpoint, we will have to leave such women out of the question. Nothing that could be said here would convince them of the error of their ways. A rational fondness for the adornment of the person is commendable. Our body is our self, not the immortal part but that temple of the soul which is to go with us through this life, and it is a sacred duty to care for it and beautify it. The rules of health in regard to eating, drinking, bathing, sleeping, etc., should be scrupulously observed, not alone because it makes us more comfortable but because it renders us more attractive and agreeable to others. No beauty, no accomplishments can take the place of sweet cleanliness. The hair should be frequently washed and brushed, the teeth and nails attended to, the skin kept soft and clean, all the little details carefully observed. These

things indicate refinement of character quite as much as or more than any graces of speech or action. There is a great temptation to neglect these requirements of the toilet after one is married and the demands upon the time and strength increase, but so far as it is possible to do so, every woman should hold fast to them.

We are told that the lilies of the field take no thought wherewith they shall be clothed. Fortunate lilies, that may stand forth in the purity and simplicity of the garb which nature bestows! Women must add to the gifts of nature garments of wonderful and complicated fashion. There has been a misconception of the curse pronounced upon Eve; it was in reality, Henceforth shalt thou wear clothes. But as the penalty of labor imposed upon man has proved a blessing instead of a curse, so this command has brought pleasure as well as trouble upon women. To be well dressed makes a woman feel at peace with all the world. It is an art which must be studied. Men have a great advantage in this respect. They have only a few styles from which to choose and the tailor does the rest. The shapes and colors and fashions of women's clothes are infinite and, as many are compelled to make their own, the task of selecting what is suitable and becoming and making it properly is most difficult. Every woman should thoroughly study her good and her bad points and learn to increase the former and hide the latter. For instance, the present clinging style of dress should only be adopted by the few who have perfect figures. The studies in anatomy that are afforded by a walk down street on a pleasant afternoon are enough to make a sensible woman hide her head in mortification.

One who is excessively thin should wear draperies whether they are the height of fashion or not, and the extremely stout woman should have her skirts made with long pleats and folds that will partly conceal the form. Both should leave something for the imagination. The present much puffed and shirred and wrinkled and trimmed style of waist and sleeves, while very becoming to persons of slight physique, makes fleshy women look ridiculous and should be greatly modified. The attempt to introduce trailing skirts should be repudiated at once and emphatically. For evening dresses to be worn only in the house, they are graceful and pretty, but for the street they are an abomination. The indications are that the old-fashioned panier is to be with us again. If so we may expect the majority of women to look like caricatures. Dress according to your figure and do not be dominated by fashion. Much of the harmony of the appearance depends upon the hat or bonnet. Study carefully the style of your head and

face and select a shape that is becoming, no matter whether or not it is the very latest thing out. Be governed by the same rule in arranging the hair. Take a hand glass and examine the contour of your head, face, ears and nose and adopt an arrangement that is best suited to all. It is really wonderful how greatly a woman's appearance may be improved by a close attention to all of these points. There was never a time when the dress was more light and comfortable than at present. Underwear has reached perfection. It fits like a glove and has no superfluity of useless and cumbersome trimming. It may be varied in thickness so that a single scant skirt is sufficient for any season. The steels and bustles and heavy linings of the dresses have disappeared and women should resist their introduction again. The corset we have always with us. It has its merits and demerits. If it must be worn let it be merely for support and not to decrease the size of the waist.

It is too much to hope that woman's clothes will ever be as comfortable as men's, but there is an improvement. As women get into business and realize the necessity for convenient garments, they will find some way to obtain them without entirely sacrificing beauty to utility. The Woman's Council, that immense body of representative women who met in Washington last year, appointed a committee to devise and report a "business dress" for women. While, of course, they cannot dictate in this matter, their suggestions will undoubtedly contain much that is valuable. Meanwhile let women bring their judgment and good sense to bear upon this question. Give it a reasonable amount of attention. Select as good material as you can afford, do not go to extremes in style, and never purchase beyond your means. Having made up your dresses and purchased your bonnets, bestow upon them no more care and do not discuss them. The old rule is a good one: Give a great deal of thought to your toilet while before your mirror and not any after you leave it.

We trust our readers will receive kindly any criticisms that may be made, and not cease to write on that account. There is no reason why the editor should be compelled to correct the same mistakes in from thirty to fifty letters every month, when they can be avoided by a little care on the part of the writers. There is no intention to "lecture." The directions and suggestions are made for the purpose of improving the standard of our department in which all of our contributors have a mutual interest.

Mrs. D. J. B., Santa Rosa, Cal., your letter was forwarded to the proper address.

PLEASE do not consume any space in your letters by expressing numerous doubts and fears lest they may not be published. If there is anything in them worth reading, they will go in. If there is not, they can not be used even to gratify the writers. Say something and you will be heard.

"A FIREMAN'S FRIEND, ROSE," of Terre Haute, writes appreciative words of the *Magazine* and the *Woman's Department*. She compliments No. 16.

KEITHSBURG, ILL., June 6, 1891.

Editor Woman's Department:

The *Fireman's Magazine* is a welcome visitor at our house. Every page has good reading. Of late, as I have read the letters from different parts of the United States, I have thought, why not write one myself. Perhaps it is my duty to do my part in this department.

Each writer seems like a new acquaintance. They give variety to the generally monotonous thoughts of a woman confined at home with little folks and housework. I am "only a fireman's wife," but I am proud to say it. I have great respect for a man who will take hold of any honorable business and do it right for his own and his family's support. I believe in a woman making her home neat, attractive and pleasant. Surely woman's sphere is home-making. If your husband must smoke, let him feel free to smoke in his own home; if he wants to play cards let him do that also at home. I know I would allow these even if I were opposed to them. A man can't do everything just to please his wife, neither can a wife exactly suit her husband. We must expect to bear with each other's feelings. There seems to be a wide strata of contrariness in human nature. If we know we are not allowed a thing, that is just what we want. If the well is dry, we were never so thirsty. Let us teach our children to be honest, industrious, kind, affectionate and thoughtful. Give them a good common education. Let the boys learn a trade, and teach the girls the science of housework and sewing, for it is a science to do it right. I believe in a practical education. If I had spent the time I did over Latin and algebra practicing cooking a good meal, my cares would be less to-day.

So I say, girls, learn to cook well. I honestly believe a man thinks more of something good to eat than he does of where he will go when he dies. Nine years ago I stepped from the school room into my own kitchen, as inexperienced in housework as the word can mean. Five little ones have been added to the family. I have had everything to learn and do at the same time. If my girls have my experience I shall feel to blame for it.

Mothers are too apt to want to make ladies of their girls. I think men are inclined to think that they earn the money and have a right to spend it. Well, perhaps they do, but if a girl is taught economy she will not spend her husband's hard earned wages foolishly.

I think a woman should have an aim as well as a man. I am bound to be a good housekeeper and cook before I die; that is if I live my allotted time. I could die happy if my epitaph could read: "She was a good wife and mother and the boss cook."

Well, well, this won't do. The only apology I can make for this lengthy epistle is that I am a woman, and you know a woman never knows when she has said enough. Kind wishes to all.

See Em.

[An excellent letter. Should not the girls learn the Latin and algebra and the cooking also? If a woman should be thrown upon her own resources to make a living, she would find an education indispensable.—Ed.]

GOODLAND, KAN., May 18, 1891.

Editor Woman's Department:

Now mayn't I please tell you "our boys" are going to have a ball the 21st? If you will let me, I won't say a word about R. wanting M. so badly, but can't get her.

Does it not look too bad to see a young man buy a house, plant trees and fix things up generally, and then have to get his mother to keep said house for him? But "good things come slow."

There is quite a wonderment who writes to the *Magazine* from Goodland. I am sure if they knew they would take up a "penny collection" and buy me a good pen, for if it were not for poor lone me you would not hear from Goodland often.

How refreshing the evergreens for decorating the opera house look, after seeing nothing but this "vast sea of prairie" for so long, and when I read of people cultivating cacti I feel like going out in the yard and filling a barrel to send them, such a nuisance as they are here, they are so thick.

Some one said to talk about our neighbors and let the "boys" rest. Just wait till I give you my most excellent soap receipt and I will: One box Lewis' lye, 4 pounds suet and 3 gallons water. I use double this amount at once. Put the lye, grease and 2 gallons of water in until the grease is "set," and then add the other 4 gallons of water. You never will buy any more soap after giving this a fair trial, and it makes the dirt and those nasty overclothes part company at once. My hands are quite tender, but this soap never chaps them. Gasoline is good to get the dirt out of overclothes. Put a little in the washing machine.

Tell "T. E. D." Arkansas City, to try this bread: One pint yeast (made from one cake of yeast), 1 quart of water, $\frac{1}{2}$ cup of sugar, $\frac{1}{2}$ cup of lard; beat this up with 1 quart of flour, and beat it hard, and then mix in enough flour to make a good, smooth dough. Mix this up at night and you can bake your bread before breakfast. It don't take as long for this kind of bread to bake as some other. Don't mix it much when you loaf it out.

Here's my cake receipt and then I must go to bed: 4 eggs, 2 cups of sugar, 3 cups of flour, 1 cup of butter, 3 teaspoonfuls baking powder. Season to suit. *Phillips.*

[Don't you use any milk?—Ed.]

HOUSTON, TEX., June, 1891.

Editor Woman's Department:

My husband has often asked me why I didn't write something for the *Magazine*, but we have been married very near two years now and we have always boarded, so you see I have not the pleasure of telling the sisters how I manage my work, so I can go out whenever my husband wishes, make a garden, make my dresses, put up tempting lunches (for I am an engineer's wife), or any of the many little things women can do to make home happy. I have been willing to stand back and let other ladies write who can write something interesting as well as improving to all. I have not seen a letter from Houston since I have been here, so I'll tell you what little I know. Houston is a very pretty place and it is growing and improving rapidly, but I do not like it as well as I do my former home, Mobile, Ala. It makes no difference where we go we will have a tender spot in our hearts for our old home. My husband is a member of the B. of L. F.; he always attends the meetings when he is not on the road. I think it is their duty to go, but nothing puts me in a bad humor so quickly as for him to say after he comes in and gets the smut off and clothes changed, after being gone several days: "There is a meeting this evening; I must go," and when men get together they talk so long; they think very little about the minutes slipping by that we think are hours. I would like to exchange music with some of the ladies. I have some very pretty duets and plenty of other music. I have some crochet patterns; I will be glad if some one will exchange with me. Wishing success to the Brotherhood and Woman's Department, I am an engineer's wife.

I. Elizabeth.

KANSAS CITY, Mo., June 8, 1891.

Editor Woman's Department:

I have been thinking of the letters from the young prospective brides. I picture before me their young, happy faces, their bright prospects of the future—for who ever saw a young couple without bright prospects—their nimble fingers preparing dainty wardrobes, or pretty furnishings for the future home. To each one would I say a word. You have known your intended husband long enough to learn his habits and disposition as well as possible until you live together. Both of you have been raised by different parents and have had different surroundings, different teachings and different influences; the little things in each one which make up the different characters, you will neither one notice until you are thrown wholly together. At first you will be completely wrapped up in each other; the novelty of the great change, the newness of the possession, the excitement of the trip, the happiness of furnishing the house, the calling of friends and their congratulations; all these will occupy a certain amount of time, long or short, as circumstances may permit, but at the end will come the settling down to real life. Hitherto you have been the pet of your family; you have been shielded from all the cares and troubles of life; as nearly as possible your every thought and wish has been anticipated; raised from the cradle in the bosom of your family, all you do is right; they are accustomed to your moods, know your likes and dislikes, and as much as possible guard against the latter; love is the basis of all.

When you go out into the world as a bride and wife all is changed. Love still goes with you—your husband's love—but with it new cares, new duties and new responsibilities; your age will not save you, whether sixteen or sixty all will be the same; you will at once become the mistress of the house; thrown completely together, new traits will be developed in each other's character which before were not seen; then will come the necessity of self-restraint and self-denying, but with pure love for each other, to bear and forbear will be your aim and pleasure, for love makes a pleasure of all duties.

It has been an easy thing for you to gain your lover's love, but it should be your constant care and thought to keep your husband's love. In many ways you are stronger than your husband. You will carry your religious training zealously into your daily life, you will strive to keep up the little loving acts of your courtship days, the good bye kiss, the happy words of welcome, and the small courtesies which add so much to the home happiness; all these things depend upon you. If you have had good home training you will under no circumstances let yourself retrograde. No slang phrases will pass your lips; you will watch your grammar and not let yourself fall into grammatical errors in common conversation, and by so watching yourself you will counteract the influence which bears on your husband in his intercourse with the outer world. You will not only keep yourself up with your present attainments, but improve yourself, making yourself in every sense of the word a companion to your husband and preparing yourself in the future to be, not only a mother to your children—if you are so blessed—but a friend and companion, renewing your youth in them, entering into their pleasures, helping them with their studies and making their joys and sorrows your joys and sorrows.

You will not let yourself go backward in your personal appearance. Your dress may not be as fine after the first year, and you may not have as many ribbons and laces, but you will have just as much soap and water and as good a comb, and in this day of cheap dress goods and cheap muslin there is no reason—if you are so inclined—why you cannot always have your clothes sweet, and with a clean apron, clean skin, well combed hair and a little something to make your neck tidy, no matter what your work may be, you will always be a neat, clean wife in your husband's eyes and respected by your neighbors. You, as an American born woman, have the same advantage as the American born man. As the plough boy and the rail splitter have sat in the president's chair, so can you, by striving, become a lady amongst ladies and cultured amongst the edu-

cated. America can boast to-day of as many self-made women as self-made men.

To all our correspondents I would add, let us each one strive to improve our letters, for our own sakes as well as to please the editor, who, I am sure, finds some of us rusty, and is most patient with our shortcomings. A fireman's mother.

W. L. W.

[It is a very great pleasure to publish such a letter as this. We hope to hear often from our correspondent.—Ed.]

OMAHA, NEB., June 17, 1891.

Editor Woman's Department:

This is my first attempt to write a piece for the *Magazine*, though my intentions have been good for some time. I see there is a little complaint. Some seem to think that the older and married folks are monopolizing too much space in the *Magazine* and that the young people are neglecting it. Well, I think that the young folks ought to take more interest in the welfare of the *Magazine* than they do, especially the young ladies and gentlemen who have fathers and brothers connected with the locomotive department; not omitting the young men who are firemen and belong to the B. of L. F. I am a young man and a fireman of four years and have belonged to the B. of L. F. three, so I think I have a right to say this. I don't think that the older and married folks ought to be rejected as they are the ones who have had experience and can give advice to the young people. I see there are a great many good suggestions made in the letters of the *Magazine* and some if lived up to would be of much help to us in the future. I agree with the editor in regard to the managing husband business: it is like a warped and weather-beaten board, it is worn out. The sayings and doings of a married man have been well discussed.

The future letters I hope, and I guess most of the readers do too, will be on some good subject, or a variety of subjects, that will give information and instruction. The Future is a splendid subject to write on, and there is a good deal in it. A man or woman, no matter how unhappy or unpleasant his or her past has been, should be looking ahead to see what the future will bring forth, and figuring all the time how they can bring themselves on an equal or higher plane than their neighbor. As I have no more time to write on this subject now, and I think it a good one, I hope that some of the other writers will say something of it; I will try and say more next time.

Now Mrs. Editor, if this don't go where the managing husband letters go, I will write again. Prosperity to the *Magazine* and the B. of L. F. is my wish.

Yours respectfully,

Young Man.

["Young Man" will get in once without giving his name, but he must bring his card next time.—Ed.]

CHANUTE, KAN., June 22, 1891.

Editor Woman's Department:

My husband has been taking the *Magazine* only since Xmas and it would be superfluous for me to say that I have read and enjoyed not only the space allotted to us, but the whole.

I haven't seen any letters from Chanute as yet, but there might have been some before we commenced taking the *Magazine*.

Our city is a very pleasant place to live. The inhabitants are very social—there are not enough of us to be formal.

Just at the present time the Neosho river is occupying a great deal of our attention. It has overflowed its banks and last night it rose ten (10) feet and it is pitiful to see the wheat that is being destroyed. The trains are all delayed by the unsafe bridges and water-covered tracks.

My first letter is quite a long one so I will close in wishing all railroaders a long life and God speed in all their trips.

An Engineer's Daughter and a Fireman's Wife.

DENVER, COLO., May 8, 1891.

Editor Woman's Department:

Through the kindness of a friend I receive a copy of the *Magazine* every month. I was never aware of its existence until last January, when I was fortunate enough to receive my first copy. It is interesting and I think it very nice, especially the Woman's Department. I think the letter in the April number signed "Mary," is just splendid. It's a pity there are not a few more homes like hers. I will say nothing concerning my own, as it is anything but a pleasant one, but the old adage says "Live in hopes if you die in despair." So I am living in hopes of having a home some day that I can call my own. When such does happen I will do all in my power to make it a pleasant one. I can give a receipt for anything in the line of cooking or managing a house, but when it comes to managing a husband I know very little more than mere hearsay, as I am rather inexperienced in that part of the business, but look forward to the day when I can write you ideas myself, and then I will tell you what the fate of a fire-boy's wife is.

Why do we never see a word from 77? Being acquainted with several of its members, and feeling as though I had an interest in it, I would like to see a line from some of its members. As this is my first attempt I will close. Promising to do better next time, I remain

Very Respectfully,

A Fireman's Girl, Little.

LEXINGTON, KY., June 6, 1891.

Editor Woman's Department:

As my brothers take your *Magazine*, I frequently read some of the leading articles in it and many of the letters. As my brothers are both railroad men I have become interested in all that pertains to the work. It seems to me a very happy idea which suggested this medium for the men and women, whose interests are much the same, to become somewhat acquainted and thus to encourage the "fellow-feeling" which makes the whole world kin.

Last week the firemen formed a new lodge here, and as it is in the centre of the renowned Bluegrass region they hope to have a successful one. It seems that if at some future time the men should wish to have a holiday and royal good time they should bring their wives, sisters, sweethearts, mothers and cousins and visit our beautiful little city, which can be easily approached from all points by railroad, and when here, one of the most suitable spots ever formed by nature is at their disposal. Our park, where "Chautauqua" is held every year, from the 2nd of June through July, where the pretty white tents dot the unkept grass, where all the oaks which rustled their leaves and formed a shade for Henry Clay are still remaining in their own natural grandeur. Then, of course, there are all the stock farms which can be visited, and again, there is the old true Kentucky hospitality, which would bid them welcome.

There are many characteristics brought out in the different letters. Among the interesting ones is that magnanimity displayed by "Charlie," who would let his wife manage herself. I am not married, but it seems to me if a man has sufficient belief in the intelligence, purity, refinement, and affection of a woman to choose her for his wife, then he should have sufficient respect for her ideas of what constitutes right and wrong to leave her sole power of self-control.

As the idea of this department seems to be mutual good and improvement, I have concluded to give a little hint which has occurred to me. Railroad men are not generally thought of as a refined, but on the other hand, a very rough and uncultivated class of persons. Why this should be, I do not know. Assuredly it is not necessary to have one's heart and soul and manners as black as his hands and face become. After all, it is not the clothes nor the polish except that which every true gentleman's instinct teaches which makes him really a man. It is the thoughts, the heart which dictates them, his actions, his conversation, his manner of life, which must distinguish the truly noble, whether he be

fireman or any other railroad official or whether he be the greatest professional man or aristocrat of the times. There is no reason why the men cannot be looked up to and thought of as refined gentlemen. By this I do not mean the duds of to-day, but well informed, gallant and abreast of the times. Let them, if possible, form reading rooms in connection with their society, where they can go when their "run" is made, where are all the leading magazines and best newspapers, some of our real "heart poets," and if possible, have a regular lecture course of best lecturers. There is nearly always a sufficient number of men with their wives in any town where there is a lodge to form an audience, and this would act as a recreation to their tired minds and bodies. I do not know of any class of men who really have less time, because their work is so hard and rest so short and yet if a great effort is made a little time for self-improvement can be found. Now is a time when men of sound mind and judgment are needed. If the federations are to prosper and reach the needs they are intended to supply, then men of high principle, of strong will, yet approachable, reasoning faculties, and men sufficiently acquainted with all the great issues of the day, and those who are capable of judging between what will ultimately be for the best under given circumstances, are the men who ought to form the Brotherhoods. The homes and boarding houses of the men have much to do in forming their characters, and so the wives and mothers should be careful what kind of influences they bring about the home life of these men who form so large a portion of the present population.

Hoping I have not made you all tired with this, my first letter, will close with many kindly wishes for the *Magazine* and its readers. *Olive.*

[A very good letter, containing many commendable suggestions. Let us hear from you again, and sign your name.—Ed.]

CADDO MILLS, TEX., June 30, 1891.

Editor Woman's Department:

Having received the *Firemen's Magazine* through the kindness of a friend for the past few months, I have become very much interested in them.

I have thought several times after reading the nice letters in the *Magazine*, that I would write, but as I never before ventured to write for any paper or magazine I felt rather timid in making a start.

I think the *Magazine* splendid, especially the Woman's Department.

I live somewhat in the northern part of Texas. This is a very beautiful country. Farmers are all very busy laying by their crops.

As "Card Playing" seems to be the principal subject now in the *Magazine*, I will give you my idea about it. I think card playing by all means should be kept out of the home circle. We can find plenty of other amusements and much nicer than card playing for the young at least. But as I am quite young yet I am not worthy of giving advice. I will close with my best wishes for the B. of L. F. and the *Magazine*. I remain a fireman's best friend.

Fannie.

STANBERRY, MO., June 7, 1891.

Editor Woman's Department:

As we have seen nothing in the *Magazine* from Stanberry, Mo., we thought we would write a few lines. Stanberry is a beautiful city in northwest Missouri, has a fine normal and a splendid public school. There are a good many railroad men living here and we think they are the bravest and truest men that there are, especially the firemen. Our fathers are firemen and we are not ashamed to own it.

We take the *Magazine* and like it better than any *Magazine* published and always read the Woman's Department first. We are but school girls, age 16 and 18 years, but we thought we might encourage some of the older sisters to write. As this is our first venture into your charming circle we will close with best wishes to the *Magazine* and firemen, especially Banner Lodge, No. 56. If this is accepted we will write again.

Mary C. Marsh,
Alta B. Campbell.

TO MRS. NELLIE BLOOM.

Dear Madam, don't think I am growing
Regardless of friends I admire,
Whose eloquent pens are bestowing
Sweet praise on my meritless lyre;
It was my intent to have written
A rhyme to yourself long ago,
Until you threw at me the mitten,
Last fall for a chap whom I know.

You kept singing of love and affection,
Sweet nightingales, ring doves and such,
Till you got my poor heart in subjection,
And held it secure in your clutch.
I supposed that I was your best fellow.
And often felt pride in the boast,
Until your false bosom grew mellow
With Sargent and Debs on the coast.

Ah, well; it is just the old story
I've read of and heard of for years;
You ne'er thought in the height of your glory
Of how I was sad and in tears.

I've written soft nonsense in volumes,
Dictated with sentiments true.
For the *Magazine's* eloquent columns,
Inscribed and transmitted to you;
I've toiled like a beaver to win you,
And have you love none but myself;
But, Lord! I've an action agin' you
For stowing my hopes on the shelf.

I've heard you looked robust and hearty—
Altho' you have written you're thin—
And flirted around with the party
Almost to the borders of sin.
How your eyes were most brilliantly gleaming—
You told me were scalded with tears—
Oh! madam, beware of such scheming,
And spare me your coquettish jeers.

Old sweetheart, my faithless and cold love,
While I have been constant and true,
"Be sure you are off with the old love,
Before you are on with the new;"
Or maybe you'll fail to console me
Until I sink deeply in gloom,
Indeed it was wrong to cajole me
In the way which you did, Mrs. Bloom.

Shandy Maguire.

NOVEL READING.

Novels are fictitious narratives, giving us false ideas of human life. They are flimsy productions of those who write for bread or mere idle fancy of a chimerical brain, highly embellished with love, chivalry and adventure. They palliate the vices and follies of mankind and underrate the sober refining virtues. An inveterate novel reader might be said to be analogous to an opium fiend, for the continual perusal of the novel and the continued use of the opium derange and poison the brain.

Crime is often attributed to liquor, but how much folly and wickedness can be traced to a dime novel? I pause for a reply, while you enumerate the many incidents that led to crime through a novel.

Novel reading leads to neglect. A novel in a novel reader's hands and there is no doing of any manual work until it is finished. The attraction of the magnet, or the influence of the moon over the tides is weak compared to the attraction that the novel wields over its victim. A wife neglects household duties, and often the little ones, given as a blessing, share the neglect, while the latest dime novel is being perused. The man allows ten fold the number of weeds to spring up into his garden while he is reading his much admired literature. Novels vitiate the taste, just as strong, adulterated liquors vitiate the stomach and constitution. Inspect the penitentiaries and you will find those there who put into execution the crime that the hero of a dime novel perpetrated. Go to the lunatic asylum and again you behold the effects of the dime novel, for there you will hear the ravings of a maddened brain which many times can be traced to the love for novel reading.

Is it by reading novels that the renowned lawyer,

the able statesman or the great orator has attained his eminence? Your answer is emphatically, no! cast a cursory glance at the pile of books that the young collegian has to study and you will readily see that the novel is excluded from the list. Books are true levelers and if we confine our perusal to the trashy we degrade our mental and moral faculties; so, by reading that which is good we may enrich our intellectual ability.

It is said that the sorrowing and troubled heart receives consolation from books; then we reiterate it must be pure, untainted literature to lighten the cares. Books are the voices of the dead and the distant and if they be good they inspire us with esteem and reverence for the author, but if they are deficient in elegance and truthfulness the sentiments set forth find no credence and the author's name, as well as his works soon pass into oblivion.

'Tis said that "reading maketh a full man," and we conscientiously believe that that reading should be literature far superior to that which we find in the majority of novels. How ridiculous, should our modest young lady of to-day be guilty of the same atrocious impropriety that the heroine of a dime novel figures in, and we would say "Fie!" denounce her and shun her society as we would a poisonous viper.

It is said that some books are to be tasted, others to be swallowed and some to be chewed and digested. But we say the novel isn't one of those, for if you taste it you will be greedy enough to swallow it; consequently, it would have to be digested according to physical laws. We read books with pride, while we look on the novel with prejudice.

Emma E. Smith.

MILLVILLE, CAL.

[The writer sustains her side of the argument upon this question with much ability but there is something to be said on the other side. We should like the opinions of our readers upon this point. Have they been helped or harmed by novels?—Ed.]

ROCHESTER, MO., June 1, 1891.

Editor Woman's Department:

Jas. A. Perry's host of friends in Illinois, Missouri and Texas, will remember with aching and sad hearts his untimely death in a train wreck in Mexico. He had won for himself the love of one of Missouri's dark haired maidens, and instead of the anxiously looked for letter containing the happy tidings of his coming to claim her for his bride, came a silent message: he is dead.

Her heart is now breaking under the dark cloud of sorrow that o'erhangs her weeping life!

While he sleeps softly and sweetly far away in the blessed mansions the loving Saviour has prepared, her fountain of grief flows in the silent grave yard: the pansies and roses, geraniums and weeping willows that wave o'er his new made grave, only remind her, as they are awakening from the winter's long reign of the glorious resurrection.

He has made his last trip, all danger is over, for he has crossed the deep waters with the angel boatman and now triumphantly chants the song of victory amid the glories of the evergreen shore.

The Lord gave—He took him, now, my dear sister, let him rest in the Saviour's bosom—and ere long he will sweetly linger 'neath the celestial shadows of the pearly gates, waiting and watching for you, and his dear, sorrowing sister now so sad and lonely, since he bidden you all a final farewell!

May God's sweet grace sustain and comfort you. Let his precious body moulder in peace, under the flowers, while his sweet loving spirit rejoices forever in the glorified realms above. May the Lord comfort your sad heart and grant you a happy meeting in the sweet bye and bye.

Mr. Perry's admiration for the *Woman's Department* was great, and he sent the *Magazine* to his intended wife.

Christianly,

Adelia Bygfield.

ELDERVILLE, TEXAS, May 27, 1891.

Editor Woman's Department:

I have neither father, brother, nor sweetheart belonging to the lodge, but I have some very dear friends that do, and it is through one of them that I get to read your valuable *Magazine*. He is also one of dear little cousin's best sweethearts, which makes his success in life doubly dear to me. Here in the South we have a great deal of amusements, such as fishing, pic-nicking, literary society, debates, and last but not least, preaching, which is a source of enjoyment.

To those that dislike card playing, I say don't play nor allow it in your house. I think it would be a sin, but there are some that enjoy it better than any other amusement.

I think it the difference in the nature of the boys when they go astray and not altogether the influence around them. I have played many games of euchre with my father and brothers and enjoyed it very much, and I have never heard of one of them being seen to indulge in any game at a gambling hall yet; but that don't make it right to play cards.

As for housekeeping I ought to be experienced in it, for I have been superintending household affairs for ten years or more, and find it very confining at times, especially when I have a great deal of company and want to go fishing or to a pic-nic, and want extra work and can't find any one to depend on. Sisters, own up now and say that at such times your homes are not as tidy as they should be, or are at any other time. I mean the sisters who attend to their own affairs in the kitchen.

I am an east Texas girl and can engage hired help much cheaper than the western sisters.

Some of you hurry and send in some real good receipts for plain, every day cooking, as well as Sunday eating. You see I fix up more on Sunday than any other day, and so do the rest of you I know.

Success to you all is the wish of

Doodle.

CARROLLTON, MO., June 15, 1891.

Editor Woman's Department:

As it has been some time since I wrote a letter for the *Magazine*, I will employ my time this morning in writing a few lines. Undoubtedly the majority of my sisters who perused our Montpelier friend's letter, read it with flashing eyes and sneering lips, and unhesitatingly pronounced the writer a crank. Perhaps the verdict was just and right. But borrowing imagination's keen eyes, I read between the lines, finding there a far different meaning than that which he sought convey to us through his sarcastic pen, and with your kind permission I will paint a pen picture of Brother Richmond and his life. I see before me a man whose form would be fine if it were not for a stooping, shambling way that he has acquired by constantly peering into his neighbor's back door. His face, too, is rather handsome, but as we observe it closer we see that the eyes have an unpleasant sharpness, caused by watching for flaws in his brother's wife's manner of discharging her household duties, or her conduct in society. His lips are parted with a scoffing curl, so as to give his acid tongue the opportunity of revealing whatever faults he may discover in the weary wife, the harassed mother or the thoughtless girl. But for all this I can see that this man has a heart, that if it had been subjected to different influences, would have caused eyes and lips to glow, and smile with kindness and good fellowship, and his tongue would utter naught, but praises for those he so ungraciously abuses now. It is evident that he never knew a mother's tender care or love. Had he ever known such a love he never would make the foolish assertion that "earth would be heaven without women." No bright eyed sister has ever met him with a caress, and with soft hands affectionately smoothed from his brow the lines of care and made him forget, in her innocent presence, that the outside world was full of sin and snares.

Sweethearts? Ah, yes, the tone of his letter convinces me that he has had several too many, and moreover he has chosen them from a class of women who care only for a man's pocketbook. Unfortunately for us his views are so contracted that he can-

not discern the true from the untrue—the good from the bad, but makes the sweeping statement that one-third of the wives of to-day do not keep their homes as they should, but go (as he elegantly expresses it) gadding about with other men or gossiping with their neighbors.

The conclusion is readily reached that Mr. Richmond has passed the greater part of his time in a third rate boarding house, with a landlady who has worn herself out trying to please old disappointed bachelors, and the trial has proven too much for even a woman to bear and she has developed into a scold. Now that I have shown you this man in his true character, as judging by his letter I believe I have read him aright do you not think that he is deserving of pity rather than censure? Truly that man is to be pitied who has never had the benefits of a pure home. He is like a boat without an oar—drifting, drifting with the tide of unbelief, until he is wrecked on the rocks of dissipation. How many young men are saved from such a fate by the prayers, the words of warning spoken by true women? They are as numberless as the sands of the seashore. How often when men are tempted, the thought of mother, sister or wife gives them the strength to resist the temptation. Then let us learn a lesson from this poor man's letter—that a woman's influence is great, and God help us to use our influence in elevating man to such a height that he never more will say "that the snares of vile women have dragged him down to Hades." Let this influence so fill his heart with respect for women that there will not be room for thought of those who have fallen from purity. It is a great pity that Mr. R. did not marry before he became such a fault finder. Now I think it would require a woman with angelic temper to live with him.

With my best wishes for the *Magazine* and good luck to the firemen, I will close.

I remain yours truly,

Grace B. Cutler.

[Mr. R. will certainly be touched by this letter which no doubt verges upon the truth. Possibly some one woman is responsible for his bitterness of feeling but he makes the common mistake of judging all by one sad example.—Ed.]

ARKANSAS CITY, KAN., June 19, 1891.

Editor Woman's Department:

Now when I tell I am not a fireman's wife, mother, sister or sweetheart, will you give me a corner in your department? I have been reading the *Magazine* and think it just splendid, except—no I will not say it. I do not know very much about railroad people, but I want to ask all of you who praise the railroadmen: Are there not as bad men on the railroad as elsewhere? I pity all the rest of mankind, for if they ever read the Woman's Department they must think they are "nowhere" in the mind of those contributors. Now I am glad I am not near any of the correspondents, as I would probably be so frightened at the "thunder clouds" on their brows that I would want the earth to open and swallow me.

I like "Charlie's" letter in the June number very much. He expresses my sentiment exactly. I, too, say: "Be what you are;" and if you have habits that you do not want known, try earnestly to give them up.

Charlie, why not take the maxim, "A good son makes a good husband," and apply it to the daughters. I think that the best way. Let us hear more on this subject; also how to judge a good husband. I am more interested in the latter.

As this is my first letter to any paper I will close.

Yours,

Maggie Miller.

[As the vast majority of our correspondents are connected by domestic ties with railroadmen they very naturally and properly admire them above all others.—Ed.]

AN AFFECTIONATE REMEMBRANCE.

The following lines written by request of Miss Mrs. Harris, are respectfully dedicated to Mr. and Mrs. F. F. Fisher in memory of their daughter, Emily W. Jenkins, who died at Newark, Ohio, January 15, 1890, aged 15 years:

She sickened and died while the roses
Were abloom on her cheek young and fair;
And she whispered these sweet words at parting:
"Trust in God and you'll meet me up there,
In that heavenly home, celestial,
Whose pearly gates stand ajar,
For the pure in heart to enter—
Where sorrow ne'er comes to mar."

Oh! the anguish and sorrow at parting,
From the one we loved fondly and dear;
Grief-stricken we wept for our darling,
While death was approaching so near;
Yet she calmly awaited the summons,
That would call her from earth far away,
And it came as the last beams of sunlight,
Were foretelling the close of the day.

We laid her to rest with hands folded,
While mute were the lips, cold and white;
Each heart-throb was freighted with anguish,
When our loved one was hidden from sight;
And the future looms darkly before us—
All happiness in life is now o'er,
While our hearts are filled with deep yearning,
For her, who will come nevermore.

Mrs. Nellie Bloom.

WEST OAKLAND, CAL.

COLORADO CITY, COLO., June 23, 1891.

Editor Woman's Department:

While not presuming to criticise your methods in any manner, it seems to us that you were a little harsh in the way in which you poured cold water on the literary effusions of "M. I. P." of Leadville, in the June number. We have no doubt that the young lady would have improved had she been given the slightest encouragement, and in time, perhaps, become one of your most valued contributors, but, after the scourging which she has received, it will be something strange if she ever again takes up her pen to write to the *Magazine*.

You express a wish that the correspondent will tell you something about Leadville. Now, we could tell you very little about that interesting city, so will leave it for her to describe if she chooses, and will endeavor to write about our little town and the country we traverse in making the trip from here to Leadville.

Colorado City lies nestled at the foot of Pike's Peak, (every city, town or village within a radius of one hundred miles is described that way,) and is said to have once been the capital of the State. It now has a population of between 1,500 and 1,600 people, and has still lots of room to grow. The principal shops of the Colorado Midland Railway are located here. The offices of the Superintendent, Master Mechanic, Roadmaster and the Dispatcher's office for the first division are also here. There are also a large glass factory, running night and day, their principal industry is making bottles for the famous Manitou Mineral Water; the Ute Pass Paint Company's works, where the crude minerals are converted into paints, mixed ready for use; a stucco and cement factory; and large quarries, from which are gotten out immense quantities of beautiful red sandstone, which is shipped to all parts of the continent.

We could give you a much better description of Colorado City, but here comes the caller to tell us that we are wanted for "No. 45, on time," so we take our "pie-box" and follow him to the round-house, where the engines are standing, ready to go. We glance into the fire-box, see that the supplies are all right, and when the engineer is ready, we move slowly out of the house and into the yard, where the train of ten loaded freight cars stand waiting for the two big engines. A few minutes more, and the engines are coupled on, the conductor

brings up the orders, the whistles sound "off brakes" and the fireman, grabbing the scoop and fire-door, commence a four handed duet of immense proportions.

Three miles from the start we reach Manitou, which you have heard of, or perhaps, visited. We have scarcely time to glance down at the beautiful little village before we come to the tunnels. Passing through them, we are almost directly over the wonderful Manitou Iron Springs, where so many invalids seek to regain lost health. Here we reach the 211 feet grade, and while the engineers give their engines the benefit of a few inches more valve travel, the slow, labored exhausts show that the monsters are loaded to their full capacity. Onward and upward we go, passing through six more tunnels, in close succession, creeping between overhanging rocks and over abysses, where derailment would mean a fall of hundreds of feet into the Fontaine Qui Bouille, which can be heard far below, sprawling over and quarrelling with the rocks which impede its progress.

Presently, Cascade Cañon is reached. This is a lovely little nook in the mountains, which attracts a number of visitors during the season. Here we side-track to meet the suburban passenger train, which runs between the numerous resorts and Colorado Springs. "Dad" comes along, just four minutes late, then on we go again, passing Ute Park, Green Mountain Falls, another pretty little resort, Woodland Park and Summit Park, and just two hours and twenty minutes from the start we are at Divide, twenty-five miles distant. Wasn't that a fast run?

Here the helper is cut off, one engine handling the train for the remainder of the trip. Looking far on to the westward we can see the white capped peaks of the Snowy Range, seventy miles distant.

Starting down from Divide, the train runs along fertile farming tracts, through grazing lands and past numerous saw mills, into the Four-mile or Florissant Cañon, at the mouth of which lies the little village of Florissant, noted chiefly for its proximity to Crystal Peak, the wonderful Petrified Stump, and the Cripple Creek mining district, which is attracting so many gold hunters at present.

In a few minutes we are ready to leave Florissant, and we glide swiftly down the valley till we reach the mouth of Granite Cañon, sometimes called the Eleven-mile Cañon of the Platte. Here we begin the ascent again, rushing through tunnels and seeking first one side, then the other of the narrow cañon, with its precipitous walls, sometimes almost shutting out the sunlight. At last we reach Idlewild, and are soon rolling over the South Park, whose broad acres of grazing and hay-land are the strongest possible contrast to the rock-bound gorge we have just come through.

The run across the Park is uneventful, and presently we are climbing the Musquitto Range, by ponderous curves and zig-zags, until we reach the summit and begin the descent into the valley of the Arkansas. At Buena Vista, (rightly named, for no one will deny that it is a "pretty view,") we look across and down the broad valley, where the land is so fertile and productive during the short summer season, and think we could be contented to live there always. Beyond the valley rise, in majestic proportions, the College Peaks, Princeton, Harvard and Yale, grim, heavy-headed and silent sentinels, seemingly keeping an unceasing and vigilant guard over the city and valley so far beneath them.

Reluctantly we leave the contemplation of this magnificent scene, and are soon running along the turbulent Arkansas, but the valley has become narrow, almost a gorge, and has lost its charm. However, this doesn't bother the fireman much, as the grade is heavy, and he hasn't much time for looking at the scenery. But right here we will stop a minute to say that no pen can describe the beauties of a trip over these mountains, and if you will only come out to see for yourself, we will take as much pride in showing you over the road as we would our best girl.

Well, just up there, around the curve, is Leadville. And fearful lest we should encroach on the domain of "M. I. P." we lay down our pen and bid adieu to the hotel, there to snooze until the caller comes to

warn us that it is time to take up the wearying burden of life again. He hands us the book and we inscribe our name.
Patsy Houltham.

[This is a charming letter and we trust our correspondent will favor us again. There was no intention of being "harsh" with M. I. P., but for nearly nine years we have tried by every gentle means to persuade our correspondents not to write such letters, and yet they are persisted in by those who declare themselves "constant readers." As this letter had no name signed, it was decided to make an example of it. The writer is undoubtedly capable of doing better and we hope to hear from her again over her own signature.—Ed.]

FORT WORTH, TEXAS, JUNE 20, 1891.

Editor Woman's Department:

I supposed "Kicker" to be a woman because "Main Rod" said so in his letter to Woman's Department in the February number.

Speaking of books, I have just been reading "Thirty Years of Labor," by T. V. Powderly. I hope you will all read it and I assure you after doing so you will have more respect for the various lodges that your husband no doubt attends. You will also feel more sympathy for humanity.

There is so much to say of and about books I must not begin or I will overrun my space. Can any one tell me where I can obtain the life or biography of "Charles Carroll, of Carrollton," through this department? I think it would be so nice to live in a large city where there are free or cheap libraries.

Mrs. Harper gave a lovely description of her new home; I know it is a pleasant one to live in.

Looking out from my window as I write just now, I see the cottage home of the Secretary of the B. of L. F. lodge, here at the foot of a lovely green knoll, above which are growing green trees, and a rustic fence is just visible through the foliage of vines and branches, all reminding one of the pictures of an old castle so often seen on the front of old-fashioned clocks.

Through an open door I see a large school building on an apparently high eminence, towering over the tops of cottages and leafy, low trees. Through another window a leafy woodland, where the forest birds are holding a musical concert. My home is quite in the suburbs and when I care for a walk in the woods or a swing in the hammock, I have them. This is all beautiful this lovely June weather, but like Ella Wheeler Wilcox, "I like to live entirely in the city," to see people and be among them. The most lonely and desolate feeling I ever experienced was once in the Texas Panhandle country, when we went for a drive of eighteen miles from Clarendon to Col. Goodnight's. He owns thousands of acres of land and stock both on foot and in banks, is a big cattleman and has everything earthly that man can enjoy except youth and happiness perhaps. For a time we were entirely out of sight of any human habitation or sign of life of any kind, only a large gray prairie where you could apparently see all over the world. O, how lonely, desolate and helpless I felt. Those with me did not seem to mind, but in a moment more carriages and people on horseback were passing, chatting and exchanging compliments, making things cheerful again. There were droves of cattle and the cowboys with their big hats and chivalrous hearts, the large tanks of cool, clear water splashing from the pumps at the windmills that are scattered every where over these syndicate lands. What a lot of lovely homes those lands would make if the Knights of Labor had their wishes and rights, and those lands were again restored to the public domains, and every man who wished could go there and have a home if he cared to undergo the privation that every pioneer must endure for a time.

Belle writes a practical, sensible letter. A few more like the one in the June number will likely

bring you an offer to take charge of a fashion department in some household paper; meanwhile give us the basque receipt you promised.

Margretta, you are right. There is nothing keeps a woman young, her ideas bright, her life interesting to herself and those around her like going from home at times; associating with others whom you like or whom you do not like so much probably. A free concert or lecture is well enough, but I see no especial reason why it should be free. There is a great gain made in man's happiness by the health and cheerfulness of his wife and children, and men never seem to begrudge money spent for their own pleasure. Why can't they see that a visit of their wives to the theater or concert, even at full fare, is cheaper than going alone. She is made cheerful and happy; has something pleasant and interesting to talk to you of when you are home, and you need not try so hard to keep back the pleasant memory of something that "just struck you" till you go out with the fellow who was there. You can have your little thought in common with your wife, who is your best friend, and who will have all these little things to keep her heart pure, her life brave, her thoughts pleasant, and her welcome home to you the most genuine pleasure on earth. It will keep your own thoughts of home and loved ones fresh and green while off on a dreary trip. Even when a woman does not care to go, and feels as if she cannot possibly spare the time to go, she will enjoy it if you can once coax her off, and she will feel better for it. You will find it is the very tonic she needs and will not cost you more probably than you now spend for sarsaparilla for her, from which she derives no benefit whatever, because she is not sick, but nervous and over-worked—over-wearied of the everlasting round of home duties.

Irene.

[Irene's letters are always welcome and helpful. If she will re-read the editor's letter she will find a description of pleasant rooms, but not a "home." Come again.—Ed.]

SEATTLE, WASH., June 3, 1891.

Editor Woman's Department:

Among the many magazines having correspondence departments which I have taken, yours is the only one to which I have had any desire to write. Some of the letters have been very interesting and made me wish I knew the people who wrote them.

Until my only brother, who is a fireman, began working, I knew very little about railroad men, and thought them rather rough and unpleasant people. But, of course I could not think that of my brother, and, since reading your Magazine, I confess that I think I may have been very much mistaken. My brother has, since childhood, been deeply interested in everything pertaining to railroads and would not think of doing any other work. Consequently, we, too, are much interested, especially in the firemen, since he is one, and always read the Magazine with much pleasure. I would be glad to know some of the writers of the letters if it were possible to meet them.

You subject, so far, has made me hesitate about writing to you. I do not expect to be anyone's wife so, of course, have nothing to say about husbands and wives. But in spite of this fact, and although I am a stenographer, I like housekeeping and cooking, and hope to get some new recipes from the Magazine.

If I may I should like to ask the gentlemen who I notice often write to this Department, a question. What books on engineering, etc., would you recommend for a young fireman to read? I shall be very glad to get an answer to this question.

Hoping that you will admit me to your circle, I remain yours very sincerely.

Marie F. W.

[We hope this question may be answered. The other letter will appear next month.—Ed.]

A MYSTERY.

I went off to work this morning,
With a very queer longing for noon:
It was all explained when I came to dinner
And found the *Magazine* for June.
From the 8d or 4th day of April,
Till the same days of this month:
I have watched and waited for the *Magazine*.
Hoping it would soon come.

It has come at last and with gladness,
I've rendered its pages o'er,
And now I see my little poem,
Which I had seen never before.
Its title is "Our Firemen,"
And is not each word in it true,
For these dear men are so loving,
So loyal and kind to you?

Well many firemen have read my lines,
And wondered who it could be;
They thought of every one they knew,
But never a thought of me.
Some one say "'Tis Jack's mother or sister."
Others again would say,
'Tis away off in Mexico, not in California,
Is this San Jose.

Well, yes, it is in California,
And don't misdoubt my word.
For if it was not, not a word of that poem,
Not a line would you have heard.
'Tis the first that ever I did compose,
But will not be the last,
And now not composing to me
Will be a thing of the past.

No, I'm not a fireman's intended,
I'm not his darling wife;
And I'm sure I am not built the way
To enjoy a fireman's life,
I'm not a fireman's father,
I'm not a fireman's mother.
And I can say with honest truth,
I'm neither his sister nor brother.

I'm only a girl in the bloom of youth.
Yes, have always lived in this place,
I'm quite a big girl and would be good looking
If it wasn't for my face.
Now, firemen, wonder and guess again,
Who I am, you may guess right,
But I think I will stop writing
For it is half-past ten at night.

A Fireman's Friend,
E. H. L.

SAN JOSE, CAL.

HOPE, IDAHO, June 23, 1891.

Editor Woman's Department:

Of late I have been an interested reader of the Woman's Department. I think the most of the subjects have been pretty well discussed. The all important question, "How to manage a husband," seems to be the one attracting the most attention. It has been quite ably handled by the "fair sex," who have been kind enough to favor us with their opinions and in most cases with more justice to the "lords of creation" than they deserve. There is room for a reasonable difference of opinion on both sides. But there can only be one opinion on the subject that our progress and advancement in this enlightened age are attributable to woman as much as man, notwithstanding the attacks of cranks and chroniclers to the contrary. Our Montpelier friend paints a very lurid picture of married life; one that the average man don't hanker after. He attacks the question with evil intent; he comes with evil in his eye and he fails to make clear one redeeming feature in woman, married or single. Such instances as he speaks of are exceptions and not the rule comparatively speaking but in this Western country it is fast becoming a howling evil; but why cite us an instance where a woman is unfitted to be a wife and make use of it as a standard from which to judge all woman kind? Where there is domestic infelicity it is pretty evenly divided; both have a story to tell. How many husbands, especially in this Western country, soon as pay day comes around and they

draw their pay, go around with the "boys" and in many cases they put down a dollar on the high card just for luck? The final of the matter is, to quote an old saying, "A fool and his money are soon parted." He goes home after staying out with the "boys" as long as he can till he has to seek rest. Probably his wife asks him for a few dollars to procure a certain article she has set her mind on when pay day comes. It is very easy to imagine her feelings; if she is of a peaceful and loving disposition (and in most cases such women are so unfortunate as to link their fortunes with such unworthy specimens of the higher order of animals, called man), the result is a peaceful one. If, on the other hand, she is of the opposite from what I have described the result is a stormy one, and who will blame her? Such men are usually faultfinding, exacting and unforgiving; aloofly in their dress, unfinished in their speech, uncouth in their manners and coarse in the treatment of others. These two great evils, drinking and gambling, and their associate vices, are in the main the source of much trouble in married life. The wives are the unwilling victims through the weakness and wicked tendencies of their husbands. Many husbands have not the courage to resist gambling or of having a time. Then why raise a howl if they set the example and their wives follow? They find fault if their wives gad about gossiping and scandal mongering among the neighbors. If he has no respect for his wife—and he hasn't when he drinks and gambles and stays out nights—why expect her to have any for him? Our loquacious friend also speaks of reform in woman's dress. From a sanitary point of view there is room for a reasonable reform, I will admit, but is public opinion ripe for the question of reform in dress? That question has been kept before the public for years by quite an army of angular maidens of uncertain years and questionable understanding—Dr. Mary Walker for instance. He has the effrontery after all his attacks on the fair sex to want some experienced person to tell an unfortunate fellow how to procure a wife. Why not try the Dr.? She suits his taste in dress, why not in all questions? As this is my first letter to the *Magazine*, I will close with best wishes for the Woman's Department and unusual prosperity for the *Magazine*.

Respectfully, Bystander.

[Our Montpelier friend seems to get a worse drubbing from those of his own sex than from the ladies. We hope "Bystander" will come again and give us his ideas upon other topics.—Ed.]

LEXINGTON, KY., June 19, 1891.

Editor Woman's Department:

After reading some very interesting letters in the June number of the E. of L. F. *Magazine* I decided to write a few lines. I am not a constant reader of the *Magazine*, as my fireman friend sometimes forgets to bring it, and quite often throws it off to one of the young ladies along the line.

Our city is considered one of the prettiest in all Kentucky. The places of most interest are the race-track, where we have the spring and fall races; the court house, where can be seen the lovely Hart Memorial Statue; Ashland Stock Farm proves to be the place of most interest to visitors that like to see some of the finest horses in the United States.

The park is the gayest place now as the tents are being put up for the Chautauqua, which commences to-morrow. Our cemetery is a beautiful place, having many lovely monuments; that of Henry Clay stands higher above the rest as if keeping guard over the silent dead. The boys of the W. W. & M. V. R. R. organized a new lodge here a few weeks ago, with B. W. Row as grand master, and a good one he will make if he manages the boys as well as he does the young ladies.

They say Bro. Robinson and several others have not gotten over their initiation yet. I would like to tell you more about the boys, but as I am not lucky enough to be a fireman's sister, sweetheart or wife, I am not well posted. Wishing success to all, I remain a fireman's friend.

Virginia Foley.

JACKSON, MICH., June 8, 1891.

Editor Woman's Department:

Once more the *Magazine* has found its way to us, and brought with it the desire to accept the invitation to call again, received so long ago.

As our editor tells us that we may write upon every subject, I would like to ask: What shall we do with our tramps? That remnant of humanity who earns his living by asking for it at the doors of his more fortunate brothers.

My husband says that were I to see a dozen or so of them tumbling out of box cars I would not encourage tramping by giving them anything to eat when they are too lazy to lift a finger to honest work.

Perhaps not. But what little they receive seems poor enough, and shall we give them a stone when they ask for bread?

Somehow I cannot say no. There comes to my mind a time when they were well cared for and innocent. They all had mothers who dreamed of golden days in store for them, who kissed away the hurt of a hammered finger, and who cast as loving glances over the cradle of the future tramp as ever were cast on the slumbers of the future president.

We do not know what has caused their downfall. Some may enter tramping from choice, while who knows the soul storms others may have passed through to cause them to lose hold of all that life should make dear and drift hither and thither with no thought for the past, no glories for the future, beyond that of getting enough to eat to keep life in that travel stained, world weary body.

There seems to be no help for this evil. Shall we refuse, or shall we give to the homeless wanderer a share out of our abundance?

Prue.

[There are two sides to this question and we will ask the opinions of our correspondents.—Ed.]

BOULDER, COLORADO, June 8, 1891.

Editor Woman's Department:

When my son informed me that he had ordered the *Firemen's Magazine* sent to me, I concluded that, as I was neither fireman nor engineer, it was a very stupid place of business and I had no sort of use for such a journal, but later I found he had builded better than I knew, and now there's little in it that escapes my attention. The articles on the labor troubles, taxation, distribution of wealth, etc., are all mostly new to me, entertaining and instructive, but being no deep thinker on such abstruse subjects I see little signs of a passable road through the African forest tangle of labor difficulties of the country, although I sincerely hope it will be found peacefully and without a revolution. Notwithstanding Bellamy has drawn such a rose colored picture of a paradise on earth for the world a few years hence, yet I doubt the way lies through his doctrines, by reason of the inordinate greed and selfishness of the world in general and of those who are so acquisitive in particular.

But what I started to write about was to take some exceptions to the strictures on woman's dress by W. B. Richmond, of Montpelier, Idaho, who hails from the same locality as my son. I cannot quite determine from W. B. R.'s letter whether he is a woman or whether she is a man, but, because she appears to be so intimately acquainted with the details and esoterics of women's dress, I assume that she is of the feminine persuasion. Doubtless she is eminently correct in all or nearly all of her remarks, if she were writing from the standpoint of a plutocrat or for the edification of the wealthy; but if, as I much suspect, she be a workingman's wife or sister, she is, in my humble opinion all at sea, and I would like to ask her how many of her Montpelier sisters are burdened with low necks and invisible sleeves to say nothing of pads, cushions and bustles—which though fiction themselves are certainly founded on fact—and a dozen or two of quilted petticoats. That there may be a good deal of long hair among the ladies of Montpelier, I have no reason to question, and for my part, I hope there is—the longer the better—to enhance their own loveliness;

but why such coils should be productive of brain stupefaction is more than I can comprehend, as I read such a bright, brainy letter emanating from W. B. R.'s cranial gray matter (except that her subject is ill chosen) unless perhaps she herself may be short haired. Now, I wouldn't be afraid to wager a dollar to a peanut that there is not one woman in ten in Montpelier, but can robe or disrobe, on all ordinary occasions, much more expeditiously than can her husband, especially if the poor fellow has a short haired wife and has to stop and swear about his lack of shirt buttons; and if the peanut is won, as I believe it would be, why it seems to me, it is sufficient proof without further argument, that their bodices are not "buttoned in all manner of odd places—under the arm, at the side, on the back and on the shoulder." True enough it is, that men have greater physical strength than women, but it not on account of the difference of dress but because nature has arranged it so and because women themselves prefer to have it so; and W. B. R. may be assured that women might wear the breeches, all their lives, with no other effect upon their constitutions than to make them less captivating and less lovable. So then, W. B. R., if you will please let the women alone, I imagine I can safely guarantee that they will not go very far wrong in managing each for herself; and if she wants and must have her head banged in both hemispheres, or build little Eiffel towers onto her shoulders, or wear abortive but cunning little coat tails, or stick a little bit of ribbon, fur or feather here and there where it will do the most good or pull down her ears with ten karat diamonds till they are as long as a Jack rabbit, (and how much I wish they could afford it)—why it's all right! The men like to see it all and that is what the most of the women are after—praise be to the Lord that it is so. But have I not said enough? I observe it is proposed that the question be mooted—Is Marriage a Failure? It can be answered just as the difference in fungus can be determined. If you think you have eaten mushrooms and live, then you have eaten mushrooms; but if you think you have eaten mushrooms and die then you have eaten toadstools.

The length of this letter may possibly consign it to the ignominy of the W. B., but if it does I can't help it. As the Frenchman would say "Quand vous voulez désescher un marais, vous ne consultez pas les grenouilles." (In draining a swamp, the frogs are not consulted.) Neither do I suppose that my permission will be sought.

Yours respectfully,

C. E. R.

[Come again.—Ed.]

SACRAMENTO, CAL., June 28, 1891.

Editor Woman's Department:

Enclosed is a beautiful clipping I found in an old paper. It is so full of the *higher thought*, which should govern the young (or old) when contemplating marriage, I thought it would reach the greatest number of that class perhaps, could it be published in the *Firemen's Magazine*.

For eight years this *Magazine* has come to our home every month and it seems to bring a cordial hand-clasp and "how do you do" from the entire army of workers it represents. We have six years in blinding and they are a nice addition to our little library.

The correspondence seems to bear almost entirely upon matrimonial topics, but surely married life is not so much that the unmarried should think there is, or can be, no happiness in *single* life. Until there are more soul marriages divorce courts will be crowded and suicides frequent.

Hoping my "scrap" is not too lengthy and that it may prompt even one to consider well and not be "bewitched" by his or her "physical beauty." I remain yours for pure lives, high thoughts, clear heads, true hearts and willing hands.

G. G.

[The selection referred to—True Human Love—is good, but would fill three columns of the *Woman's Department*. Possibly space may some time be found for it in the *miscellany*.—Ed.]

The I. & G. N. have shops here, and we are sanguine enough to believe the M. K. & T. will put up shops too. If so, Taylor will "boom" as only a railroad town can.

Burnett and Mulkey, traveling state Evangelists, have just closed a ten days' meeting. A number of "the boys" professed and joined the different churches in this city. They gathered in about 165 wanderers. Especially did we enjoy the sermon to the railroad men and their families.

Alamo Lodge, No. 263, of this place, is in a flourishing condition, having about sixty-seven members. Quite a jolly set of boys, I am sure, from what I can hear about initiating a member. At the last meeting my husband was elected Secretary. He agreed to accept if I would do the work that was attached to the office. How much like a man! Yet I am glad I can assist him, and I believe if every wife would take an interest in all the husband's affairs there would be more domestic harmony, besides elevating them to higher aims and nobler deeds.

Perhaps some of the ladies would like to know how to bleach clothes after they have been stained or yellowed by remaining too long unwashed. After washing them, spread the garments on some green grass in the yard and by the time they are dry you will be surprised how white they are. Especially is this a help to those that have to wash for husbands who work on the road or in the shops. It is simple, but try it.

Mothers, wives and sisters, you who have dear ones out on the road exposed to the dangers peculiar to their profession, let your heart go up to the God of all, asking for a safe trip and a safe return, not only here on earth but may his engine be run with a steady hand, a clear mind and an honest heart, so that when his last run is made he can meet the pay car, the Lord Jesus Christ, with a full check and a "lay off" for the banquet that Christ has prepared for all faithful ones.

May God's blessing rest upon us all is my prayer.
Mrs. Jno. Steadman.

[Congratulations from the Woman's Department. Let us hear from you again.—Ed.]

NORTH BAY, ONT., May 1, 1891.

Editor Woman's Department:

I have been a very interested reader of the *Firemen's Magazine*. I think it very instructive and wish it the success it deserves. As yet I have never seen a letter from this part and I will try and write, but as it is my first attempt it may be a failure. The B. of L. F. here is a flourishing lodge and they are a noble lot of young men and are a credit to the town as well as to the order itself. How about the town. It is situated on the edge of Lake Nipissing. It is only seven years since there were only a few log huts. At present there are 1,500 inhabitants and some splendid buildings, and besides the C. P. R. R. work-shops there are two saw mills, planing mill, sash and door factory, and separate and public schools and four churches. There are three steamers running on the lake. Quite a summer resort is one of the large islands. It is eight miles from the town—just opposite. There is a large hotel on it and a ferry boat makes two trips in the day. I see there is a good deal said in the *B. of L. F. Magazine* about how to manage a husband, but I cannot say much as I have never had any of it to do, although I am an engineer's wife, but we have the utmost confidence in each other. However I must say I do not think that when a man comes in off of the road that he comes home to be managed. He comes home for rest and for a happy time with those dear to him, and if a woman manages her house properly he will not need managing for he is only too glad to be at home when he can and help all he can, but enough has been said on this subject. I think how to manage a house could be discussed with more profit to all. As for card playing, my husband brought home cards and I play with him every time he asks me to, but I can safely say he never plays with anybody else, so that I do not mind it at all.

Wishing the B. of L. F. prosperity,

Mrs. C. E.

TUSCUMBIA, ALA., May 31st, 1891.

Editor Woman's Department:

I come and ask for admission into your charming circle. I am a constant reader of the *Magazine* and have thought several times of writing, so I forward you the following, hoping you will find space for it in your valuable columns:

No word in the English language calls up so many pleasant or unpleasant memories as the word Home. Pleasant memories of home are what ought to be and unpleasant if it is a mere stopping place. You may ask a dozen different persons what is home, and will receive as many different answers. Each one will give a definition in accordance with that which is uppermost in his mind. To one it means simply love in the heart, to another a loaded table, to a third industry in the affairs of his trade or occupation. Home may mean devotion at the altar, intelligence at the books, a wall covered with pictures and rooms richly furnished, dress and appearance or a splendid mansion. Our home should be cheerful; innocent joy should reign in every heart. There should be domestic amusement, fireside pleasure, quiet may be, but such as shall make home happy and not that irksome place which will oblige youthful spirits to look elsewhere for amusement and happiness. Home is the place of refuge and rest. We may find joy elsewhere, but it is not the joy, the satisfaction of home. Of the world the heart may tire, but of home never. With home there is a mother's watchful love and a father's sustaining influence and a circle of loving brothers and sisters. I remain yours,

B. L. H.

FLORENCE, ALA., June 10, 1891.

Editor Woman's Department:

I have never seen anything from this part of the world, so I will tell you all something about Florence. It is situated on the Tennessee River, eight miles south of Muscels Shoal Canal. It is a town of 12,000 or 14,000 population. Among some of its manufactures is F. H. Foster hardware company; stove works, bucket factory, wagon factory, and two large blast furnaces. We have one of the finest public school buildings in the South. Florence has three railroads, the N. F. & S. M. & C., and F. M. It has a delightful climate and plenty of good spring water. In fact, it is one of the nicest towns in Alabama.

Pansy, of Tusculumbia, your poetry in the June number is so nice. Write again, and let us know your true name, for I think I know you. Why don't you all tell us about where you live and what kind of a town or city you live in, for I am like the editor, I think this wife and husband managing business has been run in the ground.

I would write more, but I am afraid of that little talk from the editor, I see at the bottom of several letters this month.

I remain, as ever, a fireman, true to the B. L. F.

E. T.

ELDERVILLE, GREGG CO., TEX., May 17, 1891.

Editor Woman's Department:

Through the kindness of a friend in No. 263, Alamo Lodge, I am permitted to read your much appreciated *Magazine*.

I have often thought I would write a letter, but that is something almost out of the question for me. Though some one should always be ready to say a word of praise to the boys of justice. I have heard girls say they don't like railroad men. Of course we are not all alike, but I think some of them hardly know themselves. As to myself, I have always been partial to them.

Laying all this aside, I have a warm feeling for all the firemen and engineers. I do not live very near the railroad, but have the pleasure of visiting friends and relatives who do, also have a dear friend who is an engineer, and I think one of the best men anywhere.

It seems that card playing is the favorite subject just now. I frequently indulge in such myself, but think there are many nicer ways to entertain your company and self. With best wishes for the success of the B. of L. F., especially Lodge No. 263,

I am very respectfully,

Erasmus's Girl Cora.

NEVER MIND.

What's the use of always fretting
At the trials we shall find
Ever strewn along our pathway,
Travel on and never mind.

Travel onward, working, hoping,
Cast no lingering look behind
At the trials once encountered,
Look ahead and never mind.

What is past is past forever,
Let all fretting be resigned,
It will never help the matter,
Do your best and never mind.

And if those who might befriend you,
Whom the ties of nature bind,
Should refuse to do their duty,
Look to heaven and never mind.

Friendly words are often spoken,
When the feeling is unkind;
Take them for their real value,
Pass them by and never mind.

Fates may threaten, clouds may lower,
Enemies may be combined,
If your trust in God is steadfast,
He will help you, never mind.

And I think the brave, honest, true
Firemen that run on the M. & C. line,
Will never give way to misfortune,
But bravely work on and never mind.

Pansy.

TUSCUMBIA, ALA., June 30, 1891.

[Does "Pansy" intend this as an original poem?—ED.]

IT IS NEVER TOO LATE.

It is never too late to do a kind deed,
It is never too late a wrong to repair;
It will bring to our lives a pleasure serene
If we have the courage to do and dare.

It is never too late to forgive and forget
An injustice done us here;
Forgiving a wrong will bring no regret,
If the suppliant be truly sincere.

It is never too late, it is never too late,
To avoid contention and strife,
It is never too late for youth or man,
To lead an upright life.

It is never too late a kind word to speak,
An error to forgive, an offense to condone,
For there's no one in life quite perfect I ween,
Each and all have their faults, were they known.

It is never too late to eschew the path
Of sin, where temptations abound;
For it is only in seeking to attain the good,
That true happiness is found.

The way through life is a thorny path,
And our progress tedious and slow,
Yet it is never too late to extend a helping hand
To others, as journeying onward we go.

Mrs. Nellie Bloom.

WEST OAKLAND, CAL.

LEADVILLE, COLO., June 8, 1891.

Editor Woman's Department:

I have been a reader of your valuable *Magazine* for some time past and I assure you it is very highly appreciated by me. Having just finished reading the June number, and being much pleased with it the thought came to me: Why can't I contribute something to the *Woman's Department*? It is my first attempt to write, but I will risk it. I have several

friends among the firemen and therefore I am interested in their welfare. They are a set of noble boys. I also have a brother who is a fireman and I am proud of him, as firemen or railroad men of any kind are a noble class of men in my estimation. That letter signed "Charley," in the June number, left quite an impression on me. If he is like a Charley I knew once he does not know how to judge a good wife when he sees one. I agree with him when he says: "Young men, be just what you are and do not appear to be what you are not." I think that is a grand speech. If we would just practice what we preach we would be all right. Young ladies nowadays have to look sharp. I am a young lady, but I have learned not to believe all a young man tells me. If this Charley is like the one I knew, the girl that gets him will have to be robed in her wedding costume and have the minister close at hand when he poses the question or he will change his mind before all is ready. Young girls, if you have an engaged sweetheart, don't let him get out of your sight or he will be gone. Well, I hope this "Charley" will receive some good advice through the *Magazine* and get a good wife also. Wishing God speed to all railroad boys, with pride I sign myself a fireman's loving sister,

Uta.

[If a girl cannot trust a young man out of her sight, she could not do a more foolish thing than to marry him.—ED.]

NORTH SPRINGFIELD, MO., June 7, 1891.

Editor Woman's Department:

As I have seen but one letter from this place I thought I would try my hand at letter writing. I am sure there are a great many firemen and their wives who might write very interesting letters if they would only try. My husband is a fireman, though not a B. of L. F., but hope he will be some day as I think it is a splendid order. We have only been reading your valuable *Magazine* since the first of this year, but like it very much.

I think there are many good letters in the *Woman's Department*. The one signed Margretta in the June number is very sensible; also Belle, a fireman's wife, gives some good advice. We all know that it is necessary for a fireman's family to economize, especially if there is much sickness and rent to pay. I wish someone would tell us how to fix a nice lunch with little expense. I have a splendid receipt for Chocolate Cake, which I will send:

One cup butter, two of sugar, one of sweet milk, five eggs, leaving out the whites of three; four cups sifted flour, two teaspoons baking powder, or one small teaspoon soda and two of cream tartar. For icing, whites of three eggs beaten stiff, one and a half cups of powdered sugar, six tablespoons grated chocolate, two teaspoons vanilla.

As the editor has kindly allowed us so much space I think we should try to instruct as well as amuse each other.

As this is my first letter I must not make it too long. With best wishes to all firemen and for the success of the *Magazine*, I sign myself

*Musical.***THE FASHIONABLE HANDKERCHIEF.**

The maiden fair of olden time who used to wave her white handkerchief to the knight departing to fight her battles, would open her eyes very wide if she could see the handkerchief of to-day. The most fashionable are made of *crepe lisse*, with an embroidered edge and in every color imaginable, from brilliant scarlet to pale Nile green, and from jet black to clear white. Some very unique effects are produced by contrast of color. The black handkerchief is usually a square of silk muslin, with a full frill of fine black lace about it. Any girl can easily make one of these for herself. For everyday use the white handkerchief of lawn, with a narrow hemstitched border, a very narrow one, and a fine frill of lace—Valenciennes—not half an inch wide about it is preferred. Elaborate monograms are no longer fancied, but instead, the initials of the owner in small letters, and in what is known as running-fashion, are chosen.

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

THE SWITCHMEN'S MUTUAL AID ASSOCIATION, THE BROTHERHOOD OF RAILROAD TRAINMEN, AND THE SUPREME COUNCIL OF THE UNITED ORDERS OF RAILWAY EMPLOYEES.

The caption of this article indicates very clearly that we propose to write history, to place the facts relating to the troubles existing between the S. M. A. A. and the B. of R. T. before the readers of the *Magazine* in their true light, and as free from bias as if every word was written under the sanctity of an oath.

To say that we approach the task reluctantly is to mildly express our feelings, but a sense of duty and obligation forbids that silence should be maintained a day beyond the opportunity which the *Magazine* affords for publishing authentic records, that the rank and file of the Brotherhood of Locomotive Firemen may be in possession of every detail of an affair which has been fruitful of profound regrets.

At the outset it becomes proper to reproduce the following from the July *Magazine*, page 627:

The Supreme Council met at Chicago in annual session June 15th, and continued in session until noon, June 17th, when adjournment was had to meet at Terre Haute, Ind., in adjourned session. The principal subject before the Council was the matter of the trouble on the Northwestern Railway, a full report of which was given in our June issue. The notification of the S. M. A. A. that they had withdrawn from the Council was ruled out of order on the ground that no petition or request for withdrawal had been filed, and that no organization could withdraw from the Council except by consent of that body.

Charges were preferred against the B. of R. T. by the representatives of the S. M. A. A. for conspiring with the officials of the Chicago & Northwestern Railway to discharge all the switchmen in their employ. These charges were referred to a committee consisting of John J. Hannahan, of the B. of L. F., and D. J. Carr and J. W. Martin, of the B. of R. C., who were directed to secure all available testimony and report the same together with their finding at the adjourned meeting of the Council. As we go to press the Council is in session. What the outcome will be is purely a matter of conjecture, but it is hoped that the Council will in all regards be equal to itself, that prudent counsels may prevail, that the wrong may be rebuked and the right may be enthroned.

The foregoing simply shows what initial steps were taken by the Supreme Council as preliminary to a full investigation of all the facts upon which the charges were based.

The Supreme Council reconvened in the city of Terre Haute, Ind., on June 25th, to hear the report of the committee and take such other action as in its wisdom should be required.

The committee appointed by the Supreme Council to whom the important duty was assigned to take testimony to substantiate or disprove the allegations made by the S. M. A. A. was constituted as follows:

John J. Hannahan, B. of L. F.

D. J. Carr, B. of R. C.

J. W. Martin, B. of R. C.

And the full text of the charges submitted was as follows:

SWITCHMEN'S MUTUAL AID ASSOCIATION
OF NORTH AMERICA.
OFFICE OF THE GRAND LODGE,
CHICAGO, ILL., June 17, 1891.

To the Supreme Council of the United Orders of Railway Employees:

GREETING:—The Supreme Council having refused to accept the withdrawal of the Switchmen's Mutual Aid Association from membership in the United Orders of Railway Employees, it therefore becomes our duty, as the representatives of the above Association, to prefer charges before this body against the Brotherhood of Railroad Trainmen.

We charge that the Brotherhood of Railroad Trainmen, on and prior to the 14th day of May 1891, entered into a conspiracy with the Chicago & Northwestern Railway Company, whereby the switchmen in the employ of the company were discharged and their places filled by the members of the Brotherhood of Trainmen.

The act of conspiracy we regard as a violation of the recognized ethics of labor organizations, as well as the letter and spirit of the laws of each of the organizations which compose this federation.

[Signed]

FRANK SWEENEY,
JOHN A. HALL,
WM. A. SIMSBOTT.

Representing the Switchmen's Mutual Aid Association of North America.

The report of the testimony taken by the committee was exhaustive and so voluminous that the Supreme Council deemed prudent to have it put in print, for the accommodation of those who would be called upon to record their votes. It makes a book of 148 closely printed pages, in brevier type, and contains about 73,000 words. Pending the printing of the testimony and in order to enable the members to read it carefully, an adjournment of the Supreme Council from Thursday, the 25th, to Monday, the 29th, was had.

It is seen that it is utterly impracticable to reproduce the testimony here, but the verdict of the committee was as follows:

To the President and Members of the Supreme Council of the United Orders of Railway Employees:

GENTLEMEN:—We, the undersigned committee, appointed by the Supreme Council June 17, 1891, to investigate and report to this body on the charges of conspiracy preferred by the Switchmen's Mutual Aid Association against the Brotherhood of Railroad Trainmen, beg to render our report in pursuance of

the instruction given. Your committee went into session at 2 P. M., June 17, 1891, at the Grand Pacific hotel, Chicago, Ill., in room 201, and adjourned June 20, 1891. As a result of our labor we herewith present to the Council a full and complete stenographic report of the evidence given. After a careful deliberation on the evidence as submitted we find the Brotherhood of Railroad Trainmen guilty of conspiracy as charged. And would, therefore, recommend that the Supreme Council impose such penalty on the Brotherhood of Railroad Trainmen as they in their judgment may deem prudent.

JOHN J. HANNAHAN, Chairman.
DANIEL J. CARR, Secretary.
J. W. MARTIN.

It will be observed by the foregoing that the committee found the charges preferred against the Brotherhood of Railroad Trainmen fully sustained.

The Supreme Council having received the report of the committee, a motion to accept the report, equivalent to approval, was made.

This motion was exhaustively discussed. Its gravity was not underestimated. If the report was accepted it was equivalent to approval, to an unequivocal indorsement. It was condemnation. Every member of the Supreme Council fully comprehended the seriousness of the situation and deliberated and voted with becoming decorum. The vote resulted as follows:

YEAS.	
Frank Sweeney,	} S. M. A. A. 3 votes
J. A. Hall,	
W. A. Simsrott,	} B. of R. C. 3 votes
G. W. Howard,	
J. W. Martin,	} B. of L. F. 3 votes
D. J. Carr,	
F. P. Sargent,	} Total 9 votes
J. J. Hannahan,	
E. V. Debs,	

NAYS.

S. E. Wilkinson,	} B. of R. T. 3 votes
P. H. Morrissey,	
W. A. Sheahan,	

It will be observed that, except as to the representatives of the inculpatated Brotherhood, the vote on the motion to accept the report of the committee was unanimous; there was not a dissenting voice.

The next thing in order was to decide upon a penalty for conspiracy to do the S. M. A. A. a grievous wrong, which had been proven to the satisfaction of a majority of the Supreme Council.

A motion was made by Bro. Frank Sweeney that the penalty should be expulsion from the Supreme Council.

The motion produced earnest discussion and the vote as cast was as follows:

YEAS.		NAYS.	
S. M. A. A. 3 votes	B. of R. T. 3 votes		
B. of R. C. 3 votes	B. of L. F. 3 votes		
6 votes;	6 votes		

It is seen that the vote as cast resulted in a tie, 6 yeas and 6 nays.

At this juncture, an objection was made the vote of the President, the objection being based upon the fact that Cushing's Manual of Parliamentary Practice forbids

the vote of the presiding officer except when there is a tie, and according to the constitution of the Supreme Council, Cushing's Manual of Parliamentary Practice is made authority, as will be seen by Section 24 of the constitution, which reads as follows:

SEC. 24. All questions, unless otherwise provided for, shall be decided according to Cushing's Manual of Parliamentary Practice.

The objection, after consulting the Manual, was sustained by the President of the Supreme Council, who withdrew his vote, which left the result as follows:

YEAS.		NAYS.	
S. M. A. A. 3 votes	B. of R. T. 3 votes		
B. of R. C. 3 votes	B. of L. F. 2 votes		
6 votes	5 votes		

The final vote being 6 to 5 for expulsion, the B. of R. T. was declared expelled from the Supreme Council of the United Orders of Railway Employes.

In perusing the foregoing the reader will doubtless notice the fact that the B. of R. T. was given some unusual privileges by the Supreme Council.

The B. of R. T. was on trial. It was charged with a grievous offense, nothing less than conspiracy. That it should be heard in its own defense was its right, beyond that any concession was extraordinary. Notwithstanding this, on the motion to accept the report, which, if accepted, carried with it condemnation, the B. of R. T. was permitted to vote; but more extraordinary still, on a motion affixing the penalty after condemnation, it was permitted to vote. If the question of liberality, concession, brotherly kindness, is ever raised, the record will demonstrate that such consideration was never before extended to any party on trial for a wrong. It was an exhibition of regard which at once hushes to silence any intimation that up to the last and to the uttermost limit, every right that could possibly accrue to the order by virtue of membership in the Supreme Council remained, or was allowed to remain intact. It was permitted to have a voice and a vote upon every proposition, even to affixing a penalty upon its own offending.

The *Magazine* expresses the conviction that the penalty was injudiciously severe.

Such a declaration must not be misunderstood. It involves no intimation that the verdict of condemnation for the great wrong proven against the B. of R. T. was not strictly just. Upon that point the testimony was conclusive.

The verdict of the committee, approved by the Council, touched the B. of R. T. who conspired to perpetrate an astounding wrong upon members of the S. M. A. A.

But the penalty reached beyond the inculpatated parties, and visited condemnation upon the entire Brotherhood of Trainmen, thousands of whom, honorable, courageous,

self-respectful and loyal to law and obligation, had they been apprised of the contemplated outrage upon the switchmen, would have put forth their utmost efforts to have arrested the flagrant wrong, and would have rescued their noble order from impending obloquy.

As an organization of workmen the members of the B. of R. T. abhorlike conspiracy and scabbing, but being unadvised, they were powerless. They had no voice in the matter. Those who should have been loyal to the interests of their order, swayed by motives of revenge, led them astray.

It is such facts known and admitted, that prompts us now, as when the motion to expel the B. of R. T. was pending before the Supreme Council, to declare that the penalty, which falls with equally crushing weight upon the innocent and the guilty, was injudicious and wanting in the element of justice which should have governed the final vote in the case.

The *Magazine* at no time intimated a doubt of the fealty of the rank and file of the B. of R. T. to duty. In the June *Magazine*, page 538, the following declaration will be found:

Just here the question arises, are the two great organizations, the S. M. A. A., and the B. of R. T. opposed to each other? Is it to be believed that the Brotherhood of Trainmen is committed to the relentless policy of exterminating the S. M. A. A.? Has the unfortunate episode I have related wrecked the Supreme Council? I do not hesitate to answer in the negative.

I do not underestimate the gravity of the situation—nor do I underestimate the broad common sense of the rank and file of the men who constitute the membership of the federated orders. They are men who comprehend right, justice and fair play. There is in their ranks an abiding faith in fraternity, fellowship, good will, in the blessings of organization and in the strength of federation.

Such declarations are totally devoid of panegyric, of pyrotechnic laudation. They are simply expressions of confidence in the integrity, the cool-headed common sense of the great majority of the men who compose the membership of the S. M. A. A. and the B. of R. T., an estimate based upon years of acquaintance, and as true of the orders named as of any other orders of railway employes.

Under the laws of the various orders of railway employes, certain officers and committees are clothed with important powers and prerogatives. Responsibilities of great weight are imposed upon them. The rank and file, having, as they believe, conferred these powers, prerogatives and responsibilities upon their *best* men, trustfully go about their work. They are not in a position to know what is going on, hence it is seen how easily they may be led astray and nominally be made responsible for things which are revolting and abhorrent.

Here the question arises: If in the investigation it is found that the rank and file

of an organization are absolutely innocent of wrong doing, should they be punished with those whose guilt is proven beyond a peradventure? We answer, No. Emphatically, No.

This brings us back to the vote of the Supreme Council on the motion to expel the B. of R. T. from that body, and we reiterate the declaration that it was an extrajudicial decision, because it punished the innocent with the guilty.

We dwell upon the subject because it is vital; because we are hopeful that passion, personal enmities, the unmanly idea of "getting even," of "doing up," and the like, may disappear forever from the councils of the orders of railway employes, whether acting singly or in a federated capacity.

Suppose the grand officers of an order were to misappropriate its funds? Would the membership be held guilty of embezzlement or theft?

Was Washington and his army adjudged traitors when Benedict Arnold conspired to deliver them into the hands of their enemies?

In the same line of inquiries, were the entire rank and file of the B. of R. T. alike reprehensible with those who plotted to perpetrate an astounding wrong upon the switchmen?

The laws of the Supreme Council did not require expulsion. The Supreme Council never supposed that such a wrong as the B. of R. T. on the Northwestern Railway perpetrated was possible.

Organized enmities are infinitely worse and more to be deplored than disorganization, whatever may be the ills that flow from it. Organized enmities is organized bigotry, ignorance and viciousness. It has not, nor can it have so much as one redeeming quality. It is blindness, stupidity and malevolence combined, and can be productive only of disaster.

In all of this the principle of federation remains untouched by any shaft, untarnished and as immaculate as truth. Here we refer again to and reproduce our views as expressed in the June number of the *Magazine*, page 534:

No one, I assume, has entertained the idea that any organization of men, however guarded by declarations of principles and the enactment of wise laws, could fully overcome man's fallibilities. No such claim by any sane man was ever advanced, but it has been assumed, based upon self-evident truths, that in "unity there is strength," and, therefore, that organizations of workmen having interests in common—mutual interests—could promote the welfare of their members by federation; that in federation the largest possible power of human effort could be exerted; that by federation the wrong could be cloven down, and the right enthroned; that by federation, principles of justice could be established and maintained; and that not only the welfare of workmen would thereby be promoted, but the prosperity and happiness of society as well.

Such propositions have never been denied. The opponents of federation have simply made objec-

tions, but have offered no arguments, because there were none at their command. The principles upon which federation is based are as eternal as any axiom in mathematics. In every arraignment they can stand any test that enmity or ignorance can devise. If, in a contest, victory comes—as come it has in the past, and is destined to come in the future to men who are capable of comprehending the power of federation—its advocates and defenders may of right be jubilant; and when defeat comes—as come it has in the past when the right has been overpowered and crushed, the eternal truth that “In unity there is strength,” and that in federation that strength can be secured in the largest measure, has never lost a fraction of its claim to recognition. On the contrary, it stands as the rallying point of workmen, and will remain as immovable as the eternal hills as long as heartless plutocrats devise methods of cruelty and injustice to labor.

We reproduce the foregoing from the *Magazine* because it may be assumed in some quarters that had system, instead of general federation, been adopted, such things as have occurred in the Supreme Council would have been avoided.

We are not unmindful of the “we told you so” logic. But we are not aware that pseudo prophets ever intimated the possibility of occurrences such as we have chronicled.

No seer, soothsayer or astrologer in all of the ranks of those who delight in predicting disaster, ever intimated the possibility that any one of the orders of railway employes would ever or could ever conspire with railway officials to visit wholesale disaster upon the members of another order of railway employes. Such treason as that never cast its dark shadow across the pathway of any advocate of any sort of federation. Hence any assumption that system federation would have been better than general federation is sheer folly.

That such conditions were never so much as dreamed of, is in the highest degree creditable to those who have favored federation of any kind.

Here let it be said and remembered, because it is the *naked truth*, that the troubles existing between the S. M. A. A. and the B. of R. T. were outside of and independent of the laws of the Supreme Council, violative of its principles, its laws and its teachings, growing out of mere personal wrangles, which, discarding law and rectitude, would have occurred under any system of federation. Had the laws of the Supreme Council been regarded the occurrences, which all laboring men deplore, would have been averted.

It is scarcely required to discuss such propositions.

When passion holds sway, reason is dethroned, and all laws are disregarded.

The strength of organization and of federation does not lie in the laws enacted, but in the integrity, the honor, the moral courage of the membership. If in those elements of strength the membership are wanting, the wisest and best laws could not give the organization power. Where there

is a lack of fealty to principles, there is weakness which no code can overcome.

It may be worth while to illustrate the idea. As for instance: Here are two classes of employes working on the same road side by side, known to each other, having mutual interests at stake, and one class concludes to take the places of the other class, as the facts in the case under discussion disclose. The question arises: What system of federation, what form of obligation, what law or decision could have prevented the action of those who, under the influence of personal animosities, premeditated and perpetrated the wrong?

We do not anticipate that any one in the future, any more than in the past, will inveigh against the principle of federation, and yet we anticipate philippics against the Supreme Council.

It has had its enemies from the first, and to see it in trouble, battling against adverse winds and tides, will be to them a source of gratification. And yet, every offensive word will be gratuitous. The worst enemies of the Supreme Council have been within, not without.

The one thing to be deplored is man's fallibility, his frailty, his liability to err. In these regards, let those who boast, remember they too are human, and that the afflictions of others, over which they indulge in flippant comment, may, all too soon, be visited upon them.

We abate not one jot or tittle of our devotion to the principles of federation. They are vital and eternal, and are the hope of workmen of America.

The ordeal through which the Supreme Council of the United Orders of Railway Employes is passing, ought to be of incalculable service. Hitherto whatever trials have beset its operations have been trivial. The present trial is well calculated to test all its resources of tenacity and fortitude.

Admitting that the outlook is gloomy, it is not as dismal or as cheerless as when under the federation of the Colonies, Washington, with his half-starved, half-frozen, ragged and hungry Continentals, camped in the snow at Valley Forge. Not as forlorn, as when Greene with his naked troops upheld the cause of independence in the Carolinas.

Does some one predict wreck and ruin? Wherefore? Do they estimate correctly the fiber of the men who remain on the deck of the federated ship?

Admit that a cyclone wave swept her decks. Call the roll—only one has been lost, and even that one may be rescued. Admit that the storm is still raging, does any one predict that a calm will never come? Possibly. But such has not been true in the past.

Experience teaches us that there are

"mistakes in the best regulated families;" that there is a "skeleton in every house." If the Supreme Council anticipated exemption from trials, it has found out its mistake and may profit by the lessons of experience.

We expect to see the time when under more favorable conditions, passion, enmity, malice, selfishness and the entire brood of infirmities will be banished. When broad, manly views will be in the ascendency—when such an organization as the O. R. C., well equipped, and under the guidance of broad-minded men now at the helm, will be identified with federation—when the two orders of Railway Conductors will be one great order, marching under one banner, pledged to protection and all the blessings which flow from federation.

In this gratifying outlook we include the organizations of Railroad Telegraphers, and still other orders of railway employes.

In this, we group, not only possibilities, but probabilities. We bank not only on the common sense of officials, but of the rank and file. Should the estimate be less worthy of organized labor? Should the *Magazine*, because of a storm, join the carping crowd, and confess all is lost? Should it throw up its hands and surrender—give its hopes to the winds, and stamp its faith into the dust?

We have not been trained in that school. On the contrary, our motto is that of the immortal Hull, "Don't give up the ship."

It is given out that that the B. of R. T. will soon meet in convention. We hope the intimation is correct. Should the convention be called, the subject we have discussed in this article will doubtless receive the attention its consequence merits. We have full faith in its ability to deal with it as the facts warrant, and to solve the problem which the facts force upon the attention of the world.

In conclusion, may we not hope that out of all this trouble good will come? If not, even the school of experience might as well close its doors, since students will have been found incapable of improvement by the lessons it teaches.

Regardless of what others may say or do, the *Magazine* will stand by the principles of federation as embodied in the Supreme Council.

Is it a forlorn hope? Not more so than was the federation of the Colonies from 1774 to 1784. In that period that "tried men's souls" gleams of hope were few and far between. Despondency took possession of the minds of the masses. The Tories were prolific of predictions of ultimate disaster. The few fought on, hoped on and hoped ever. The road to Yorktown was circuitous, dark and dangerous, but resolutely the few, regardless of sacrifices,

marched on until the sun of victory, so long obscured, burst forth in noonday splendor and those who believed in federation found at last they had cherished no vagary, but had been true to a principle that gave them liberty and independence.

SOMETHING TO THINK ABOUT.

In a May issue of the *New Nation* we find the following:

Serious questions, growing out of the relations of individuals in society, are up for consideration, if not for solution. The name of "Jesus" was cheered, not irreverently, at a workmen's meeting in New York not long ago, but the "church" was hissed. Why was this? Surely it was not because of the mere personality of the man Jesus who lived nearly two thousand years ago, but because of his teachings, and the splendid church was recognized as being out of harmony therewith. No one thinks that the modern clergy will ever become Christians to the extent that they will imitate the example of the Master, who mingled with the poor to bless them; who solemnly appealed to the conscience of his followers; who laid down the Golden Rule as the platform upon which Christians must stand; who mingled with publicans and sinners to save them; who uplifted the Magdalenes, utterly indifferent to the false imputations his conduct called forth from the fashionably religious of his age and generation; and who preached righteousness—right conduct—to the world. Speaking to his followers, of the hungry and poor and naked and sick, he said: "Inasmuch as ye did it not to one of the least of these, ye did it not unto me."

To applaud when the name of Jesus is mentioned, and "hiss" when the "church" is mentioned is strangely suggestive. Do Christians ever ask the reason why? Do the clergy, who hold forth in palatial edifices stop to inquire, what's the matter? Yes, once in a while, but seriously—because the facts would not be complimentary.

Thousands of churches are run on the theatre principle. The seats in the sanctuary are sold out annually. The rich Christians get the most fashionable pews. An observer, at all critical, can pretty nearly tell the size of a communicant's bank account by the seat he occupies as he takes his share of the "bread of life" handed over a richly upholstered pulpit. As the bidding proceeds, and the auctioneer goes toward the doors, prices decline, until somewhere the "pauper's bench" is found. But the rank and file of the people are not there. Once in a while the kind of people Jesus loved are present, and when His name is mentioned they "cheer." Why not? When the church is referred to they "hiss." Why not? It may not be agreeable to ears attuned to costly music, trained and salaried choirs, but it is perfectly natural, and is likely to be done more frequently in the future.

SLOWLY but surely the Robinson Monument Fund is increasing, and will continue to increase until a monument worthy of the grand old man marks the spot where he sleeps his last long sleep.

THE BALTIMORE & OHIO RELIEF EXHIBIT.

We have on our table a circular issued by S. R. Barr, Esq., Superintendent, showing receipts and disbursements of the B. & O. Relief department for the month of February, 1891, as also a "statement of benefits paid from May 1, 1880, to February 28, 1891."

The receipts for the month of February, 1891, are placed at \$33,066.72, and the disbursements at \$37,001.84, and that there may be no mistake in the figures we reproduce the tables contained in the circular, as follows:

DISBURSEMENTS.

	Main Line.		Philadelphia Div.		Trans-Ohio Div.		Pittsburgh Div.		AGGREGATE.	
	No.	Cost.	No.	Cost.	No.	Cost.	No.	Cost.	No.	Cost.
Accidental Death	9	\$8,300 00			2	\$2,000 00	2	\$1,500 00	13	\$11,800 00
Accidental Injuries	247	3,329 86	27	\$537 40	105	1,681 20	59	856 82	438	6,405 28
Surgical Expense	122	464 53	7	50 75	29	80 60	23	104 10	181	699 96

Expenses Medicine										34 30
Contributions refunded										398 13
Total										\$37,001 84

STATEMENT OF BENEFITS PAID FROM MAY 1, 1880, TO FEBRUARY 28, 1891.

671 Cases Accidental Death	\$698,167 28
32,681 Cases Accidental Injuries	437,148 36
20,243 Cases Surgical Expense	122,868 28
54,375 Cases Natural Sickness	808,796 25
1,260 Cases Natural Death	505,724 70
109,230 Cases.	\$2,571,704 87

Aggregate

S. R. BARR, Superintendent.

The readers of the *Magazine* and especially members of the various beneficiary orders of railway employes will be interested in a brief analysis of the foregoing official figures. It appears that during the month of February, 1891, there were thirteen (13) accidental deaths, costing the fund \$11,800, and fourteen (14) natural deaths, costing the fund \$7,500, a total of twenty-seven deaths, costing a total of \$19,300, an average of \$714.81 for each beneficiary. In the Brotherhood of Locomotive Firemen twenty-seven (27) deaths, whether natural or accidental, would have required the payment of \$1,500 each, or \$785.19 in excess of the amount paid by the B. & O.; a total of \$40,500, or \$21,200 more than was paid by the B. & O.

It is seen that the heirs of a dead fireman who was a member of the B. of L. F. receive more than double the amount paid by the B. & O., and being a member of the B. of L. F. he retains his self respect and independence, and does not become a part of the *live stock* or the *watered stock* of the corporation; can go where he chooses and work where he chooses, without being subjected to any penalty whatever.

It will be noticed that during the month of February there were 438 accidental injuries, of which only 181 required surgical attention, 257 being of such little consequence that the injured employe was left to take care of himself. These 181 accidental injuries required a surgical expense amounting to \$699.98, or an average of \$3.86 each.

Is it to be presumed that of 181 cases of "accidental injuries" requiring surgical attention, not one was totally disabled? Is it not presumable that at least five (5) of them were totally disabled? Take any of the brotherhoods, and it will be found that out of 438 "accidental injuries" more than five (5) are totally disabled, probably three times that number. Assuming that five were totally disabled, if they had been members of the B. of L. F. they would have received each \$1,500, or a total of \$7,500, whereas it is shown they received on an average in surgical attention the sum of \$3.86, or for the five totally disabled employes \$19.30.

The next thing we have is what is called "natural sickness," to distinguish it from unnatural sickness we suppose. Well, there were in the month of February 470 cases of natural sickness requiring the expenditure of \$7,021.21, or an average of \$14.94 for each case, and in this connection it will be observed that the expenditure for medicine during the month of February was \$34.20. There were 470 cases, and as a result, the average cost of medicine for each was 7 cents and 2 mills.

To the intelligent employe such statements, when prudently analyzed, must be bitter pills to swallow, but they are swallowed often without a grimace, and in numerous instances with the greatest satisfaction. When all workingmen thus permit the corporation to exact a portion of their wages to be doled out to them as in old

plantation times, when "massa" doctored his "niggers," it will be time for Gabriel to blow his horn.

But we are not yet through with the B. & O. circular, with the marginal injunction, "Please post in a conspicuous position," to which we are responding to the best of our ability.

The statement of benefits paid from May 1, 1880, to February 28, 1891—10 years, 10 months and 27 days—in round numbers say 11 years.

In this statement sum totals swell to dazzling proportions. It is seen that there were 1,931 accidental and natural deaths, costing a total of \$1,202,891.98, or an average of \$622.42. If these deaths had occurred in the Brotherhood of Locomotive Firemen, the heirs of each would have promptly received \$1,500, or \$877.58 in excess of what the B. & O. paid, and the total expenditure for benefits would have reached the sum of \$2,900,500, or \$1,793,608.02 in excess of the amount paid by the B. & O. The question arises, why should Locomotive Firemen join the B. & O. relief department? since if they die or get killed their heirs receive \$877.58 less than would be paid them by the B. of L. F.; besides, if they get totally disabled they get scarcely anything at all when, were they in the B. of L. F., they would receive \$1,500.

It appears there were 32,681 accidental injuries which required an expenditure of \$437,148.36, or an average expenditure for each case of \$13.46. Of the 32,681 accidental injuries, only 20,243 required surgical attention at an expense of \$122,868.28, or an average expense for each case of \$6.60; an amount so small that the maimed employé may have seen the surgeon once or twice. But we have the figures showing that 54,375 cases of "natural" (not artificial) sickness cost the fund \$808,796.25, an average of \$10.83 for each case. Taking the statement that the expenses for medicines in February, 1891, amounted to \$34.20, or \$410.40 a year, as the average, the expenses for 11 years would be \$4,514.40 for medicines for 54,375 cases, an average of about 8 cents and 3 mills each—not enough to buy a box of pills or a dozen grains of medicine.

Notwithstanding this, surgical expenses and natural sickness cost \$331,664.53; deducting cost of medicine, \$4,514.40, we have a remainder of \$927,150.13. Where did it go? The statement does not show. Did the surgeons get it, or most of it? If it was paid for sick benefits no mention is made of it. All is dark and mysterious, and those who paid in the money, or had it deducted from their wages, are doubtless in the dark concerning the matter.

Add your name to the Robinson Monument Fund list. It's a roll of honor.

THE NEW YORK AND NEW HAVEN R. R.

Some weeks since, Rev. J. Lee Mitchell, pastor of the New Haven Grand Avenue Congregational Church, in the course of a sermon on Christianity and Socialism, referred to the mission of the New York and New Haven Railroad as follows:

"I listened to an address the other night from a director of the New York & New Haven railroad. I learned for the first time that the railroad was built and run solely to please the people, for their moral welfare—in fact, that it was the greatest disseminator of Christian truth since Christ, and that the true apostle of Jesus was the true director of the New York & New Haven railroad. Then a well known man here, with New York & New Haven railroad stock in his pocket, increased in value 400 per cent. got up and brought the New Jerusalem right down among us by proposing to heal the hearts of all laborers by sharing profits with them—the profits to be shared being a tenth of one per cent. to be divided among 10,000 employes. I started home then to tell the deacons to close the church, the New York & New Haven railroad had brought the millennium. Meantime, a widow, whose husband was killed coupling cars for the consolidated railroad, is trying to get \$50 out of them to pay for burying him."

The foregoing is the whole thing in a nutshell. Of all the fakes practiced by corporations this thing of trying to make it appear that they are organized or managed for charitable purposes, embodies the largest possible amount of low, base-born duplicity, and the Rev. Mr. Lee saw it at a glance and effectually exposed the cheat; and yet, there are thousands of railroad employes who seem to be impressed with the idea that railroad corporations are eleemosynary organizations which have souls.

ELECTION OF OFFICERS OF THE SUPREME COUNCIL.

During the annual session of the Supreme Council, the following officers were elected for the ensuing term of one year, viz:

F. P. Sargent, B. of L. F., President; Geo. W. Howard, B. of R. C., Vice President; J. A. Hall, S. M. A. A., Secretary and Treasurer.

The election of President F. P. Sargent, after two years' service, to succeed himself, by a unanimous vote, was a high compliment and the same is true in the case of Vice President G. W. Howard, and all the officers of the Supreme Council are worthy of the honors conferred upon them.

ELSEWHERE in this issue of the *Magazine* will be found an exhaustive argument by Hon. JOHN DAVIS, M. C., relating to the policy of railroad corporations, in which the purpose is to create and maintain antagonisms between farmers and railroad employes, a contention destructive of the welfare of both, but profitable to the corporation.

This fact Mr. Davis clearly presents and clinches by arguments which ought to convince every railroad employé in the country, and that the readers of the *Magazine* may have the views of the writer, we reproduce the article entire.

DISTRIBUTING THE SURPLUS.

In the estimation of Chief-Inspector Byrnes, of the New York City police, a very dangerous crank made his appearance in that city early in May last, whose mission was to persuade Mr. Jay Gould to relinquish his grasp upon his millions, for "charitable purposes." The crank gave his name and residence as follows, Charles J. Dixon, Pueblo, Col.

Mr Dixon, in his conversations with the officials, did not hesitate to state all the particulars relating to his philanthropic mission—indeed, his first move was to unfold his plans to Mr. Gould's physician, Dr. Munn. As might be expected, Mr. Gould became very much alarmed and promptly sought the aid of the police.

Mr. Dixon was armed with a letter of introduction to Dr. Munn, which he presented in person to the Doctor. The account of the affair begins as follows:

Hardly had the Doctor read the letter when the man stated the object of his call. He said he belonged to the organization of "Christ's Followers," which was very strong in this country at the present time and was steadily growing. The object of the organization, he said, was an equal distribution of the wealth and property of the country. Among the first property to be distributed was that of Jay Gould, and if any difficulty was to be encountered in carrying out that idea, Gould would have to die.

By this time the Doctor's hair perhaps began to stand on end. Then he talked long and earnestly with Dixon, who eventually suggested that perhaps he could prevent the necessity of killing Jay Gould. This could be accomplished providing Mr. Gould gave him \$60,000 cash and \$200,000 for charitable purposes.

Dr. Munn agreed with Dixon, that some such settlement might be arrived at and asked the man to call again the following night (Tuesday,) which he did, shortly before 9:30 p. m. Before that hour Chief Inspector Byrnes, with Detective Sergts. Frink and McCloskey, had been admitted to the Doctor's house and stowed away behind the screens in the parlor.

When Dixon arrived he at once began business, talking in an off-hand manner, and unfolding the whole plan by which Mr. Gould was to sacrifice his untold wealth and thereby possibly save his life. After Chief Byrnes had heard enough to satisfy him of the dangerous character of the man, he gave the signal and the detectives took possession of Dixon, escorting him to Police Headquarters.

It is not astonishing that Mr. Gould was alarmed. If Mr. Dixon, the philanthropist, from Pueblo, had been less diplomatic and considerate, Mr. Gould would have had no use for Dr. Munn, or Chief-Inspector Byrnes. Mr. Dixon, if mad, exhibited the shrewdness of a business man. He wants Mr. Gould to balance his life against \$260,000, of which \$200,000 would go for charitable purposes and the remainder to Mr. Dixon, as some slight compensation for his services as a representative of "Christ's Followers." At the lowest estimate we have seen, Mr. Gould's income is about \$200,000 a week, so it will be seen that Mr. Dixon's assessment was comparatively light, and could have been paid without in any way interfering with Mr. Gould's daily comforts, it being about 4 per cent. of his income—

and it would be a most lucky day for the lambs when Mr. Gould could not secure fleeces double the amount required by the "walking delegate" of "Christ's Followers."

The matter is of such importance that we reproduce the following from the *New York World*, of May 7:

Yesterday, in the quiet of Chief Byrnes' private office, the prisoner laid bare his whole scheme. He said that in 1888 a newspaper man came to him out West and offered him \$25 a month to do certain odd jobs and errands, with a promise of more if he proved satisfactory. This he did for a year, during which time his pay had been sent to him regularly. At the expiration of that time the man came again and raised his pay to \$100 a month, but more risky work was expected of him. After a long time his employer came to him a third time and prevailed on him to renew his engagement, inasmuch as he had performed his duties faithfully, and having received a great deal of money from him he did not hesitate to consent.

Then he was asked to go to "Owl's Head," which he said was on the Canadian border, near Buffalo, where he would meet with a party to give him instructions. Arriving at the appointed rendezvous in the night time he was surrounded by a band of about fifty men, all heavily masked, who compelled him to kneel in their midst, the band forming in a circle around him. While in a kneeling attitude he was compelled to take a solemn oath, which was administered with much pomp and ceremony, and he, from that time forth, was a member of the order of "Christ's Followers."

The object of the Order was explained to him, and after various business transactions, which he declined to explain, he was finally, on April 15, ordered by the Arch Council of the organization to come to New York. His mission was to obtain an interview with the money king, Jay Gould, or with some of his most intimate friends, and through them to lay the decree of the Order before Gould. He was instructed to say to Gould that the Order demanded that \$5,000,000 of his money be set apart and sent at once to the headquarters of Christ's Followers. Then, within the next ten years, \$15,000,000 more was to be sent to the same destination, and at his death the will must be so made that only \$1,000,000 was to go to each of his sons, and \$1,000,000 to the widow. All the rest of the vast property was to be set aside for charitable purposes, or for such other purposes as the Order might decree.

These were the conditions on which Jay Gould could be permitted to live, and if he failed to carry out any of the provisions of the sentence he must pay the penalty with his life. And Dixon was the chosen agent to carry out the sentence.

"That is the only way he can escape death," said Dixon coolly.

He told the Inspector that the Chief of the Order was known as "Adonia," and that he (Dixon) was known as "Vice President No. 71," he being the seventy-first member chosen to carry out the decrees of "Christ's Followers."

"But," he added, with a significant smile, "I feel that I can arrange with the organization to spare Mr. Gould's life, as he is already well advanced in years, providing he will give me \$60,000 in cash and give \$200,000 more to some charitable institution. Now he has either to comply with this order, be killed or I myself must die. The last communication I had from the Order was as follows:

"Mr. Jay Gould has been tried, convicted and found guilty by the Arch Council, and the last Vice President has been directed to carry out the sentence."

"I am the last Vice President, and I know that my life must be given if I fail to carry out the order. If I fail to kill Gould I will be killed by the Order, providing I don't kill myself. All agents of the Order who fail to do their duty are killed. If I am not successful in my mission I have made up my mind to kill myself."

Any one who knows Mr. Gould will see

at a glance that he would fight Mr. Dixon's plans for the distribution of his estate. Nor is it likely that Mr. George Gould would be less inclined than his father to have "Christ's Followers" to administer the great estate, though it may be said that George, with \$1,000,000 hard cash in hand, would not be in danger of going hungry. But badinage aside; the vagaries of Dixon, who is pronounced a crank of the most dangerous type, teaches a lesson of terrible significance. The methods introduced by plutocrats to pile up colossal fortunes are being discussed in the *lairs* of poor oppressed and degraded men who are systematically robbed, as in the coke and anthracite coal regions of Pennsylvania. These wretched human beings, fighting for their dens—women with scalding water, men with clubs, pistols and dynamite, present horrifying scenes which defy exaggeration. Men and women, dead and wounded—women wailing and children crying amidst scenes of desolation, are pictures for a Raphael to paint or a Dante to describe, and amidst such seething horrors, cranks, human devils are born and nurtured until whole communities go mad.

In the midst of these social volcanoes, vomiting fire and death, Pinkerton thugs, with the citizen soldiery, sheriffs and deputies, shout for "peace." But there is no peace. The cry is not, "give me liberty or give me death." Poor creatures, they know little of liberty, but they shout "give us food, give us shelter, give us clothes, cease robbing us, cease degrading us, recognize us as human beings, and another covenant bow, emblazoned upon the breast of the storm cloud, shall symbolize peace. Till then there can be no peace." They tell the truth, and until then the dangerous cranks will multiply. It is the immutable law of cause and effect, and the nation should take heed in time.

DAME rumor has it that a French and English syndicate has been formed to scoop in all the type foundries in the United States. Capital \$6,000,000.

"And the Star Spangled banner"—*sic transit*—don't rave;
Just hold up your hands like a syndicate slave.

DURING 1890 over 8,000,000 kegs of nails were produced by workmen, and driven home by workmen, and if any one will reflect a moment upon what nails do for civilization, they will have kind thoughts for the men who make and drive nails.

A LAWYER hailing from Erie, Pa., recovered \$48,750 from the Lake Shore & Michigan Southern R. R. for injuries sustained while traveling on that road and the amount is said to be the largest ever received in any similar case.

SLAVERY IN CONNECTICUT.

The New York *World*, under date of Fairfield, Conn., June 16, publishes the following special dispatch:

Encamped in the vile back of the Fairfield quarry is a colony of upward of two hundred Italians in a state of slavery compared with which that of the negro in the Southern States before the war was freedom and independence. They were brought here from New York by contractors to work on the New Haven road. They are in charge of a foreman by the name of Leonard Scinto, a savage-looking fellow who parades about with a revolver in his hip pocket and a knife in his belt. Scinto tells the men, it is said that he is King, and can imprison them forever if he chooses. They are paid \$1.35 per day, nominally, but they claim every dollar is taken from them.

It was formerly the custom to take up subscriptions from them on various pretexts, and each man was expected to contribute \$1. If one refused he was discharged the next day. The men interviewed say they cannot remember all the things for which they were required to contribute. Some of them were to present an official with a gold watch and chain, a bicycle, a diamond ring, a baby carriage, and numerous other luxuries. One day one of the bosses went to the men and said he had lost his pocket book containing \$85, and requested that they contribute the usual dollar as a mark of their esteem. The hat was passed, and \$250 was raised. When Supt. Turner died, it was represented to them that the railroad required them to raise a big sum of money for a memorial, and they contributed \$300 on this occasion for flowers.

When Scinto assumed control he established a storehouse on the grounds, and the men were ordered to buy everything of him, and no person was to go outside the colony to see friends. Any Italian who ventured away would be discharged. As soon as any man learned to talk English he was discharged. Scinto charged four cents for two cent stamps, twenty eight cents a pound for cheese, and for the night use of the shanty, which was compulsory, he charged them \$1.20 a month. Last week a workman who could not find a can in Scinto's stock went to the village store to buy one and was discharged. When the men are sick they are not allowed to have a doctor, but must buy the medicine which Scinto keeps in stock.

Dr. Dickenson said to-day: "During the past six months a dozen Italians have come to me for treatment and said that if Scinto found it out they would be discharged. Shortly afterwards a man named Valentino told me he had been discharged for stopping the purchase of Scinto's medicine. Another named Ricco, who owed me \$2, sent it by a friend, as he dared not come again. I was told that there were four others sick at the shanty who needed treatment, but dared not come."

Stanley discovered nothing so essentially infamous in Central Africa as the *World* shows is transpiring in the State of Connecticut, where our christian civilization is supposed to have long since blossomed on the "thorny stem of time." It is a State of schools and churches, newspapers and libraries, and boasts of the great University of Yale. Connecticut has as much religious creed to the square foot as can be found anywhere; sends missionaries abroad to convert the heathen, and is the home of Mrs. Harriet Beecher Stowe, who wrote "Uncle Tom's Cabin," the book that is supposed to have been the chief factor in emancipating the black slaves of the South, and now the lightning tells of slavery in Connecticut, such as the fancy of Mrs. Stowe never

grasped and such as we doubt if the devil himself ever dreamed of.

In old plantation days the owner's weapon was a whip, while the Connecticut boss of Italian slaves carries a revolver and a big knife as symbols of his authority and power.

So far as the *World* is advised, not so much as a prayer-meeting has been held in Connecticut to petition Heaven for the emancipation of Connecticut slaves; no public indignation meetings have been held, nor has the press of the State said so much as one word of protest against the infernalism practiced upon the enslaved Italians. The New York *World* points out the "damn'd spot," and may possibly do something for the miserable colony if it should keep up its bombardment.

Connecticut is a small State, but, as the *World* shows, has a large crime on its shoulders which it ought to shake off, but we surmise the slavery and savagry of which the *World* tells will continue, because the plutocrats, who are responsible for it, make money out of the degradation which it entails.

Connecticut is notorious in history for its "blue laws," and is now to have another boom, in which the enslavement of Italians will bring it still larger dividends of obloquy.

THE EXPULSION OF THE B. OF R. T.

We have on our table the *Railway Service Gazette* of July 9th, in which reference in numerous ways is made to the action of the Supreme Council expelling the B. of R. T.

The *Gazette* is an ardent advocate of federation, and it commends and applauds the expulsion of the B. of R. T.

We do not question in the least the *Gazette's* loyalty to federation or to the welfare of railroad employes nor are we disposed to enter upon any lengthy criticism of the *Gazette's* position relating to the justice of the penalty visited upon the B. of R. T. In one place the *Gazette* says:

Every reader of the *Gazette* should bear in mind that while the Supreme Council could, under its present laws take no other action than that which was taken in passing sentence upon those who participated in the Chicago & Northwestern conspiracy, it is not intended to intimate that the Trainmen's Association did anything deserving censure, those who participated in the conspiracy alone being responsible.

The italics are ours, and are introduced to emphasize the position the *Magazine* has taken in the matter. The great body of the Trainmen were absolutely innocent but by the penalty are made to suffer with the guilty. This could have been avoided and ought to have been avoided.

As we view the case, the *Gazette* is unfortunate in its illustrations and conclusions, as for instance, it says:

But we are told that in expelling the grand officers of the Trainmen's Association, all the members of the association are punished. This is absurd. Every

one at all acquainted with the laws which govern the federation knows that no other action could have been taken. As well say that when the United States Senate expels the two Senators of a certain State, who have been guilty of treason, that the people of the whole State are punished, because they are left without representation in the Senate. And so, too, they are in a certain measure, for it was their misfortune to be represented by traitors, but no one for a moment intimates that the whole people of the State are tainted by the treason of their Senators.

Here we have the declaration repeated that the B. of R. T. was innocent, and also the declaration that is "absurd" to say the "members of the association are punished." And, again, the admission is made that "in a certain measure" they are punished. But let such things pass; the misfortune of the *Gazette's* illustration and conclusion lies in the fact that the action of the Supreme Council in expelling the B. of R. T. is as unlike the action of the Senate of the United States in the two Senators of the State, as it is possible to conceive.

By the action of the Senate two members are expelled—not the State they represented. By the action of the Supreme Council, assuming the B. of R. T. to represent the State, representatives and State go out together. The B. of R. T. is absolutely out of the federation, and can be represented in that body only by readmission. Does the *Gazette* see the point?

It is not required to pursue the subject, as the *Gazette* has supplied an illustration which upsets its conclusion.

Still, we are inclined to introduce one more of the *Gazette's* illustrations. It says:

Benedict Arnold, previous to his treason, was a general of the Continental army, and enjoyed confidential relations with George Washington. As well say after a court martial found him guilty, that he should continue to hold his commission, and still share the secrets of the commander-in-chief, until such time as Arnold's State had taken action in the matter.

Benedict Arnold, at the time of his treason, commanded West Point. He had troops under him. His treason was discovered, but his troops were not punished by Washington. They were not dismissed from the army.

In the case of the penalty inflicted by the Supreme Council upon the Grand officers of the B. of R. T., the order was also expelled. The penalty fell with equal force upon officers and men. The officers, not alone were expelled, but the men who made up the rank and file of the Brotherhood.

A different course could have been pursued. The verdict could have been transmitted to the Brotherhood of Railroad Trainmen, giving that organization an opportunity to seek out the guilty, those who had betrayed their trust, and impose upon them, wherever found, the penalty their treachery merited. If the Brotherhood of Trainmen declined to receive the verdict, or adequately punish the offenders, such action or non-action would be equivalent to an ap-

proval of the conspiracy and the organization as a whole would be inculpated and it would then be time enough to arraign and punish the entire organization.

We must not be understood as entering a plea for the traitors who plotted to secure the dismissal of the switchmen on the Northwestern. From the first we stated that expulsion from the ranks of organized labor was what they deserved, nor have we modified our opinion, so far as they are concerned, in the slightest degree. It is to be hoped that the members of the B. of R. T. will thoroughly investigate the matter, punish the conspirators and again join the federated forces.

GLOOMY.

The *Farmer's Voice*, after taking a survey of the situation, remarks:

A solemn crisis is coming every day nearer when it must be determined whether a government of the people, by the people and for the people can long endure among men.

Free institutions will then be put to a supreme test—and all the men now living in the world, together with the generations which shall inhabit it through coming ages will have a vital interest in the result.

Not a single great statesman of Europe either living or dead ever gave faith to the permanency of the republican idea in earthly government.

In the proudest day of our republic they doubted it and said with courtly cynicism, "Your United States cannot justly claim to have made a demonstration during the few score years it has been in existence—yours is purely an experiment and scarcely even a dubious one, for all the experience of the past is against you.

History makes no record of a republic that did not after a short life vanish into some form of absolutism, either autocratic or oligarchic.

Republics may come and republics may go, but the king goes on forever. He appears in the dawn of time, and tens of thousands of years hence when the final chronicles of this world shall be written—it is not improbable that his name shall be the last one inscribed by the last annalist of the human race."

Now, it may be possible that the great American republic is doomed and that in the not remote future, a king will be enthroned and crowned, and that our children and our children's children will be heard shouting "long live the king." Still, we doubt it. The processes by which a king will be evolved for the American people will be slow in their operation, and before a king will be permanently seated in a land where Washington once ruled by the divine right of the people's fiat, several dozens of necks will be stretched, and several plutocrats, aristocrats and monarchists will have such funerals as the people may award them. And still, such a catastrophe is among the possibilities, as it is that some 40 billions of years hence the sun will roll in space or stand still, as cold as an iceberg.

Just now when intelligent workingmen are organizing to better their condition, and the work is going grandly on, those who favor kingly rule will be prudent if they keep remarkably shady. The rank and file

are "catching on" to the schemes of plutocrats. League, Union and Lodge fires are blazing; new forces are coming to the front. Capitalists, in many instances, are reading, without an interpreter, the handwriting on the wall, and the first thing they know they will be eating grass like the old Persian king.

The American people will prove patient and long suffering, they will drink the cup of their misfortunes and woes to the dregs, and when they surrender the ballot, when they accept brands and chains, every river that rolls its floods to the sea will be a crimson tide. Possibly troubles are near at hand, possibly the conflict is soon to begin, but we conjecture it will be postponed for a century or two. Be that as it may, we would unhesitatingly stake a town lot against a cigar that no insurance company would risk *ten cents* on the life of the first king of the United States of America.

COMMENTING UPON THE CONSPIRACY.

The *Farmer's Voice*, in a recent issue, referred to the sweeping discharge of switchmen on the Chicago & Northwestern railroad, as follows:

A special dispatch to the *Evening Journal*, of Chicago, reads as follows:

CLINTON, IOWA, March 14.—[Special].—There were a surprised lot of switchmen on the Chicago & Northwestern here this morning when, like other places on the road between Chicago and Omaha, on coming down to work at 7 o'clock they were handed their time checks and informed that they could get them cashed at the office. No reason being given for this action.

So it seems from the foregoing item that there was "a surprised lot of switchmen" at Clinton, Iowa.

That is surely a very frigid way of indicating the state of feelings of a lot of humble workmen, who see the daily bread snatched out of the mouths of their wives and children without a moment's notice. This infamy on the part of a gang of lawless railway despots should of a verity give a big surprise and a large measure of indignation to the great plain people of this nation, and it will do so if the bold patriotism of our citizens has not rotted out of sight in a general cringing lackeydom, that would welcome the destruction of democratic institutions and imperialism of the republic, if accompanied by a champagne supper and fifty dollar bill.

The *Farmers' Voice* is to be commended for its outspoken denunciation of the C. & N. W. infamy, but when the indignant paper learns that the railroad corporation was aided in perpetrating the monstrous wrong by another organization of railroad workmen, who entered into a conspiracy with the corporation to snatch the daily bread out of the mouths of switchmen, their wives and children, it may come to the conclusion that such conspirators are deserving of anathemas ten fold more severe than should be visited upon the corporation officials.

The *Farmers' Voice* is a publication splendidly edited. It takes a wide survey of the economic field. It sizes up the infamies perpetrated by syndicates, trusts, and the various plutocratic combinations to rob

labor of its just returns, and we are anxious for it to know that the treason and duplicity of the members of a great labor organization of railroad employes made it possible for the officers of the Chicago & Northwestern Railway corporation to strike down about four hundred switchmen and rob them of employment. We want to say to the *Farmers' Voice* that the men who were guilty of entering into this conspiracy to down switchmen were guilty of treason to obligations as sacred as were ever imposed upon mortal man. These members of the Brotherhood of Railroad Trainmen over-leaped every barrier between honor and infamy; struck down the principles of their own organization and of the federation which they were bound to respect, that they might vent their pent up malice against a few men, whose offending was utterly insignificant as compared with the penalty that conspiracy and treason compelled the unfortunate switchmen to pay.

What hope is there for labor? What hope for oppressed workingmen when one organization of workingmen use their power to crush another organization? Why should organized labor continue to denounce *scabs* when the members of a labor organization perpetrate the most colossal scab enterprise in the history of organized labor?

The *Farmers' Voice* can now, if so inclined, tell its readers what it thinks of this conspiracy to "*snatch the daily bread out of the mouths of switchmen, their wives and children without a moment's notice.*"

RYHME AND REASON.

The poets (?) of the period, the namby-pamby-wishy-washy—the drooling crowd, who have the faculty of rhyming without reason, who ride goats instead of the "winged horse," and who slake their thirst in tad-pole mud holes, rather than at the inspiring fountain of the muses, are multiplying with the rapidity of rabbits in Australia, and what is singular about the business, appears in the fact that those who control the press of the country, not only print the insufferable doggerel but pay for it—and compliment the author—as a consequence, the flow of the nauseating stuff steadily increases.

From a literary point of view such doggerel has no merit whatever. It is a display of ignorance throughout. It ranks infinitely below the lowest production of "Mother Goose." As poetry, it has no more merit than the belchings of a sour stomach. It is too insipid to be used in nurseries, and would demoralize a kindergarten. It is astonishing to note the quantity and quality of such bosh as gets into labor papers. If the rhyme *stingers* would look around, they could find themes for their fancy, which

however poorly treated, would embody redeeming facts worth at least the space required for printing them.

As an instance of this, take the following, "Business is Business" from the Boston *Transcript*:

Eh? "Business is business?" Sheer cant, sir! Pure gammon?

Of all the inhuman, sham Maxims of Mammon,

This one is the worst.

For under its cover lurks cruelty callous.

With murderous meanness that merits the gallows.

And avarice accurst.

Oh, well, I'm aware, sir, how ruthless rapacity Loves to take shelter, with cunning mendacity,

'Neath an old saw;

But well says the scribe that such "business" is crime, sir,

And such would be but for gaps half the time, sir,

'Twixt justice and law.

Starving is bad enough, but to starve and to work too is altogether too bitter for any human creature. If there is no actual starvation at the doors of those who read this there is plenty of privation, and everybody's business is no longer nobody's business concerning the fate of those in the next streets. The same arguments are put forth in support of industrial slavery that were once offered in defense of personal slavery in the South. Work is a good friend, but a poor master; surely the poor who work from candle-light in winter should have a chance.

A phrase takes the place of an argument often.

And stomachs go empty, and brains slowly soften.

And sense sick with dizziness,

All in the name of the hosh men embody

In one clap-trap phrase that dupes many a noddy.

That—business is business.

Business? Yes, precious bad business for them, sir,

Whose joyless enslavement you take with such phlegm, sir,

Suppose, to enhance

Their small share of ease, such as you, were content, sir,

To lower a trifle your precious "per cent." sir

And give them a chance.

The poet who wrote the foregoing is evidently a "kicker," and his rhymes have the ring of reason which gives them value.

The *People*, published in the City of New York, has the kindness to say:

One of the finest labor publications in existence is the *Locomotive Firemen's Magazine*, edited by Eugene V. Debs, and issued at Terre Haute, Ind. It contains exhaustive essays upon the labor question, from which profuse quotations are made by labor papers in all countries where the English language is spoken.

Such complimentary words by a publication which does not speak at random we appreciate, and they cannot fail of being encouraging to the great Brotherhood of which the *Magazine* is the official organ. But the *Magazine* has sought to be something more than an "organ." It has taken an interest in all labor organizations, and as best it could cheered them on in their good work.

ROBINSON MONUMENT FUND.

The following subscriptions to the *Robinson Monument Fund* have been received since our last report;

J. H. Cunningham, Pan Handle, Tex.	\$1 00
Thos. Sheehan, Pan Handle, Tex.	1 00
Thos. Mullhall, Pan Handle, Tex.	1 00
J. E. Barney, El Paso, Tex.	1 00
O. O. Stoner, Garrett, Ind.	1 00

The following collected by A. E. Rief, Pana, Ill.:	
Wm. Wolf	25
A. E. Rief	50
M. Fry	25
Chas. Roley	25
Chas. Morrison	25
D. Shinfelt	25
W. J. Miller	25
Andrew Smith	25

Harry Lippey, Pan Handle, Tex.	1 00
A. C. Seger, Pan Handle, Tex.	1 00
Previously acknowledged	25 70

Total \$41 10

Remittances should be directed to *Locomotive Firemen's Magazine*, Terre Haute, Ind.

Going the rounds of the press we note the following:

In Cincinnati thousands of pairs of trousers are made for 5 cents a pair, and overalls for 3 and 4 cents. Under the sweating system hundreds of women are earning from \$1.25 to \$3 per week. Children are working for 6 cents per day, and are subject to fines that often equal their wages.

Now, suppose a proposition be made to boycott the establishments in Cincinnati and elsewhere that pay such murderous prices, and it should succeed and break up the business of the monsters? What would become of the women and children whose lives are made up of pangs and groans?

There is an immense amount of burning literature circulated against the moon-calf monstrosities, who care no more for the lives and happiness of women and children than a wolf cares for the innocence of a lamb, and they would still further reduce prices were it possible and keep up their business.

But is there not another side to the question? Take a cut-throat Shylock who sells trousers and overalls cheap, because he pays murderous wages, and a white man who pays fair wages, and therefore must have an advanced price, and which one will secure the trade? Is it required to state that the cut-throat would prosper while the white

man would be left with his goods unsold? What is the moral? This—the public cares no more for the enslaved women and children than do the monsters who defraud them. “Cheap” is the battle cry and it seals the doom of the victims of the “sweating system.”

FOURTEEN MILLIONS GONE.

The *New York World*, of recent date, contained the following editorial reference to a big steal:

A day or so ago there was a mysterious meeting of capitalists in New York. These people represented the majority of \$40,000,000 worth of stock. They declined to say anything to the newspapers that would satisfy either the public or the shareholders.

The corporation was the Construction Company of the Northern Pacific Railroad, an institution into which many millions of dollars have mysteriously disappeared. Not many months ago the assets of this very Construction Company shrank from \$30,000,000 to \$6,000,000, and no one knew whither the \$24,000,000 had gone.

Perhaps it will be said that the public has no concern in these private affairs; that even if men are so imprudent as to pour their money into rat-holes it is wholly the business of those who are proverbially easily parted from their money.

But this is not true if the rat holes owe their existence to law, and it is the duty of the State that enables corporations to secure the money of investors to compel their creatures to do their business in the light of day. Sudden and mysterious disappearances of money into corporation coffers create public scandals.

Blind pools and the secret management of corporate funds are contrary to public policy.

All the millions of dollars which “mysteriously disappeared” in the construction of the Northern Pacific Railroad were stolen, and at the same time were made to appear as having been expended in the construction of the road, a case, not unusual, of stealing being reduced to a science but entirely within the law, made for the special accommodation of plutocratic thieves.

THE *Cologne Gazette* of June 15th has an account of a railroad accident at Basle, Switzerland, in which an excursion train was precipitated into a river and a number of lives lost. That the entire number of passengers was not lost is due to the Westinghouse air brake. The account says: “The unfortunate train was filled with passengers, because many people from Basle were going to visit the singing festival at Moenchenstein. The new bridge close to the station spans the River Birs above rapidly flowing waters. The train consisted of two engines, two fast freight cars and ten coaches. The bridge broke in two. The entire first part of the train was precipitated into the river, but six of the coaches remained on the track held there by the tearing apart of the couplings which brought the Westinghouse automatic brake into action and resisted further progress. Up to the present sixty-five bodies have been found. Forty-one seriously injured passengers are lying in the Basle Hospital. The work of clearing away the debris is being performed slowly.”

WM. D. ROBINSON MONUMENT FUND.

Wm. D. Robinson, who died at Washington, Ind., on November 7th, 1890, was the founder of the Brotherhood of Locomotive Engineers, and in doing this great work, he as certainly laid the foundation of the Brotherhood of Locomotive Firemen and all other organizations of railway employes.

In closing our obituary notice in the December issue of the *Magazine* we said:

In this hour, when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame, the memory of a man who gave the best years of his life for their benefit? Is not the answer, We will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response.

If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

"What hallows ground
where heroes sleep?
'Tis not the sculptured
pillars you heap!
In dew that heavens far
distant weep.
Their turf may bloom,
Or genii twine beneath the
deep
Their coral tomb.

"What's hallow'd ground?
'Tis what gives birth
To sacred thoughts in souls
of worth!
Peace! Independence!
Truth go forth.
Earth's compass round
And your high priesthood
shall make earth
All hallowed ground."

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep, is hallowed ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallowed ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the Brotherhood he founded will be his imperishable monument, and that his name in connection with that great order is to increase in lustre as the years flow on. But that does not cancel the debt of gratitude the two great brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unaided, our order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two orders, but would invite all the brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

In discussing the propriety of erecting a monument to perpetuate the memory of the dead philanthropist we said in the April issue:

The idea of building a monument to perpetuate the name and fame of Wm. D. Robinson, originated with the *Firemen's Magazine*. The time has come for action. Contributions should be made. We have said that 25 cents each from members of the B. of L. F. would build the monument. But we surmise that other orders would want a place in the splendid work proposed, and we have opened in the Grand Lodge office of the B. of L. F.,

A ROBINSON MONUMENT FUND.

Every contribution, however small or large, will be acknowledged in the columns of the *Magazine* under an appropriate head, and when the contributions approximate a sum which gives assurance of success to the enterprise, a commission made up of the members of the various brotherhoods will be constituted to take charge of the fund and prepare for work.

Members of the various orders subscribing should designate their calling, and if they will give their address it will be regarded as a favor.

Now, let the good work proceed. Wm. D. Robinson, when alive, was the friend of the workman. He wrote and spoke and toiled to establish a brotherhood and to teach men the power of organized labor. Railroad trainmen had no more ardent and unselfish friend. Let a monument bear testimony that death did not sever the tie that bound him to the living.

WM. D. ROBINSON.

If ever a man deserved the grateful homage of his fellows that man was Wm. D. Robinson. He devoted the best years of his life to the great work of organizing railroad men for their moral and material advancement. He toiled without recompense, he endured privations and made sacrifices, the half of which will never be told. He lived and died in poverty

that others might fare better than was his lot. Every man, woman and child who has been, is now, or ever will be the beneficiary of any of the brotherhoods of railway employes owes Wm. D. Robinson a debt of gratitude that never can be paid. Such a man deserves a monument to bear testimony of the love and gratitude of those for whom he accepted poverty, persecution and all their attendant ills, and every member of every organization of railroad employes should cheerfully contribute his mite, small as it may be, to such a noble purpose. Contributions may be directed to the *Locomotive Firemen's Magazine, Terre Haute, Indiana*, all of which will be acknowledged in its columns.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth* day of each month.

WHY IS IT?

There are things in this life I don't understand,

You meet with them everywhere,

Why many can drive in their carriages grand

And live a *la* millionaire,

While others day after day ever toil

For wages exceedingly small,

Why land-grabbers own the most of our soil,

And poor men ne'er get bonused at all.

Why young men don collars up to their chin,

To stifle and throttle them so,

Why ladies wear corsets so tight that they grin,

When nobody's looking, you know.

Why they buy such *dear* hats of delirious shape,

Causing the sterner sex oftimes to swear,

Why the manners of foreigners so many do ape,

And shop girls must not sit on a chair.

Why a team of base ballists can play a great game,

No errors or muffs, "There's the rub,"

But the very next day, oh! 'tis not the same.

They get beat by some back country club.

Why a night with the "boys" isn't good for the head,

And we thrive on boarding-house hash.

Why the girl we love another fellow does wed,

And the ugliest dude makes the best mash.

Why aldermen free in our street cars can ride,

While poor washerwomen pay fare;

The richer the man the prettier the bride,

You find it the same everywhere.

Why members shirk voting in our Parliament,

Drawing salaries with manners so bland,

Why labor there seldom sends a "represent,"

Are some things that I don't understand."

TORONTO, ONT.

John Tierney, Jr.

Organization.

MR. EDITOR:—Being a reader of your valuable journal, I take the privilege of writing something for publication, hoping to interest your readers and especially members of the brotherhood.

In looking back over a life spent on the rail and on the front end of the trains that move the commerce of the nation, memory carries me back into the 50's, when many of the appliances of to-day had not been thought of. September 17, 1859, I threw my first billet of wood in the old Sam Patch, (named so on account of jumping off a bridge as did the original Sam Patch) on the S. S. R. R., which is now a part of the Norfolk & Western of Virginia.

It is reasonable to suppose that I have seen many vicissitudes in railroading, development going on continually, all tending to perfection.

To one who has been, as it were, in the midst of this great evolution, and noticing factors that have played their part as being the causes which have produced the great-

est and most wholesome effects, none deserves more consideration than organization, from the very fact that by organization operatives in their different vocations are thrown together and discuss matters pertaining to their particular branches of service, thereby educating the membership up to a high standard.

There was a time when railroad officials were opposed to organized labor, but the wise among them have abandoned any such attitude, and now the grievances of organized labor are given a respectful hearing.

This change in the attitude of managers of railroads has been forced upon them not through any greater reverence they have for organized labor, but by the stern law of necessity.

Let any of the old landmarks in railroad service take his stand back in the 50's and draw a comparison with the train service of that day and this. It will be discovered that the improvement is wonderful. As an illustration I will mention an occurrence in which I was a factor—the fireman. There was wanted engineers, and the Master Mechanic hired a steamboat engineer, and sent him out on the engine I fired. We were six days and nights making a run of 408 miles, and put in most of the time on the road; and it was all right—nobody complained; (but the fireman, and he didn't amount to much then) the officials thought probably it was the best that could be done. Now is there a first-class road or even an insignificant branch road that would undertake such an experiment as trying to get trains over the road with a steamboat engineer? verily not, and I don't think the C. B. & Q. would like to try it again.

The reason for my assertion in regard to the attitude of managers is very plain; railroading in all of its departments, and especially the train service, has attained to such a degree of perfection that a high order of skill and training is essential on the part of the men in charge to meet and properly discharge the duties imposed upon them.

Railroad managers have discovered this, and have accepted the inevitable; they do not desire a conflict with their operatives if it can be avoided by an appeal to common sense and reason. Believing this to be a fact, it behooves operatives to make justice the basis of their demands and not to act hastily if there seems to be a grievance, but use Davy Crockett's motto: "be sure you are right, then go ahead," always keeping in view the self-evident fact that all men are created free and equal and are endowed by their Creator with certain inalienable rights, among which are life, liberty and the pursuit of happiness.

It has been my aim in life to make the world better by having lived in it, and I

hope yet to live to see the day when every honest citizen will feel that he is the peer of any man; and I believe that organization is the medium through which this is to be accomplished.

I believe that the future historian in making his summary of great benefactors of mankind, will give the faithful leaders of organization of to-day their proper meed of praise; but for the present they must be content with simply the approval of the majority, knowing that they are building a monument to themselves that will stand when bricks and mortar have crumbled to dust. Therefore it becomes necessary to build wisely and use no bad material, such as hypocrisy, subterfuge and a hundred other artifices to take the place of truth, which, if used in the structure, will mar its harmony and in time cause it to tumble to earth.

Before closing I want to speak to the craft: be faithful to duty as members of an organization that you may well be proud of; be faithful to yourself and family in order to make life pleasant and home what it ought to be and be faithful to the company in whose service you may be employed for the reason that justice demands it; but to be faithful to your employers doesn't carry with it the demand that you must surrender your manhood. Be faithful in the discharge of the duties pertaining to the position you fill, and don't say, as my fire-boy does sometimes when I speak to him about economy in fuel, "it don't cost me a cent." We are all what we make ourselves; some of us may have greater obstacles to overcome than others, but organization, will aid us in overcoming them, so finally be faithful to organization.

Axiom.

FAIR WAGES AND SPOT CASH.

BY SWITCH.

MR. EDITOR:—There are motors and there are voters, there are churches, prayers and preachers, There are books by the million, and some hundred thousand teachers; There are snivelling philanthropists, who prate about perdition, Each with a patent nostrum, to improve working-men's condition. Where there are so many doctors there'll be views of great variety, Relating to orthodox morals and gold-lined society— But what I want to know is, and this, twixt you and me, If good wages and spot cash, morally and socially, is 'nt about the idea?

[If the question were put to vote, we should be inclined to vote early and often for spot cash and fair wages.—ED. MAGAZINE.]

MR. EDITOR:—I know that workingmen should be socially elevated— And I know they all desire to be morally sublimated.

If cleanliness is godliness, then just here I want to say, There are workmen who believe in soap, and wash, at least once a day. They don't have to be ordered out, and made to stand in line, And be lectured by the Vanderbilts on the habits of swine; Still, if morally and socially, we are to be altitud-leum, Don't you think good wages and spot cash is the way to kingdom come?

[If by "kingdom come" *Switch* means a good home, with three square meals a day, then, in that case, we advocate "good wages and spot cash." They make labor's ways, ways of pleasantness, and all its paths, paths of peace.—ED. MAGAZINE.]

MR. EDITOR:—Morally and socially, I want to go as high as circumstances permit; I am fighting on that line, and I don't propose to quit. But firing an old engine with anti-combustion coal. While it gives me an appetite, is a little rough on my soul. But heroically I keep at work, and am making some advance— There is nothing else in sight, just now, and I take the only chance. But I am often irritated, this I confess with no delight. Still, hopeful that good wages and spot cash will set me right.

[*Switch* has got the hang of the question, stick to the old engine and make her hot. There need be no fears as long as the good appetite continues.—ED. MAGAZINE.]

MR. EDITOR:—I am anxious to see added to the list of ages, One distinguished for spot cash, fair play and honest wages. And when you see its dawn, bet your boots and old hats, There will be a mighty tumbling of purse-proud plutocrats. Then labor, by its own decree, will be found on top. And though you live a thousand years you'll never see it flop. With fair wages and spot cash—longed for beatitudes— We'll rise, morally and socially, to "400" altitudes.

[We are confident, though somewhat behind time, that the age of good wages and spot cash is coming. Its coming could be expedited by federation, and that, too, is coming, and when it comes, labor will be on top.—ED. MAGAZINE.]

The average small boy of the present day is seldom at a loss for something to say, even in the most embarrassing situations. Bobby, a precocious youth of six summers, had been indulging in profanity and, in order to escape the punishment for which his mother had made preparations, he crawled under a barn and remained there in a state of siege for the greater part of the afternoon. When his father returned at night and learned how matters stood he made his way, with much difficulty, under the barn in search of the boy. "Hello, papa," said Bobby, cheerfully, as his sire approached, "have you been swearing, too?"

A Step from the Rail.

Dedicated to the memory of Percy A. Robinson, a bright and promising young fireman, who was instantly killed in an accident while on duty, May 13, 1891. In frequent conversations with the writer he displayed in a prominent degree that the ruling thought of his life was filial regard for his mother.

David, who slew the lion and bear,
And to battle with Goliath dare.
To Jonathan said, in his despair,
"There's but a step between death and me."
As then said David, so now say we,
For young or old, for the grave or gay,
For the busy man, for child at play,
"But a step between," come when it may.

Precautions seem of little avail
To avoid "the step," while seas we sail
Or journey take on glistening rail.
We are prone to think, if not say it,
For us, somehow, something will stay it.
It matters not how long life is spared
No one seems ever just quite prepared
To take it, though living much have dared.

Upon an engine devouring space,
A fireman stands, with a cheerful face
Helping his steed to quicken its pace.
To him it is "a thing of beauty,"
A joy to help it win and duty.
His pride in it he will not smother
For a sweetheart "he wants no other;"
His heart is filled with it—and mother.

His heart and mind, with the busy brain,
Are filled with mother, while muscles strain
In line of duty, to speed the train.
Mother was the "angel of mercy"
Uppermost in the heart of Percy.
What mattered the surroundings dreary,
The tired limbs and muscles weary,
When talk of mother made him cheery.

Of her he thinks as he works that night,
While so dark without, within is bright,
Thoughts of mother give him inner light.
Alas! alas! there should only be
"But a step between" grim death and thee!
Could mother see, how she would have prayed,
"If possible, let 'the step' be stayed."
Runaway cars are coming down grade!

A blow, a crash, then a jar and shock
With force that causes the earth to rock.
An awful silence which seems to mock
The terrified ones standing aghast.
Who ask "if death has paused or passed?"
Death's gate swung wide for the engine crew:
The engineer only got a view,
While fireman Percy "the step" made through.

"But a step" from the rail, how it thrilled
As over the wire went "fireman killed!"
A loyal heart and cheery voice stilled.
With faces blanched, brother firemen said
In saddened tones, "Young Percy is dead."
"As Jonathan was David's brother,
Was he ours," as they told each other,
"Percy's gone!" they echoed—"his mother."

Those left standing this side of "the gate"
Do feel sometimes like murmuring "fate!"
When a young life goes while old ones wait.
To solve the cause, they wondering try,
While echoes mockingly answer, why?
Since solution here may not be had,
Such steps from the rail must make us sad,
We voice our sorrow in our "too bad!"

S. E. F.

Acknowledgments.

COLORADO CITY, COLO., June 2, 1891.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—I have this day received a draft for fifteen hundred dollars, the full amount due me on my disability claim from Bro. Griffith, Receiver of Lodge No. 218. I am unable to express my thanks to the noble hearted brothers of No. 218, and the members of Division No. 385, B. of L. E., and others who have assisted me in my misfortune, but it is my earnest wish that when their time comes they may reach their next home without pain or trouble. It is also my earnest wish to remain a member of the order for the short time I expect to be with you.

Yours fraternally,
WM. MICHIE.

DODGE CITY, KAN., June 2, 1891.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—I desire to return my sincere thanks, through the columns of our worthy *Magazine*, for the payment of \$1,500, being the amount of my disability claim; also to thank the noble brothers of Old Fort Lodge, No. 347, for their uniform kindness and help all through my suffering and sorrow, and may none of them ever have the misfortune that I have had. God bless the noble B. of L. F. and may it ever prosper.

Yours fraternally,
SOUTHEY B. TUNNELL.

WOOD RIVER, NEB., June 6, 1891.

To the Officers and Members of the B. of L. F.:

DEAR SIRS AND BROTHERS:—Words cannot express the gratitude I feel as I acknowledge the receipt of a draft for fifteen hundred dollars for injuries which I sustained on Bear River bridge, on the 16th day of June, 1890. I also tender to the members of Morning Star Lodge, No. 88, my warmest thanks for their kindness. Hoping that the Brotherhood will continue to prosper, I remain,

Yours fraternally,
P. W. MCGUIRE.

SANDUSKY, O., June 15, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—Allow me, on behalf of my mother, to acknowledge the receipt of insurance due her by the decease of my late brother, Leander Gordon. To the gentlemen, Messrs. Miller and Butler, of "Safety Lodge, No. 142," to whom the adjustment of this matter was intrusted, do we desire to express our gratitude. To the officers and remaining members of "Safety Lodge," we are indebted to an extent which we cannot estimate. From the moment those gentlemen were apprised of my brother's illness, till the sprigs of evergreen were dropped from tender hands to cover the spot where he lay at rest, did they do everything in their power to lighten his suffering. Number me among the firm and steadfast friends of your noble order, and my sentiment is representative of mother, brother, and sisters, whose sorrow you so materially lessened.

Yours in gratitude,
GEO. H. GORDON.

LIMA, MONTANA, June 16, 1891.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

It is with sincere thanks that I acknowledge, through the columns of the *Magazine*, the receipt of a draft for \$1,500, for the policy held by my dear brother, Myron S. Russell, who was killed in collision at Dillon, Mont., February 1, 1891. I am especially thankful to the members of No. 343 for their kindness and respect shown to my brother while at Lima, also to members of No. 77, at Denver, for their kindness in conducting the remains to the grave at Riverside Cemetery, at Denver. May God bless each and every one of you, and may the Brotherhood prosper and be to others as it has truly been to me and my mother.

Your sincere friend,
ANNIE L. RUSSELL.

KINGSTON, GA., June 7, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I received, through Mr. G. W. Manning, of Kennesaw Lodge, a draft for \$1,500, the full amount due me on the policy held by my brother, C. W. Nevill, who died at Atlanta, April 7. My brother and sister wish to join in heartfelt thanks to the Committee from Kennesaw Lodge who accompanied my brother's remains home. May God's blessing rest upon every member of your order, is the wish of

Yours sincerely,
ADDIE NEVILL.

SAN FRANCISCO, CAL., June 20th 1891.

Editor Magazine:

The members of Golden Gate Lodge No. 91, desire to acknowledge their gratitude to Mrs. W. Cole, of Alameda, for the many handsome gifts to this lodge. Mrs. Cole is one of the ladies who have taken an active part in all our undertakings.

J. L. MAYNE, Sec.

BUFFALO, N. Y., June 21, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to express my sincere thanks for the prompt payment of \$1,500.00, due me on the policy of my dear husband, Patrick McCabe, through Mr. P. J. McNamara, Receiver of Buffalo Lodge, No. 12. I also desire to express my thanks for the attention paid me, and also to those who accompanied the remains and who so kindly assisted at the funeral. May God ever bless and protect your noble Brotherhood is the sincere wish of

MRS. PATRICK MCCABE.

TRACY, MINN., May 24, 1891.

To the Brotherhood of Locomotive Firemen:

We desire to extend our most sincere thanks to the B. of L. F., for the payment of \$1,500.00 for the policy held by my beloved son, Charles D. Hennessy, who was injured in a railroad accident and died Dec. 13th, at Needles Calif, through Homer Howard and Charles T. Largent, of Big Four Lodge, No. 337, of Kansas City, Mo.; also for the kind attention shown the brother of the deceased while in their city, a stranger, awaiting the arrival of the remains; for the beautiful floral tribute furnished by the members of No. 337; also to Mr. W. H. Wise, of Kansas City, who accompanied the brother with the remains to his home, and whose kind words of sympathy helped to lighten the burden; and to those who so kindly assisted at the funeral. May God, in his infinite mercy and kindness, protect the noble order throughout the land, is the earnest prayer of

MARY HENNESSY.

MINNEAPOLIS, MINN., June 30, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—Please accept my sincere thanks for the prompt payment of fifteen hundred dollars (\$1,500.00), the full amount due me on the policy held by my son, Tommie J. Lynch, who died in Missoula, Montana. Dear Tommie often spoke about the advantages of being a member of your noble order, in time of sickness or death. I certainly never appreciated its value until his death. I can scarcely express my gratitude for the kindness and attention of the Brotherhood. May God grant that trouble will never come near you, but if Providence has appointed it your lot, I earnestly hope you will have friends who will be as kind to you as you have been to me during my great affliction. My appreciation of kindness compels me to especially return my earnest and heartfelt thanks to the members of Lodge No. 194, of Missoula, Montana, and No. 82, of Minneapolis. I assure you that the Lover of Charity, whose power is unlimited, and whose mercy is unbounded, will liberally repay you for your kindness to me. From the depths of my heart I wish you prosperity, health and all earthly happiness. I earnestly pray that when this painful life is ended you will enjoy the beatific vision of God.

Sincerely your friend,

MRS. MARY LYNCH.

Address Wanted.

PAT. KAVANAUGH.—If the Secretary of the lodge that Bro. Pat. Kavanaugh is a member of will communicate with the Secretary of Mission Lodge, No. 281, Yoakum, Tex., he will confer a favor that will be appreciated.

In our advertising columns of this issue will be found a special offer to our members from the Holman Liver Pad Co. This is an old, reliable house, and has no connection with the devices known as "Electric Belts," etc. Their book of testimonials covers the most reputable persons in all vocations, and will be sent free on application. We append here one of their testimonials.

OCEAN GROVE, N. J.

Holman Pad Co.:

DEAR SIR:—I have worn the Liver Pad bought of you about the middle of May last, and have received much benefit from it. I had tried a great many remedies for an inactive liver with but little success, and I confess that I did not expect much from yours, but it has done a good work for me.

Yours, etc.

REV. S. G. VISSCHER.

ELEGANT FASHION BOOKS.

The new Fashion Journals, "La Mode," "La Mode de Paris," and "Album des Modes," published by A. McDowell & Co., 4 West 14th Street, New York, are the most elegant of their kind ever brought to our notice. The styles are drawn by the best artists; and the books are produced by rival houses in Paris, each trying to excel the other in the character of its publications. Formerly they were printed only in French; but they are now published in English for the use of American readers. These journals furnish the styles one month in advance of any similar publications; and they have a *practical* department, in which lessons are given each month on how to make dresses, etc. The admirable fashions, the lessons in dress making, and the giving of the styles one month earlier than heretofore, are strong points in favor of these Fashion Books, causing them to be called "The Favorites." These excellent publications can be obtained from all newdealers.

A Close Student.

"Is your son studying the languages?" inquired the visitor of Mrs. Bently, whose son George is at college.

"Oh, yes," Mrs. Bently replied; "it was only yesterday that he writ home for money to buy a German student lamp and a French clock."

It Was Hot.

[New Haven News.]

We do not say it on our own authority, but a subscriber has just dropped in to tell us that the sun was so hot on State street yesterday that a cake of ice which the ice-man was taking into a store caught fire while he was crossing the sidewalk.

Patriotism Versus Principle.

"This prize fighting business is disgusting," remarked a citizen. "The idea of men pounding each other to pulp. It is a disgrace to the country, and the laws ought to stop it."

"But the coming fight is to be between representatives of England and America," said another citizen. "It will be an international affair."

"Is that so? Then I'll bet \$500 our man wins."

ALL IN THE SAME BOAT.

Farmers vs. Workingmen, Especially
Railway Employees.THE SITUATION VIVIDLY OUTLINED BY JOHN
DAVIS.

Now comes the cry that farmers and laboring men can never unite in one political or industrial organization—for their own common interests, because, it is said, their interests are not the same, but are, on the other hand, opposite and antagonistic. As well say that a man's two hands cannot work together for common purposes, because their positions are opposite and labors different. Each has its own secret pocket, into which the other is not admitted. Each has special functions to perform, many of which the other cannot perform. Yet these same two hands find, in practice, that, though their interests and labors are not identical, yet they are mutual and coöperative. They meet together for common purposes, daily and hourly, and aid each other in the most intimate and necessary duties of life. They wash each other in the most confidential manner. They both seize the same handle of the sledge or ax for a common purpose; and when the right hand would handle a hatchet the left holds the pin to be sharpened or the nail to be driven. All day they coöperate and work together for common purposes, but when work is done, each rests and recuperates in its own side pocket, sub Alliance or secret assembly, without the merest symptom of jealousy.

Yet it is upon this alleged jealousy and imaginary antagonism of interests that the enemies of labor found their hopes of dividing and beating the labor movement which is now everywhere showing its power at the ballot box. It is claimed that the farmers desire to hire labor as cheaply as possible, while laboring men desire to get as high wages as possible, and, that therein lies an antagonism of interests which can never be overcome. If this near-sighted view of the matter covered the whole case, or even any considerable portion of it, it would have weight. But it does not. It might with better reason be said that farmers cannot unite with each other in fraternal organization for common purposes because of their antagonism and rivalry in supply the same markets with the same goods. Every farmer is the industrial competitor of every other farmer, and must, in the very nature of things, be the enemy of the man he is trying to crowd to the wall, and who is trying to crowd him to the wall. Yet, in spite of this narrow and short-sighted view of the case, farmers have no difficulty in uniting and working shoulder to shoulder with each other for their own common interests,

and standing manfully together in a life and death struggle with the common enemy.

It might with much show of reason be said that two lawyers in the same village can never unite in fraternal organization for mutual benefits, because each takes from the other one-half the local business which the other might enjoy were his competitor out of the way. Yet lawyers find no difficulty in uniting for the benefit of their profession. The same statement will apply to each of the professions, to merchants, and to men of all business pursuits and industries where individuals and firms are rivals of each other. Yet, in every profession, in every business pursuit and in every industry, intelligent men find no difficulty in forming unions, guilds, Alliances, associations, assemblies, boards of trade and other fraternal organizations for general purposes and mutual benefits. Moreover, in the matter of politics, their co-operation is not prevented nor even retarded by the least shade of jealousy or antagonism.

In view of these facts, open to the observation of all thinking men, how foolish and absurd it is to say that men who are the consumers of each other, and in no true or general sense rivals or antagonists cannot co-operate for their mutual benefit. Farmers hire a few men on their farms. But for every man hired on the farms many thousands of men, women and children are hired in the mines, factories and shops, on the railroads, and in the great cities at divers occupations, all clamoring for better wages, that they may become greater consumers of farm products. A hundred thousand men, more or less, are employed on and about the railroads of the country. Every one of them and their families, of such as have families, are customers and consumers of farm products in proportion to the means they have to spend in that line. The official labor reports show that a million men, representing perhaps, three millions of people, are idle; unable to earn wages through want of employment, they pay for nothing, while they suffer and drift into crime on their way to the grave.

Now it is only expressing a well-known truism to state that it is to the interest of every farmer that his customers be multiplied and enriched so as to create a larger and better market for his commodities. Hence, the more men there are employed on the railroads, and in the mines, shops and factories, in all the professions, in every line of business, and in all the non-farming industries the larger market the farmer has for his product. The employment of more men means shorter hours for wage laborers in the non-agricultural industries. It is better for the farmers of America that wage workers have short time—that three men be employed ten hours per day instead of

two men fifteen hours. It is better for the farmers, that, in all industries where furnaces must be kept hot and wheels and machines in motion night and day, that three shifts of men be employed eight hours each, rather than two shifts twelve hours each. It is, also, to the interest of farmers that the laboring men, agents and clerks in all the non-agricultural industries and employments receive good wages. All wages thus paid to the workers and operatives in mines, shops and factories, and on the railroads, enrich the farmer's customers and improve his markets for all the products of the farm. In order to show the unity of interests in every normal community, it may be added, that short hours and numerous, well-paid employes, increase the business of merchants, and benefit every line of trade and every mechanical employment, because we are the consumers of each other's wares. No sensible business or professional man nor intelligent farmer can conceive himself benefitted by the oppression of labor, through long hours and small pay. But, on the contrary, the more men there are employed (that means short hours), and the better the wages, the better it is for the farmers and for the professional and business men who have laboring men for customers.

This view of the case is plain and self-evident. But there is another phase of alleged antagonisms which must have further attention. It is claimed by the railroad corporations that farmers on the one side, and railroad employes on the other, have antagonisms toward each other which can never be reconciled. They justly state that the farmers desire lower freights and fares on the railroads, while the men operating the roads as employes are demanding higher wages and shorter hours. These demands, it is claimed by the corporations are, on each side, earnest and persistent, and, at the same time, are incompatible. There is enough of truth in this claim to give it a show of plausibility. Under normal circumstances, it would be serious, provided it did not entirely disappear. It is claimed that lower rates cannot be permitted on the railroads without lowering the wages of the employes on the road. On the other hand it is not possible to grant the employes shorter hours and better pay without raising the freights and fares which the farmers and public must pay. Thus, the corporations have drawn a picture of an irrepressible conflict, with the public, including the farmers on one side, and their employes on the other. They would have us believe that the farmers and all the public are engaged in a war of oppression on the men who operate the railroads, and that this war is merciless and endless. So earnest and persistent are the corporations in pushing

this view of the case that they have commenced organizing their men into "Clubs," with regular newspaper organs to resist the growing unity and power of the "farmers' and people's movement." During the session of the Kansas legislature last winter, men calling themselves railroad engineers met several times with the legislative committee and used their influence to prevent any and all reform in railroad legislation. They boldly claimed that any lightening of the public burdens in the line of railroad charges, would be taken out of their wages, and cited cases in Iowa to prove their statements. It was replied to them that the corporations have abundant margins, under just management, to pay their men better wages for shorter hours, while at the same time granting all the easement that the farmers are asking.

This view seemed new to the alleged "engineers." They apparently had not thought of more than two parties in the case. The more important and dangerous party which has been pocketing its thousands, millions, and hundreds of millions of dollars, while the farmers and railroad workers have been grabbing and quarreling over pennies, were, by these "railroad club men," left entirely out of the account. No problem can be properly and truthfully solved unless all the factors in the case are duly considered. In this case we have the corporations who manage the roads, the workingmen who operate them, and, the farmers and general public who patronize them. The corporations are the ruling power. They work with little noise or friction. They lay their plans carefully and secretly, and, they carry them out with certainty and conscienceless precision. Laws, constitutions, court decisions and public opinion are brushed aside as cobwebs by the hand of a giant. The men composing these corporations are usually millionaires and are spoken of as "Magnates." Beginning business sometimes, on the mouse trap plane, in a very few years their wealth is reckoned by hundreds of millions. The "Coming Billionaire," it is predicted, will soon arrive by railroad, floated in by the floods and forgeries of his own watered stocks. These millionaire corporations are one factor in our railroad problem. They cannot be left out of the calculation. Where did they get their wealth? They acquired it from the men with whom they have been dealing. They acquired it from the other two factors of the problem—from the laboring men who operate the railroads, and, from the farmers and the general public! These magnates crowd their employes down—down—down—into the most merciless slavery, utterly unknown in the annals of our once peculiar institution—chattel slavery. They work men, it is said, ten, twenty, thirty, forty, or fifty hours at a

stretch, as suits their own sweet will and pleasure; until in some cases, engineers and conductors are too much exhausted to be proper custodians of a train. Many lives and much property have been sacrificed by the inability of men to keep awake. The corporations do not drive men to their tasks with whips, shot guns and blood hounds, but, through hunger, distress, lack of fair wages for fair work, and threats of discharge. That is the millionaire treatment of employés! On the other hand, as described by Mr. Garfield in June, 1874, "These modern barons, more powerful than their military prototypes [of the middle ages], own our greatest highways, and levy tribute at will on all our vast industries!"

Senator Windom, in an official report to Congress, in 1874, described our present masters and oppressors as follows:

"In matters of taxation, there are to-day four men representing the four great trunk lines between Chicago and New York, who possess, and who not infrequently exercise powers which the Congress of the United States would not venture to exert. They may at any time, and for any reason satisfactory to themselves, by a single stroke of the pen reduce the value of property in this country by hundreds of millions of dollars. An additional charge of five cents per bushel on the transportation of cereals would have been equivalent to a tax of \$45,000,000 on the crop of 1873. No Congress would dare to exercise so vast a power, except upon a necessity of the most imperative nature, and yet these gentlemen exercise it whenever it suits their supreme will and pleasure, without explanation or apology. With the rapid and inevitable progress of consolidation and combination, these colossal organizations are becoming daily stronger and more imperious. The day is not distant, if it has not already arrived, when it will be the duty of the statesmen to inquire whether there is less danger in leaving the property and industrial interests of the people wholly at the mercy of a few men, who recognize no responsibility but to their stockholders, and no principle of action but personal and corporate aggrandizement, than adding somewhat to the power and patronage of the government directly responsible to the people and entirely under their control."

In all cases they act on the robber's rule when he sets out to get rich by his calling. From the laboring men, who operate the roads the corporations require all that flesh and blood can stand (and more) at the lowest living or starving wages! Of the public they require "all that the traffic can bear," regardless as to the financial embarrassment, the loss of homes or the means of life, by the individuals who compose the public!

Now the question occurs about this way: Suppose the farmer and the general public on one side, unite for mutual self protection against the corporate "barons" who operate the roads for the millions and billions they make at the business. Suppose we require that workingmen be paid better wages, and have shorter hours as well, so that there will be more men at work and more money to spend in the channels of business. Then, on the other hand, let it be demanded that farmers and the public be served by the rail-

road at a rate not more than six to ten per cent. above the cost of service; and require that in all cases the charges shall bear some sort of reasonable relation to the cost of service. If a car load of commodities can be carried across the continent, from ocean to ocean, for three hundred dollars (\$300) it surely cannot be just to charge eight hundred dollars (\$800) on the same roads and in the same train for two-thirds of that distance! If a car load of wheat can be carried from points in southern California to San Francisco for twenty dollars (\$20), it surely cannot be just and equitable to charge three hundred dollars (\$300) for a car load of alfalfa seed from the same points to the same market! If newly arrived Europeans can be carried from New York to Chicago at one dollar per head, it must certainly be unfair to charge native born Americans eighteen times as much over the same roads between the same points. Yet these rehearsals are but the common place occurrences under our present robber management. They "have the drop" on the public, and as a rule "levy tribute at will, 'all the traffic will bear,' on all our vast industries!"

Having raised freights on one side, and suppressed wages on the other, until the margin of profits is large, then comes the opportunity to swell "capitalization" by the sale of manufactured or forged stocks and bonds. These are known as "watered stocks." An agent of the company orders printed blank stock certificates and blank bonds. These blanks which cost merely the price of printing are then filled out with large amounts, signed, and sold for cash in the market at the market price—at par, more or less. If sold at only fifty cents on the dollar, the transaction is bold robbery. A bit of paper costing the company only a cent may be sold for fifty thousand dollars (cash to the corporation). Then, after that sale, there will be one hundred thousand dollars (\$100,000) more "capitalization" for the public to pay interest or dividends upon. To meet this increased demand, freights are crowded a little higher and employés are crushed a little lower, "in order to provide for the obligations of the company!" In this way the railroad burdens of the United States amounted in 1889 to \$9,931,453,146. As the amount is increasing about half a billion annually, it is with-in the truth to call the present total burden ten billions. According to the best railroad authorities one-half of this incomprehensible sum is *fraud*—watered stocks! Five billions of water! If sold at par it brought enough money to make five thousand new millionaires! At four per cent. per annum the income is enough to make two hundred new millionaires each year from this watered capitalization, which represents no honest value.

The proposition that I make, now, is this: Let us cut down freights and fares on the railroads in the interest of the farmers; in the interest of all merchants and business men; in the interest of all the men, women and children in this broad land, who eat victuals and wear clothes; also at the same time let us shorten the hours of railroad workingmen, until about fifty per cent. more men are employed, and raise wages until about one hundred millions of dollars more money per annum, shall go into their pockets, than now finds its way there. I would do this shortening of hours and raising of wages, primarily, in the interest of the laboring men; secondarily in the interest of the farmers, making larger and better markets for farm products; and, thirdly, in the interest of all business men. I would then lower freights and fares, leaving more money in the channels of business; while, through increased sums paid to railway employes, more money would be returned to the channels of business than the laboring men now have to spend on themselves and families. Is it not plain that this would make better times for all of us?

Do you ask who would suffer by this process? I reply, the millionaires of London and New York would collect less money than now on watered stock! What a hardship! I would provide for them less liberally! That is all! When a farm is water-logged the sensible farmer cuts a ditch to the nearest river and leaves the water to exercise its own option, to go or stay. Our water-logged highways might be so managed by means of lower railroad charges to the public and better wages and terms to the men! Two hundred millions of money per annum saved, is an item worth mentioning in any discussion. This leaves five billions of alleged *bona fide* capital in railroads in this country at four per cent. per annum, with nothing for water; or, two per cent. on the whole ten billions, and the corporations can divide their income as they like. We should quit paying two hundred millions per annum on water! When the farmers, merchants, railroad men, and the general public come to understand this subject as the people understood chattel slavery in the sixties, it is safe to say that we will quit turning our pockets inside out upon demand of public robbers!

Under that fraternal state of prosperity, with better markets and cheaper freights, it may be safely predicted that American farmers will cheerfully pay their hired men more wages than now, making them, also, better customers, for all products of the farms, shops, mines and factories. How nice and easy it is to thus have one hand wash the other, when once we show them the way, though on the start it seemed impossible that it could be done! When all

laborers on the farms, in the mines, in the shops and factories, on the railroads and in the business houses, meet at the ballot box intent on justice to themselves and their families, with less respect and care for their common enemies, times will be better here in America! We are all in the same boat, and must sink or swim together. Divided we are helpless. United, our enemies will disappear as dew disappears under the morning morning sun. Their power of resistance to our will when united is as the breath of an infant to the fury of a cyclone! Let us study this problem of three factors from the bottom, and UNITE.

A Great Bridge.

The great steel bridge across the Columbia river at Vancouver, says San Francisco *Wood and Iron*, will be a mammoth concern. It will be 6,000 feet from the Washington to the Oregon shore; it will be double tracked with a roadway on top for teams, and will be erected upon pneumatic piers. The pivotal pier, or draw pier, will support a draw which will give an opening of 200 feet space on either side for vessels to pass, and the span immediately south of the draw span will be 375 feet. Whole structure to be of steel, built 10 feet above the high water of 1876, and 40 feet above low water. On account of the sandy formation it will be necessary to go down 80 feet below low water to get a firm foundation. There it rests on a foundation of coarse gravel similar to that upon which the great bridges across the Missouri river are built. This gigantic structure will cost over \$1,000,000 and employ hundreds of men in its erection. It will be January 1, 1892, before the cars can pass over it. The company are pushing their bridge and also their road as fast as men and money and their present perfected plans will permit. They have now between here and Kalama over 2,000 men and 1,500 teams at work.

Betrayed by his Accent.

[New York Sun.]

Magistrate (to prisoner)—Phat's your name?

Prisoner—Patrick McGoolihan.

Magistrate—Is it an Irishman yez are?

Prisoner—Yes, yer honor.

Magistrate—That's what Oi thought. Yer accent is froightful.

Work of the Modern Ananias.

A Philadelphia editor says he "violates no confidence" in stating that when a band marched past the offices of the United States legation in London on the Fourth of July playing "Yankee Doodle," Ed. Phelps, the American minister, asked a duke who happened to be standing on the front steps what tune it was. .

PASS IT ALONG.

I asked her what paper she preferred,
And warmly kissed her cheek,
Then pressed her for her heart's reply,
"Say, darling, can't you speak?"
She moved a little nearer then,
And answered: "Lovely Sir,
The one of all that suits me most
Is the Wayland Register!"

—*Wayland Register.*

Just kiss her on the other cheek,
See what she thinks of that,
Then press her for her answer,
And she'll say the Democrat!

If your years are about eighteen,
Come this way, and you'll fall in love
With the *Firemen's Magazine*.

HIS FIRST DOLLAR.**Henry Clews Tells How He Started the Foundation of His Fortune.**

Henry Clews, the banker, financier and author, being asked by a representative of the New York Sun as to how he laid the foundation of his fortune, said:

"I was preparing for Cambridge when I first came to this country. It was the rule in English families not only to dispose of the children in marriage, but also to select for them their occupation in life. My parents had decided upon making me a clergyman. My family had been famous for clergymen for many generations. An uncle of mine, named Tysen, was vicer of Woolstan-

ton, in Staffordshire. He had a number of curacies at his disposal, and it was his desire that I should take one. Now, a curate never received more than £100 per annum. That was to be my fortune. Of course, when my uncle died I might have succeeded him, but there was nothing certain about that. Like most English boys, I had no thought, one way or the other, about accepting the life mapped out for me. There was no question about it. It had been decided, and I did not think of disputing the decision. During one of my vacations, however, I thought I should like to come to America. I had a brother here who was in business, and my father had gone over on some business, also, and I thought I'd like to see the country. I requested permission to come, and it was accorded me. I sailed from Liverpool in the ship *England*, and landed in New York after a passage of thirty-two days. Shortly after my arrival my father returned to England, but as I had seen but very little of the country I requested permission to remain longer, and my father agreed.

"I had not been here long before my ideas broadened and I perceived that here in this country there were opportunities of which I had never dreamed in England. I became very much dissatisfied with the idea of returning to my narrow prospects in England, and after some deliberation I determined to remain. I was at the time in receipt of a small allowance from my father, which I obtained through a banking-house in this city.

"I had no sooner determined to stay here than I looked around for some employment, and secured a situation as assistant book-keeper with the firm of Wilson B. Hunt, at William street and Maiden lane. Mr. Hunt was related distantly to my family, having married a cousin, and it was for that reason principally that I secured employment under him. My first salary was \$250 a year. I was then 14 years of age. I wrote to my father as soon as I had secured the place, informing him that I would not return to England, and that he need not send me any further allowance. My father and mother wrote me to come home, but I refused to do so, and have not been there since."

From this small beginning Mr. Clews has built up a colossal fortune, which is now the backbone of the banking firm of which he is the senior member. Mr. Clews referred with pride to the fact that at his early age he was one of the best penmen in the city of New York. It was his splendid penmanship that made it easy for him to secure his first situation and that won for him shortly thereafter the diploma at the American Institute Exhibition in Castle Garden. That diploma, handsomely framed, now forms one of the decorative features of Mr. Clews' home.

ANCIENT ENGINEERING.

Some Facts that would Prove Too Much For the Modern Engineer.

The hard mechanical training necessary for an engineer of the present day disinclines him to spend his scanty leisure in studies which cannot be turned to account. The result is that he conscientiously believes his art to be the special flower and glory of the age—in which he is not altogether wrong; but beyond that he regards all earlier feats of engineering as unworthy of serious discussion. And the public, as ignorant, with less excuse encourage this view.

It is waste of time to ask him how the bowlders of Stonehenge were conveyed to their resting place, how the walls of Fiesole or Mycene were built; these marvels represent the power which lies in the brute force of multitudes, and there's an end of the question. Engineering now is an art and a science, with which the rude work of the savages has no sort of connection. One must not inquire why he takes it for granted that Stonehenge, for example, was built by savages, where the brute multitudes came from, how they subsisted on Salisbury Plain, or why it is necessary to assume that they were unacquainted with mechanics. All that is chose jugee—beyond dispute. If you cite records of antiquity which tell of works he can not rival that fact alone is proof that the record is a lie; for how can it possibly be that mere Greeks and Romans should have been able to do what the builders of the Eiffel Tower and the Forth bridge can not accomplish? We had an amusing instance of this feeling lately. The ingenious M. Eiffel and the artistic M. Bartholdi have been gravely pondering the Colossus of Rhodes—measuring and weighing it as per prescription; and they conclude that the thing was simply impossible.

It could not have been set up, to begin with, and when set up it could not have withstood the pressure of the wind. This is demonstrated by all the rules of modern science, and he who does not admit the demonstration must be prepared to show that two and two do not make four. Those antique personages who professed to have seen the Colossus were victims of an ocular delusion or flat story tellers, and that greater number who mention it incidentally, as we might mention the ruins of the Colosseum, were credulous gossips. The fact is that Messrs. Eiffel and Bartholdi argue in a fashion usual with engineers. Not all of them would pretend that they know every law of nature which applies in such a case. But very few would listen patiently if it were urged that the ancients knew some laws with which they were unacquainted.

So it appears, however, to the disinterested student, and we can bring forward evidence enough. If it is true that the Colossus of Rhodes is really proved "impossible," according to the best modern authorities, this is a good illustration to begin with, for its existence is as well authenticated as the Temple at Delphi and the statue of Olympian Zeus, or the Tower of London, for that matter, to one who has never seen it. By some means it was set up, and by adaptation of some natural laws it was made to stand until an earthquake overthrew it. One is embarrassed by the number and variety of illustrations to the same effect which crowd upon the mind. Since the Colosseum has been mentioned we may choose examples of this class. Is M. Eiffel prepared to put an awning over Trafalgar Square when the sun shines, and remove it promptly without the aid of a central support or steam engine, or even chains? The arch of the Colosseum is certainly not less. This may seem a trifling matter to the thoughtless because they have never considered it. Roman engineers covered in that vast expanse with some woollen material, and they worked the ponderous sheet so easily and smoothly that it was drawn and withdrawn as the sky changed. The bulk of it must have weighed hundreds of tons, all depending by ropes from the circumference. But the ancients thought so little of this feat that they have left us only one trivial detail of the method.

So Julius Caesar stretched an awning above the Forum Romanum and great part of the Via Sacra in the space of a single night. Have any of our modern engineers pondered the contemporary descriptions of Alexander's dubar tent before Babylon? That, again, appears to have had no central support. It was upheld, says Phylarchus, by eight pillars of solid gold. Of the glorious plenishing within we have not to speak, since our theme is mechanics. Around the throne and the great courtiers stood 500 Macedonian guards; in a circle beyond them 500 Persian guards; beyond these again 1,000 archers. To fix a tent which held 2,000 soldiers on duty, with arms and accouterments, surrounding, in successive circles, the most gorgeous oriental court that ever was, with hundreds of satraps, councilors, generals, eunuchs and slaves, would perplex a mechanician of the nineteenth century. He will reply that the story is false—must be because he could not match it. Happily the awning of the Colosseum stands beyond dispute, and Alexander's tent is a small matter compared with that. But we undertook to deal with the engineering of the ancients in connection with the theater, having chanced on that class of illustration. Pliny tells how Metellus Scavrus, edile, built a wondrous edifice, which stirred his rival, C.

Curio, to frantic jealousy. It may be worth while in passing—since we are all so much interested in the theater nowadays and think so much of our new ones—to tell what sort of a building that was which Curio set himself to outdo. It had 300 marble columns, each 38 feet high and 38 feet apart. About 2,000 bronze statues stood among them. The stage had three floors, as was usual, the lowest paved and fitted with marble, the second with glass, the third gilded, boards and all. It held 80,000 people.

This account will seem so fabulous to steady-going Britons that it is prudent to give chapter and verse. The description will be found, with curious details and passionate reflections on the luxury of the day, in "Pliny's Natural History," xxxiii, 24. Such was the wonder which Curio resolved to beat, and, feeling himself unable to vie in outlay, he summoned the engineers of the period to design something which would "fetch" the public. They built two enormous theaters of wood, each to contain an audience of about 25,000, which stood back to back.

When the spectators assembled in the forenoon Curio was chafed, no doubt, on the issue of the attempt to excel Scæurus. But the audience returned in the afternoon, for these entertainments were devoted to the names of Curio's father, and last a month. In the place of two theaters, back to back, they found an amphitheater, holding 80,000 persons, wherein gladiators and wild beasts contended until dewy eve. The two great buildings had been swung around and united; and day by day for the month following this colossal trick was repeated. The perfiervid indignation of Pliny could not make him altogether indifferent to the ingenuity of the thing. The fact is, in brief, that those who know what the ancient engineers did, with their imperfect means, feel a qualified admiration for the works of the moderns. If Archimedes or Stasicrates had been acquainted with the forces and the laws with which every old woman is familiar in these days they would have changed the face of the earth and the destinies of mankind.

THE LAST SLAVE SHIP.

It Was Not the "Rebecca," as Stated by a Writer in Scribner, but the "Eric."

[Boston Transcript.]

The writer or the very interesting article, "The Last Slave Ship," published in the current Scribner, is mistaken in his assumption that the vessel of which he was surgeon deserves the title he has bestowed upon her. He places the departure of the slaver, the Rebecca, from the mouth of the Congo as early in October, 1859. Near the end of

October, according to his account, the ship was rapidly approaching the Carribee islands. On the 3d of November the ship was close to her destination, an island about twenty-five or thirty miles from the Cuban coast, and within a few hours completed her voyage. These dates are important, as showing the author's error in thinking the Rebecca the last slave ship.

On the 8th of August, 1860, ten months after the Rebecca left the Congo, the United States steamer Mohican captured, fifty miles off the mouth of that river, the slave ship Eric, commanded by Capt. Nathaniel Gordon. The Eric was a small ship of not more than five hundred tons, and in her narrow quarters were confined 897 negroes, men, women and children. Their condition was shocking, as sickness had broken out on board. In addition, Gordon, who was a ruffian just fitted for his infamous calling, had treated the poor wretches with peculiar cruelty. In order to stow the negroes closer, he had torn off the little clothing they wore when they came on board, and in some instances the poor creatures lost for a time the power of locomotion, so cramped was the position they had been compelled to assume. The proceedings against Gordon constituted a cause celebre. After a long delay he was put on trial before the United States Court in New York in November, 1861, convicted under the piracy clause of the law against the slave trade and sentenced to death. Great efforts were made to secure a commutation of sentence, and President Lincoln relieved Gordon for a time. Commutation was, however, positively refused, and Gordon was hanged on the 21st day of February, 1862. He made a desperate attempt to commit suicide, poison having been in some way conveyed to him in prison. It was hinted that some parties of high mercantile standing in New York were interested in the Eric's voyage. Indeed, the New York Evening Post, about the time the Eric was at sea, openly stated that eighty-five slave-ships had been fitted out from that port in eighteen months of 1859 and 1860. The statement does not seem improbable when we reflect that as late as 1856 fifty-eight members of Congress could be found to vote for the repeal of the law against the African slave trade. Slavers are unknown on the high seas to-day, but native craft are caught with negroes on board on the African coast. Only a few years ago the Arab slave-dealers adopted the shrewd device of hoisting the French flag to evade search by the British cruisers. The attention of the French government was called to the trick, and while it declined to allow the right of search of suspected vessels under the tri-color, it sent a squadron of its own to enforce its laws against the slave trade, which soon broke up the practice.

Within a few years our squadron in African waters was instructed to keep a sharp lookout for a schooner under the American flag suspected of being a slaver. A clew to the identity of the vessel was obtained, but when she was finally hunted down in one of the ports of Mauritius, she had changed her flag and apparently her ownership. There was no proof that she was ever actually engaged in the slave trade, and it was believed that she never had an American register, showing our flag only to avoid search by cruisers of other nations. She ran little risk of interruption by our cruisers, as we had few on the station.

Old Chocolate's Philosophy.

[J. A. Waldron in Judge.]

De po' singah allus has de longes' song.

An nod er bettah'n a story toe de man in a hurry.

De hoe-cake er sweetes' w'en de meal-bag er emp'y.

Six days bar'foot, the seventh in boots er mighty long.

De rain say toe de lazy man: "W'y didn't yo' men' dat ruff?"

De 'coon yo' eat might fin' some comfut ef he knew how good he tas'e.

W'at do de Crismus dinna 'mount to 'less yo' got a Crismus appetite?

De prayer ob a man in danjah emp'ies his haht an' unloads his conscience.

Ef foolishness pained dem dat hab it a-mos' ebery one yo' meet ud be gruntin'.

Yo' kin spite yo' animal by not greasin' de w'eels, but yo' er laikely toe spile yo' caht.

A dozen han's an' one head make quick wuck, whar mo' heads dan han's lets de crop spile.

De stranjah dat show yo' mo' mannahs dan yo' deserve may be a gemman an' may be a knave.

De man dat 'specs a mule gwine t' be reas'n'ble an' dat de ox ull nebbah goe w'en de drivah yell "haw" bettah try totin' hisse'f.

A Corporation Catechism.

[F. E. L. in Kate Field's Washington.]

Question. What is a corporation?

Answer. An association founded for the purpose of issuing stock, which the first holders get for nothing and the second holders pay a premium for.

Q. What is a charter member?

A. A person let into a corporation on the ground floor, while the dear public has to climb a ladder and get in at the second story windows.

Q. What is common stock?

A. The kind that is lying around loose when the corporation starts business.

Q. What is preferred stock?

A. The kind everybody prefers to have after the charter members have unloaded all their common.

Q. What are dividends?

A. The small percentages of the stockholders' money which they ever get back again.

Q. What are bonds?

A. Fetters for tying up the money of those capitalists who are too smart to buy stock.

Q. What is a receiver?

A. A gentleman with cool nerves who comes in at a certain stage of the game and takes all within reach.

Q. What is a receiver's certificate?

A. A paper which certifies to stockholders and bondholders that the receiver is a bigger man than all of them put together.

Q. What is a "construction" account?

A. A convenient device for accounting for the money which the dear public knows it has paid over, and which the corporation can't produce on demand.

Q. What is a balance-sheet?

A. A mathematical demonstration that two and two make seven.

Q. What is a report?

A. A legal formula whereby a corporation inquires whether the public authorities can see any green in its eye?

Q. What do the public authorities require of a corporation?

A. That when it bleeds the dear public, it shall do so with as little pain as possible to the victim.

Q. And what redress has the victim if the corporation defies the law?

A. Profanity.

The Germans' Labor Book.

[Irish World.]

According to the revised laws which recently went into effect in Germany persons under the age of twenty-one are only allowed to be employed as laborers on their being provided with a "labor book," which is furnished free by the police authorities. The employer is required to keep the book, to produce it upon official demand, and return it at the expiration of term of service. This requirement does not apply to children who are compelled to attend school. When one book is filled another is furnished. It must contain the name of the laborer, the place, date, and year of his birth and his signature.

When a laborer enters the service of an employer the latter must enter in the book the time of entry and kind of employment. The expiration of service is entered in a like manner and any change of employment. At his departure the laborer is entitled to

demand a testimonial referring to the manner and duration of his employment, and if the laborer desires the testimonial may include behavior. Tradesmen disregarding the ordinance for the purpose of showing the owner of the labor book in an unfavorable light may be fined 2,000 marks (about \$476) or imprisonment for six months—and penalties are attached to every violation of those rules.

This kind of legislation could never be enacted in this country, no matter how philanthropic or fatherly may be the motives of those who may thus seek to make citizens of the commonwealth beneficiaries of any such humiliating system. But certain American magnates who assume to deny the right of the American government to require them to answer legitimate questions regarding their methods of business might profit by noting the summary manner in which other governments might deal with their obstinacy.

Bunko Men And Their Ways.

[New York Herald.]

"Come in here and I'll show you a point. It's a good one and little known. It's beat the best of 'em."

Going into a private room at the rear of the saloon, Mr. "Charmer" carefully closed the door and began his enlightenment in a low whisper.

"You see," he began, "it is in this way. We are all sitting at a table like this—that is, myself as proprietor of the game, the sucker and the steerer. The sucker sits between us. Imagine the time has come when the sucker is obliged to give his check in payment for his losses. The steerer is very much grieved at seeing his friend lose so much, but says it can't be helped. I have pen and ink on the table, and the sucker fills up a check. He either has a blank one in his pocket or I furnish him with one. As soon as he has signed it I pick it up, look at it and begin to fan it about to dry the ink and blow on it. Now, there is a newspaper on the table folded like a flattened letter Z. In the top fold a bogus check has already been placed, face upward. I pull the paper toward me to use as a blotter, slip in the good check in the under fold, face downward, and smooth the paper with my hand to blot it. Here the steerer takes the sucker's attention off for a moment, and quick as a wink the newspaper is turned over and the dummy check comes to the bottom. Picking up the dummy check, I hold it up with the back toward the sucker and say: 'Now, my dear sir, I suppose there is no doubt but this is all right, and that it will be paid?' 'Of course it's all right,' says he. 'Hold on,' says the steerer, grabbing the check out of my hand and beginning to tear it up, 'I'm eternally blamed if my friend

shall give you that check; he's lost enough; I won't see it done. Come on out of here,' he says to the merchant, 'don't write no more checks,' and he flings the torn pieces of the bogus check in the fire and drags the sucker from the room. Of course I make a great row until they are gone, and then I take the good check out of the newspaper and send it off to get it cashed. The merchant once out in the street thanks the steerer for saving him, shakes hands with him and invites him to dine with him and spend the evening, which he does. Supposing the check has been destroyed, he, of course, never thinks of notifying his bank. He is the most festive business man in New York for a few days until he is notified he has overdrawn his bank account, and he is dumbfounded on inquiry to find his check has arisen from the ashes and has been cashed by 'naughty bunko men whom he met in New York City.'"

THE DEVIL'S ARMY.

An Awful Experience in the Wilds of Central America with Tarantulas.

I have just returned from an expedition into the interior of Yucatan and Campeche, during which I met with an adventure so awful and unusual that I think my friends in San Francisco will be much interested in an account of it.

In the latter part of May last I came to Central America from San Francisco at the request of the Munich Society for Prehistoric Research, of which I am a member, to investigate the ancient ruins which cover this country, with a view of obtaining, if possible, some clew to the period to which they belong. I got the clew I sought for from some hieroglyphics among the Conquistador ruins, which, according to my theory, are about 8,000 years old, but, of course, absolute proof is not available. I had as a guide a most intelligent half-breed, Manuel Bebero, and he informed me that, according to the traditions of his Indian progenitors, there were some ruins of still greater antiquity some 110 miles to the northward, near the Rio Seca. Indeed, he said that this dry basin was once the bed of a river that had been turned from its course by the inhabitants of these same ruins. Thinking that I might possibly find some corroboration for my theory among these earlier relics of the lost race, I started to find them, accompanied by my faithful guide. It was very hard traveling through the jungles, and we made hardly fifteen miles a day. The difficulties were multiplied by the enormous number of snakes and poisonous insects that infect this section. We lost one of our pack mules through a bite or a sting of some sort on the third day.

On the afternoon of the fourth day we camped in a little opening, clear, except for grass. This was soon burned off.

We had just finished supper, and I was sitting at the base of a tree smoking my pipe, when an enormous tarantula came out of the grass into the cleared circle. He was positively the largest specimen I had ever seen, and as the slanting rays of the sun caught him I noticed a curious, dull, indefinite reddish line down his back. I regretted that I had not the means to preserve it, but Manuel settled my regrets by crushing it with a billet of wood. It had hardly ceased moving when another and equally large one appeared at the other end of the burned patch. I did not fear them much, as I wore heavy leather-leggings reaching to my hips.

"We have made a bad camp, Manuel," I said, "there seem to be many tarantulas."

"One place is about as good as another," he answered in Spanish, "they usually go by twos."

He appeared more troubled, however, than his careless answer seemed to indicate, and while I killed the second unwelcome visitor he began to poke around in the grass with a long branch. He uncovered more of the great spiders and killed them; when he turned around there were fully half a dozen of them in the clear space. They fastened on to the dead ones and seemed to suck their blood.

"We must get out of this," screamed the Indian.

At this moment our remaining mule began to struggle and kick. He soon broke his picket rope and disappeared. Then I became aware of a steady rustling in the grass. More tarantulas came out.

"I have heard of it from the Indians," cried my guide. "It is a devil's army. They say that the people who lived in the dead cities were killed by them, and that no one can live there. They come by thousands, like red ants, and leave nothing alive where they pass. I thought it was a squaw story. We must fight them with fire."

He seized a flaming brand from the camp-fire, and yelled to me to do likewise. He tried to fire the grass on all sides of us, but where the trees grew it was too rank and wet, and the fires we started would not go.

Meanwhile the spiteful spiders became more and more numerous. I crushed one, at least, of them every step I took. Many of them bit at my leggings, and hung there by their fangs. We turned our fire-brands to crushing the tarantulas, but they seemed to come thicker than we could drive them off.

"I am bitten," I heard the Indian scream. I passed him my flask. I could do nothing more for him, and, dropping my stick, I

started to run. Every step in the grass seemed to bring me into worse quarters. I tried every direction, but they seemed everywhere. I noticed that they were in the bushes and on the grass, so high that my leggings would not protect me, and presently I found myself back at the camp. There, at least, they could not reach me without climbing up. The ground was perfectly black with them. Poor Manuel was down on his knees, and the great insects were all over him. He seemed crazy, and I have no doubt his mind was nearly gone with terror and the pain of the bites.

I could barely keep the tarantulas from getting above my leggings. Suddenly it occurred to me that I might find safety in one of the trees. I knew that I would soon be exhausted if I remained among the black beasts, and that would end it. In a moment I had my arms about a small tree. I crushed the insects that clung to my legs against the bark as I dragged and scrambled up. A dozen feet from the ground there was a branch from which we had hung some small game I had shot. I pulled myself up on to this branch, and got the first moment's rest I had had since the tarantulas first appeared. I had had no time to think before this, but now I began to realize what had happened. It seemed more like a nightmare than anything real. I looked down and almost fell off my branch at the horrid sight below me. My Indian was now fairly on the ground. I could not see him for the poisonous things that covered him, but the irregular black mass wriggled and squirmed like a wounded snake, and I knew he was not yet out of his agony. On every side were more tarantulas hungrily searching for more victims. Their crushed fellows were almost torn to pieces so fierce were they in their hunger. They were all enormous; some of them were as big as turtles, and when the sun struck them I could see the red line that distinguished them from the non-gregarious species that are familiar in other places. They crawled over one another in their desire to find something into which to sink their fangs. Poor Manuel's writhing body was the objective point of most of them. They fought fiercely for a spot of flesh where they could strike, and every movement of the still living man seemed to make them yet more fierce.

It did not take me as long to notice all this as it does to describe it, and I soon saw that I was not yet safe from the horrible fate that had overtaken my guide.

The insects began to crawl up the tree, though not in any considerable numbers at first. I brushed them down with a small branch, and those that were hurt at all were immediately set upon by their fellows.

My recital of these things may seem

tame, but I have no pen to describe the awful horror of it all. There were about two hours of daylight left. I knew this, and I wondered what I could do in the dark. Then I remembered reading that snakes or centipedes would not cross a hair rope, and I thought that perhaps the same rule might apply to tarantulas.

The game was swinging from the branch by a horsehair riata, and it took me a very few minutes to cut the rabbits loose and wind the rope about the trunk just below me. Pretty soon more of the big spiders came up. Manuel was quiet now at last, and they wanted another victim.

My hair rope did some good. They could not swarm over it in such numbers that I could not sweep them back with my branch. How long I stayed there fighting the insects back I do not know.

But the light was fading when I noticed a commotion among the tarantulas. At the same time I observed a number of blue-black wasps darting about. I recognized them as belonging to the hymenoptera family, and realized that they were the tarantula hawks of which I had read. In ten minutes the four or five wasps had become hundreds, and five minutes later there was not a tarantula to be seen, except the numerous dead ones at the foot of the tree.

Manuel's body, swollen and discolored by the venom of the spiders, stared up at me. I waited an hour and then came down.

It took me eight days to reach Nevada, and on the way I did not see a single tarantula.

A Race for a Bride.

[New York Dispatch.]

Along the line of the Santee railroad no trainmen were better known than Billy Perkins and Jack Smith, the only passenger conductors that road found it necessary to employ. Every man and boy along the route watched for the familiar trains, and when the mail passed east in the morning, each station lounge was ready to shout, "Hello, Billy!" while they never missed greeting Jack in the same manner an hour or two later, when he passed in the opposite direction. In the evening when the trains returned the genial ticket punchers again received ovations at each stopping place. Even the passengers were apparently all acquainted with the conductors, for as they went their rounds each traveler would have some remark to make or some sly inquiry about Bob Yocum's Sallie, which would bring color to the cheeks of the officials.

The total length of the Santee railroad was only forty miles, but the natives regarded the conductors with that awe and admiration which country folk always feel for railroad men. No telegraph line ran

along the branch, and the trains were run in the good old way upon the single track; that is, sidings were placed a few miles apart, and when a train scheduled to pass another at a given point did not find the other at the switch it simply waited until the belated train did come, or after an hour or two started on its journey at a snail's pace, a flagman running in front.

In the morning the trains passed at a lonely siding in the woods, but in the afternoon the meeting point was directly in front of Bob Yocum's plantation, and as the farm house, with its shady porch, stood near the railroad, the trainmen had long ago struck up an acquaintance with the owner and daily resorted to the cool garden to while away the time until the opposing train arrived. Sometimes one train reached the point first, sometimes the other would be in ahead. The engineers had no signals to hold them back, and very often the farm would be reached half an hour ahead of time.

The schedule was slow, even for the old style engine, and unless there was something unusual to detain them, or the wood was very wet, the crews could generally manage to spend about twenty minutes at Yocum's, tranquilly smoking or romping with Sallie, the planter's daughter. Now it was this same Sallie who caused so much disturbance in the breasts of Billy and Jack. Each strove to cut a favorable figure in her sight, and she was the loadstone which drew them daily to the garden. Luckily for them, each had an engineer as wild and reckless as the most ardent lover could desire, and when the conductors told the man at the lever to "let her go," he did let her go, until some faint-hearted passenger protested at being bumped into jelly.

Only a reckless man would dare to ride one of the rattle-trap old engines over the uneven road at the rate of forty miles an hour, which speed was occasionally reached in sudden bursts. Forty miles an hour over old-style U rails laid on rotten ties five feet apart and jointed with fish plates is equal to sixty miles an hour on a smooth track, so far as sensation goes. To the observer the Santee railroad was hardly visible, high grass growing between the rails, but where the track could be seen it seemed to be laid upon the ground without any preparatory grading.

Up hill, down hill, tilted to the right, tilted to the left, it pursued its devious way, and the shaking and creaking of trains and track were enough to alarm any one not preoccupied in endeavoring to retain his seat. The engines burned wood, and when running at night resembled volcanos in active eruption. If the reader has ever traveled behind one of these fiery machines he will remember how the sparks and pieces of wood flew when the engine got into good

working order. He will also have a vivid recollection of the long and frequent stoppages when all hands heaved cordwood into the tender until it could hold no more. These were the characteristics of the line over which Billy and Jack made daily trips. There were wood stations on each side of Yocom's, and the trains in the afternoons were required to get a supply of fuel before reaching the passing slide.

The conductors pressed their suit with the fair Sallie for many a day, but, while each felt that the other had no advantage, neither could make any headway. At last the two friends decided to put matters to a test, and together they sought Bob Yocom, and, explaining their desires, asked that he and Sallie choose which, if either, should be the favored suitor. Sallie, with blushing face, declared she could not decide, although she felt she could be happy with either. With that keen instinct for gaming which characterizes Southerners, her father at once suggested that they settle the question by racing their trains for the next three days, the one getting to the switch twice ahead of the other to be the winner. The proposition was eagerly grasped by the conductors, and acceded to by Sallie. All agreed upon secrecy, except that the conductors should make confidants of their engineers.

Anxiously the father and daughter awaited the coming of the trains the next afternoon. Fully twenty minutes before schedule time the familiar whistle rang out, and Billy's engine came to a standstill just as Jack's train came around the bend. Billy was exultantly happy. The next day, however, Jack was sitting upon the porch talking serenely to the prize when Billy's engine came into view.

The following day would decide it, and the morrow found four eager hearts wondering what the result would be. About 10 o'clock a steady rain set in, which apparently settled the question of fast time being made that day. As Billy passed down the lines and saw the soaking woodpiles, he felt exceedingly blue, but while pondering a great thought came into his brain and his countenance cleared in an instant. When he got to the end of the run he took his engineer aside and explained something which caused a broad grin to overspread the features of that worthy. Billy was next seen in a provision store, and ere the train departed an odd looking barrel marked "Sugar Cured" was put aboard the engine.

His train made glorious time that afternoon, and when the passengers asked how the engineer managed to keep up steam, Billy smiled, but said nothing. He felt no forebodings of defeat now. Poor old Jack must be a dozen miles down the road, and right around the curve was Yocom's. Hurrah, Billy said to himself. Hur—, he did

not finish. From the car platform he saw something that made him rub his eyes in astonishment. Was it Jack's train lying there so quietly on the siding, or had his senses deserted him? A wild screech of triumph from the waiting engine made him realize it was indeed true. His rival had won the third heat.

Jack, taking warning from his defeat the first day, had wisely bargained with the wood station man for a special supply of dry pine knots, and these were supplemented on the rainy day with a barrel of pine tar.

Billy danced at the wedding, but the sight of a ham has filled him with disgust ever since.

A Nihilist Trial Scene.

[The Career of a Nihilist, by Stepniak.]

In the gray, dull light of the approaching morning the courtroom looked strangely oppressive. Six candles, in silver candlesticks, glimmering upon the judge's table, gave it a lugubrious, funereal aspect. The closely packed people were almost silent. From the prisoners' box a hum of suppressed voices came. The prisoners knew that after the sentence they would be separated. They tried to profit by the short time they were to be together. Judging by their unbroken, rapid talk, they were in good spirits. But the public could not see any of them, as they sat all six on wooden benches, surrounded by twelve gendarmes with drawn swords on their shoulders. The crowd outside the building, which the sleepy and exhausted policemen now left to take care of itself, was neither so patient nor so calm. They represented the most turbulent section of the population. As a part of the loiterers, tired by the long waiting, withdrew, these were brought into closer contact. A handkerchief was raised at one of the windows. "The verdict!" shouted a voice in the crowd. Instantly all noise ceased, and the crowd pressed forward.

Within, the voice of the usher was announcing the last scene of the shameless farce. The tribunal was about to enter to read the sentence. Rising to their feet as one man, the people stood in breathless expectation. A silence as of death fell upon the many-headed crowd. One could almost hear the beating of so many hearts—some in agony of fear, some in the excitement of dramatic tension. One by one the six members of the tribunal appeared upon the platform behind the long table lit by the six candles. Their troubled, worn-out looks were suggestive rather of a great villainy just committed, with full knowledge, than of a stern though painful duty fulfilled.

All eyes were riveted upon the presiding judge, who, a white sheet of paper in his hands, was about to utter the fatal words.

In a voice raised to an unusually high pitch he read the preamble, which seemed to last an eternity. At last the first words of the sentence were uttered, sending an electric thrill throughout the audience. The name of Boris came first, followed by a long mumbling to which nobody paid attention—it was the enumeration of his offenses. Then a short pause and the sentence—death! Though no one expected him to be spared, the word fell upon strained nerves like the blow of a hammer. Vasily's name followed with a mumbling less irksome, for it was shorter, and then another blow of the hammer—death! The nerves shiver but hold good. The third in the roll is Zina, whose fate had been the most discussed, because the most uncertain. The silence deepened. Life or death? life or death? all asked in their hearts, whilst the mumbling went on. The threatening hammer rises higher and higher, then suspense and again it falls with a crash—death! A sigh, gathering into a groan, ran through the hall. All, even the most prejudiced, turned their eyes with unmixed sympathy and awe upon that young, noble, beautiful woman, standing so calmly and modestly. Most had expected that as a woman she would be spared. The three remaining prisoners were so little compromised, they would be let off with a nominal punishment. The mumbling affixed to Botcharov's name, which came next, was such as to lull the inattentive audience to complete tranquility. Most people ceased to listen altogether, when suddenly a suspicious quivering in the judge's voice, a short pause, and the sentence—death!—resounded amidst universal stupefaction. A wondering "ha!" escaped from all lips. Men looked at their neighbors to ascertain whether they had not misheard. "Many thanks, gentlemen judges!" the voice of the condemned man resounded, sneeringly. The judge had not the courage to call the prisoner to order, and pretended not to hear, and hastened on to the following name. It was that of the elder Dudorov. This time the public followed with strained attention all the circumlocutions and windings of the clumsy summing up of offenses. There was the same treacherous prolixity and abstruseness in the statement of motives. Some phrases sounded ugly—doubts, alternated with hopes, irritating men's nerves to the extremity. The hammer was hanging in the air—now rising, now sinking, and then rising again. Then the blow was struck, it was—death!

The suppressed passion burst forth on a sudden. Shrieks, hysterical cries of women, groans and curses filled the air. People jump upon their seats, shouting and gesticulating wildly, as if they had gone mad on a sudden. It was a scene of disorder such as had never before been witnessed within

those walls. A good lady in the second row—the wife of the chairman of the board—fainted from her excitement. Upon the bench the disorder and confusion were hardly less than among the public. The presiding judge, the paleness of shame on his face, strove to face the storm. He failed completely. He wished that the public should remain and listen to the end of his paper, which trembled in his hand. The sixth of the prisoners, the younger of the sisters Dudorov, in consideration of her youth, was condemned—not to death, as the prosecutor had asked—but to fifteen years' penal servitude. They had offered this sop to their slavish consciences, and they wished their act of courage to be made known. But in the general uproar nobody could catch one word of what was read. A young man opened the window, and, leaning out, shouted to the people in the street: "To death! All sentenced to death!" A threatening yell was heard from the crowd below. Some among the representatives of the "loyal" element thought that the crowd was about to storm the place, and that they would be massacred wholesale. In a fit of panic they began to shriek and yell on their own account. The police officers appointed to watch outside rushed to the judge. They confabulated for a moment, and the policemen ran out by the back way. The president had ordered troops to be called out. The judges had slipped out of sight, hiding themselves in the inner rooms, while the policemen began to clear the hall.

JOHN BROWN'S EXECUTION.

An Eye-Witness Describes the Old Hero's

Last Moments.

[J. T. L. Preston in Southern Bivouac.]

Shortly before 1 o'clock the prisoner was taken from jail and the funeral cortege was put in motion. First came three companies, then the criminal's wagon drawn by two large white horses. John Brown was seated on his coffin, accompanied by the sheriff and two other persons. The wagon drove to the foot of the gallows and Brown descended with alacrity and without assistance and ascended the steep steps to the platform. His demeanor was intrepid without being braggart. He made no speech; whether he desired to make one or not I do not know; even if he had desired it, it would not have been permitted. Any speech of his must of necessity have been unlawful as being directed against the peace and dignity of the Commonwealth, and as such could not be allowed by those who were then engaged in the most solemn and extreme vindication of law.

John Brown's manner gave no evidence of timidity, but his countenance was not free from concern, and it seemed to me to

have a little cast of wildness. He stood upon the scaffold but a short time, giving brief adieus to those about him, when he was properly pinioned, the white cap drawn over his face, the noose adjusted and attached to the hook above, and he was moved, blindfolded, a few steps forward. It was curious to note how the instincts of nature operated to make him careful in putting out his feet, as if afraid he would walk off the scaffold. The man who stood unblenched on the brink of eternity was afraid of falling a few feet to the ground.

Everything was now in readiness. The sheriff asked the prisoner if he should give him a private signal before the fatal moment. He answered in a voice that sounded to me unnaturally natural—so composed was its tone and so distinct its articulation—that “it did not matter to him if only they would not keep him too long waiting.” He was kept waiting, however; the troops that had formed his escort had to be put in their proper position, and while this was going on he stood for ten or fifteen minutes blindfolded, the rope around his neck, and his feet on the treacherous platform, expecting instantly the fatal act; but he stood for this comparatively long time upright as a soldier in position and motionless. I was close to him and watched him narrowly to see if I could detect any signs of shrinking or trembling in his person, but there was none. Once I thought I saw his knees tremble, but it was only the wind blowing his loose trousers. His firmness was subjected to still further trial by hearing Col. Smith announce to the sheriff: “We are all ready, Mr. Campbell.” The sheriff did not hear or did not comprehend, and in a louder tone the same announcement was made; but the culprit still stood steady, until the sheriff, descending the flight of steps, with a well directed blow of a sharp hatchet, severed the rope that held up the trap door, which instantly sank sheer beneath him. He fell about three feet; and the man of strong and bloody hand, of fierce passions, of iron will, of wonderful vicissitudes, the terrible partisan of Kansas, the capturer of the United States Arsenal at Harper’s Ferry, the would-be Catiline of the South, the demi-god of the Abolitionists, the man execrated and lauded, damned and prayed for, the man who, in his motives, his means, his plans, and his successes, must ever be a wonder, a puzzle, and a mystery, John Brown was hanging between Heaven and earth.

There was profoundest stillness during the time his struggles continued, growing feebler and feebler at each abortive attempt to breathe. His knees were scarcely bent, his arms were drawn up to a right angle at the elbow, with the hands clinched, but there was no writhing of the body, no violent heaving of the chest. At each

feebler effort at respiration his arms sank lower and his legs hung more relaxed, until at last, straight and lank, he dangled, swayed slightly to and fro by the wind.

ALASKA.

Why It Was Purchased.

[From the Denver News.]

“Do you know the real inwardness of the purchase of Alaska from Russia by the United States?” asked a prominent Eastern gentleman of a circle of friends at the Windsor the other evening.

Everybody gave it up.

“Well, then, I’ll tell you. It’s a singular fact that this remarkable piece of history, though it is a matter of record, is so little known, even among the best posted men. Probably not one in 100,000 knows the real truth of the matter. During the war I held an official position under the government that gave me access to this and many other curious fragments of historical information. You see, along about the latter part of 1862 or the beginning of 1863, England and France were just on the verge of recognizing the South as an independent nation and Germany was wavering. The accomplishment of this step would perhaps have made the South victorious. But by means of some of the most wonderful diplomacy the world has ever known, Mr. Seward averted the crisis, and let me say right here, gentlemen, that Secretary Seward will never in this world receive one-half the credit really due him for his matchless conduct of the State department during the war. I well remember with what hate and ill-concealed longing to be at them, we saw the English men-of-war lying in the offing, for we well knew that they wanted but the word from England to attack us with the utmost pleasure and ferocity. All their soldiers and mariners when they came ashore wore a scornful and supercilious air that well-nigh drove us to desperation. Ah, gentlemen, little you, even those among you who carried a musket, knew of the awful trials and anxieties borne and surmounted by the men on the inside of affairs. With traitors in our midst in all the Northern cities plotting internal disruption, and treacherous friends on our coasts longing for the word to spring upon us, and a valiant enemy on our southern borders, never were men more sorely tried nor a nation more nearly wrecked.”

“You wonder what all this had to do with the purchase of Alaska in 1876? Much more than you think, perhaps. I’m coming to that in a moment. As I was saying, in the dark days of 1862-63 England and France were ready to acknowledge the South, and Germany would have followed their lead. Russia was appealed to by the Powers to join them in recognizing the Con-

federate States. But Russia peremptorily refused, and cast her allegiance once and for all on the side of the North. Fearing an attack on the North by English vessels, Russia sent her finest naval fleet, sixteen magnificent vessels of the most powerful type, to this country and tendered them to the Government at Washington with the Czar's compliments. They cast anchor at first at Fortress Monroe, and there the Russian bear faced his hereditary foe, the British lion, ready to spring upon and rend him at a word from Washington. Fortunately, most fortunately, that word was never necessary. For months the Russian fleet remained in our waters under orders from the United States Secretary of the Navy, and not until the supremacy of the North was fully assured did they turn their prow toward home.

"While they were here Admiral Farragut immortalized himself by his unparalleled victories at New Orleans and Mobile, and in honor of the gallant sailor and the nation they had come to protect, the Russians adopted a new naval flag signal, to be used only in action, as a sort of rallying battle cry: "Remember Farragut at New Orleans!" That signal is now a fixture in the Russian naval signal code.

"The officer in command of the Russian fleet was Admiral Boutchikoff. I knew him and most of his officers well, and several times had the pleasure of dining with the Admiral on board his flagship, the name of which I have now forgotten. A finer lot of gentlemen I never knew than those same Russian officers.

"Well, I must get on with my story. When the war was over one of the first considerations of the Government was the subject of making some adequate recompense to Russia for the enormous expense she had incurred in our behalf. It would never do to make a straight out payment of money to reimburse the Russian treasury for this act of unselfish friendship, for such an act would have immediately precipitated diplomatic troubles abroad that would have involved Russia in very serious difficulties, if not war itself. Some other plan must be hit upon. At last it was found. Russia didn't want Alaska, but she did need money. We didn't want Alaska, particularly, but we owed Russia a big bill. So the matter was quietly arranged between the two Governments, and the bill was introduced. Do you remember that at that time everybody wanted to know, "Where is Alaska?" What does the Government mean by spending such an immense sum for a slice of the Arctic coast, when we are so deeply in debt? But the Government knew what it was doing, and if you will look up the records you will see that in March, 1876, the bill for the purchase of Alaska for

\$7,000,000 passed both houses without a dissenting voice. And it was a pretty good bargain, don't you think? However, that is the real history of the transaction, and the Government archives will substantiate every word of it."

In the Center of the Earth.

Hell, according to primitive conceptions, has usually been located in the center of the earth. Modern science does not accede to this hypothesis, though admitting that the place is plenty hot enough for the purpose. In fact, it is positively known that, as you descend into the bowels of our globe, the temperature rises steadily at the rate of one degree Fahrenheit for every fifty feet, until at least four thousand—some say ten thousand—degrees, is reached. Even at four thousand degrees every known substance—metals, rocks and all—becomes fused and liquid. This condition of things is found when a point twenty miles from the surface is reached; from that point on the heat remains about the same all the way to the very middle. To understand this it must be remembered that the earth was originally an incandescent ball of the same temperature all the way through from crust to centre. Now that the crust has cooled sufficiently to enable life to exist upon it, the state of affairs is still the same inside.

The incandescent sphere was formed in one of two ways. Either it was thrown out by the sun, around which it has revolved somewhat like a ball that a small boy whirls at the end of a string, or it was composed of an aggregation of meteors that generated heat by collision. Such are the two theories held by scientific men to-day, though many other very extraordinary ones have been suggested. The celebrated Poisson advanced the idea that, owing to the heat given out by many of the giant suns that bespangle the universe, great variations in the temperature of space exist, some vast regions being cool and others extremely hot. While passing through a hot region, he surmised, the solar system acquired its present store of caloric.

It seems curious that such a great ball of fire as the earth is at present, with a crust ever so much thinner in proportion than the shell of an egg, should not be too hot to live upon. As a matter of fact, however, the crust is so good a non conductor that the radiation is very small. Twenty miles down beneath your feet it is all one vast furnace, and yet not enough warmth escapes from it to produce any appreciable effect upon the temperature of the air. It has been decided that the entire heat which escapes through the surface of the earth in one year would just suffice to melt a layer of ice one quarter of an inch in thickness enveloping the globe. It seems a

pity that some of the warmth from this fire could not be fetched by artificial conduits outward, in order that it might run the machinery of the world and heat the houses. Unfortunately, supposing such a scheme practicable, a conduit might at any time transform itself into an active volcano, which would be unpleasant, especially in cities.

It must not be imagined that the fusion of everything inside the earth implies, as most people conceive, that rocks and metals there are flowing about in a liquified condition. The fact is that this enormous incandescent mass, which would flow like so much water if it were free, is held together by the pressure due to gravitation so mightily as to be as rigid and compact as so much steel. This pressure increasing steadily all the way from the crust, amounts at the center of the globe to not less than forty-five millions of pounds on each square inch. Acting from all sides inward toward the center, it has naturally tended to crowd the materials of which the earth is composed together, so that their density becomes immensely increased. An average piece of the earth's crust weighs a little over two and a half times as much as water. In the middle of the sphere the average weight of things is eleven times as great as water. That means that the innermost mass is as heavy and as dense as lead is.

The next question is, what are the materials spoken of that make up the inside of the earth? Many geologists are inclined to believe that the heavier stuff has tended to gravitate toward the center, and that the middle point of the globe is surrounded by a mighty agglomeration of the heavier metals, chiefly iron. The distinguished savant Edouard Roche says that the earth is probably made up of two distinct parts—an outer crust about six hundred miles thick, and a solid core of metals. Between the two he places a flood of molten substances. But the best informed physicists to-day assert their conviction that this terrestrial ball is made up of the same materials inside as are found outside. They do not think it necessary to assume the existence of a central mass of metals, for the pressure alone is sufficient to account for the great weight of the interior.

Who Are The Law-Breakers?

[Philadelphia Leader.]

Railroad companies which, on account of their property interests, ought to be the stoutest upholders of law and order, are about the only corporations in the country that dare to employ armed bands of men to carry on their work in defiance of law or protest. The fatal affray at Sayreville, N. J., has had its counterpart in many places; in fact "railroad wars" are a recognized in-

stitution. It is not enough to punish the men immediately engaged in such a fracas; the laws should be so framed as to enable the authorities to reach the higher officers who give the orders that lead to such breaches of the peace and dangerous encounters. When a private citizen finds his right of way obstructed by another he seldom takes the law into his own hands, but makes appeal to the proper authorities and has his rights determined in a peaceful way. Railroad companies, however, knowing the value of possession, are too much given to doing their work by force of arms, leaving the aggrieved persons to seek a remedy in the courts. They are artificial creations, however, and it would be no injustice to them if it should be provided that violence of this kind committed by their employes should work a forfeiture of their charter rights. Then they would not be so ready to engage in railroad wars—sometimes, as in this New Jersey case, resulting in murder.

\$10 for Mr. Boffin.

[Chicago Herald.]

It was a clean case of negligence on the part of the engineer. He should have whistled at the crossing and slowed up. He did neither. Farmer Boffin, driving into market with a load of hay, was half way across the tracks when the express struck the wagon. For suddenness it beat electrocution all hollow. Farmer Boffin and the two horses never knew what struck them, and their remains were collected with difficulty.

These facts were laid before Julius Burnett, solicitor to the railroad, and he said, in his pleasant way: "Farmer Boffin will cost about \$5,000 more than he was worth if the case goes to court. We must settle with the widow at once."

So Mr. Burnett adjusted his clerical white tie—a bit of dress he was most particular about in his negotiations with widows—and took the first train for Moon's Rest. It was a hot and dusty walk to the Boffin farm, but when he clasped Mrs. Boffin's hand and murmured a few words of apologetic sympathy the attorney was the cooler of the two. Then he began: "The Atlantic & Northwestern Railroad Company have sent me, madam, to offer their deepest sympathy. No accident that has ever happened on our line has been so deeply regretted, I assure you, madam, and—"

"Them horses was wuth a plum \$200," broke in the widow, rubbing her eyes with the corner of her apron. "Joshua wouldn't take less, he tol' Zeph Hanks las' Aprile."

"As I was saying, madam," continued Mr. Burnett, "our company is deeply grieved—Mr. Boffin was a—"

"An' the wagon's kindlin' wood," interrupted Mr. Boffin's relict.

"That's precisely what I came to see you about," said the attorney, changing his course to catch the wind. "In an hour like this, when the heart is bowed down, a little ready money is often very desirable, and I see you are a woman who believes in doing business in a business-like manner. Now those horses, Mrs. Boffin, I feel sure our company would like to replace them. It can be done for \$150, can't it? Say, one fifty?"

"Two hundred dollars won't buy them horses' equals," said Mrs. Boffin, decidedly. "Then we will pay \$200 for the horses," cheerfully assented the lawyer. "Now for the wagon—we are prepared to be liberal, Mrs. Boffin; we know what it is to lose a wagon in this heartrending way—shall we say \$25 for the wagon?"

Mrs. Boffin nodded her head and murmured, "It's nothin' but kindling wood," adding sharply: "You've forgotten the hay and the harness—they ain't no good to me now—an' that harness war nearly new."

"Certainly, Mrs. Boffin," the lawyer said. "I was coming to that—\$15 ought to cover that—you regard that as satisfactory, of course. Let's see—\$225 and \$15 is \$240. And now, madam, as to that excellent husband of yours, it is my melancholy duty," here he paused, and Mrs. Boffin took up the parable with: "Joshua was a powerful worker—nigh on twenty year he ran this farm—an' hired men so wuthless."

"Precisely, Mrs. Boffin. Let's say \$10 for Mr. Boffin, and I'll draw you a check right now for \$250."

And a check of that size went into Mrs. Boffin's bank account that very day.

A New Anecdote of Lincoln.

General O. O. Howard tells a new anecdote of Abraham Lincoln. When the Merrimac retired from the contest with Lieutenant Worden's homely little craft in Hampton Roads, the last shell fired by the Confederate vessel exploded exactly in the eye hole of the pilot house where Lieutenant Worden was at the moment looking out. His eyes were severely injured, his face was filled with powder, and there was also a slight concussion of the brain. The moment the brave officer recovered his consciousness his first question was:

"Have we saved the Minnesota?"

When told she was safe, he answered, "I am satisfied."

He was taken at once to Washington, and an incident connected with him there, illustrates the character of Abraham Lincoln. A Cabinet meeting was in progress, when it was told the President that the wounded commander of the Monitor was in the city; he instantly arose and took his hat, saying:

"Excuse me, gentlemen, I must see this

fellow," and went immediately to his room.

Worden was on the sofa, his eyes bandaged, his face swollen and bloody. The President was announced, and took his hand in silence.

"Mr. President," said the wounded man, "you do me great honor by this visit."

"Sir," replied Mr. Lincoln, while the tears ran down his cheeks, "I am the one who is honored in this interview."

Women as Collectors.

[Kansas City Star.]

The avenues of employment for women are constantly increasing. Already she has proved herself a good clerk, a good housekeeper and a good typewriter, and the latest is a female collector. At least a dozen houses in Kansas City are employing women in this capacity, and their number seems to be constantly increasing.

A woman may be a bookkeeper or a typewriter and yet be the most feminine creature imaginable, despite the business relations, but the female dunner would seem to be another kind of business woman, and she brings forward very promptly the question of how much distinction must be made between a woman and a man in the same business. One thing is certain, one cannot kick a lady collector out of the office.

The female collectors are for the most part young women, and, according to their employers, they are as persistent and as successful in their business as men. Their mode of operation, however, is somewhat peculiar, and they do not seem to go about the collection of a bill the same way as a man. A reporter happened in an office yesterday where fifteen or twenty young men were working. While he was talking with the manager a well dressed young woman walked in and inquired for one of the young men. He was pointed out to her, and while the whole office watched her she walked over to his desk and began a conversation with him in a tone so low that no one could hear. After talking for a few moments she turned to go, and, raising her voice, said:

"If you don't come in and settle I'll be around again on Saturday."

When she was gone the young man came in for an unmerciful guying, and it is safe to say he made a desperate effort to pay the bill before Saturday. She was the collector for a jewelry firm.

A merchant who had adopted the new scheme was asked about it and said: "I find that my lady collector is persistent, faithful and trustworthy, and has great success in making some very bad collections, and I don't see why a lady could not be permitted to ask for the payment of a bill if she can do almost everything else about an office."

KNEELING 'AT THE THRESHOLD.

I'm kneeling at the threshold, weary, faint and sore,
Waiting for the dawning, for the opening of the door—

Waiting till the Master shall bid me rise and come
To the glory of His presence, to the gladness of His home.

A weary path I've traveled, 'mid darkness, storm
and strife.

Bearing many a burden, struggling for my life;
But now the morn is breaking—my toll will soon be o'er;

I'm kneeling at the threshold—my hand is on the door.

Methinks I hear the voices of the blessed as they stand

Oh, would that I were with them, among the shining throng.

Mingling in their worship, joining in their song.

The friends that started with me have entered long ago;

One by one they left me struggling with the foe;
Their pilgrimage was shorter, their triumph sooner won;

How lovingly they'll hail me when all my toll is done!

With them the blessed angels, that know no grief or sin,

I see them at the portals, prepared to let me in.

O Lord, I wait Thy pleasure—Thy time and way are best;

But I'm wasted, worn and weary; O Father bid me rest!

Economy of Time.

[Philadelphia Ledger.]

There is, among our people, a very general and wholesome feeling of contempt for the man who deliberately squanders his time. It is a common saying that time is money, but it is also a great deal more; it is opportunity, skill, ability, character, and to waste it is to waste life itself, with all it holds in store.

Yet the true economy of time is but little understood, even by some of those who are most anxious to save it. Indeed, the very anxiety itself, when unaccompanied by broad views of its meaning, often degenerates into a nervous haste, which is destructive of its own object. It is not only the idler who wastes his time; it is often the busy man or woman whose only idea of its true management is an increasing rapidity of action. Now, rapidity is an excellent thing in its own allotted sphere, but, outside of that, and unguided by wisdom, it may become not only useless, but prejudicial. Then it interferes with due preparation for the work in hand. It rushes into the fray all unarmed and soon encounters defeat. Very much of the inferior work of the world, and many of its most disheartening failures, are due to this cause. People are so eager to begin that they do not make themselves ready; hence, however much haste they put into their work, the results must always be poor.

On the other hand the man who has learned the art of economizing his time knows that he must not stint in the period required for preparation. Whether he pro-

poses to plow a field, to make a road, to build a ship, to conduct a business, to teach a class, to argue a case, to paint a picture, or to write a book, he sees to it that he is qualified for the work. He obtains the requisite proficiency, at whatever cost of time; or, should he find that to be quite impossible, he will resign an undertaking which can have no promise of success. When he begins the work, therefore, he is *ready* for it, a state to which many busy people never attain. He knows just what he has to do and how to do it, and he need not waste precious time in vain experiments, or in looking helplessly around for aid. Beginning thus intelligently, and gaining fresh experience from every effort, he can soon become able to work speedily without sacrificing the quality of the work itself. Now he is able to arrange it with system and method, giving to each part its due attention, and going from one to the other without confusion or loss of time.

One who is thus master of the situation, acquires a calmness of mind which is most essential to the best economy of time. Nervousness, doubt, fear, excitement and hurry are all consumers, not savers of time. They produce irresolution and vacillation, and are fatal to all true despatch. Yet how many workers are there in all the departments of labor who suffer from these distressing feelings, who are lacking in power and efficiency, and who produce poor and meagre results, simply because they have never taken the time and pains to become thoroughly prepared for what they are attempting to do! Their condition is truly pitiable; they try hard and work hard, often wearing themselves out in the vain effort to overcome the disadvantages under which they are laboring. They have made a fatal mistake; in the hope of saving time, they have sacrificed the very thing for which time is chiefly valuable. It is safe to say that, as a general thing, every one enjoys doing that which he can do well, and the spirit and energy that he instinctively puts into it enable him to produce the largest results in the least time and with the least fatigue.

True economy of time also recognizes the limits of human endurance, and the varied needs of human nature. It is a most shortsighted policy that sacrifices health and well-being of the worker to the supposed good of the work. The master who overtasks his men not only injures them, but depreciates the value he hopes to obtain from them. The business man who goads himself early and late to incessant labor and anxious care will find his business suffering as well as himself and his family. The mother who denies her mind and body the rest or recreation they require, for the sake of her children, sacrifices *their* best

good, as well as her own. He who counts an hour lost that is spent in wholesome refreshment of tired energies, has yet to learn the true economy of time. Often what he deemed lost is truly saved, and what he thinks saved is as truly lost. Just as the hoards of the miser are of far less value than the money that is freely circulated and widely employed, so the time that is hoarded up and exclusively devoted to a single object is less productive than that which is intelligently and generously apportioned out to meet the varied needs of human welfare. Bacon says: "To choose time is to save time, and an unseasonable motion is but beating the air."

Home.

[Food.]

Home is another of those beautifully expressive Anglo-Saxon words which indicates, even in its sound, peace and affection. Home in order to be enjoyable must be pure. The word itself forbids all idea of contention and bloodshed. The idea of killing the pets that gather around our home; the cow or ox that looks you honestly and confidently in the face and comes up to be caressed; the birds that hop about your feet to gather the grain or the crumbs; the lamb that gambols with the children—the thought of killing these poor creatures to gratify a morbid taste, is inconsistent with the peace, harmony and love expressed by the word home. And then in its higher sense home is that condition of joy and happiness which is the result of a life of activity in the service of others; heaven is our eternal home. To promote the attainment of home free from the dreadful drudgery and impurity of killing and then handling and cooking slaughtered animals; the establishment of home in its truest sense for both the natural and spiritual man, is the object of this publication.

"What Good is the Railroad?"

That was the question which the *John Bull*, an English paper of the stout old conservative sort, asked in 1835. Witness the following extract from one of the editorials of the *John Bull*, which the *Engineer* printed the other day, and which multitudes of people fifty-five years ago considered mighty sensible talk, however comical it may now appear:

"Does anybody mean to say that decent people, passengers who would use their own carriages, and are accustomed to their own comforts, would consent to be hurried along through the air upon a railroad from which, if a lazy school boy left a marble or a wicked one a stone, they would be pitched off their perilous track into the valley beneath; or is it to be imagined that women, who may like the fun of being whirled away on a party

of pleasure for an hour to see a sight, would endure the fatigue and misery and danger, not only to themselves, but their children and families, of being dragged through the air at the rate of twenty miles an hour, all their lives being at the mercy of a tin pin or a copper boiler, or the accidental dropping of a pebble on a line of the way? The loss of life upon the favorite toy from Liverpool to Manchester has already been terrific. Mr. Huskisson was the first martyr to this favorite absurdity, and the last splendid exhibition took place only on Thursday, on the new tomfoolery to Greenwich, when in the outset, 'by some accident,' one of the carriages, in which a party of noodles ventured themselves, was thrown off the rail, but although it ran a vast many yards no serious accident occurred. How lucky? Nobody killed the first day of trial! Nothing to us can be more ridiculous than a Greenwich railroad. The distance from London to Greenwich is about four or five miles. Get into a Greenwich coach at Charing Cross, and in about three-quarters of an hour you are landed. Go by the railroad, which is to begin at the foot of London Bridge on the Surrey side, it will take indefinitely more time to walk from Charing Cross, to mount the ridge in the borough, and be steamed along at the hazard of your life to get to the Ship, than it would to have gone by the regular stage from the Salopian, and have half eaten your white bait. *Qui bono the railroad?*"

FAMOUS VIOLINS.

Many Advertised for Sale that Never Existed—Paganini's Favorite Instrument.

[New York Commercial Advertiser.]

In his address to the jury, Mr. Loewy, counsel for violin dealer Fletcher in the suit brought against the latter by Miss Powell, compared the value of old and rare violins to that of the famous peach-blow vase for which Mr. Walters, of Baltimore, is said to have paid so many thousands of dollars at the sale of the Morgan collection in this city. There is no question but this remark has some degree of truth.

There is no absolutely determinable standard by which the superiority of old violins from the hands of famous makers can be established. Miss Powell's is, no doubt, a case in point to show the difficulty of telling by its intrinsic qualities the real origin of an instrument. Perhaps the most remarkable feature of the trial of her suit, tending to illustrate the ease with which people can be imposed upon regarding the character and history of a violin, from the uncertainty that must always attach to the great majority of old instruments, was the fact introduced as evidence by the plaintiff, that

Fletcher advertised Duiffoprugcar violins as if there was no doubt of their existence. The fact is that the best authorities are skeptical, almost to conviction to the contrary, of the genuineness of the alleged Duiffoprugcar instruments. Gaspard Duiffoprugcar lived in the early part of the sixteenth century, and the evidence of contemporary history is that the violin had not yet been developed in its evolution from the viola and violocello. Duiffoprugcar was a maker of the latter two instruments beyond doubt, and his work—perhaps more in the carving of beautiful scroll pieces than in the adaptation for producing fine musical tones—was held in such high esteem that such artists as Leonardo da Vinci and Cellini painted pictures on the back and otherwise added to the decorativeness of his products. The general verdict, in short, is that Duiffoprugcar violin does not exist.

Perhaps Stradivari Nicholas, who lived and made violins in Cremona, Italy, in the latter half of the seventeenth century, should be credited with popularizing the violin as much as any one in history. To be sure, Amati, whose name is one of the famous ones still, was a little earlier, and taught Stradivari the art.

But for the man who did most toward establishing the present rule of values for violins of ancient make the world must look to Louis Tensio, an Italian collector, who was at the meridian in the first quarter of the present century. Tensio was a lover of violins, either for themselves or the money that he acquired by trading in them. He roamed about Europe, buying up old violins and trading new ones for them. In old monasteries he secured many a rare one, which the owner was only too glad to exchange for one of newer finish. This goes to show how little was then appreciated the benefit of age which now is such an important factor in the value of an instrument. Tensio was found dead one day in his house in Milan, surrounded by his collection of violins, which probably could not be reproduced for its rare and fine instruments to-day from all the collections in the world.

The name of Guanarius stands next to that of Stradivari to-day for excellence of make, especially the name of Joseph Guanarius del Jesu, whose trade-mark was I. H. S. A hundred years ago the Amati violin stood higher in the value of the world than those of Stradivari, but they have since exchanged their positions. To-day an Amati must be exceptionally fine to be worth more than \$500 or \$600, while as good specimens of the Stradivari or Guanarius are probably worth, respectively, as many and a half as many thousands.

One of the finest, or at least most precious Guanarius instruments extant is that

which Paganini used, and now preserved in a glass case in the Municipal Palace at Genoa. Paganini's pupil, Sivori, is probably the only one who has played on it since his master's death, and that only once.

In this country, Mr. Hawley, of Hartford, Conn., has an exceedingly valuable collection of rare violins. He has no less than five specimens of Stradivari and three of Guanarius. One of the latter is known as the King Guanarius, that is the finest product of the artist. It is valued at \$2,500.

Theodore Havemeyer, of this city, has a number of rare and valuable instruments, among which are more than one Stradivari and Joseph Guanarius del Jesu, with the I. H. S. brand of excellence.

Mr. Knopf, whose testimony did much toward winning Miss Powell's case, has a Stradivari which he values at \$2,000. It is not one of the larger size produced by Stradivari, or its value would be perhaps one-half as great.

DO CHILDREN PAY?

Sometimes They Seem Imperfect, But They Pay Pretty Well, After All.

[J. L. H. in Detroit Free Press.]

"Sometimes I just think children don't pay," said one of my careworn and discouraged neighbors one day. "What do you think about it?"

"Well, I don't know," I replied, and my conscience smote me even while I spoke. But then I said in mental self-reproach and self-excuse for saying it, "I know I didn't pay," and I don't think I did.

But when it comes to my own bairns—do they pay?

Well, they are "a sight of trouble." Indeed they are, and they cost time and money, and pain and sorrow.

There are three of them and they are little things still, and my friends who have older children tell me that I need not expect a time to come when my babies will be "less trouble" than they are now. I cannot expect a time to come when they will not be a source of care and anxiety, and hope and fear—no, not even when they have gone forth to homes of their own and have their own little ones around them.

Do they pay now? Here I am wearing old clothes and trying to brush up my old hat to make it look new, that my Johnny and Sammy may have new kilts, and reefers, and hats, and shoes, and look as well as other children. They do kick out shoes so dreadfully, and they haven't the first compunction of conscience about it, either. They tear and smash and destroy and are "into everything," particularly the baby.

Does a two-year-old baby pay for itself up to the time it reaches that interesting age? Sometimes I think not. I thought so yes—

terday when my own baby slipped into my study and "scrubbed" the carpet and his best white dress with my bottle of ink. He was playing in the coal-hod ten minutes after a clean dress was put on him, and later in the day he pasted 50 cents' worth of postage stamps on the parlor wall and poured a dollar's worth of the choicest "White Rose" perfumery out of the window "to see it wain."

Then he dug out the center of a nicely baked loaf of cake, and was found in the middle of the dining-room table with the sugar bowl between his legs and most of the contents in his stomach.

He has already cost over \$100 in doctors' bills, and I feel that I am right in attributing my few gray hairs to the misery I endured walking the floor with him at night during the first year of his life.

What has he ever done to pay me for that?

Ah! I hear his little feet pattering along out in the hall. I hear his little ripple of laughter because he has escaped from his mother and has found his way up to my study at a forbidden hour. But the door is closed. The worthless little vagabond can't get in, and I won't open it for him. No, I won't. I can't be disturbed when I'm writing. He can just cry if he wants to. I won't be bothered for—"rat, tat, tat," go his dimpled knuckles on the door. I sit in silence.

"Rat-tat-tat."

I sit perfectly still.

"Papa."

No reply.

"Peeze, papa."

Grim Silence.

"Baby tum in—peeze, papa."

He shall not come in.

"My papa."

I write on.

"Papa," says the little voice; "I lub my papa; peeze let baby in!"

I am not quite a brute and I throw open the door. In he comes with outstretched little arms, with shining eyes, with laughing face. I catch him up into my arms, and his warm, soft little arms go around my neck, the not very clean little cheek is laid close to mine, the baby voice says sweetly:

"I lub my papa."

Does he pay?

Well, I guess he does. He has cost me many anxious days and nights. He has cost me time and money, and care and self-sacrifice. He may cost me pain and sorrow. He has cost me much. But he has paid for it all again, and again, and again, in whispering those three little words in my ears, "I lub papa."

Our children pay when their very first feeble little cries fill our hearts with the mother-love and the father-love that ought never to fail among all earthly passions.

Do your children pay?

AN EXTRAORDINARY BEACON.

A Lighthouse in which There is Neither Lamp Nor Keeper.

The most extraordinary of all lighthouses is to be found on Arnish Rock, Stornoway bay—a rock which is separated from the Island of Lewis by a channel over 500 feet wide. It is in the Hebrides, Scotland. On this rock a conical beacon is erected, and on its summit a lantern is fixed, from which, night after night, shines a light which is seen by the fishermen far and wide. Yet there is no burning lamp in the lantern and no attendant ever goes to it, for the simple reason that there is no lamp to attend to, no wick to trim, and no oil well to replenish.

The way in which this peculiar lighthouse is illuminated is this: On the Island of Lewis, 500 feet or so away, is a lighthouse, and from a window in the tower a stream of light is projected on a mirror in the lantern on the summit of Arnish Rock. These rays are reflected on to an arrangement of prisms, and by their action are converged to a focus, outside the lantern, from where they diverge in the necessary direction.

The consequence is that to all intents and purposes a lighthouse exists which has neither lamp nor lighthouse keeper, and yet which gives as serviceable a light—taking into account the requirements of this locality—as if an elaborate and costly lighthouse, with lamp service-room, bed-room, living-room, store-room, oil-room and water tank, were erected on the summit of the rock.

The Wisdom of Fools.

[London Standard.]

Under the above caption the *Industrial Journal* publishes one of its usual common sense articles, in which it speaks of a man who, suffering from a dreadful toothache, went to a dentist to have the tooth extracted. The dentist told the sufferer to be seated and he would soon relieve him of his troublesome companion, but before being seated he must know the charge. He was informed that the operation would cost him fifty cents. This, he said, was exorbitant. Could he not perform the operation for twenty-five cents? No, the dentist could not. He could not lose time in learning a profession, buy instruments, and keep an office and then afford to relieve suffering for nothing. The man left. He preferred to endure the excruciating pain sooner than pay the exorbitant sum of fifty cents for such a trifling service. But his susceptibility to pain, he learned by sad experience, was greater than his power of endurance. His tortures were those of the damned; but pay fifty cents he wouldn't. He took a drink of brandy to numb the pain, but it had no effect; he then took another and another; he became intoxicated; it cost him \$5, but

it failed to cure the toothache, as it was worse than ever next day, and to end the whole matter he was forced to go to the dentist and pay fifty cents. The course of this man has its parallels in the actions of these men who refuse to pay forty or fifty cents to an organization, monthly, for the grand privilege of being relieved of many countless burdens that now hang heavily upon them, while at the same time they think nothing of paying ten times the amount for the privilege of destroying both their souls and bodies. It has its parallels, also, in another class of men, who like to be relieved of the burdens that weigh them down, but who are unwilling to pay for the services which they wish rendered unto them. We hear every day men who complain of excessive taxation of the union, and many of these very same men have already actually received an advance in remuneration equal to \$2 or \$3 per week, while the entire tax asked of them will not amount to over \$6 a year at farthest.

Again, there are other men who say the union is of no benefit to them. Their wages have not been advanced, hence they don't want to pay union dues and assessments. Fifty cents a month is fearful when asked of them to be used for their own benefit, but they permit the employer to swindle them out of \$4 or \$5 per week without a murmur or a word of complaint. Just think of men wanting to receive an advance of wages equal to \$100 a year, and because they don't receive it two weeks after they are organized they growl and complain of the assessments they are paying. They pay \$6 and expect \$100 in return, and because it is not done for \$3 and done forthwith they exclaim the union is of no benefit to us. Let us leave because the union does not give us \$100 for \$3. Let us give the boss \$200 for nothing or spite. This is truly the wisdom of fools.

The Debasement of Women.

To complete the ecstasy of those who believe in the degradation of human labor, need I say that at Stockholm the debasement of woman is perhaps more thorough and complete than in any city of Northern Europe? She here practically supplants the beasts of burden. And I am not altogether unfamiliar with women's work in Europe. I have seen her round the pit mouth, at the forge, and bare footed in the brickyards of "merrie England," filling blast furnaces and tending coke ovens in "sunny France." I have daily watched her bearing the heat and burden of the day in the fields of the "Fatherland," and in Austria-Hungary doing the work of man and beast on the farm and in the mine.

I have seen women emerge from the coal pits of "busy Belgium," when little girls and young women graduate under-ground as

hewers of coal and drawers of carts, for it is no uncommon thing in Europe to hitch women and dogs together, that manufacturing may be done cheaply.

Aged, bent, and sunburned, I have seen women, with rope over shoulders, toiling on the banks of canals and dykes in picturesque Holland. Having witnessed all this, I was yet surprised to find in a city so beautiful and seemingly so rich and prosperous as Stockholm, women still more debased.

In Stockholm she is almost exclusively employed as hod carrier and bricklayer's assistant. She carries bricks, mixes mortar, and, in short, does all the heavy work about the building. At the dinner hour you see groups of women sitting on the piles of wood and stones eating their frugal repast. They wear a short gown, coming a trifle below the knee, with home knitted woolen stockings and wooden shoes. Over the head a handkerchief is tightly tied. Those engaged in mixing mortar and tending plasterers wear aprons.

They are paid for a day of hard work of this toil, lasting twelve hours, the magnificent sum of one kroner (equivalent to 26 cents).

Women sweep the streets, haul the rubbish, drag hand-carts up the hills and over the cobble stones, unload bricks at the quays, attend to parks, do the gardening, and row the numerous ferries which abound at Stockholm. The entire dairy business of the city is in their hands, and here they take the place of horses and dogs, carrying on their shoulders the heavy cans of milk from door to door.

The King And The Peasant.

One day while the King of the Cannibal Islands was out hunting for grizzly bears he became separated from his retainers, and after wandering about for a long time he finally came upon the cabin of a peasant. The peasant hadn't the least idea who the stranger was of course, and he invited the King to enter and make himself as comfortable as possible. His royal nibs seeing how the land lay, thought to get an honest opinion of himself, and after a bit he led off with:

"They say that the King is out on a hunt to-day."

"No doubt of it," replied the peasant; "he has of late seized upon every pretext to neglect the King's business, and lets affairs of state go to the dogs."

"They say he drinks."

"Alas! yes. He can guzzle more budge than any four old drunkards in the country."

"And that he is harsh and tyrannical."

"You bet! He'd grind our noses to get an extra dollar in taxes, and he is always after a new law to abridge our liberties."

"And that he is a spendthrift."

"Ah! sir; if he wasn't a King he'd be a loafer and a vagabond."

"But he must have some good features," protested the King, as he sweated under the collar.

"I never heard of but one. They say he is extremely kind to cross-eyed cats."

"I am the King!" thundered his majesty, as he rose up in all the terribleness of his awfulness.

The peasant fell upon his knees and prayed that his life might be spared, being he had no insurance, and the King took him by the right hand and lifted him up and said:

"Have no fear. You are an honest man. You are the only human being who has dared to tell me of my faults. From this moment I am a changed sardine. Here—take these seven signet rings and these thirteen purses filled with gold, and as soon as you get your potatoes dug and your corn husked, come to town and be my prime minister."

Now wasn't that nice!

Is The Law a Farce?

[Wall Street News.]

The inter-state commerce act has been a law for just about three years, and it has no more effect than if it was not on the statute book. There has never been a criminal complaint instituted under the law, nor a single prosecution, and yet there is not a practical railroad manager in the country who does not know that it is daily and openly violated on his own road. If there is a single manager who can truthfully say that he has not broken the law, then he must stand convicted of stupidity or incompetency. The law says that any one is guilty if undertaking to avoid the provisions of the statute by "trick or device," and yet the commission has found hundreds of cases in which this has been attempted and has so ruled. Is it not about time that the law was repealed or else something done to show that it is in force?

SENATORIAL POKER.

Public Men in Washington Find a Great Deal of Fun in Gambling.

[From a Washington Letter.]

But if it be true that public men in Washington indulge in gambling in stocks and margins, it is equally true that public opinion has long ago driven from the capital gambling houses, where in years gone by public men were in the habit of gathering night after night and openly risk their money upon the turn of a card. There is not in Washington to-day what is generally known as a gambling resort. There is not, so far as the public knows, a single faro bank or roulette wheel in operation, and the

men who gamble do so in their private apartments, or in the rooms of hotels or other places where the public and the law have no right to enter. Poker-playing is, of course, as popular an amusement in Washington as it ever was. Games may come and games may go, but poker is the only species of card gambling that has taken a lasting hold on the affections of Washingtonians. A few years ago the game of hearts was dragged from oblivion, and for a time seemed to threaten the supremacy of the great American game. Hearts had its day but that day is gone, and poker again reigns supreme. It is more popular than ever, and it is rare that men in Washington who sit down for a quiet little game indulge in any other species of gambling. Poker is played at the clubs universally, and some pretty big stories are told about games for high stakes indulged in by Senators and Representatives, officers of the army and navy, civilian officials and men about town. There are many cliques of these men who play so constantly that the games are almost continuous, and names are given to distinguish them. There are, for instance, the army game, the navy game, the dude's game, the club game, the hotel game, the official game and the Senatorial game.

The last named game is the one which attracts the most attention. Time and again denials have been made, apparently based on good authority, that any senatorial game exists. The fact is, however, and it is well known by everybody who keeps posted on what is going on in Washington, that there is a senatorial game, and that it is in progress almost constantly, night and day, for several months in each year. This game is as well known to men who play cards as any of the theatres or hotels are, and during the time when Congress is in session any man who is properly introduced can join this little game and be assured of meeting foes worthy of his steel. The senatorial game is located in a so-called hotel uptown, and is composed, as regular players, of some of the most prominent and well-known men in the Senate. These men form what is known as the charter members of the club, and those who are taken in from time to time are called recruits. There are three or four members of the House who are almost daily seated at the senatorial game, and strangely enough, two of them have never been suspected of playing by their colleagues. One of them is a member from Chicago, and, in addition to being a poker-player, it is said that he is a member of the alleged silver pool, and that his persistent efforts to secure increased coinage of silver at the last session were largely due to his heavy investments in bullion.

The third member of the House who belongs to the senatorial game is the repre-

representative of a rural constituency in Kansas, and there is probably not one man in the House who has not personal knowledge on the subject who would believe for an instant that this man ever saw a game of poker. Yet, according to the statement of one of the constant participants in the game, this hayseed member is one of the most expert players that ever opened a jack-pot. He has a face that no man can read and an appearance of utter child-like innocence. It is said that he plays like a vulture, not for amusement, but for money, and that when endeavoring to free his competitors of their cash he takes no note of time, and cares not to either eat or drink.

American Tenant Farmers.

Recently a writer in the *North American Review* made the startling statement that the United States is the largest tenant farmer nation in the world. Of the 7,500,000 adults engaged in agriculture, less than one-third are farm owners, and half of that third are so heavily mortgaged that the interest they must pay to avoid foreclosures is equal to a galling rent.

The number of tenant farmers in the various States are given, and we shall give a few samples from that list:

New York	39,872
Pennsylvania	45,322
Maryland	13,937
Virginia	34,838
North Carolina	52,728
South Carolina	47,210
Georgia	62,175
West Virginia	12,000
Ohio	48,283
Indiana	40,050
Illinois	80,244
Michigan	15,411
Iowa	45,174
Missouri	53,802
Nebraska	11,419
Kentucky	14,027
Kansas	22,651
Tennessee	57,196
Mississippi	14,558
Arkansas	26,138
Texas	66,465

Here are twenty-one of our leading States with more tenant farmers than England, Ireland, Scotland and Wales.

Too Much for Ned.

Cincinnati Enquirer.]

Governor Nicholls, of Louisiana, as most people know, has lost an arm and a leg, but so deftly have the artificial members been fitted to the stumps that but few people are in the secret of his loss. His colored body servant was left behind on the occasion of his last visit in Vicksburg, and they put at his disposal during his stay there a likely young lad, who was told to try and take the old body servant's place. That night, when Governor Nicholls was ready to retire, he stretched out one of his legs to Ned, the servant, and said: "Ned, unscrew that leg." Ned's eyes began to open with hor-

ror, but he obeyed, and took the leg off. Gov. Nicholls then said, calmly stretching out an arm, "Ned, unscrew that arm." The boy rolled up his eyes until nothing but the whites could be seen, but he obeyed and unscrewed the arm. The Governor, who now realized his condition of mind, determined to have a little fun with him, so, reaching out his neck, he said: "Ned, unscrew that head." But the boy never waited to see whether his head would come off or not, and no one ever succeeded in getting him to go near Gov. Nicholls again. He said he was the worst "hoodoo" that he ever saw.

Tough on the Dog.

[Express-Gazette.]

A solid, sensible-looking woman, who was bound east, entered the baggage rooms of a Detroit depot, leading a dog, and asked:

"Can this dog go in the car with me?"

"No, ma'am."

"Has he got to go in the baggage car?"

"Yes'm."

"Is it extra?"

"Fifty cents."

"Well, it's a shame!"

"Yes'm, but it's the rule."

She walked about for five minutes, the dog smelling at her heels, and then returned to say:

"There are three of us, myself, the dog and my husband."

"Yes."

"If my husband went in the baggage car couldn't the dog ride in the seat with me?"

She managed to choke down her indignation when told that no such change could be effected, but later on, in the waiting room, she was giving her husband fits, and it was probably because he was satisfied with the rule of the road.

NOBODY KNOWS BUT MOTHER.

Nobody knows of the work it makes

To keep the home together;

Nobody knows of the steps it takes,

Nobody knows—but mother.

Nobody listens to childish woes

Which kisses only smother;

Nobody's pained by haughty blows,

Nobody—only mother.

Nobody knows of the sleepless care

Bestowed on baby brother;

Nobody knows of the tender pray'r,

Nobody—only mother.

Nobody knows of the lessons taught

Of loving one another;

Nobody knows of the patience sought,

Nobody—only mother.

Nobody knows of the anxious fears

Least darlings may not weather

The storm of life in after years,

Nobody knows—but mother.

Nobody kneels at the throne above

To thank the heavenly father

For that sweet gift—a mother's love;

Nobody can—but mother.

One of Herschel's Problems.

In her "Reminiscences of the Herschels," in the Century Magazine, the late Prof. Maria Mitchell says:

One of Sir John Herschel's numerical problems was this: If, at the time of Cheops, or three thousand years ago, one pair of human beings had lived, and war, pestilence and famine had not existed, and only natural death came to man, and this pair had doubled once in thirty years, and their children had doubled, and so on, how large would the population of the world be at this time—could they stand upon the earth as a plane?

We were sitting at the breakfast table when he asked the question. We thought they could not. "But if they stood closely and others stood on their shoulders, man, woman, and child, how many layers would there be?" I said, "Perhaps three." "How many feet of men?" he asked. "Possibly thirty," I said. "O more!" "Well, we'll say a hundred." "O more!" Miss Herschel said, "Enough to reach the moon." "To the sun." "More, more!" cried Sir John, exulting in our astonishment; "bid higher." "To Neptune," said one. "Now you burn," he replied. "Take a hundred times the distance of Neptune, and it is very near. That is my way," said he, "of whitewashing war, pestilence and famine."

Is Ice Water a Healthy Drink?

[The Sanitary News.]

In the opinion of the editor of the *Sanitary Volunteer*, the official organ of the New Hampshire board of health, there is a great deal of sentiment and many opinions regarding the use of ice water that vanish when the light of reason and experience is turned upon them. The fact is that ice water, drank slowly and in moderate quantities, constitutes a healthful and invigorating drink. There is no doubt that ice is a great sanitary agent, and every family ought to be provided with it during the warmer months of the year. It is true that the inordinate use of ice water, or its use under some special conditions and circumstances, is attended with great danger; so is the improper use of any other drink or food. The assumption that iced water is dangerous, and that iced tea, or iced coffee, or iced lemonade is a harmless substitute, is simply a delusion. As the source of danger feared by some is the degree of cold, we fail to see clearly how flavor modifies the effect of temperature. There are individuals, undoubtedly, who cannot drink ice water without injury, and who ought never to use it, but to a great majority of persons it is refreshing and healthful. Its use, temperate and discreet, is in no way to be condemned, which cannot be said of some of its substitutes.

Horse and Man.

In starting, Gen. Booth, of the Salvation Army, lays down the ideal at which society should aim. This is explained as the ideal of the London cab horse. The cab horse has its charter with two points, work is found for it with food and lodging sufficient to enable it to get through its daily task; that is the first. The second is that when it falls down, whether it be by its own fault or by mischance, or by the fault of others, it is helped up again—all questions as to who was responsible for its fall being deferred until it is set upon its feet again.

Mr. Carlyle long ago remarked that the four footed worker has already got all that this two-handed one is clamoring for: "There are not many horses in England able and willing to work which have not due food and lodging and go about sleek coated, satisfied in heart." You say it is impossible; but, said Carlyle, "The human brain, looking at these sleek English horses, refuses to believe much impossible for Englishmen."

Gen. Booth claims the extension to every human being of the two points of the cab horse charter.

The English Language.

It is computed that at the opening of the present century there were about 21,000,000 who spoke the English tongue. The French speaking people at that time numbered about 31,500,000, and the German exceeded 30,000,000. The Russian tongue was spoken by nearly 31,000,000, and the Spanish by more than 26,000,000. Even the Italian had three-fourths as large a constituency as the English, and the Portuguese three-eighths. Of the 162,000,000 people, or thereabouts, who are estimated to have been using these seven languages in the year 1801, the English speakers were less than 13 per cent., while the Spanish were 16, the German 18.4, the Russian 18.9, and the French 19.6.

This aggregate population has grown to 400,000,000, of which the English speaking people number close upon 125,000,000. From 13 per cent. we have advanced to 31 per cent. The French speech is now used by 50,000,000 people, the German by about 70,000,000, the Spanish by about 40,000,000, the Russian by 70,000,000, the Italian by about 30,000,000, and the Portuguese by about 13,000,000. The English language is now used by nearly twice as many as any of the others, and this relative growth is almost sure to continue. English has taken as its own the North American Continent and nearly the whole of Australasia. North America alone will soon have 100,000,000 of English speaking people, while there are 40,000,000 in Great Britain and Ireland. In South Africa and India also the language is vastly extending.

Women and Railroad Tickets.

The woman who is never able to find her ticket, and after much tribulation has it discovered for her sticking out of her glove, will be glad to hear of the recent decisions of a Western court.

The effect of the decision is that a passenger must be allowed a reasonable time in which to hunt up his ticket, and if the conductor proceeds to extremities before it is run to earth the road must respond in damages. Now and then a man is so overburdened with messages for Aunt Aurelia and injunctions to take good care of himself that he gets aboard in a coma and for the first few miles of his trip is not sure of anything. But ordinarily it is a woman who finds the question of transportation embarrassing.

As the conductor heaves in sight she compares herself very favorably with those who are slow at handing in their vouchers, but when he drops anchor before her and rasps out "Tickets!" she is horrified to find that hers is not where she was sure she had put it. A second rasp and her bonnet tilts to an angle of forty-five; at the third call she frantically opens her reticule and finds therein her hairpin reserve, beautifiers, and that snippy little wad of samples no woman is ever without, but no ticket. The lunch-basket is then invaded and every sandwich opened, but the missing link between her and her destination is not there.

Then she takes a header into her pocket, remains down a long time and come up red in the face, out of breath and out of ticket. She fears that the conductor thinks it a little game, and in her mind's eye sees herself landed on a cross-tie, miles away from anybody and at the mercy of cows, field-mice and other savage creatures.

The conductor, however, is not thinking it a little game. Despite his austere look he is a long-suffering and much-experienced man, and knows that somewhere in the collapsed mass of feathers and bugles before him there is a ticket, if he can only find it. In a kindly way he suggests the watch pocket, but it is not there; then that it may be tied up in a corner of the handkerchief, but no; finally he plays his best trump, glove, and it is forthwith found.

Rescued from despair, the little bully twitches her hat on straight and tartly informs Mr. Conductor that she intends to have the Company written to about him.

The trouble with our fair friend is that she labors under the impression shared by the traveling public generally that a passenger is bound to have his ticket on call under penalty of eviction, but the law is otherwise now declared. Conductors may be driven to lunacy and station after station be reached before the tickets thereto can be collected, but the right of search must remain inviolate.

Not Tall Enough.

[London Tid Bits.]

Just at the time when vague reports were beginning to creep along that Germany was meditating fresh extension of her frontier at the expense of Holland, a Dutch official of high rank happened to be visiting the court of Berlin, where he was handsomely entertained. Among other spectacles got up to amuse him a review was organized at Postdam.

"What does your excellency think of our soldiers?" asked Prince Bismark, as one of the regiments came marching past in admirable order.

"They look as if they knew how to fight," replied the visitor, gravely, "but they are not quite tall enough."

The Prince looked rather surprised at this disparaging criticism. He made no answer, however, and several other regiments filed past in succession; but the Dutchman's verdict upon each and all was still the same: "Not tall enough."

At length the grenadiers of the guard made their appearance—a magnificent body of veterans, big and stalwart enough to have satisfied even the giant loving father of Frederick the Great; but the inexorable critic merely said, "Fine soldiers, but not tall enough."

Then Prince Bismark fairly lost patience, and rejoined, somewhat sharply, "These grenadiers are the finest men in our whole army; may I ask what your excellency is pleased to mean by saying that they are not tall enough?"

The Dutchman looked him full in the face, and replied with significant emphasis, "I mean that we can flood our country twelve feet deep."

Benjamin Tillett, the Young English Labor Leader.

[English Correspondence of the Congregationalist.]

"He was speaking to an immense crowd of workmen, many of them Socialists, when he began to talk about his Divine Master. He spoke of what the Man of Nazareth said when He was upon the earth; he told them what the Man of Nazareth did when He dwelt among men, and he added what he believed the Man of Nazareth would do to workmen and dock laborers were He here to-day. He grew more and more earnest as he spoke of the righteousness and sympathy and unselfishness and love of the Man of Nazareth. At last a Socialist cried out: 'Let's give three cheers for that Man of Nazareth! He is the best man of whom we have ever heard!' And immediately thousands of hats and caps were uplifted, and thousands of voices joined in ringing cheers for the 'Man of Nazareth.' So 'the world moves.'"

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

AUGUST, 1891.

Assessment Notice for August.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., August 1, 1891. }

ASSESSMENT No. 22, \$2.00.

CLAIM No. 445. Thomas P. Sammon, of Just In Time Lodge, No. 149, was declared Totally Disabled by Loss of Leg, March 12, 1891.

CLAIM No. 446. Edward B. Davenport, of Pine City Lodge, No. 81, died of Pneumonia, April 25, 1891.

CLAIM No. 447. John J. Donnelly, of Peter Burns Lodge, No. 425, died of Typhoid Pneumonia, May 11, 1891.

CLAIM No. 448. Percy A. Robinson, of Northwestern Lodge, No. 82, was killed by Railroad Accident, May 13, 1891.

CLAIM No. 449. M. H. Neal, of Sunset Lodge, No. 177, died from Injuries received in jumping from engine, May 14, 1891.

CLAIM No. 450. Thomas R. Wallace, of River View Lodge, No. 330, was scalded to death, May 17, 1891.

CLAIM No. 451. W. J. Dwyer, of Chicago Lodge, No. 95, was declared totally disabled by Loss of Eyesight, May 21, 1891.

CLAIM No. 452. James A. Mathews, of Eureka Lodge, No. 14, died of Congestion of Brain, May 21, 1891.

CLAIM No. 453. Frank Jagerman, of Aetna Lodge, No. 163, died from injuries received by Railway Accident, May 23, 1891.

CLAIM No. 454. C. M. Conroy, of Fargo Lodge, No. 85, was declared totally disabled by Tubercular Peritonitis, May 25, 1891.

CLAIM No. 455. Charles L. Dickinson, of Clinton Lodge, No. 34, died of Cerebral Abscess, May 27, 1891.

CLAIM No. 456. W. R. Clark, of Mt. Lookout Lodge, No. 289, died from injuries received by jumping from Engine, May 27, 1891.

CLAIM No. 457. Thomas Irwin, of Gold Range Lodge, No. 341, was killed by Engine Falling Through Bridge, May 27, 1891.

CLAIM No. 458. Charles Smith, of Glad Tidings Lodge, No. 233, died of Heart Failure, May 28, 1891.

CLAIM No. 459. John P. Spurlock, of Phoenix Lodge, No. 23, was declared totally disabled with Fracture of Arm, June 4, 1891.

CLAIM No. 460. John T. Kelley, of Van Bergen Lodge, No. 62, was killed by being run over, June 8, 1891.

CLAIM No. 461. Arthur C. Ball, of Franklin Lodge, No. 9, was declared Totally Disabled by loss of lower limbs, June 9, 1891.

CLAIM No. 462. George W. Purcell, of Kaw Valley Lodge, No. 313, died from injuries received in a Railway Accident, June 12, 1891.

CLAIM No. 463. Charles F. Quicksell, of Peace Lodge, No. 109, was declared totally disabled with Chronic Pneumonia, June 16, 1891.

CLAIM No. 464. Anson H. Pike, of Lake Shore Lodge, No. 183, died of Typhoid Fever, June 16, 1891.

CLAIM No. 465. James R. Lane, of Jackson Lodge, No. 274, was killed by Railway Accident, June 17, 1891.

CLAIM No. 466. Charles B. Munn, of James I. Watt Lodge, No. 436, was killed in a Collision, June 19, 1891.

CLAIM No. 467. John A. Larson, of James I. Watt Lodge, No. 436, was killed in a Collision, June 19, 1891.

CLAIM No. 468. Lorin S. Lightner, of Big Four Lodge, No. 337, died from injuries received in a Railway Accident, June 20, 1891.

CLAIM No. 469. Calmer S. Hull, of Denver Lodge, No. 273, died of Heart Failure, June 24, 1891.

An assessment of TWO DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership AUGUST 1ST, 1891, also for all members having taken a withdrawal (limited or final) after AUGUST 1ST, (and for all members who died or were totally disabled since that date,) said remittance to reach the Grand Lodge not later than AUGUST 20TH, 1891, as provided in Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all the benefits of the order, as per Section 52, of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. and T.

Bound Volumes.

We still have on hand a few bound volumes of the Magazine for the years 1887, 1888 and 1889, which can be had, postage paid, at \$1.50 per volume. Every wide-awake fireman should have these volumes in his library. Address *Locomotive Firemen's Magazine*, Terre Haute, Ind.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,

Why Shouldn't a Brotherhood Man

Supply Brotherhood men with something they all use? Nearly all Brotherhood men wear overalls, and I am making overalls that can't be beat. It won't cost you a cent and will help me a great deal if you'll ask your dealer for the "Brotherhood Overalls" and insist upon getting them. He will handle them if you insist, and when you get them you will be getting overalls as good as can be built. Every garment warranted not to rip. Look for "Brotherhood" on the buttons.

Manufactured by H. S. PETERS, Member Lodge, No. 3, and F. A. E. Division, No. 419, B. L. E. Office and Factory,
Hinsdale Street,
BROOKLYN, N. Y.

SEELEY'S HARD-RUBBER TRUSSES

CUSHMAN'S MENTHOL INHALER CURES CATARRH.

Endorsed by the Highest Authority of England.

DEAR SIR:—The Inhaler came in due course of mail, and I am enthusiastic over it. I am satisfied that it will effect an ultimate cure in my case of catarrh and asthma. I shall recommend it to all my friends. Since ordering the Inhaler I have received a copy of Browne's great work, "Diseases of the Throat and Nose" (3d ed.), and find on p. 558, that he discusses quite fully different remedies for catarrh, etc., and closes by giving Cushman's Menthol Inhaler his unqualified preference in terms of highest praise. He says that he has used it for several years in the Central London Throat and Ear Hospital, and has achieved better success with it than with all other remedies combined. Such an endorsement is worth more than a deluge of old-lady certificates of cure, etc.

DEL RIO, TEXAS, Dec. 30, 1890.

DR. W. W. GATEWOOD.

From the Hon. Ira Mayhew, Detroit, Mich.

DEAR SIR:—I have been a sufferer from catarrh for twenty years. During this time I have consulted a number of physicians (some of them specialists), and tried various remedies, with only partial relief for a time. About two months ago your Menthol Inhaler was brought to my notice. From the benefit I have received from it I consider it an efficient catarrh remedy. It also improved my hearing which had become dull.

IRA MAYHEW.

Head Colds, Hay Fever, Sore Throat, Asthma, Bronchitis, Headache and Facial Neuralgia, as well as Catarrh, yield like magic to the soothing and antiseptic properties of inhaled Menthol. The Inhaler in a neat pocket case costs 50 cents and lasts a year. 1,000 treatments for 50 cents and every one a pleasure to take. Try an Inhaler a week and if not entirely satisfactory return it to me and I will refund your money. At druggists or sent direct by registered mail—same price.

PRICES REDUCED.

**BAKER'S
TRIPOLINE**

THE BEST METAL POLISH IN THE WORLD.

For this year prices to firemen (as agents) will be: One pound boxes, per dozen, \$2.25; one-half gross lots, \$12; gross lots, \$22.50. Three pound pails, \$5.50 per dozen. Five pound pails, \$8.75 per dozen.

Cash must always come with orders to avoid delay. Bed rock prices are here given to firemen as agents and they cannot and must not expect to buy from dealers at these prices. Samples sent free on application. Address

**THE MATCHLESS METAL POLISH CO.,
88 MARKET STREET, CHICAGO, ILLINOIS.**

\$1,000 FOR AN OLD COIN

**IF YOU HAVE
ANY COINS**

dated before 1871, with plain date, send us a list. We pay high prices for hundreds of dates and kinds. Among coins that we want are: silver dollars dated between 1794 and 1868; dates of half dollars before 1864; quarters of all dates before 1868; all dates twenty-cent pieces; all dates dimes before 1868; silver five-cent pieces before 1867; five-cent nickels of 1877 and 1883; all dates of silver three-cent pieces; nickel three-cent pieces before 1870; two-cent pieces between 1864 and 1873; all large copper cents, also small cents with eagles on, also cents of 1873 and 1877; all half cents; foreign coins, fractional and Confederate currency, etc. For above we pay big amounts over face value, if in required condition. This is a comparatively new business, and by merely keeping your eyes open when handling money, you may find many coins that we want. A short time since (Jan. 23), a Scotchman in an Illinois town found one coin worth \$700. Others have done even better. The New York World says: "Many people have become rich by looking after coins wanted by collectors." The Home Journal says: "Collecting coins is a very profitable business nowadays, as there are but few in it. One Boston broker, Mr. W. E. Skinner, buys from agents all over the country, and pays them big sums for rare coins." Coins that are very hard to find in one section of the country are often easily found in others. Largest business, highest prices, prompt payments, best references. Write at once for further particulars, enclosing stamp for reply, which may be worth hundreds of dollars, perhaps a fortune, to you.

VARIABLE EXHAUST DAMPER, FOR LOCOMOTIVES.

Patented Nov. 10, 1885.

The use of the Damper, placed under control of the Fireman, assists him in the performance of his duties, so that, according to his testimony, the difference is as day and night, as compared with an engine without the Stack Damper.

RESULTS:

TO THE FIREMAN.—Less labor, no coal gas in the cab, no blowing of cinders and sparks into the front of the cab when open, and easy control of the fire and steam pressure.

TO THE R. R. CO.—In most cases large saving of fuel, also preservation of the flue joints and firebox, and safety against fire from sparks.

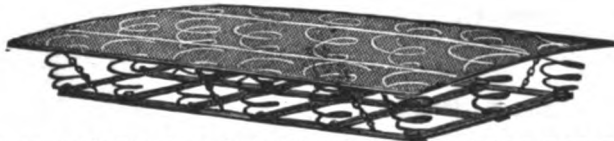

TO THE PUBLIC.—Cleanness and noiselessness.

Send postal for "Some of the Functions of a Locomotive," written in the interest of Locomotive Firemen.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

BRIGHT! CLEAR! BEAUTIFUL!

Can there be any reason assigned why a man whose Business brings him in contact with Oil and Dust should not return to his home at the close of his day's labor With Face and Hands as Clean as Those of His Neighbor, the Merchant? No! is the answer to this question, if he uses

Glenn's Sulphur Soap.

One cake of this Efficacious and Harmless Remedy for removing Dirt and Every Species of Discoloration, will perform its work, leaving Hands and Face the perfection of

HEALTH AND PURITY.

Before the healing influences of GLENN'S SULPHUR SOAP, Abrasions of the Skin, Pimples, Sores, and all Unsightly Eruptions vanish, and in their stead appears a skin as

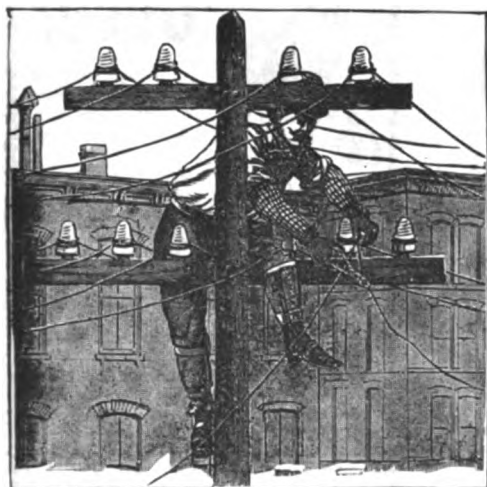

CLEAR AS ALABASTER.

For Sale By Druggists Everywhere.

ARTIFICIAL HUMAN LEGS AND ARMS, (MARKS' PATENTS.)

WITH RUBBER HANDS AND FEET.
DURABLE IN THEIR CONSTRUCTION,
NATURAL IN THEIR ACTION,

NOISELESS IN THEIR MOVEMENTS,

and the MOST COMFORTABLE for the wearer. It is not unusual to see a farmer working in the fields with an artificial leg, or a brakeman plying his brake on a fast running train, or an engineer with hand on the throttle, or a fireman, carpenter, mason, miner, in fact, men of every vocation at labor in the full capacity of their employment, wearing one or two artificial legs with rubber feet, performing as much as men in possession of all their natural members, earning the same wages, in fact, experiencing little or no inconvenience in the use of their rubber extremities.

ALVAH YOUNG is a living example of the remarkable degree to which rubber feet restore lost members. He is a lineman employed by an electric light company. He lost one of his legs some years ago in a railroad accident. He had a Marks' rubber foot artificial leg applied and since then has engaged in active manual labor earning his livelihood. He will climb a pole as dexterously as any of his associates, hold himself on the cross bar with his artificial limb and place the wires in a thoroughly workmanlike way.

Artificial legs and arms with rubber feet and hands can be constructed from measurements and sent to the wearer in any part of the world. A Treatise of 400 pages with a thousand testimonials and full instructions for home measurements. Over 11,000 artificial limbs with rubber

ments will be sent without charge. Established over 37 hands and feet in use. U. S. Government manufacturers

A. A. MARKS,

701 Broadway, NEW YORK CITY.

Good morning

Have you used
PEARS' SOAP?

"I have never come across another Toilet Soap which so closely Realizes my ideal of perfection;

Its purity is such that it may be used with perfect confidence upon the tenderest and most sensitive skin—EVEN THAT OF A NEW BORN BABE."

Dr. REDWOOD, Ph. D., F. C. S., F. I. C.

Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain.

Insist on having Pears' Soap. Substitutes are sometimes recommended by druggists and storekeepers for the sole purpose of making more profit out of you.

Taking a Pill is often a happy thought.

Beecham's Pills

are the most wonderful antidote yet discovered for ALL BILIOUS AND NERVOUS DISORDERS.

A Box of these pills, costing only twenty-five cents, constitutes a family medicine-chest. Wind and Pain in and Weakness of the Stomach, Giddiness, Fullness, Swelling after meals, Dizziness, Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness, Blisters on the Skin, Disturbed Sleep,

Sick Headache, Derangements of the Liver, and all nervous and trembling sensations are cured by using these Pills.

The First dose often relieves in 20 minutes, and apprehension and sickness can be avoided by having a box always at hand wherever you are—in the house, on the train, on the steamer—ready for immediate use.

Prepared only by **THOS. BEECHAM, St. Helens, Lancashire, England.** B. F. ALLEN CO., Sole Agents for United States, 365 Canal Street, New York, will mail **BEECHAM'S PILLS** on receipt of price, 25 cents. Correspondents must mention this paper. Inquire first of your druggist.

EUGENE V. DEBS, . . . *Editor and Manager.*

JOHN D. ROCKEFELLER AND THE STANDARD OIL TRUST.

It is, confessedly, a difficult task to write dispassionately of millionaires, their great wealth so dazzles and bewilders that the average mind loses sight of the man while contemplating his wealth. If the millionaire is at the head of any great industrial enterprise, like those with which Rockefeller, Gould, Vanderbilt, Carnegie, and others who could be named, are identified, the man becomes so mixed up with his money-making methods that whatever villainies are disclosed by the methods attach at once to the man and they are gibbeted together, and no appeals to the public change the verdict.

John D. Rockefeller is always associated with the Standard Oil Trust.

We have before us an article which appeared in the *New York World*, June 15, 1891, devoted to Mr. Rockefeller, which is exceedingly interesting reading.

Mr. John D. Rockefeller resides in Cleve-

land, Ohio, and is President of the Standard Oil Trust. On June 15th the millionaire was seriously ill, suffering from nervous prostration consequent on close application to business.

Mr. Rockefeller was born in the year 1839, and is, therefore, only 52 years of age; just in the prime of mature manhood. He was 30 years of age when he went into the oil business. The *World* says:

That Mr. Rockefeller is the richest man in America admits of no question whatever. His wealth is estimated to be not less than \$125,000,000. No closer estimate than this can be made, except by Mr. Rockefeller himself. Even that gentleman once declared on the witness-stand that he was not able to estimate his own possessions within ten or fifteen millions of dollars.

About two years ago a Standard Oil man who is a close personal friend of Mr. Rockefeller, and who is thoroughly and accurately posted as to the inside of Standard Oil affairs, estimated the Rockefeller fortune at \$129,000,000, and gave the following figures:

Standard Oil Stock	\$40,000,000
Premium on same	28,000,000
Real estate	10,000,000
Lead trust	2,000,000
Railroad stocks and bonds	20,000,000
Natural gas stock	4,000,000
Bank stock	5,000,000
Manufactured gas stock	3,000,000
Steamboat stock (Inman Line, etc.,)	1,000,000
Mines in Utah, Wisconsin, etc.	4,000,000
Cash on hand	2,000,000
Miscellaneous	10,000,000

Total \$129,000,000

It will be seen from this statement that Mr. Rockefeller's investments are of the most solid, substantial, and remunerative description. This estimate of his wealth, by the way, is confirmed by no less an authority than Mr. Rockefeller's associate millionaire, Henry M. Flagler. Mr. Flagler not long ago said that he knew Mr. Rockefeller's income was in the neighborhood of \$9,000,000 a year. Reckoning that his investments yield an average of 6 per cent., and there is not much doubt that the gilt-edged securities he holds pan out at that figure, this gives him a capital

of \$150,000,000. The vastness of this income may, perhaps, be better realized when it is calculated that \$9,000,000 a year is something like \$25,000 a day. At the same time as making the statement referred to Mr. Flagler said that his own income was \$3,000,000 a year, and estimated the wealth of Col. Oliver Payne, another Standard Oil magnate, at \$22,000,000.

Here we have it that in 22 years Mr. Rockefeller secured \$129,000,000 of wealth, an average of \$5,863,636 a year, or \$19,546 a day for 300 working days a year.

The *World* is of the opinion that the only American whose wealth exceeded that of Mr. Rockefeller was Wm. H. Vanderbilt, whose possessions were estimated at \$200,000,000. When Mr. Vanderbilt died he distributed his wealth in such a way that no living Vanderbilt can boast of \$100,000,000. Next to Rockefeller William Waldorf Astor stands with his \$100,000,000, and then comes Jay Gould, who is credited with \$60,000,000.

The fact is, when a man's fortune runs up into the millions, conservative estimates are likely to embody a large per cent. of conjecture, as shown by the statement that, when under oath, Mr. Rockefeller could not state the value of his possessions within ten to fifteen millions of dollars. If, as is stated, his income is \$9,000,000 a year, it represents 6 per cent. on \$150,000,000, or 4 per cent. on \$225,000,000.

Mr. Rockefeller is said to be a very devout member of the Baptist church, to which he gives liberally, and it would seem probable that he will avoid the mistake of the foolish virgins and not be caught without oil in his lamp.

After all, as we have intimated, John D. Rockefeller cannot escape being measured by the methods he has adopted for securing wealth, and realizing the fact may cause him nervousness.

A contemporary, *The Farmer's Voice*, says "his fortune is monumental of a series of the most gigantic robberies ever recorded in the annals of history. The winnings of Capt. Kidd and Black Beard, the pirates; Sir Francis Drake, the buccaneer; Francisco Pizarro in Peru, and Lord Clive in the East Indies, become puny and mean when compared with the colossal pillage of this man Rockefeller, which has been scooped in with perfect safety by this deacon of the Baptist church now in good and regular standing."

"Scooped in with perfect safety" means that it has been obtained "*legally*," a term which to-day covers more iniquity than passed in review under the eye of Omnipotence from the creation of Adam to the deluge. The land is full of "legal" scoundrelism, "legal" fraud and robberies, villainies which horrify heaven and send ripples of joy throughout all the confines of hell. Says the *Voice*:

The Standard Oil Trust is a chartered brigand that has grown so strong and rich that it now tramples on all the laws of God and man with absolute impunity.

It hires incendiaries to burn down the refineries of its rivals.

It hires thugs to ruin oil wells that are discovered by farmers.

It bribes oil inspectors who pass cheap, low grade oils, that explode and burn up women and children.

It bribes legislators who lower the oil test to the danger line.

It elects members of Congress and United States Senators.

It buys judges and prostitutes courts of law.

It is a smug swindler who goes to church and passes the contribution box.

It is a thief who filches from the meagre store of the poor. It is a universal despoiler and desolator.

It is a moral devilfish whose slimy tentacles overspread the land, making crime seem respectable—making honesty the badge of stupidity.

It is the apotheosis of triumphant demonism.

It has made justice a mockery and republican institutions a sickening sham.

The Standard Oil Trust is the boss brigand of a league of brigands, which now holds the United States of America as a conquered province.

These plutocratic anarchists have overthrown a government of the people, by the people and for the people.

They have subverted the Constitution of Washington and Jefferson.

They have converted our legislative halls into foul shambles where the liberties of the people are slaughtered.

They have transformed our courts of justice into thieves' dens where bogus title is given to the stolen wealth of the people.

The great republic of America lies nerveless and prostrate, and these lawless freebooters are trampling the life out of it.

If the arraignment by the *Voice* is just, then indeed John D. Rockefeller's nervous prostration is easily accounted for. His fortune represents a series of piracies which defy hyperbole, the thought of which must necessarily make him nervous, make his brain reel, and which may finally send him to a madhouse. There are thousands and tens of thousands of workingmen whose

fifty or sixty years of toil would not bring them Rockefeller's income for one day, who are far happier than he.

The arraignment of John D. Rockefeller is the arraignment of our civilization, our Christianity, our law-makers, our government. It is an arraignment that breeds anarchists. It discloses conditions that are fruitful of evil, and only evil, and that continually.

Can these conditions be changed? We answer, only by the united, the intelligent, the patriotic action of the great body of the people. If they fail to act, if they are supine, if they permit things to drift the way they are drifting, then there is no hope. History will in due time repeat itself. The danger line is in sight.

A FRENCH statistician has come to the conclusion after much patient investigation, that American countries, are even now, great treasure houses, and that their riches will in the future be so vast as to excite the cupidity of men to a degree that will disregard the sacredness of tombs. The Frenchman says that American dentists insert every year in American teeth the enormous amount of 800 kilogrammes (about 1,800 pounds) of pure gold, which represents nearly four hundred and fifty thousand American dollars. This gold is never recovered, of course, but is buried with the persons in whose mouths it is placed. Making allowance for the rapid increase of the population of the United States and for the continued deterioration of American teeth, it appears that in less than a hundred years American cemeteries will contain a larger amount of the precious metal than now exists in France. According to the Frenchman's figures, there will be at the end of one hundred years, \$45,000,000 worth of gold in the teeth of dead Americans, independent of what has already been buried—which is doubtless equal to \$45,000,000 more—a total of \$90,000,000. In the teeth of such facts, we do not hesitate to say that hunting for gold in American graveyards will be more profitable than hunting for elephant's tusks in Central Africa.

A MASSACHUSETTS CONGRESSMAN LECTURING THE CLERGY.

Hon. George Fred. Williams, M. C., a citizen of Massachusetts, not long since, in addressing the clergy, pointed out numerous sins, at least of omission, the divines will have to answer for. We reproduce the address as we find it floating about, as follows:

"What is it which deadens the priestly function when the immoralities of public life are exposed to view?" Our public business and its moral standards and methods belong to every citizen; nay, more, as they take the stamp of public approval they pass current among men as our authorised coin. Yet while public men are striving upward, seeking to bring more honesty, more decency, some touch of Godliness into the affairs of the republic, it can not be denied that to the pulpit they look, generally in vain, for protection or encouragement.

It is true there have been notable exceptions; and ministers of this faith have furnished many of them; they make it easy for me now to thank them for their work, and to beg that it be honored and emulated.

It has been given to the church to keep the spiritual interests of men, and the field of moral instruction has been yielded to it quite as fully as that of religious teaching. I ask you by what right you abandon the great field of public morals; why are you silent in the face of public wrongs and scandals? Where are your words for the champions of political honesty?

What wonder that the power of the church wanes, if it stands silent and listless as the devil takes possession of the public business. Let me suggest that the ministry owes its intervention in the moral struggles of politics, first to the politician, second to the cause of morality itself, and third to his country.

You owe it to the politician who is making any effort to hold up the standards of political honesty. He needs your help even for himself, because there is no calling in life which so discourages ideals and makes high motives so dangerous as politics.

Men risk their reputations when they enter politics; therefore men with reputations are apt to keep out of it. I fear clergymen avoid it less because it threatens their reputations than because their pulpits are in danger. I agree that there is common consent among the political sinners, that they should not be referred to from the pulpit, but that consent should not settle your duty.

But surely the church has jurisdiction, sin is its peculiar business, and the ministers are pure men who cannot be frightened with recriminations. I ask in all earnestness "if public wrong, immorality, dishonesty is not the business of the clergy, whose business is it?"

The politician is the thing to be reformed; he will reform as public opinion demands, and you are responsible for the sentiment of the community. Indeed, ministers of the gospel should stand in the

front ranks of attack upon public wrongs. You need not mix in politics; but politics is not wrong and wrong is not politics. It is because public sins are most powerful that it is your first duty to attack them. In private sin men shrink and are ashamed, because they are alone; public sin becomes bold and defiant because many are joined in it. The offenders stand together, they defend together; they may be enough to call themselves of the public; they may even constitute the public; they may sit in your front pews and menace you.

This clergy business is greatly misunderstood by the public at large. The clergy constitutes one of what are called the learned professions, and clergymen are produced in large numbers annually by certain theological schools, academies, colleges and universities. They come forth with their diplomas, and then begins the hunt for pulpits, positions and salaries. The supply is largely in excess of the demand, and yet a great many pulpits remain vacant, chiefly because the church is too poor to pay a graduate such a salary as an educated minister requires in these days, when fashion and folly, pomp and pretension have secured a guiding influence in the church. The minister being human and living at a time when miracles are not performed, must have money if he is to keep up with the procession. To secure money he must be careful about his utterances. In a general way he may denounce sin and to some extent particularize, but the moment he essays to hold up to just condemnation such sins as "society" approves—and their name is legion—such as Christ anathematized, he will experience the value of silence. Here and there a clergyman will speak right out, but the great majority will change their tune and save their salaries. It is human nature, and clergymen carry about as much of the article as average mortals engaged in other pursuits, a fact which Congressman Williams apparently has not discovered.

Take for instance, what is called the "State" or the "Established Church" where it exists, and it is seen at once that it is a monopoly, a trust, run by a syndicate for the maintenance of which the people are taxed. In such a church the term "religion" in its relations to christianity defies characterization. It cannot be defined in a way to secure commendation. It is a con-

tinuous display of aristocratic pomp and circumstance—human to a degree that defies exaggeration.

Congressman Williams seems ambitious to exalt clergymen to the skies that he may let them drop to the earth regardless of consequences. The Congressman sees, as he has opportunities for seeing, that public business is conducted in a way to disgrace the nation, and he wonders why the clergy are silent. He thinks the clergy should help such politicians as are laboring for a higher moral standard in the government of state and nation. If the clergy seek information as to what class of politicians is right, from the press, they will come to the conclusion all are rotten to the core, and that if they denounce one they should denounce all, with rare exceptions. Indeed, Mr. Williams says that "men with reputations keep out of it." But many of the politicians are church-goers and pay liberally, and Mr. Williams might profitably inquire if such facts have anything to do with the silence of the clergy.

But there is more sin in private business than in governmental affairs, and the clergy do not enter the arena to rebuke the particular sins of business men which often involve whole communities. Why? Because if they were to do so the "paying members" would withdraw their support, and it is therefore too much to ask the clergy to make any new departure.

Some time since one hundred clergymen in a western city were invited to deliver sermons upon labor topics. Two of them consented to do so; ninety-eight declined the invitation. In the city referred to there were not less than 10,000 working men, but as a general thing they were poor. Was that the cause of refusal? Or did they believe such subjects as work, wages, rest, eight hours for a day's work, etc., were unworthy of their attention? We express no opinion. It might have been that the clergy was opposed to "class preaching."

To sum up the matter, clergymen preach for pay—for salaries. They too must live, and they are not disposed, more than other humans, to place their living in jeopardy, and in this one fact Mr. Williams will find the solution of his problem.

THE MACHINE AND THE MAN.

The world demands machinery, and it is held by some that machinery is playing the part of an evangelist, and is redeeming the world from poverty, squalor and degradation. In this line writes Fred Woodlow in the *Iron Age*. In discussing "machinery and hand power," he says:

Hand power was the primitive motor. It was equal to its task. The supple hand supplied the wants of man. That was enough. The product was ample and the producer busy. As population increased and civilization developed new conditions, the hand of labor was not equal to the wants of man. Invention became a necessity, machinery was industrial salvation. It supplemented elbow grease and perspiration. Its introduction was gradual. It had its limits. The pump did not exhaust the well. The fever of getting rich was not epidemic, and patent laws were unknown. In the normal process of industrial evolution the boot and the foot were on good terms, and it was not till number six men with number nine ambitions got on the top rail of the industrial fence, that the inventive brain became a bottle of brandy and went into hysterics. Machinery was used without any regard to the displacement of labor and empty bellies. Labor recoiled from these new conditions, and we read of riots and rebellion, and what to us to-day seems to be unreasonable and anarchial hostility to machine work. The masses were not to blame, in a logical sense, they saw the sky through a gimlet hole, and measured the future by the tape-line of to-day. They made a mistake, but it is understandable if we put ourselves in their wooden shoes and weigh out an ounce of bread to a pound of appetite.

Machinery, through the old eye-glasses, meant over-production, cheap wages, rage, hunger and idleness. Such was the logic of the times, and the reason why so much of hostility pervaded the industrial world towards anything and everything that displaced the old motor of hand power. Time has pulverised the old argument and reversed the original conditions. Invention had lifted us out of a deep hole, and machinery bridged the stream we could neither swim nor leap.

The steam engines in England alone could now do in eighteen hours what it took the ancient Egyptians twenty years to accomplish with 100,000 men; and the spinning machinery in Lancashire can do in one year as much work as 21,000,000 persons in the same time could do with the old distaff and spindle. This tremendous power has been reached by degrees. It was not instantaneous but gradual, and if monopoly and the lust of money went at a gallop, the supreme power at the back of all forces put a bridle on the wild ass.

In the textile manufactures, that represent the most colossal of all modern enterprises, we get the fly-shuttle, the drop box, the spinning jenny, the water frame, the power loom and the steam engine. Each of these inventions was opposed at its inception—it was another mouse to nibble at the poor man's cracker and the torch and brick bat were

used to intimidate the progressive manufacturer. But few men to-day have so little intelligence under their hats as not to see that with multiplied inventions have come new and increasing industries, and mechanical skill has not emptied the bag of flour, but doubled the grist at the mill. The industries of civilization increase with its inventions, and where science discovers a force in nature, its utilization is not a brake on the industrial wheel, but an additional seat in the coach and a new horse in the harness.

The electric light may dispense with the old lamp lighter, the locomotive may halt the stage coach, and the screw propeller may strand the old-time brigs and galleys, but the displacements of industrial methods and forces have not reduced the chances of employment nor left the multitudes with little to eat and less to do.

Mr. Woodlow's estimate of the power of the machine we do not presume is exaggerated, in fact, it may be underestimated. It is quite probable that the steam engines of England are equal in power to all the hand power of the inhabitants of the earth.

He says that the steam engines in England could do in "eighteen hours" the work performed by 100,000 men of Egypt in twenty years. 100,000 men twenty years equals 2,000,000 men one year. If the 2,000,000 men work twelve hours a day 300 days, they would have worked 3,600 hours, therefore the steam engines of England could do as much in eighteen hours as 2,000,000 men could do in 3,600 hours. If, therefore, the steam engines of England could do in eighteen hours the work required of 2,000,000 men 3,600 hours, they could in 3,600 hours do the work of 400,000,000 of men.

The population of the world is estimated at 1,500,000,000, deduct one-half for women and we have 750,000,000 men, deduct from the men one-third for children and old men, and we have a remainder of 500,000,000 to do the work of the world—as the steam engines of England can perform the work of 400,000,000 we have 100,000,000 remaining to take their chances.

Take the steam engines of England, Germany, France and the United States of America, and it is safe to say that England does not supply more than one-third of the steam engines in operation, hence, it is to be assumed that the countries named operate steam engines equal to the hand power of 1,200,000,000 men, or 700,000,000

more than the effective force of the world, provided the 500,000,000 were all workers.

But the countries named do not supply more than three-fourths of the steam engines of the world, hence it becomes necessary in the calculation to assume that the steam engines of the world are equal to the hand power of 1,600,000,000 men, or 1,100,000 more than the world contains of men capable of physical toil.

Again says Mr. Woodlow, "the spinning machinery of Lancashire can do in one year as much work as 21,000,000 persons" performed before the various machines in operation were invented. The population of England, Scotland and Ireland in round numbers is about 38,000,000. Of men, women and children who work for wages it is not presumable that the number exceeds 5,000,000, hence the Lancashire machinery does the work of 16,000,000 working people more than Great Britain and Ireland contains, and the statement that the steam engines of England are equivalent to the hand power of 400,000,000 of men is brought within the realm of probability.

Mr. Woodlow talks eloquently. He not only shows that those who opposed the introduction of machinery were blind, but that the machine is the one thing needful to carry forward the splendid enterprises of the age.

Machines are to multiply indefinitely. No sane man doubts the proposition. New machines are to be invented, all "labor saving," all proclaiming blessings, all to help on civilization and elevate man in the scale of being.

If it be folly to the extent of stupidity to suggest that "labor saving" machines are injuriously numerous and powerful, may it not be, on the other hand, blindness to the extent of cruelty and criminality, to provide no remedy for conditions no longer conjectural, where the machine so far usurps the prerogative of the hand that God's mandate to "eat bread in the sweat of thy face" cannot be obeyed?

The query brings to view a new phase of the question which neither Mr. Woodlow nor men of his type deem it prudent to discuss. Nevertheless, there are men of splendid vision who look at the "machinery and

hand power" question through neither a "gimlet hole" nor an auger hole, but who, taking a survey of the field of labor with a vision unobstructed, see that a time is coming when the necessity for some remedial policy will be inevitable.

What is the proposition now? It is a less number of hours in the twenty-four devoted to work.

In the case of the Lancashire machinery doing the work of 21,000,000 persons in a year, if it is in operation ten hours a day for 300 working days it performs the work of 70,000 persons each day, or 7,000 every hour. If, therefore, the hours be reduced the ratio of reduction indicates the ratio of the increase of hand power required to carry forward the enterprises of Lancashire. Tabulated results are as follows:

HOURS MACHINERY OPERATES.	Equal to persons.	Reduced to hours.	Equal to persons.	Gain to persons.
10	70,000	9	63,000	7,000
9	63,000	8	56,000	14,000
8	56,000	7	49,000	21,000
7	49,000	6	42,000	28,000
6	42,000	5	35,000	35,000

Machinery displaces hand power, to what extent, Mr. Woodlow shows; therefore, if hand power is to regain what has been lost it is not required to destroy the machine, but simply reduce the hours of its operation. This, as we have shown, would modify conditions, and to this it must eventually and inevitably come. If the work of the world, by combining machine power and hand power could be done in one hour each day, why should there be a demand to work more than one hour? If reducing the number of hours affords an opportunity for all who must work or starve to earn their living, why should any one object? "Work or starve" is the decree. Men will not starve in large numbers if there is food in sight.

It may be well to glorify the machine, but the time is coming when the man is to be heard. Standing armies and shotted guns may postpone the conflict, but not indefinitely. It were better far to reduce the hours of labor and to let machinery stand still a few hours each day if thereby work for the hand and food for the stomach can be supplied.

REVOLUTION AND REBELLION vs. STAGNATION.

There are those who cry "peace," but there is no peace, nor will there be until right triumphs. Till then, there will be wars, and rumors of wars. When right, truth and justice, in holy alliance, rule the world, the reign of peace will begin—not till then.

There are those who deplore war, revolution and rebellion. Manifestly, war is to be lamented, if it is waged to enthrone or to perpetuate wrong, but it expands to superlative grandeur if it is for the purpose of establishing justice and breaking the fetters of slavery. In such cases every blow struck for the down-trodden sends thrills of joy throughout the world. The cowering slave looks up and sees, however dimly, the dawn of a new era when he shall be free.

There are men in the United States who are everlastingly deprecating revolution and rebellion. They prefer stagnation. Had they lived in '76 they would have said to the patriots of the time, "Pay taxes and submit to King George—pay tribute and wear a yoke." They would have been Tories. They would have said, "Peace at any price is better than war."

Such degenerate creatures constitute the extremes. In the one case they are mercenary and mean. They would make sacrifices neither of money, time nor comfort; they would place neither life nor property in jeopardy, and in the other case, they are degenerate, base born and cowardly. Liberty and independence are meaningless terms to them. In these extremes there is no martyr material, but any quantity of the Judas Iscariot stuff. They never won a battle for the right since Adam was driven out of Eden, nor will they win such a battle while the pendulum of time continues to vibrate. They would as soon be the subjects of a Tiberius, a Caligula or a Nero as sovereign citizens of a republic, and there are thousands of these burlesques of men in the United States. They are either plutocrats or poltroons, in fact, both. One is on top, the other at the bottom; one is the dog, the other is the flea. On all sides is seen the moneyed aristocrat and the de-

generate sycophant—the crawling dirt-eater. Together they exert a tremendous influence. As yet, they are not in the majority; at least, such is the hope. There is a mighty host who will not cower; who will neither take off their hats, shave off their whiskers, button up their coats, nor do aught else that a slave is expected to do by the command of his master and owner. The forces are not yet in operation that can crush them. They will protest against wrong though every star in the blue vault above them falls. They will speak in spite of the "gates of hell." Prisons do not intimidate them. The storms of obloquy they meet as fearlessly as veterans meet the storms of bullets, while with the lamented Lowell they sing:

Truth forever on the scaffold, Wrong forever on the throne,
Yet that scaffold sways the future, and, behind the dim unknown,
Standeth God within the shadow, keeping watch above His own.

We see dimly in the Present what is small and what is great,
Slow of faith how weak an arm may turn the iron helm of fate,
But the soul is still oracular: amid the market's din,
List the ominous stern whisper from the delphic cave within,
"They enslave their children's children who make compromise with sin."

Then to side with truth is noble when we share her wretched crust,
Ere her cause bring fame and profit, and 'tis prosperous to be just;
Then it is the brave man chooses, while the coward stands aside,
Doubting in his abject spirit, till his Lord is crucified,
And the multitude make virtue of the faith they had denied.

'Count me o'er earth's chosen heroes, they were souls that stood alone,
While the men they agonized for hurled the contumelious stone,
Stood serene and down the future saw the golden beam incline
To the side of perfect justice, mastered by their faith divine,
By one man's plain truth to manhood and to God's supreme design.

By the light of burning heretics Christ's bleeding feet I track,
Toiling up new Calvaries ever with the cross that turns not back.

And these mounts of anguish number how each generation learned
 One new word of that grand Credo which in prophet-hearts hath burned
 Since the first man stood God-conquered with his face to heaven upturned.
 For Humanity sweeps onward; where to-day the martyr stands,
 On the morrow crouches Judas with the silver in his hands;
 Far in front the cross stands ready and the crackling faggots burn,
 While the hooting mob of yesterday in silent awe return
 To glean up the scattered ashes into History's golden urn.

The idea of the poet is, that some time "the world, the flesh and the devil" are to be conquered. Possibly. We treasure the hope, but the outlook is not as cheery as could be desired, nor yet is it alarmingly dubious. Plutocrats will be required to surrender their grasp upon the "iron helm of fate." When labor is fully equipped and ready, things will move with more satisfactory rapidity. Till then, patience and agitation. The revolution has begun. Rebellion is in the air. Nature abhors a vacuum, and stagnation is equally out of order. Labor, mind and muscle are in alliance. The world moves, and it is to move at no distant day in the right direction. Let free thought and free speech have full sway and the right will triumph.

THE *Washington Post*, having exceptional opportunities for knowing what things are called in Washington society, says that "taking \$1,000,000 is called genius; taking \$100,000 is called shortage; taking \$50,000 is called litigation; taking \$25,000 is called insolvency; taking \$10,000 is called irregularity; taking \$5,000 is called defalcation; taking \$1,000 is called corruption; taking \$500 is called embezzlement; taking \$100 is called dishonesty; taking \$50 is called stealing; taking \$25 is called total depravity; taking one ham is called war on society." Occasionally a "genius" is incarcerated, but only when he has taken a million from the rich. The robbery of the poor is not regarded of sufficient importance to require comment.

It costs only \$200 to make the tour of Great Britain and the continent. Cheap enough.

NATIONAL PROSPERITY.

No one pretends that the United States is not prospering to an extent almost beyond the grasp of computation. Those who study statistics arrive at conclusions which at once dispel doubts, and convince the most skeptical that in spite of every obstacle the strides of the country in the march of progress are gigantic.

Among those who have discussed the subject critically is a Mr. J. C. Reiff, who gives twenty-one statistical reasons why everybody, particularly "security holders," should have abounding confidence in the future of this country.

We find in a recent issue of the *Railway Age* the following reference to Mr. Reiff's views:

Mr. Reiff's first reason for being a bull is the growth of the country, the population having increased from 38,558,371 in 1870 to 62,622,520 in 1890. His second is the decrease in the public debt from more than two billion dollars in 1870 to \$830,000,000 in 1889, and then he runs on showing the decrease of interest from \$118,784,960 to \$33,752,354 the reduction of the per capita debt from \$60.46 to \$15.12 and the decline of interest per capita from \$3.08 to \$0.52. He then points out that notwithstanding the gross revenue collected per capita \$10.67 in 1870 and was reduced to \$6.01 in 1889 and that notwithstanding the expenditures were reduced per capita from \$8.03 in 1870 to \$4.38 in 1889, the excess of revenue was \$101,601,916 in 1870 and \$105,063,043 in 1889. And meanwhile the cash in the United States treasury increased from \$106,207,816 in 1870 to \$643,113,172 in 1889. In the same period gold in the United States increased from \$135,000,000 to \$680,063,505. The number of national banks increased from 1,571 to 3,094 and their capital and surplus from \$502,485,201 to \$796,580,069. Savings banks increased from 639 to 894 and their deposits from \$802,490,298 to \$1,425,230,349. The number of depositors in 1883 was 3,015,955 and in 1889, 4,021,532, pretty conclusive evidence that our poor are not growing poorer.

The production of anthracite and bituminous coal increased from 70,481,426 tons in 1880 to 142,037,935 tons in 1888. Pig iron increased from 1,665,179 tons in 1870 to 6,489,738 tons in 1889, while the price was steadily reduced from \$38.25 per ton to \$17.75 per ton. The production of steel rails was increased from 30,357 tons in 1870 to 1,390,976 tons in 1889, the price being reduced from \$106.75 per ton to \$27.50 per ton in 1889. The wheat crop increased from 235,884,700 bushels in 1870 to 490,560,000 bushels in 1889 and the corn crop from 1,094,755,000 in 1870 to 2,112,892,000 bushels in 1889. The value of the hay crop increased from \$338,969,680 in 1870 to \$406,449,565 in 1888, the value of farm animals from \$1,576,917,566 in 1880 to \$2,418,366,028 in 1890. The value of cereals has increased from \$997,423,018 in 1870 to \$1,320,255,398 in 1888 and the value of metallic and non-metallic mineral products from \$413,901,748 in 1884 to \$591,672,795

in 1888. The cotton crop has increased from 3,114,592 bales in 1870 to 6,935,082 bales in 1889. The value of domestic exports increased from \$376,616,473 in 1870 to \$730,282,619 in 1889, of which the export of domestic manufactures increased from \$78,350,411 in 1870 to \$138,675,507 in 1889. The post offices increased in number from 28,492 in 1870 to 58,999 in 1889, while the revenue increased from \$19,772,221 to \$56,175,611. The railroad mileage increased from 76,808 miles in 1876 to 161,397 miles in 1889, while the gross earnings have increased from \$497,257,959 to \$1,033,736,596 and net from \$186,452,752 to \$322,284,936. The rate per ton per mile on freight was reduced from 00.1236 in 1882 to 00.976 in 1889. Mr. Reiff then quotes the cost of the necessities of life to the consumer, showing it to have been reduced since 1870 about 50 per cent.

It so happens that such statistics and conclusions create unrest. Wealth accumulates while the victims of poverty and wretchedness increase. The rich multiply in number, fortunes mount up to colossal proportions, the few obtain control of the surplus wealth which labor creates, and as a consequence dictate the policy under which workingmen must toil or starve, indeed, all too often toil and starve.

No statesman of the time in which we live denies that a monstrous wrong exists, in fact, a whole brood of monstrous wrongs, and that something must be done, and that without delay, if widespread disasters are to be prevented in the near future.

The discussion of these wrongs has suggested the creation of a new political party, to antagonize the old parties, which, it is held, have so legislated as to make the triumph of wrong possible. Again, workingmen are constantly organizing to protect their rights, their determination being to secure, if possible, better wages, which would in some measure at least, reduce the flow of wealth to the coffers of the few and thereby establish peace and contentment, where at present unrest and feelings bordering upon enmity exist.

In all of the great centers of population where the great industrial enterprises are conducted, there are fierce contentions between employer and employé, and this unrest, this feeling of antagonism between capitalists and toilers, has spread to the agricultural districts and is being fanned to a flame. The most patient and conservative of people are the most intensely aroused because of wrongs existing which none deny.

Statistics demonstrate that in this land progress and poverty go hand in hand, rather than progress and prosperity. The plutocrats have secured control of every avenue to wealth, and levy such tribute as suits their greed, and when they are satisfied the facts demonstrate there is little left to cheer and encourage those but for whose toil no wealth would be created.

That there is to be a change in the programme at an early day is not specially cheering, and in the fact lies the danger, but that efforts are being made to modify some of the more cruel conditions under which thousands work and perish, keeps hope alive that eventually the right will triumph by peaceful means, and the day when history repeats itself in violence may be indefinitely postponed.

THE *American Manufacturer* is moved to remark that "all over the country there is a demand for laborers; there is abundance of work to be done if men will but go and do it, the chief thing is to go. To be sure much of this work is of the coarser kind, and it is in the country, perhaps in another state, but it is the coarser kind of work for which most of the unemployed are fit, and surely it is better to live with a full belly in strange surroundings than to starve in a back alley, however much the latter may seem like home." The statement is misleading—it is not true. It is a libel upon thousands of idle men who would work if they could obtain work. For instance an idle workingman in St. Louis, hears that he can obtain work in Kansas City. Out of work and out of money, the idle man can't go to the distant place. If he starts on foot he becomes a tramp and is liable to be arrested. It would be easy to multiply illustrations. It is a fact, that in all the great centers of population, if an advertisement appears "men wanted," regardless of the kind of employment—there will be ten applications for every place offered. The world has had enough of this lying misrepresentations of idle men.

A BAROMETER has been invented to measure thunder in Congress and State Legislatures.

AN ODISIOUS COMPARISON.

In the discussion of labor topics we are everlastingly told that the condition of the American workingman is vastly superior to the European workingman, and it is urged upon the attention of the American toiler, that since he is better off than his European colleague, he should be content and quiet, and cease agitation. The idea being that he should accept what was offered him in the way of wages, and make the best of it, because, as a general proposition, that is the way things work in Europe. Wage workers in the United States have a right to complain of this ceaseless effort to reconcile them to a policy of flagrant injustice, by references to the down-trodden workers of Europe. It will be found by perusing any of the laborious arguments of the pampered statisticians of monopolists and stock watering corporations, that the tables are prepared and paraded before the public for the purpose of demonstrating that in the various trades, Americans receive higher wages than European workers, and as figures are supposed to always tell the truth (when in fact they can be made to lie like the devil), the conclusion is at once arrived at that any unrest on the part of workingmen is proof positive that they are the enemies of capital, of progress, of law and order, and should be suppressed. The idea upon which the argument is based is vicious to the last degree. It is conspicuously anti-American. In the United States the workingman is a citizen. He may be poor and obscure, born at the very bottom round of the social ladder, ragged, without influential friends; born in a hut or in a wayside cabin in the wilderness, but a sovereign born, nevertheless, with rights, prerogatives and responsibilities unknown to the unfortunate poverty born child of Europe. We do not overstate the condition. It is only required to write the name of Abraham Lincoln, and history corroborates the statement. To eternally parallel the American workingman with the European laborer is to debase American citizenship. Its purpose is to degrade labor and exalt wealth. It is tabulated degradation, and the outrage is perpetrated only by those who favor the establishment in the United

States of class and caste, in which the few shall be able to levy and collect tribute from the great army of American toilers in the future as is being done at the present time.

In carrying out the purpose, writers in the interest of corporations and monopolists, trusts and syndicates, are constantly parading before the public what these capitalists are doing for workingmen. We are told with what great solicitude certain rich men look after the interests of their employes and their families. These philanthropic magnates profess to feel profoundly the great responsibility Divine Providence has thrust upon them, in watching the moral, religious, financial and physical welfare of men who work for them—American sovereigns, men whose votes make presidents; men who are born the peers of kings, sovereigns in their own right. They talk of their employes after the style of the southern planter, when labor was a commodity as much as rice, cotton, tobacco or sugar, and if by chance they pay the American citizen as much wages as are paid in Europe they insist that the American sovereign citizen workingman shall be satisfied and silent. Such is the drift, and if workingmen do not protest and declare their independence of such a humiliating, patronizing policy the work will continue to go forward. American workingmen are in the majority, are eminently able to take care of themselves without the interference of a patronizing government or dictation from employers. A robust manhood, permeated with American ideas of government and conditions, self-reliant, asserting its right to do what it pleases with money earned, demanding its rights and asking no favors, is the supreme demand—anything less is accepted degradation.

For the past ten years the estimate is that the wealth of the United States has increased at about the rate of \$5,000,000 a day. At the same time there has been a startling increase of poverty, idleness and crime. Poor houses, jails, work houses and penitentiaries are overflowing full. Divorces multiply, and the cry is "failure to provide." The army of tramps increases in numbers but the millionaires are happy.

A NEW PLUTOCRATIC AMUSEMENT.

In a recent issue of the *Brooklyn Eagle*, Blakely Hall, under the caption "What are we coming to," writes as follows:

A society for the protection of the poor will be in order next. A number of enterprising men in New York have within the week completed the organization of a corporation which has for its object an exhibition of the slums and poorer quarter of New York to sight-seers. A number of guides have been procured, and their services may be had on a regularly scheduled price list, and maps of the town are printed on which the slums are indicated by dark shading. Full protection is guaranteed to persons wishing to see "the poor man in his home, the laborer in his hovel, the opium joint, fan tail games and Italian dens where at times thirty people live together in a room twenty feet square." I should not mind being a "poor man in his home" some time when one of the prying and insolent agents of this particular concern pushed his way in.

The patronage of the rich is asked for on the ground that slumming is the most absorbing of diversions. The organization of the concern is due entirely to the silly affectations of society people toward an interest in their lowly neighbors. The rich men and women of the town have been muffling themselves in ulsters, and pulling soft hats over their eyes, and wandering through Mulberry, Hester and Delancey streets at midnight under detective escort, with short gasps of dismay and with a tremendous ado about the novelty of it all. Most of their parents were born in the slums, by the way, and a good many of their fathers and mothers might have given them points about the life of the people from personal experience.

They entered into the bedrooms and eating rooms of the paupers of the tenement districts at midnight without a suggestion of hesitancy. The manners of the poor have been admirable, for it is not recorded that these impertinent intrusions have been followed by any fractured limbs or broken heads. They have borne the insolence of the attention of the 400 without an outbreak, but they should be polite and return the call. The visit of a group of tattered outcasts at an exclusive dance on Fifth avenue, and their forced entrance to the house under police escort would have just as much sense and decency in it as the slumming of the rich.

Just think of it, a corporation organized in the City of New York to exhibit the wretchedly poor of the city to the aristocracy as a means of making money. What a splendid subject for a cartoon or for an oration. In what a shameful light does such an enterprise exhibit the plutocratic class of New York. It is not recorded that in Sodom or in Pompeii the people, though lower than beastly in their habits, ever sunk to such depths of vileness as now characterizes a portion of the moneyed

aristocracy of the City of New York. To say that it "beats hell," must be regarded even in refined circles as a mild expletive—in fact, no word or phrase, known to the language can be found to do the subject justice. When any portion of a community places its poverty, wretchedness, crime and degradation on exhibition for the purpose of money making, the verdict must be that those who seek to improve their fortunes, by such means must be moral and mercenary lepers, too leathsome and depraved to be reached by any ordinary means of redemption.

SPOT CASH.

A writer says that "monthly payments mean, for the majority of workmen, a system of store credits which makes commercial independence impossible. It means either that the hands do not appreciate the advantage of the cash system, or that they have not had the chance to get far enough ahead to avail themselves of those advantages. It means that the manufacturer can avoid the expense and trouble of frequent cash payments because the hands either do not realize the loss which they suffer, or are not fit to avail themselves of the advantage of cash payment if it were granted them." The subject is one which is of vital interest to every working man in the land. Analyzed, it presents astounding results. To have a correct idea of the advantage to capital, resulting from monthly payments, an approximation to sum totals must be had. We shall endeavor to simplify propositions. Suppose there are 2,000,000 men in the United States receiving \$1.50 a day, or \$3,000,000 a day—equal to \$900,000,000 a year. The statistics for 1880 show that wages paid for that year amounted to more than \$900,000,000. Suppose this sum was paid in monthly payments, then the fact is disclosed that capital has had the custodianship of money earned, just one half of the time, or six months of the twelve months constituting the year. Hence, capital has \$900,000,000 belonging to the 2,000,000 working men six months. Suppose money is worth six per cent., then \$900,000,000 is worth for six months the sum of \$27,000,000. If the amount of withheld wages is worth

that much to capital, it is worth that much to labor, or \$13.50 to each of the 2,000,000 working men. In numerous instances the amount, \$13.50 would pay two months rent, and were we to particularize, purchase many things of value to the homes of working men.

But this is by no means the only objection to monthly payments. The difference between "spot cash" and credit means more than the 6 per cent. It means, in a majority of instances, fully 10 per cent. That is to say, cash in the hand of a prudent buyer means a difference of fully 10 per cent. as against credit, and this on the disbursement of \$900,000,000 is \$90,000,000. It will be seen, therefore, that while the capitalist has made \$27,000,000 by withholding wages, the working men have lost \$90,000,000 by not having "spot cash" with which to purchase the necessities of life, as the days go by. But it may be said, in cases where employers keep "company stores," the employé does not purchase, on an average, within 20 per cent. as low as he could do if he had "spot cash," in which case he is doubtless fleeced of his hard earnings. When men are looking for remedies for the cruel wrongs under which thousands of working men and women are laboring, this thing of withholding earnings should have special attention, for by it working people are annually robbed of millions, and their condition made more haggard by an injustice which legislation could at once remedy.

HORSE CARS, from Cairo to the Pyramids, will soon be running. Arrived at the Pyramids, an elevator will take you to the top of old Cheops, when, with "forty centuries" you can look down upon the sand.

REPORTS have it, that "Portugal has a female bull fighter." If the American press is not controlled by Ananias, the United States has a thousand female bull fighters—fighting the meanest sort of beasts.

WOODWORTH, who wrote "The Old Oaken Bucket," was a jour printer, and A. P. Russell, in his literary notes, says he wrote it "under the inspiration of brandy." If so, it must have been a good article.

We of the United States can boast of some rich women, but says an exchange the richest woman in America is a resident of South America. She is not only the richest woman in the Americas, but she is the richest woman in the world. She has one of the largest fortunes held by either sex. This woman is Dona Isadora Consino, of Chili. She is the biggest real estate owner in Santiago and Valparaiso. South American fortunes are hard to estimate, but many people have put hers above \$200,000,000. Money multiplies fast in her hand, for her eye is everywhere. If Dona Isadora is maid or widow, and inclined to matrimony, now that her wealth is advertised, she can, if she chooses, obtain for a husband, a European with a high title—possibly a throne—and become the mother of kings. Yankee girls of comparatively small fortunes, pick up Barons, Dukes and Lords, and when the announcement of their misfortune is made, common sense people exclaim, "Poor fools."

ORATORY may whirl away mind and imagination in a magnificent tide, and nations hang breathless upon its utterances. But one day—its silent and past—the spell is broken, and there is left behind but a name. It is the press, the labor paper that by constant reiteration day by day, that will wear through the hardest stone and cut a new channel for the waters of labor to flow onward.—*Lastier*.

Yes, and it becomes the duty of the labor paper to point out in what regards labor has been and is still oppressed and by whom. This done, the howl is set up by capitalists and their paid organs, that it is the labor paper that creates the dissatisfaction existing in the ranks of labor. Not so. The labor paper, true to its duty, exposes wrongs and demands redress. By agitation there is hope for the workingman. Without it his doom is sealed.

REPORTS have it that a middle aged lady recently called upon Mr. Chauncey M. Depew, and was so delighted with his conversation that she "impulsively kissed him." Was her name Patsey Matilda Arthur?

BARNUM would doubtless pay \$10,000 for Frick's hide, when the creature dies. The great showman pays big money for monstrosities.

Principle of the Single Tax.

IF Mr. Charles Marshall will read Henry George's "Social Problems," which is written in an easy style, suitable for those who have not been in the habit of giving close study to economic questions, he will find therein a clear exposition of the Single Tax principle.

Everybody knows that in a widely scattered community business is done at a disadvantage. The merchant is unable to build up a large trade, as there are, perhaps, only a few score customers within many miles of his store; and his customers suffer too, on account of the high prices he is obliged to charge in order to make up for scarcity of business.

In a crowded city, on the other hand, the merchant can have a store conveniently reached by thousands of customers. Business competition may, perhaps, compel him to sell at very low prices, but he can clear large daily profits on account of the large volume of his business. These low prices are, of course, a considerable benefit to the city resident. Both merchant and customer, therefore, profit by the simple circumstance that population is dense. And there are other benefits that accrue from density of population—educational, social, etc.

A moment's reflection will make it clear that whoever desires to enjoy these benefits cannot escape the necessity of paying for them. If a practical test is wanted, let the skeptic undertake to erect a business edifice upon some choice location in a growing city, without first paying somebody roundly for the privilege of doing so.

The question up for discussion is, who should receive payment for these benefits that accrue from density of population? Landlords do collect payment for them, upon the transparent pretext that they are charging for the use of their lands. Single Taxers claim that payment should be made to the community. Can it be shown that there is any injustice in their proposition?

Mr. Marshall wants it shown "that the Single Tax would be beneficial to the poor." He says: "I do not oppose the Single Tax theory, I only ask its apostles to show in what way it would benefit the toiling masses."

If it should happen that Mr. Marshall were unjustly cast into prison, and all his effects forfeited to the state, and then if it should be proposed to release him from prison, he would probably refuse to be released, on the ground that his friends had not shown him how his release would put a cent in his pocket. Or, supposing a man set out to walk from Chicago to St. Paul, and should fall into the hands of robbers, who should leave him bound hand and foot. If Mr. Marshall should happen along and notice the man's plight he probably would

not cut his bonds, for the reason that cutting the bonds would not take the man to St. Paul.

Laws cannot create wealth. The Single Tax will not transform houses into palaces. It will not transform dimes into dollars. It would, however, relieve the workingmen from the burden of contributing six hundred millions of dollars a year in taxes. They are now paying taxes to the government, and also paying ground rents to landlords. Under the Single Tax they would continue to pay the ground rents, but would discontinue paying the taxes. The government would take the ground rents to use for public purposes. Mr. Marshall seems to contend that the people should be relieved from the payment of ground rents, as well as taxes. But, as observed in a former paragraph, this cannot be done. Ground rents will forever continue to be paid; the only question is, to whom shall they be paid?

Why are men poor? Is it because they are not able to produce enough wealth for themselves? No. It is rather because there is sharp competition among workingmen for a chance to earn a living. Why does this competition exist? Because there is not enough work to do. Then why is there not enough work to do? Because opportunities for work, for enterprise, are locked up, and the key is held by the landlord. Coal fields are idle; iron fields are idle; city land is idle; farming land is idle;—not because we do not want to use coal and iron, not because we do not want to build houses or eat farm produce; but because the land owners are holding the land for speculation. Thus enterprise is debarred until first a large premium is paid to the speculator. Enterprise is discouraged; work fails; competition arises among workingmen to do what little work there is to do; wages fall.

The Single Tax, being laid upon land whether used or not, and in proportion to its value for use, would make it too expensive for anybody to hold land out of use. The land speculator could no longer afford to choke off enterprise; employers would no longer be obliged to share their incomes with idle land owners. Men now working for others would then be able to start in business for themselves, because it would require so little capital to do so; no capital would be required to buy land with, and, owing to the absence of taxes upon goods, not so much capital would be required to put up a building or buy material for manufacturing or trading purposes. The mass of the people would be benefited in two ways: first, access to all natural wealth being unrestricted, there would be a large output of goods, which would reduce the prices of goods to a reasonable figure; and second, there would be a large demand for

laborers to work out the raw materials, now existing in the earth, into finished goods; and this demand for laborers would send the rate of wages up. The third benefit given to the masses of the people would be the feeling of independence; if wages should not suit, there would always be plenty of good land, near centres of population, to be had for the asking, where the laborer could enjoy being his own master; and as he thus would have a perpetual employer, always ready to employ him at good remuneration, he would not be slow to ask high wages of any capitalist that might desire his services.

Mr. Marshall's idea seems to be that the poor should concern themselves only about those laws which it can be shown will benefit the poor as a class. Is the poor man to be limited to such laws as he thinks will put money into his pocket? Why should he not consider a law on other grounds—for instance, on the ground that it is just and right? Who are to make the bulk of our laws, the poor or the rich? If the Single Tax would be just and right, why should not the poor man favor it on that ground alone? Does Mr. Marshall consider the masses incapable of judging of the merits of any proposed law? What is Mr. Marshall's idea of self government?

BROOKLYN, N. Y.

B. C. Stickney.

Social Skepticism.

WE have two classes of people subject to social skepticism. Some feel that all important social improvements are well nigh impossible, or too remote to pay working for them. Others feel disinclined to accept any plan which they cannot grasp in full all at once without any special study. The former are often the victims of that fatalism implying that God wants to do not only His share but our share too, in making future generations better than the past and present ones. They are willing enough to help some of those who have been sunk into the abyss of poverty by our wrong social conditions, but they are not inclined to realize that that is but a small part of what we owe to humanity and to the Father in Heaven. The reformer can seldom do anything with this class. With sufficient patience he will do something with the other class. We should divide this class in two sections: Those who have no time for study, and those who have no inclination for it. The way to deal with them all is to boil down truth into its ultimate elements. This is not always a very easy matter. And even when that is done we often fail to accomplish great results. Why? Simply because most men have been taught to believe that truth is complex, when truth is essentially simple.

It is given unto you to know the myste-

ries of the kingdom of heaven, said Jesus,—the mysteries of the universe.

Of course, those words are not addressed to any skeptic, nor to those who prefer the darkness of mysteries to the sunlight and splendors of all truth.

Men are to-day face to face with two vast schemes aiming at important social improvement. The one is exceedingly complex and the other exceedingly simple. The former is the symbol of a grand machinery with wheels of all sizes and different revolutions, apparently admirably connected with each other, and theoretically producing the most surprising results. I refer to the different socialistic schools, for some of which I have a certain degree of respect. The other vast scheme is the image of a machinery with a grand solitary wheel. But it happens that that wheel touches the most fundamental human doctrines, production and commerce; the only ones that make civilization possible, and it happens that it is through taxation that we can limit, contract, oppress production and commerce, or that we can free commerce and production. So, there it is. Freedom on one side, oppression on the other. Shall Americans, the great lovers of freedom, be afraid of free production and free commerce? And, however ludicrous it may appear, there is but one system of taxation that can give freedom to production and commerce, because free from the entanglements of monopoly, the semi-eternal enemy of all honest labor.

And what is civil and political freedom without industrial freedom? What is the use of all kinds of freedom to me or anybody else if our march through temporal life from the cradle to the grave is but a tale of poverty and hard work—when work can be found? Not necessarily the poverty of the masses in India and Egypt—that may come yet—but the poverty that means, anyhow, the absence of most of those joys and that manhood that God has ordained to be the birthright of all men while on earth.

Why should we not have a science of government—which means a science of taxation—since we have a science for nearly everything else? We all agree that society is to-day impossible without a tax fund. Therefore labor, without which society is impossible too, owes something to society. That something labor should pay. It should pay no more; it should pay no less. Hence the need of that science of taxation to fix a tax fund independent of the fancies of any set of men, high or low.

We are never at any trouble ascertaining the price we need to pay for potatoes or shoes. Supply and demand regulates that. Why should we have any trouble in ascertaining the taxes we should have to pay? Do we lack the law of supply and demand to regulate that? Not at all. Let all taxa-

tion rest on land values, and land supply and land demand shall fix the precise amount of taxes that labor owes to society. There we have the science of taxation. There we have the science of government, since land is indispensable to human life and all human activities. Even the *corporation and the trust* need land.

But I will be asked for a clear, precise demonstration of how labor shall be benefited by that scientific taxation. Under our disorderly civilization the wealth produced is distributed among three partners, say forty per cent. to the labor fund, ten per cent. to the tax fund, fifty per cent. to the monopoly fund. Our scientific taxation would suppress one of the three partners, *Master Monopoly*. The wealth produced would then be distributed as follows: Twelve and one-half per cent. to the tax fund and eighty-seven and one-half per cent. to the labor fund against forty or forty-five per cent. to-day. I am not quite sure that I have convinced any social skeptic. Faith, the faith that works, and reasons, and trusts is an indispensable element in all human activities, even in that of grasping truth, even in that of my jumping across a ditch representing the approximate maximum of my jumping powers.

Between our old and disorderly civilization, because resting on anarchical methods of taxation, and a new and orderly civilization because, resting on fixed scientific taxation, there can hardly be any points of comparison. For instance; can I refer to what a land syndicate of cattle barons or any similar monopoly will do under taxation on land values, when the very object of that taxation is to make all syndicates and monopolistic schemes look foolish? All syndicates and monopolies rest, more or less, on the profit from rising land values. Our scientific taxation would rest on the constant appropriation for public needs of all those rising land values. All syndicates and monopolies rest, to a greater or less extent, on the holding of land unused, or improperly used. Our scientific taxation would mean: Down with the gates into all land not improved, or not sufficiently improved or paying insufficient rent to the people at large, that labor may step in and fully improve all land worth improving, in relation to density of population at the time. Syndicates and monopolies can never pay half the land rent to the people that labor can pay to itself. Labor is the people. Monopoly is not. The land improver can thrive while paying full rent, under free production and free commerce. The individuals or corporations that do not fully develop the land they hold will soon have to go overboard if they have to pay full rent. To a thinking mind that fact is just as self-evident as the sunrise and the sunset. Syndi-

cates and monopolies need a constant stream of industrial slaves forced to sell their labor for a mere animal existence. Taxation on land values means free land, free men, no more slaves to be held by any monopoly, individual or corporate. No capitalist enabled to fix the conditions on which labor shall live and work. Labor fixing its own conditions. This is the very essence of an orderly civilization, while the reverse is the essence of a disorderly, unprincipled, anarchical civilization; *ours*, for instance.

It is a waste of time to imagine that the iniquities fostered by to-day's civilization shall continue under totally different fiscal methods. Just as well imagine that the processes of decay supposed to be going on in the moon are identical to the processes of life supposed to be going on in the sun. Differences in conditions exclude comparisons.

Are not all monopolies, by whatever name called, in whatever form they appear, the natural result of those taxes on production and commerce and that artificial limitation of natural opportunities that taxes on land values would suppress? And hence they would suppress the oppressive features of all corporations, because they all rest on franchises, and franchises rest on land values. Our scientific taxation would take in all the water in their bonds and stocks. Nothing would be left to them but what individual labor had created. The rest is a social product and belongs to society. If corporations tried to avoid the payment of their annual land values, and thereby disobey the law of the land, a law of eternal justice besides, that would cancel their charters. The legitimate capital of all corporations would receive all legitimate interest direct from the people. Does not the people pay to-day all interest, legitimate or illegitimate, on all capital and on all water besides? Monopolies would certainly object to all that. Shall social skepticism object too?

Social skepticism performs a very important function in life. I would not suppress it if I could. Truth is like a diamond—the more we hammer against it the brighter it grows.

Only one more point before I close. Strictly speaking all wealth is not produced by individual labor. Some is exclusively produced by collective labor. Let us never forget that. And I hope my readers will bear with me for again dwelling on that. Ethics and honesty require that society should take for all collective needs the values created by collective labor, expressed through free competition for land, what, I assume, we can call scientific taxation, because regulated by the natural law of free land supply and land demand, and hence above the arbitrary dictation of any set of

men. There is no poetry, no sentiment, no platitudes, no imagination, no vagaries in all that, it seems to me. It is honesty and mathematics. That is all.
